THE SUPPLY OF FISH IN THE SEA.—In Great Britain Professor William C. McIntosh, the leading British Marine biologist, has strongly supported the view that the resources of the sea are practically inexhaustible, and in Norway Dr. Hjort and Dr. Dahl are stout apostles of the more hopeful prospects as regards our sea food supply. Dr. Hjort's discovery shows that there are many million times more young fish in the sea than man had any idea of, and the theory that the young brood carried out to sea perished is proved to be a fable. He made the further remarkable discovery that away out in the open sea, where it was several thousand metres in depth he found fish as it were in layers or ocean strata. Some required a line as long as the monument to reach down to them, others were in still lower depths which would submerge St. Paul's and the monument on top, and with many thousand feet of water below them. There, in these still and dark and hitherto supposed barren regions of the sea, he caught great cod and haddock and coalfish, sometimes in quantities. Not of least significance is the finding of cod in the deep places of the sea, as in this discovery we have the key to solve the mystery as to where the cod abides when he draws from the coasts. It was formerly supposed that the killing of a cod in roe meant the destruction of more than two million potential codfish. Now, as Dr. Dahl says, it merely looks like improving the life chance of the progeny of another cod. Formerly it was considered that the fish production of the sea was a fixed quantity, which was being continually decreased by man's inroads on it. Now, it would appear to be an organism on which the attacks of man can make no real impression. It seems probable, indeed, that in every second, every minute and every day more fish is produced in the sea than all humanity combined could devour in the same time.—*Nineteenth Century.*

THE MONT BLANC ELECTRIC ROAD.—The height of Mont Blanc is about fifteen thousand feet, and it has been proposed to build a

railway with an elevating shaft to near the summit, like that already carried out in part on the Jungfrau. The work is to be done in three sections, an open air railway, a lower and upper tunnel. The cost is estimated at \$1,250,000. The line will be an electric track railway, and the power is to come from waters of the Arve. It is expected that travelers can be landed at the Aiguille du Gouter in Seventh Month, 1902.—*Electrical World*.

A LONDON FOG.—Some unofficial experiments carried out at Chelsea during the recent fog, according to Sir William Thisselton-Dyer, the director of Kew Gardens, showed that in a week six tons of solid matter were deposited on a square mile. They included not only soot, but a variety of tarry hydrocarbons, highly injurious to animal and vegetable life. Adopting the post-office telephone area of six hundred square miles, this means that the metropolis labored under a weight of thirty-six hundred tons of this dreadful compound before the wind was strong enough to carry it to another part of the country. That other part of the country might be the Berkshire downs, where Sir William Richmond has sometimes seen a solid bank of fog creeping up from the east. There they call it London dirt.

Another instance of the destroying power of the London fog was supplied at the meeting of the Coal Smoke Abatement Society by Professor Church, who exhibited an evil looking object, two inches thick, which had recently been chipped off the moulding of the gallery outside the great dome of St. Paul's. This deposit covers most of the building where water penetrates, and it only contains one per cent. of soot, the remainder comprising chemical products which are most pernicious to Portland stone. Professor Church also has a grievance against the fog as the enemy of oil paintings.—*London Chronicle*.

There are so many helpful things to do,
(Helps to the Helper, if we but knew),
So many troubled hearts to soothe,
So many pathways rough to smooth,
So many comforting words to say
To hearts that falter along life's way.

Here is a lamp of hope gone out,
Some one stumbled and fell, no doubt;
Out of thy store of oil refill,
Kindle the courage that smoulders still,
Think what the Saviour would do to-day
For one who had fallen beside the way.

How many lifted hands still plead
The old, sad story of human need;
But let us follow the Saviour's plan,
Love, unstinted, to every man,
Content if, at most, the world should say
"He helped his brother along the way."

In a long and laborious life I have found the love of Christ the most prevailing power to sustain right endeavor; and I know that obedience to Christ is the secret of a noble life. As a watchword fitted to be the inspiration, the test, and the support of an untiring service to God and man, I would leave with you these words: "The love of Christ strengtheneth us."—*Westcott*.

It is vanity to desire a long life and take but little pains about a good one.—*Thomas a Kempis*.

Relating to the Doukhobors.

ROSTHERN, Saskatchewan, Canada.

1st Jan. 1902.

WM. EVANS, Philadelphia.

Dear and Respected Friend:—I would own receipt of thy favor of Twelfth Month 20, 1901. I am glad to hear from it that the number of Friends engaged in the educational work among our Doukhobors, increases.

I have also received the interesting letter* from S. L. Allen & Co. enclosed in thy letter, and am going to read its contents to the Doukhobors of Terpenie.

While I admire these people for their gratitude, and for their request not to send any gifts for the material wants of these colonists, I would suggest, as Teacher among them, that any contributions made in the school line by the Friends, for the Doukhobor schools, have been received, and will be received, very gratefully, of whatsoever kind they may be. The books, slates and copy-books which were sent were very welcome, and as the Doukhobors themselves do not realize the need of taking energetic steps for starting the schools, we will be very grateful if the help, or a measure of help, comes from other quarters. The Doukhobor settlers have had several gatherings (at least three or four), to consider the question of a school. Although much has been spoken, they have not yet come to any result. The building of the school house is still a matter of the future, and I have to go from hut to hut, assisted by my son, to gather the school children and to attend to our teaching. These boys and girls cluster round the master, without desks, without school-benches, without blackboards, waiting to see better days, when a regular and sound school work, in a good building, will begin. Still, I am happy to continue the work begun. I have also readings for the grown-up people from a book sent to me by John Bellows, of Gloucester—"The Southern Heroes,"—and I am happy when I can secure their attention for spiritual food. I will soon write again about the ploughs, etc., and will give some particulars about the cattle and other property of the Doukhobors.

I send enclosed translation of their collective letter to the Pennsylvania Friends.

With humble regards, I am thy friend

MICHAEL SHEBINEN.

Translation of a letter from the Saskatchewan Doukhobors to the members of the Society of Friends in Pennsylvania, written by Simon Verschagin.

TO PHILADELPHIA.

DEAR BRETHREN AND FRIENDS:—After having lived in Canada, which is for us a new country, these last two years, we have tried the land with all kinds of seeds. The earth yields a full growth of fruit to every plant sown on it, the climate also allows the field crops and the vegetables of the garden to ripen.

The crops of this year, 1901, are quite sufficient, and will fully supply the yearly need of each farmer, both for the food and for sowing. We have also begun to make the ends meet in the matters of our household (or husbandry). Now we ask you, dear Friends,

*Respecting ploughs for next spring's planting, which the Doukhobors wish to purchase.

do not send us any more help; we thank God from the depth of our hearts, and also you all, for your great and charitable gifts, which you have been sending us during the time of our heaviest trial. We are not able to express to you openly, on paper, the measure of gratitude which we do realize and feel in secret.

May the Lord God grant you the peace of soul and the bodily health to confess his holy name.

We are heartily thanking, likewise, all the good people who have helped us to go out of oppression into the beautiful land of freedom. Only our hearts are continually heavily filled with sorrow and woe, for our brothers who remain there in Russia, and who for Truth's sake have been exiled into a far away part of Siberia where the climate is not fit for living.

And now we bid you farewell. Please accept, dear Friends, our best love, and our respectful greetings. Once more we wish you all welfare from God. We remain

Yours truly,

Christians of the Universal Brotherhood living in the Province of Saskatchewan. Written in Terpenie, 25th Twelfth Month, 1901.

Selected for "THE FRIEND."

The Humanity of the Saviour.

Thomas C. Upham, in his "Interior Life," well says of the language, "Therefore if any man be in Christ he is a new creature."

The old life perisheth in order that there be a new creation in Christ. The deformity of the ancient nature passes away and the image of Christ in the soul takes its place. And we can try and be assured of the truth of the resurrection from the death of sin, only by its likeness to the life of the Saviour. It is; matter of great gratitude therefore, that the gospel not only delineates holiness, which is but another name for true inward life, by means of abstract statements, but represents it visibly and sensibly, in the beautiful mirror of the Saviour's personal history.

This is a mirror which it is necessary for every Christian and especially for those who are earnestly seeking the entire sanctification of the heart, to contemplate prayerfully and unceasingly. The more we study the life of Christ, if we do it with a consecrated and prayerful spirit, the more it is reasonable to suppose we shall be like Him. And in proportion as we bear his likeness, will those various inconsistencies and imperfections, which often mar the lives of his professed followers, disappear. We propose, therefore, to mention briefly some of the traits of character which are conspicuous in the life of our Saviour. . . . Accordingly, we proceed to remark that the Saviour in his human nature, was a man of sympathy. In making this remark, we mean to imply, that he was a man of sympathy on natural as well as religious principle; sympathetic as a man, as well as a religious man. And as such, it is very obvious, from the Scriptures, that he felt a deep interest in all those who are the proper objects of both natural and religious sympathy; for the sick, for the poor, the ignorant, the tempted, the suffering, of all classes and conditions. Although he loved religious retirement, and knew more than any one else the inestimable privilege of

alone, with God, he felt deeply the sense of a common humanity; and in obedience to those claims, came forth, and lived suffered among men; weeping with those who wept, and rejoicing with those who rejoiced. He gave no countenance to an exclusively solitary religion, a religion which shut up in barren isolation and has no deep operative sympathy with men. When wounds were to be healed, whether mental or bodily; where there were tears to be wiped up; whenever and wherever he could add the amount of human happiness, or detract from the sum of human misery, he was present. He deeply sympathized with those who were the subjects of religious trials and duties, especially with the beginners in Divine life, the weak ones and the lambs of the flock. Accordingly, he adapted his instructions to the capacity of understanding, and also to the present degree of advancement and length of purpose. And hence it is that on certain occasions having made some communication to his disciples, He added, "I have many things to say unto you, but ye cannot hear them now." It is said in allusion to his interesting trait in his character, a unpruned reed shall be not break, and smokelash shall be not quench." It is hardly necessary to add that those who are experiencing inward restoration and have been raised in the image of Christ's likeness, will exhibit this interesting trait in a marked degree. It can be no such thing as a truly holy trait which is destitute of a pure and deep sympathy.

Back Seats for Age.

As the twig is bent, the tree's inclined," the proverb which time has not discredited. Modern pedagogy concerns itself more and more with the careful training of the twig. The value of early habit in play, work, association, and conduct, is acknowledged everywhere. This is, we are often told, the era of the young; children receive every advantage, and are barred from no opportunity. Great prizes are in the hands of young men; the women mould in the schools the citizens of the future, serve great charities, or step from a sheltered life to share the labors of the world. Fittingly this young country is pressed forward toward its destiny, borne on the impetuous wave of youth.

What of age? What of the ancient? No longer supple, their twisted trunk hardened into shape, broken, storm-rent, yet venerable. To the understanding eye it is more interesting, more beautiful than the fresh and supple sapling. But do the eyes of our triant young folk see and understand? Too often they do not. Our young people fail, sadly, in reverence for age; often, their reverence, yet shun it. With the marvelous rapidity of progress, requiring an unprecedented adaptability of mind and habit, material and intellectual changes, has come the restless impatience of the conservatism and the rigidity natural to age. It is a regrettable mistake, and one not at all to the credit of intelligent young people.

The tree, fully grown, cannot bend. As it stands, so it stands. Only fret, failure and decay can result from trying to effect a

change. Nevertheless, comfort, counsel and that wisdom which is higher than mere knowledge are found in seeking the cool tranquillity of its shade.—*Late Paper.*

WHEN our blessed Saviour said to his disciples, "Greater works than these shall ye do, because I go unto my Father," was it not that they should be instruments in the transformation of men from a state of nature to one of grace?—*Ohio Epistle.*

Items Concerning the Society.

William C. Allen, having concluded his religious visits to parts of Chester Co., Pa., returned his certificate to his Monthly Meeting on the 7th inst. He was at Caln Monthly Meeting Twelfth Month 26th, at Christiansa Meeting on Twelfth Month 29th, and at an appointed meeting at Gap, Pa., on the evening of the 1st day; and at appointed meetings in Ercildown meeting-house and in Coatesville on the 5th inst.

To the Editor of THE FRIEND:—Does London Yearly Meeting of Friends by the judgment of its "Conference" in reference to the visits of ministers of the gospel coming from other Yearly Meetings, imply that she does not consider those outlying meetings of Friends on the continent of Europe, or those in Australia, Tasmania, or New Zealand, to form an integral part of London Yearly Meeting? or as not being under her jurisdiction? If not, to what bodies do they belong?

If London Yearly Meeting has jurisdiction, she certainly retains the right to approve or disapprove of any such laborers from elsewhere; and if receiving her approval, it would not be like London Yearly Meeting in all her past history, not to provide liberally to further approved messengers.

It would be well for Friends in all other Yearly Meetings to know in what relation London holds herself to these meetings, that others might govern themselves accordingly. A FRIEND.

[Our apprehension of the minute referred to, that it was not intended to touch the matter of London Yearly Meeting's jurisdiction outside Great Britain, but only to protect herself from abuses found to be burdensome in regard to guests from other Yearly Meetings proposing to travel to parts beyond.—ED.]

The periodical heretofore announced as about to be published by "The Friends' Bible Institute Publishing Company," Cleveland, Ohio, has now begun to appear, under the title of *The Soul Winner*. Its introductory language is as follows:

"For a long time there has been much pressure brought to bear upon us to change *The Bible Student* to a weekly, aggressive, holiness paper—a real soul winner that would feed the multitude in the Friends' church and elsewhere, and be used of God in preparing the Bride for the coming of her Lord. It may seem to many that there are plenty of such papers now. We admit that there are plenty of the kind already published, but we feel there is just a place, a unique mission for *The Soul Winner* among the people who are bent on finding the deeper things of God; who, not content with the experience common among Christians of to-day, are earnestly contending for the faith once delivered to the saints, not content to be lukewarm themselves nor let others be."

It is said that a valuable article by President Isaac Sharpless has appeared in the current issue of the *Atlantic Monthly* on the "Causes of Pennsylvania's Ills," by "A Pennsylvania Quaker." It was written "to answer an article which appeared recently in the same magazine entitled, 'The Ills of Pennsylvania,' which endeavored to show that 'the corrupt politics of Pennsylvania are due to the meekness and non-combateness of the Quaker'"

Notes From Others.

The *Congregationalist* says: "The authority even of the Church as an institution has gone, but the authority of truth will never fail."

To-day we have seventeen kinds of Methodists, thirteen kinds of Baptists, twelve kinds of Presbyterians, and some 350 different denominations, all told, in the United States.

F. B. Perkins says in the *Pacific*: "The making of our Bible was a work of more than four thousand years. It was not sprung upon the world complete. It grew. It could not have been constructed in any shorter period."

A writer in the *Churchman* says: "The truth of God is the same always, but theology, which is our science of the truth, cannot remain always, or even for any great length of time, the same.

South America, called the "Neglected Continent," has a population of 34,000,000, and of these 30,000,000 have never seen a Bible, although called a Christian country. There are now eighteen Protestant missionary societies operating there, and about 350 missionaries are working there.

"The Decline in the Number of Candidates for the Gospel Ministry," was the subject of a recent address by Henry C. Minton before the Presbyterian Ministers' Association. Many reasons were given for this decline, some being entered into at length and others being only touched upon, and the remedy was found to be in a consecrated, pious home and an outpoured Spirit.

It is announced that two universities for women will be opened this year, one at Tokio, Japan, and the other at Moscow. The Russian University for women has been endowed by a wealthy merchant, Astraknoff, with 5,000,000 rubles. It will contain for the present only three academic faculties—medicine, mathematical and physical science. The Russian Minister of Education, whose sympathy has been gained, cannot see his way as yet to the concession of a legal faculty.

The *Christian Observer* remarks: "The number of Stundist immigrants [from Russia] in this country is surprising. It amounts to about two hundred thousand. Of these a part are in Canada; the rest, from fifty to one hundred thousand, in the United States. They are located mostly in the Dakotas, and are industrious, peaceable citizens. They were willing to begin life here in mud houses, with heating stoves of clay, and with hay or straw for fuel. But they are people of piety, of Lutheran, Presbyterian or Baptist faith—and, unlike many immigrants, are exercising a happy influence out there. They are a welcome addition to our population."

FORCED TO "TRANSCEND HER SPHERE."—"Women used to be told when they ventured into some public fields where they are now such familiar figures, that their place was the fireside, the family altar (typified by the cook-stove and the wash-tub in most houses), and, in fine, the home. We do not remember that they were in the habit of openly retorting, 'Whose home?' but surely their advisers were open to some retort. It is because women have, in the hideously egoistic and erroneous development of our commercial civilization, been obliged so often to make the homes they were bidden keep to, that we now find them the rivals (alas! sometimes the victorious rivals) of men, not only in the graces, but the industries, the arts, the sciences. The part they play (it is very like working) has been less chosen than forced upon them by the brutal and entirely man-made conditions of the life which prevails throughout the world ironically calling itself Christendom; and

their schools cannot do better than continue to fit them for it, until their brothers shall imagine some gentler and juster economy, in which they shall each be chosen a wife by a husband worthy of her, and dwell with him in a home of their common creation, safe from want and the fear of want.

Even this millennial vision should not involve any obligation to matrimony as to a state more honorable or more ideal than celibacy. The apostle had something to say for that which will always commend itself to consideration, and no one can have lived long in the world, or met many maturely unmarried women, without questioning the right of matrimony to hold itself as the only holy estate, or the holiest. It is holy if the married pair behave themselves; and if they do not, why, celibacy seems rather preferable. In millennial conditions, even, it is doubtful if it ought to be commended as the chief and primary motive in woman's education.—*W. E. Howells.*

SUMMARY OF EVENTS.

UNITED STATES.—Henry C. Payne of Wisconsin has been appointed postmaster general.

The Nicaragua canal bill has been passed by the House of Representatives by practically a unanimous vote, only two members out of 400 voting against it. The amendment to lodge with the President discretionary power as to the route was defeated by a vote of 102 to 170. It is now to be considered by the Senate.

The purpose of Andrew Carnegie in presenting \$10,000,000 to a Board of Trustees is thus stated: "It is proposed to found in the city of Washington, in the spirit of Washington, an institution which, with the co-operation of institutions now or hereafter established, there or elsewhere, shall, in the broadest and most liberal manner, encourage investigation, research and discovery; encourage the application of knowledge to the improvement of mankind: provide such buildings, laboratories, books and apparatus as may be needed, and afford instruction of an abstruse character to students whenever and wherever found, inside or outside of school, properly qualified to profit thereby."

The Manhattan Railway Co. in New York city is installing electrical motors instead of steam upon its elevated road, and in a recent trial trip, the train attained a speed of forty miles an hour. A part of the route has a remarkable cure of cancer of twenty years' growth, is reported to have been effected in San Jose, Cal., by means of the X-ray, on a person 83 years old. A daily treatment of fifteen minutes under the X-ray was commenced. After the twelfth treatment it could be seen that the cancer was healing. From that time up to the present treatment the affected parts healed rapidly, until the cancer has entirely disappeared, leaving only a scar.

The statistician of the Department of Agriculture estimates the average yield per acre of wheat in the United States in 1901 at 14.8 bushels as compared with 12.3 bushels in 1900; 12.3 bushels in 1899, 15.3 bushels in 1898, and 15.3 bushels, the mean of the averages of the last ten years.

The invention is reported of a device by which it is possible to talk by telephone from one trolley car to another car of the same line while they are in motion.

John G. Woolley, the Prohibition leader, who has just returned from a seven months' trip around the globe, has taken the time to describe the condition of the liquor traffic in foreign lands, says that "among all the greater nations, I feel sure that America is at present the farthest advanced in the struggle for prohibition."

The population of the United States, including all outlying possessions, was 84,239,693 in the census year 1900. It was made up as follows: States and Territories, 5,594,431; Philippines, 6,661,323; Porto Rico, 953,243; Hawaii, 154,000; Alaska, 65,932; Guam, 9,000; and Samoa, 6,100.

F. L. Hoffman, insurance statistician, is reported as stating that a comparative mortality table shows that close behind Norway, and ahead of Great Britain, France, Germany, and ahead of all other States of our country, New Jersey has the lowest death rate. Certainly the facts are abundant tending to prove that old age is being attained by men and women in this country with an increasing degree of frequency, and, "It is certain that our American men at sixty are not broken up as badly as our fathers were at forty."

The traction department of the United States has a fleet of twenty vessels owned by two firms trading with the Gold coast of Africa, take out about 2,000,000 gallons of rum each year.

T. Estrada Palma, lately elected President of Cuba by an almost unanimous vote, has long been a resident in New York State, and for several years has been employed as a school teacher in Central Valley, Orange Co., where he has a model farm. In his reply to the notification of his election, he mentioned two things he was desirous of accomplishing, viz: the strengthening of cordial relations between the republic of Cuba and the United States and conducting an economical administration. In connection with the latter he hopes to develop the resources of Cuba, especially its agricultural industries.

There were 47 deaths in this city last week, reported to the Board of Health. This is 17 less than the previous week and 2 more than the corresponding week of 1901. Of the foregoing, 247 were males and 224 females: 49 died of consumption; of the latter 82 of inflammation of the lungs and surrounding membranes; 16 of diphtheria; 21 of cancer; 12 of apoplexy; 8 of typhoid fever; 3 of scarlet fever, and 15 of small pox.

COTTON closed on a basis of 8½c. per pound for mid-land uplands.

FLOUR.—Winter, super, \$2.75 to \$3.00; Pennsylvania roller, straight, \$3.00 to \$3.75; Western winter, straight, \$3.70 to \$3.90; spring, straight, \$3.75 to \$4.00.

GRAIN.—No. 2 red wheat, 87 to 88c.
No. 2 mixed corn, 67 to 67½c.
No. 2 white oats, clipped, 54½c.

BEEF CATTLE.—Best, 64 to 66c.; good, 5½ to 5½c.; medium, 5 to 5½c.

PORK.—Choice, 3½ to 4c.; good, 3¼ to 3½c.; common 1½ to 2½c.

LAMBS.—4½ to 6½c.

HOGS.—Western, 8½ to 9c.

FOREIGN.—The Emperor and Empress of China have returned to Peking amid a great display of pageantry, which was witnessed by a large number of natives and a crowd of Europeans, diplomats, army officers, missionaries, photographers and correspondents. The return of these rulers to the capital is regarded as favorable to the maintenance of peaceable relations with foreign countries.

The Director of Railroads and Mines of Shan Si province has requested Minister Conger to exert his influence to induce Americans to invest capital in the province, saying that the majority of the United States people who are troubled had led the Chinese to prefer dealing with the Americans, as they have greater confidence in their honesty.

Geo. S. Miner, lately returned from a ten years sojourn in China, reports that the Chinese were greatly impressed with the idea of the Christian religion, with about one-twentieth within a few weeks suffered death for their religion, while scarcely one among millions of Chinamen could be expected to sacrifice his life for Confucianism, Buddhism or any form of ancestral worship.

The Commissioners of the Northern Lighthouses in Scotland have decided to adopt wireless telegraphy as a means of end of the communication between the mainland and certain of their lighthouses.

There are but three countries which now have a greater population than the United States, viz: China, the British Empire and the Russian Empire. China and the British Empire have each of them probably between 350,000,000 and 400,000,000, or together nearly one-half of the total population of the human race. The Empire, with about 131,000,000 people, has more than half as many again as the United States, and has been increasing during the century just closed with greater rapidity than any other European Power.

It is estimated that as many as 6000 tons of coal were carried off in suspension in the atmospherically from the chimneys of London. London scientists state that there is a decided increase in the death rate during these heavy black fogs, and there can be no doubt but that so much smoke in the air is a cause of bronchitis and other inflammations of the respiratory tract, which in their turn give rise to greater liability to influenza and tuberculosis.

The British War Office has issued a call for 9386 infantry volunteers, gradually to replace those now serving in South Africa.

Statistics collected by the National Councils of Women show that in Germany 202,016 women are proprietors, managers or in leading positions in business. Women principals and managers are found in mining industries, iron, brick, glass and other works. There were sixty-six different occupations in business.

A dispatch from London says: One of the most important of American commercial enterprises in Europe has just culminated here. It consists in the securing of all water routes for American cargoes of grain and other commodities from inland ports in the United States to the British ports in Europe, and embraces the purchase by American capital of several British and other canals.

The Vice-President of the Erie Canal Traction Company, has been here several months, securing concessions for

the operation of European canals by electricity. Erie concern has secured control of about 5000 miles of canals in England and on the Continent. As a result cargoes will shortly be shipped on the same bill of lading from Duluth, Minn., to Brussels, Bruges, Ghent, Cologne, and later to many points in the United Kingdom, France, Germany and Italy.

Vladimir Bogoras, ethnologist of the Jesup exploratory party in Kamchatka and neighboring regions, says that indisputable connection between the Amer. Indians and the Paleo-Asiatic races on the Bering Coast in Kamchatka and on the head waters of the river which rise in the Stanovoi Mountains. The Indian Paleo-Asiatic languages are similar in structure and their mythologies present additional proofs of correlation.

Cleveland and Chicago capitalists, incorporated as the Cleveland Construction Company, have been successful in negotiating for concessions for electric lines from Egypt, to Mount Sinai, and thence along the coast of Red Sea, through Syria and Arabia to Mecca.

Consul General Mason sends from Berlin translation report by the Imperial Health Office on the success results of the open air treatment of consumption in Germany. The success of the treatment has caused erection of a large number of establishments in Germany, with 5000 beds, in the spring of 1901. In a half the cases, the patients had been sick for less than a year before applying for admission to the institution. The average duration of treatment was 92.4 days for each patient. Data as to the final results show that each 100 patients treated 87.7 per cent. were discharged as cured or improved, 8.8 per cent. left unimproved, per cent. were worse, and one-half of one per cent. The favorable results were in part due to a careful selection of cases suitable for treatment in the institution. The cost of good quality food has been found in the island of Spitzbergen, near Tromsø, about 100 feet below surface.

The quantity of wheat produced in 1901 by the largest wheat growing countries is thus stated: United States, 720,000,000 bushels; Russia, 338,000,000 bushels; France, 304,000,000 bushels; India, 240,000,000 bushels.

NOTICES.

NOTICE.—A meeting for Divine worship is appointed by the Quarterly Meeting's committee, to be held at the meeting-house at Fourth and Arch Streets, on Thursday evening, First of March, 1901, at 7:30 P. M. All who are interested as attenders or members are invited to be present.

WESTTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to WILLIAM F. WICKESHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

WESTTOWN BOARDING SCHOOL.—For convenience of persons coming to Westtown School, the stage will leave Philadelphia 7:10 and 8:15 A. M., and 4:25 and 5:25 P. M. On Saturdays, the stage will leave Philadelphia, at 7:30 P. M., twice each way. To reach the school by telegraph, call West Chester, Phone 1144.

EDWARD G. SMEDLEY, Supt.

MARRIED, at Friends' Meeting-house, Moorestown, Tenth Month 3rd, 1901, WILLIAM MARTIN, M. J. ELIZABETH E. KAIGN, daughter of Amos E. and L. Kaighn of Moorestown.

DIED, at his home near Salem, Ohio, on the thirteenth Twelfth Month, 1901, EDWARD BONSAAL, aged seven years and eight months. "A shock of grief" and "a life-long member of Salem Monthly Meeting." In 1839 he married Hanna Jones of Germany, Pa., who died eight years ago. He was a loving and devoted husband and father. He was a firm believer in the principles and doctrines of Friends as held forth in the ancient purport, and did what he could to support them. After a brief illness of twenty-four hours he died at 4:32 P. M. His funeral services were held at the Friends' meeting-house on the thirteenth Twelfth Month. His relatives and friends have the consoling evidence that he has been gathered into the Heavenly city, where sorrow and suffering are unknown.

Striving for Masteries.

An examination of the word "athletics," which is to acknowledge that it includes the of "contests,"—thus correcting a foot-crowded into our last number (page 213), based upon a temporary confusion of ory between *athla*, contests, and *alke*, gth. The note was not intended as a re- to our esteemed Friend's article on *athletic Sports*, but rather to explain why ould have admitted a previous discourse at the foot-ball evil, which at the same had a favorable word to say for athletics. Then, athletics must mean personal anisms, they are working a moral evil, on ea that physical good may come to the und and unslain. Their pernicious princi- consists in making victory for victory's a motive of conduct,—the spirit of tri- ing over others as an end to itself. The it of victory over opponents is honorable for the sake of some higher cause,—the ph of a moral purpose or spiritual prin- or the greater good of the greater num- Victory for victory's sake,—the mere of conquest—is ignoble because selfish. party has been worsted, the other made

ere it is pleaded that physical culture is ect and the development of bodily pow- and health is a duty, it is manifest that process, while incidental as a by-product, the object, by the very fact that per- vity has to be held up as its bribe. bribe is made the object, to induce phys- culture to bestir itself, and without which resumed the culture would not be sought. le triumph is for triumph's sake, and so om physical culture being its motive, it

is pursued under about an equal prospect of physical injury.

No wonder that lives and limbs and deeper rights of fellow-beings seem a small obstacle to conscience, where glory to self or to "our side" is the idol that blinds the eyes of antagonists. If hardening the heart is the price to be paid for hardening the muscles, the beast-like gain is too paltry, and the cost too eternal. So if all our scruple as to a people's inalienable rights, counts nothing against an overriding mercenary ambition or greed of power, then, whether its money perish with it or not, a nation pays too fearful a cost, though it gain the whole world by the sale of its own soul. What shall it profit? And when will nations, as well as men, learn that they are so members one of another that the honest prosperity of one is the prosperity of all? That reciprocity of favors is mutually enriching, and reciprocity of blows is mutually impoverishing? Why should it be thought that a nation crippled will be a nation of customers? Or that the makers of cripples elsewhere are true character-builders at home and at heart, in the righteousness which exalts a nation?

In a society choosing to carry the name of Friends, personal antagonisms and rivalries are nowhere admissible. It has been a concern with some of us in our schools to give no place to the motive of competition of one with another, but to stimulate good work for truth's, virtue's, and improvement's own sake. So we have abolished for pupils the rank system of invidious "comparing themselves among themselves." "For we dare not make ourselves of the number," as said the apostle, who do that, and "are not wise."

Life is a contest, and a warfare, as he declares. But the true Christian antagonism is not personal, for its athletics are of the Spirit. Not between man and man for mastery gained by one in the belittling of the other, "not against flesh and blood is our wrestling," but it is a warfare of principles, even "against the principalities, against the powers, against the world-rulers of this darkness, against the spiritual hosts of wickedness in the heavenly places." (R. V.) We may rejoice in the victory of truth, may labor as against those of the contrary part for the triumph of a higher cause, and may contend earnestly for the faith once delivered to the saints. But even

all this exercise ceases to be Christian the moment it lets in personal rancor or personal triumph.

The Christian athlete, "valiant for the truth upon the earth," is made such through faithfulness in inward conflicts with his soul's enemies, while fighting the good fight of faith; casting down, not human antagonists, but "imagination, and every high thing that exalteth itself against the knowledge of God, and bringing every thought into captivity to the obedience of Christ." So through inward strivings for masteries, and striving lawfully, he learns how to put on the whole armor of God,—the hope of salvation for an helmet, truth for his girdle, righteousness for a breast-plate, the Spirit and Word of God for his sword, faith for his shield,—and then not always that he may *fight*, but (a still greater value) that he may be equally strong to *stand*.

For "THE FRIEND." Follow Thou Me.

We find a condition existing amongst us which would prefer the things of time to their chief joy, a state that looks unworthily at the lives of our faithful Friends who have trodden the wine-press alone in the days of their crucifixion, who having found liberty in the perfect law of liberty which cometh from Jesus Christ to partake of the things of this life, things given us richly to enjoy,—these Friends are held up as examples by the carnal and unborn in Christ, in such a manner as to attempt to lead aside the tender minds of those lambs, whom it hath pleased the Great Shepherd to lead into narrow paths for the more effectual fulfillment of the days of their weaning.

These being bought with a price and not feeling easy to spend time upon "that which satisfieth, not" find a second copy set for them lower than the upper line of Christ, who alone has power to say "follow thou me." This lower standard they are concerned to cast aside, that they may follow with an undivided heart and a willing mind the pointings of the Spirit of Truth.

I am concerned for those who would be leaders amongst the people, but whose inexperience would cause us to err, those who have not felt upon their faces the breath of the "Babe immortal," nor the touch of his soft hands gently pressing them into his paths.

O may the Spirit of God move upon such, that he may say "Let there be light;" and may the light be divided from the darkness of their minds by the day-spring from on high, constraining them to cry, "My Father, be thou the guide of my youth."

G. A. KEELEY.

The Daughter of an Atheist.

Strange as it seems, no matter what father and mother, or uncle or aunt, or grandfather or grandmother may believe, they always prefer that the boys and girls should seek the Lord early in life and live devoted Christians ever afterwards. This story is told of the daughter of Littre, the great French scholar. He was a man, learned in all human wisdom, but ignorant of God. A man must entertain some opinions concerning religion, and this great scholar who had experienced nothing of it had come to be opposed to it. But fortunately for his daughter the mother was a devoted lover of Christ.

The great scholar, observing that she had a possession he did not have, said:

"Bring up your daughter in the ways of religion and piety which you have always followed, but I must exact one condition and that is, that when she is fifteen years of age you will bring her to me. I will explain my views to her, and she can choose for herself."

The mother accepted the condition, years rolled on, the fifteenth birthday came, and the mother entered the husband's study. "You remember what you said to me and what I promised," she said. "Your daughter is fifteen years old to-day. She is now ready to listen to you with all the respect and confidence due to the best of fathers. Shall I bring her in."

"Why certainly!" replied Littre. "But for what special reason? To explain to her my views! Oh, no, my dear, no, no. You have made of her a good, affectionate, simple, straightforward, bright and happy creature. Happy, yes; that is the word that in a pure being describes every virtue. And you fancy I would cover all that happiness and purity with my ideal? Pshaw! my ideas are good enough for me. Who can say that they would be good enough for her? Who can say that they would not destroy, or at least damage, your work? Bring her in, so that I may bless you in her presence for all you have done for her, and that she may love you more than ever."

The boys and girls who seek the Lord early in life, as did this daughter of the famous atheist, will not only demonstrate the power of a godly life, but they will avoid the pitfalls of unbelief into which he and many others have fallen, by waiting for a more convenient season.—*Er.*

My life is not what I have chosen. I often long for quiet, for reading, and for thought. It seems to be a very paradise to be able to read, to think, go into deep things, gather the glorious riches of intellectual culture. God has forbidden it in his providence. I must spend hours in receiving people to speak to me about all manner of trifles; must reply to letters about nothing; must engage in public work on everything; employ my life on what seems uncongenial, vanishing, temporary waste. Yet God knows me better than I know myself. He knows my gifts, my powers, my failings, and weaknesses, what I can do and what I cannot do. So I desire to be led, and not to lead—to follow him. I am quite sure that he has thus enabled me to do a great deal more, in what seemed to be almost a waste of life, in advancing his kingdom, than I would have done in any other way. I am sure of that.—*Norman McLeod.*

For "THE FRIEND,"

The Continued Iniquity of Traders on the New Hebrides Island Group.

Writing from Australia to friends in this country, the veteran missionary, John G. Paton, some of whose interesting and helpful experiences have been set forth in *THE FRIEND*, refers to a remarkable escape of his son, also a missionary, on Tanna island of the New Hebrides, which recalls not dissimilar incidents in J. G. Paton's own eventful life. "Two savages," says the latter, "discharged their rifles trying to shoot our son, when a recently converted noble Christian chief sprang forward between the rifle and the missionary; so the ball intended to shoot the missionary went through the chief. He pleaded with his sorrowing men not to take any revenge but leave that to Jesus; to cling to the missionary, helping him, and to love and serve Jesus Christ so as to meet him in heaven at death; and so praying for them he died, exulting in Jesus and his salvation, while they all wept at their loss."

John G. Paton writes that there are about sixteen thousand known as Christian converts, among the sixty thousand savage cannibals yet on the group. Near the station at Tanna, very recently, the savages shot four men and two women dead, and a short time before, several children and native Christian teachers and two men, suffered a like fate. Further, and shocking to relate, one of these victims was feasted on ten days after the killing. Another was about to be similarly made use of four days later but the missionary and his converts finally succeeded in having the body buried.

The bullets that took these and many other lives, were believed to have been secured from a United States trader living there, who traffics with the natives in these destroying agencies.

It will be remembered that John G. Paton has several times visited this country for the purpose of better protecting the "savages" from the demoralizing methods of so-called civilized men's cupidity. The plea which he personally made to Presidents Harrison, Cleveland and McKinley successively, was for the enactment of a law, to prohibit United States subjects, living as traders on the New Hebrides islands, from selling or giving in barter to the natives, intoxicating drinks, opium, dynamite, ammunition and firearms. Each of the Presidents named, in turn, promised to exert his endeavors to get such a law passed and, indeed the "Gillett New Hebrides bill" to effect this obtained a majority in the House of Representatives, but not the two-thirds majority requisite to pass it. That occurred nearly two years ago. Meanwhile, Secretary Hay, as also President Roosevelt, have expressed themselves as heartily favoring the proposed measure. It were well if Friends, as opportunity now offers, would exert themselves to help remove this iniquity of the South Seas—equalled perhaps by anything that Daniel Wheeler witnessed.

JOSIAH W. LEEDS.

NOT MUCH EXPECTED OF THEM.—"Did you ever know an uproar to be made because an infidel went astray from the paths of morality?" said Dr. Mason to a young scoffer.

For "THE FRIEND,"

Reminiscences.

(Continued from page 210.)

Samuel Bettle, Sr., was not only a giver to meritorious objects, he was also a dicious giver. It is reported of him that, in presenting upon one occasion, when money was needed for some object deemed necessary and quite a hesitation was manifested by the Friends there present, to contribute their funds towards the desired object, he said to them, "Oh! give, Friends, give; it will be used to it after awhile."

Samuel Bettle, Jr., alluded to in a former number of these reminiscences, was a man of superior intelligence and concerned about things else to be found in the line of his day. In earlier life he was diligent in the work of distributing Friends' tracts.

Boarding one summer at a farmhouse, near his family, near a town some twenty miles from Philadelphia, 'twas his practice to go very early on First-day mornings, ride down with his bundle of tracts and going to the house to house would pass a tract under the front door. Upon one occasion when riding in a carriage through the town on a Friday afternoon, he purposely left fall from the curtains at the crossing of two main street tracts. It was noticed by some young men sitting near, one of whom left his companion went out into the street, picked up the tract and at a suitable time when alone read it. It was a memoir of Thomas Chalkley. That, under the Divine blessing, was the means enabling him to take the first step out on a broad way in which he had been walking some thirty years, into the narrow but peaceful way that leads to eternal life.

Samuel Bettle, Jr., at another time, First-day felt his mind strongly impressed with the belief that it was his duty to go to a certain house in a certain street in Philadelphia, and place under the front door a copy of Friends' tract on "Charity and Forgiveness." 'Twas about the time of day when persons were returning home from the respective places of worship. It was a humiliating service to him, pushing a tract under a stranger's door, but so clear and improved was the belief that it was his religious duty that he complied.

It was subsequently ascertained that a male inmate of that house on entering the door soon after, observing the tract picked up, took it to her room and read it. On inquiring the family afterwards she said to him, "I have read a tract on charity and forgiveness and I have forgiven —," with which she had been in emity.

The next day she was a corpse.

W. P.

The following interesting tribute, it is understood, is from the pen of Wm. C. F. author of "Boat Life on the Nile," "The Nile in Egypt," etc., and is taken from the *York Journal of Commerce*, of Third 26, 1880.

ONE WORTH REMEMBERING.

"A plain white card comes to me to-day with the legend on it, 'In Loving Remembrance of Samuel Bettle, who died at his home in Philadelphia, on the 28th day of First Month 1880. Aged seventy years. A minister."

Gospel of the religious Society of Friends thirty-five years.'

'Blessed are the dead which die in the Lord from henceforth: Yea: saith the Spirit that they may rest from their labors, and their works do follow them.'

'O, death where is thy sting? O, grave where is thy victory.' 'But thanks be to God which giveth us the victory through our Lord Jesus Christ.'

(His last words in the ministry, First Month 1, 1880.)

Perhaps my friend would not have me, would he forbid it, print what I am moved to say of him. But it is not for him I print it. It belongs to himself less now than ever, and all men I have ever known, he least being that he belonged to himself. He, his memory, his example, are our possession now. Many years ago, late one stormy night, a wild ice raging and rain driving through the street, a loaded stage coach arrived at the office House, then a small hotel and crowded full. The passengers looked in blank dismay at the announcement that they must re-enter the coach and go five miles down the worst road to the Flume House.

Among them my eye rested upon a man, tall, of striking form and feature, whose face would have impressed anyone in any crowd. There was no look of surprise or trouble on his face. It was then, as it always afterward was when I saw it, calm, with a look rather of pity for others than thought of himself. The ladies who were under his charge also attracted our notice, and as my extra rooms were easily made available, I ventured to offer my hospitality to a stranger. I am not extravagant when I say, now that he is gone, that I found I had unawares entertained one of the rare visitors of earthly houses.

Rare in many respects beside that of an impressive influence from above. This was the beginning of a long and happy friendship, wherein many hours and weeks of pleasant moments at the Profile have passed profitably me, and to many of the guests there from year to year, who will have heard with sadness that he is dead.

He was a man of clear intellect, vigorous thought, convincing utterance. He was a scholar both by study and by digestive thinking. Gentle to all and a gentleman therefore everywhere, he commanded belief when he asserted the truth, and respect when he retracted the wrong. He never hesitated to do so.

I cannot refrain from relating a memorable occurrence, and in this day of much church rivalry and perhaps some enmity where ought to be only love, it may be good, and do good tell of it.

We are Christians of various names at the office house, but we have for many years kept up a regular Sunday service, in which all are in great satisfaction. It is a feature of the quiet family life into which even great crowds fall pleasantly in lonesome places upon the mountains. The large parlor is filled with several hundred people for this service, which is conducted by whatever clergyman of whatever denomination may happen to be among us over Sunday. One Sunday it happened, for the first time in years, that in full house (now grown to be a great hotel

holding five hundred guests) there was no one accustomed to the prefix 'Reverend' on his name. But Samuel Bettle was with us, and we looked to him to conduct the service. He had much hesitation, apprehending that the crowd of gray people might not be willing to join in a simple meeting; but to the argument, 'You may do good, it is an opportunity,' he yielded.

Of course the idea was abroad all day among the happy and jolly young folks that in the evening there would be a 'Quaker meeting,' and the drawing-room was crowded to excess. Samuel Bettle with a few of the older residents of the hotel came in and took seats at the end of the room.

Among the assembly were many who were curious, and had come to be amused. Contrary to the usual custom of silence there was much loud talking, some laughing, and exchanges of signs especially among the younger folks. There was no signal given, as in liturgical and other formal services, of the commencement of the worship. Our leader sat still, his pale and striking features unmoved, his eyes on the floor. The tittering, talking, laughing continued for some minutes, and no reverence or even respect for a religious service was visible, when suddenly silence rolled like a wave over the assembly, instantaneous, profound. It was more than impressive, for it was startling. Every laugh, every smile was gone, and an anxious, uncertain, alarmed look took possession of most of the faces of the young. Still no movement from our leader. For full five minutes that dead silence held the entire room. The most frivolous were awed. The strain became intense on many minds. The stillness grew apparently deeper and more solemn.

Then he threw himself on his knees, and prayed. His clear voice, in a tone of passionate entreaty, low and subdued but full of emotion, asked from God what I think every soul in the room felt to be its own desire. When the short prayer was ended, I saw tearful eyes here and there, and serious countenances everywhere. For twenty or thirty minutes he spoke of the life that is, and the life that ought to be, the life of Christ in the soul of man. Practical, simple, wonderfully persuasive, his words were now meditative, now rising to eloquent emotion, warning, admonition, appeal. I think he did some of the good he tried to do. We can never know here what is the effect of our words for evil or for good. He perhaps knows now more than we of the result. There are many besides me who will never—it is a long word that—never forget that evening.

If I have conveyed the idea that he was in appearance or character rigid, ascetic, I have done wrong. He was always most genial, and in conversation, playful at times and sparkling with humor. His critical and accomplished mind saw the depths of an argument instantly and the same perception led him to instantaneous appreciation of wit. Strong and lovable, I think those two words fitly express the impression he made on an intellectual mind coming in contact with his. He knew the world well. He looked through the filmy covering of a 'man of the world' as if they were transparencies. He saw at a glance through external polish, of a man or woman, and recog-

nized the worth or cheapness of that which was beneath. While men of our annual company, clergymen, judges, eminent men of all professions and employments, were drawn toward him, it was a very striking fact, that when he was conversing in low tones on the front piazza, the mountain stage drivers would gather closer and closer around and listen to him in absorbed silence. We had had many a great talk there, but of no other man could this remarkable fact be recorded.

I have said nothing of his life and work in Philadelphia, his devotion to the poor and oppressed, his usefulness among the Friends, where he was a minister of the Gospel for thirty-five of his seventy years. My knowledge of him was not there. I know him as a man in social life, among men. And I think I loved him and every one loved him, and he had power and influence, and accomplished great good, all because in his life among men he was a man of God, and made every one know it. He was a living proof that a man can be a companion of his fellow men, a scholar, a delightful addition to society, a lover of beauty, a giver of happiness to young and old, an ornament of social life, and yet always and everywhere carry to the heart of everyone he meets the conviction that that man lives close to the other world. Meeting such men, you cannot help—I care not who you are—you cannot help feeling that though they be like us, and of us, with our bone and blood and passion, they have somehow, with outstretched right hand, a grasp on something invisible but firmer than anything our miserable philosophies and sciences can give us to hold on by.

I am afraid that some of Samuel Bettle's friends in Philadelphia may think I do wrong to write thus of him who would rather go in peace and be forgotten. It is not to praise him I have written. But of such as he this world has too few, and since he has gone out of it into the light he desired, I think he himself approves my motives in this much, that I would, if possible, preserve yet a little longer the good his presence did while yet among us.

To some, the foregoing from the pen of Wm C. Prime may appear as too eulogistic of the creature, but having known S. B. intimately, from 1843 to the period of his death in 1880, I can truthfully approve of it and willingly bring it into notice as another striking evidence of the power of Divine Grace to redeem and bring poor fallen man up from a state of nature to a state of Grace.

W. P. T.

ARMOR-PLATED BOYS.—It is important, in these days, that America should have armor plated boys. A boy needs to be iron-clad on—

His lips, against the first taste of liquor.
His ears, against impure words.
His hands, that they handle nothing wrong.
His heart, against irreverence and doubt.
His feet, against going with bad company.
His eyes, against dangerous books and pictures.

His pockets, against covetousness and dishonest money.

His tongue, against evil sentiments.
The Christian armor on her citizens gives more security to the nation than all the "armor plate" can on her ships.—*Selected.*

Notes on Tuskegee and the South.

(Concluded from page 212.)

On our second day we were taken by friend Palmer, in company with Loring A. Chase of Chicago and Roscoe Conklin Bruce, a senior at Harvard, on a pleasant drive in the adjoining country. The day was summer-like and our trip was rich in interesting incidents. We stopped first at a typical country school. There were forty pupils present out of eighty-five enrolled, and the teacher was a Tuskegee graduate. The school-house was innocent of windows and most of the shutters must be closed in cold weather. Two small stoves, holding less than a peck of coal, were supposed to furnish heat, but to us school seemed impossible here under ordinary winter conditions. We found good work, however, and a good spirit, and when our friend Bruce had made a neat little speech it was re-produced first by a boy, then by a girl in a manner wholly creditable. Our object in this expedition was to meet a Tuskegee graduate who is managing "The Northern Improvement Company." This enterprise is established to stimulate the ownership of land in fee by the negro, and in less than a year has had a measure of success. As we waited by the roadside for a messenger to find our man, a somewhat typical Southerner drove up in a buggy. Our Chicago friend saluted him and an interesting dialogue ensued. They had both been in the war and the Southern man could only account for the escape of the Northerner on the theory that they had not then met. Speaking of Tuskegee, brother Ashurst, for that was his name, said, "It gets ahead of me," and, "Booker Washington is as great as the greatest, ain't he." Our graduate's name was Chalmers, and he now came up and escorted us to the saw mill, a mile off the road in a sandy piece of wood-land. Here timber is prepared for the houses of the settlers and the combination of enterprise and Christian philanthropy seemed complete in our new friend. Truly the spirit of Tuskegee is spreading!

In the afternoon the two fine teams were again at our disposal and we turned to the town of Tuskegee. Our errand in the town was to see the Institute through the eyes of the town's people, to meet a Tuskegee graduate who has prospered as a merchant and to inspect a "Female College" reputed to be one of the leading educational institutions of the South. The President of the Board of the college is the senior doctor in the town and we came upon him at once upon arriving. He joined us in one of the carriages and we drove to the college building. One of the Philadelphians, with Palmer and Bruce, took a drive during the inspection, but those who saw the equipment felt regret for its limited character and had the idea that the young ladies would be better off in some well-equipped college in the North. The President evidently is a man of ability and admirable character, and he and the President of the Board spoke in high terms of Booker Washington and his work. This testimony was further corroborated by the member of Congress and by other prominent white men of the town. Turning into the principal grocery store of the place we were met by an affable colored man who confessed to being the proprietor and who had an evident pride of a commendable character, how-

ever, in the fact that he is a Tuskegee graduate. The brick store fronts on the Court House Square and extends for some distance on the side street where there is a barber shop and a law office. The whole property belongs to the grocer. Over the store a large room is furnished as a school-room and a night school is conducted under the direction and care of the Institute. A few doors beyond is a small library room managed by an undergraduate of the Institute. Tuskegee was once an aristocratic centre in the South, and several old time mansions present their colonial fronts to the streets of the town or to the roads that centre in the town. On our return trip we passed the site of the original Institute. A new church building had taken the place of the old structure in which Booker Washington first taught, but we learned that the forlorn building that served as an additional school-room in which it was necessary to hold an umbrella over the teacher during a rain, is still standing.

Our time at Tuskegee was now about spent. A good supper, warm farewells on every side, and we were whirling along the road to town again to take the train connecting with the north-bound express. Rarely in our life-time had two days afforded so much of interest and so much for serious but hopeful reflection. The points in the work of the great school that most impressed us can be briefly stated, but the range of the work and the power of it, can not readily be transmitted in writing. Every one must note the earnest spirit of the place. The staff of teachers and the student body are harmoniously active, and no trifling is observed. Doubtless trifling characters come to Tuskegee, but they are transmuted or retire. Equally evident it seemed to us is the high moral tone of the place. "Manners maketh man," and not a little of that refined courtesy for which the South has been noted has descended upon the colored race. But deeper than this, one is justified upon investigation in saying that the atmosphere of the place is pure just as its ideals are noble. The two things belong together, of course, but they are not always found together. Finally the great ideas that we have heard the founder of Tuskegee preach so fervently have here a permanent form in a living and growing organism. The place still needs the man, but should the man depart, the place and the work will go on. Moreover, we left Tuskegee with the conviction that such centres will multiply, and that the multiplication of such centres means not only a solution of the race problem, but a solution of the world problem as well. Trained to serviceableness along lines of independent activity a man, white or black, takes his place in the social order and rejoices that God has given him work to do.

Our return trip from Tuskegee contemplated a stop at Asheville on our way to Christiansburg, and a day at Christiansburg and at Hampton. We found Asheville in the rain but could enjoy the sweep of the valleys and the somewhat obscured outlines of the encircling mountains. The resort is much patronized by consumptives who are often benefited by the mountain air. Our specific business was to meet with another Tuskegee graduate, and to observe his work as principal of the Col-

ored High School. The school we found closed for vacation, but so far as a man and a schoolhouse can reveal a work, we were pleased again with the Tuskegee product. In this instance the graduate is an expert carpenter, but beginning with elementary Sloyd he hoped to develop a manual training course in a school that has now nothing but book instruction.

By his kindness we were shown through thirty thousand dollar building contributed the Vanderbilts for a work among the colored people on Young Men's Christian Association lines. There are bath rooms in the basement stores and rooms for rent on the first floor an auditorium, reading room, sitting room, a play room in the second story and the inevitable night school that every Tuskegee graduate seems ready to establish, in the third story. None of these classes or privileges are to be had free for any length of time, but a large and growing membership attests the value of putting some slight premium on opportunity. Indeed, we learned that many of the so-called free schools in the South require a small monthly payment from pupils, much the principle of the penny-a-week charged some Board Schools in England.

Christiansburg is not easily accessible from the South, but a day's journey from Asheville should have put us there. Two days, however, of unusual rain had caused communication to be suspended and no guarantee trains for several days could be had from the railroad men. In view of this and the danger of travel after washouts, we reluctantly turned toward Hampton. Booker Washington in his annual report speaks of Christiansburg as representing the Tuskegee spirit in Virginia, and we were anxious to see how the work had progressed there. Without seeing it, however, we have new confidence to believe that Friends have a much louder call than they appreciate to give themselves and their money to developing this opportunity that belongs especially to them. It seems shameful that the modest but growing needs of this school are not better supplied.

The ride from Asheville toward the east carried us through rough but attractive mountains, through tunnels and around spiral curves that are certainly feats of engineering. Darkness found us approaching Salisbury, N. C., and here we were obliged to wait several hours for the sleeper to Norfolk. It was near 2 A. M. when we got it, and so tired were we that we hardly appreciated the fact that we had been side-tracked at Danville, Virginia after about two hours progress. The swollen waters of the rivers before us had submerged the tracks and after waiting till mid-day we gladly took the north-bound express for Philadelphia. Twice during that journey we saw wrecked freight trains, due doubtless to the storm, so that we had an unusual sense of preservation from danger.

Doubtless there was an advantage in having Tuskegee as the single feature of our trip. It gave everything in our experiences there individuality quite apart from the confusion of multiplied pictures. Measured, however, any standard, Tuskegee is a very remarkable place. Educationally, socially, morally it presents a practical solution of the problem of the colored race, but as indicated above it is no less significant to the white race, and re-

ts a very fair realization of the best educational theory the world over. So money invested at Tuskegee is sure to yield a large return. The fifty dollars a year that supports a boy or a girl may not produce a Booker T. Washington, but it is fairly sure to produce a Crummell. Washington spirit, and that is the great spirit whether it runs a saw-mill, keeps a store, or builds up a great school.

THE YEAR OF RELEASE.

As the bells rang their peal through the wintry air, the worshippers hushed as in prayer, and the people turned gladly to friends who were near—

“Whispered, ‘God give you a Happy New Year,’ and went forth from God’s chamber of peace, and some there was dawning the year of release.”

He knew not the sign that was set on their brow, that happy ones soon in his presence to bow, and the late light came in and began a new day—saw not the messenger placed in the way; said, “Will the toil and the sorrow increase?” He feared they had entered their year of release.

He courage they patiently turned to their task, strength, not deliverance, dared they to ask; sighed as they took up their burdens again—sorrow and weariness, sickness and pain, ventured to hope, that their troubles would use, and become theirs, in this year of release.

He could they but know what the New Year would bring, the glad songs of freedom and hope they would sing! willingly suffer and toil for awhile, and willing eye of their Lord and his welcoming smile; the “patience of hope” would grow strong and increase, they counted the days of their year of release.

When it is passed the King’s face they shall see, never from sorrow and sighing be free; all things that perplex them shall all be made plain.

“The evils of sin never touch them again; will gain the bright country of pleasure and peace, the happy ones living their year of release.

“They are they thus near to the end of their way, sad faces waiting that wonderful day! now not, they know not, the Master alone, who shall have rest in the joy of his throne, may say while our spirits grow strong in his love, may be, it may be, my year of release.”

“We live with that hope in our hearts day by day.”

“We can hear that which passes so swiftly away; is work yet unfinished, tasks yet to fulfill; lessons to learn of our Father’s good will; as we spend, as for Him, the time shortly to cease, God makes us meet for our year of release.”

MARIANNE FARINGHAM.

“With the wise and the foolish virgins rested and waiting for the coming of the Bridegroom. The wise ones enjoyed the sleep of rest; the foolish gave themselves up to the number of the slygard. But for these there was a rude awakening. When the call came announcing the arrival of the Bridegroom, the wise virgins arose from their rest, dressed and ready for the wedding. The foolish ones were confused and dismayed, for they were not prepared. The Son of Man is

coming for each and all of us and at such an hour as we know not. We may grow weary of waiting for his appearing and must needs rest by the way, but knowing that everything is in readiness for the Master we may quietly enjoy our repose and awaken ready to receive and greet Him.

FOR “THE FRIEND.”

Ancient Printed Bibles.

On page 178 of the current volume of THE FRIEND there is a paragraph headed “The Oldest Bible in this country” in which is given an account of a German Bible printed in Zurich in 1553. It is certainly a most valuable and interesting volume but it is quite erroneous to say that it is the oldest Bible in this country. There are a number of older ones though they are of course scarce.

In Friends’ Library, Philadelphia, there is a Crummell Bible printed in 1539 which, it will be seen, antedates the one above referred to by fourteen years. It is one of the group known as “The Great Bible” and is a large volume about fourteen by ten and a half inches in size, printed in old English black letter with pictorial title pages. There are also many small illustrations scattered through the text. The printing is in two parallel columns on each page three-and-a-half inches wide, paragraphed and with chapters only, the division into verses having been a much later invention.

The Old Testament is divided into three sections, each of which has an appropriate title. There is, of course, the main title page at the beginning; then before Joshua another which designates those following as far as Job inclusive, as “The second part of the Byble,” and the remaining one designates the books from the Psalms to Malachi, both inclusive, as “Third part of the Byble.” The Apocrypha has a separate title page and there is one to the New Testament similar in its main features to that at the commencement of the Old Testament.

The main title page is said to have been designed by the celebrated Hans Holbein and is most interesting. It embraces upwards of fifty different figures. At the top the Saviour is represented with both arms outstretched. Immediately below is King Henry VIII, seated on his throne with a Bible in each hand with the appropriate metal clasps and inscribed with the words “Verbum Dei,” which he is handing to bishops and clergy on his right hand and to Crummell and others of the laity on his left. To the former he says in Latin: “These things command and teach” (1 Tim. iv. ii); to the latter “Judge righteously . . . ye shall hear the small as well as the great” (Deut. i. 16-17). Lower down on the King’s left Crummell appears a second time handing the Bible to the laity, and on the same level on the other side is Cranmer in his cardinal’s hat likewise handing the sacred volume to one of the clergy. Still lower down and at the bottom of the picture is seen a preacher speaking to a large gathering of people consisting of men, women and children, many of whom are represented as exclaiming in Latin “Vivat rex,” or in English, “God save the King.”

This Bible was included in the library of our friend John Pemberton who died in Germany in 1794 when on a religious service, and was

bequeathed by him with other books to Friends’ Library. On the fly leaf in his own hand is written “Jno. Pemberton, bought at Colchester, 9 Mo. 25, 1753.”

But the Crummell Bible is but an infant when compared with a Latin Bible belonging to the Biblical Library of the Bible Association of Friends in America. Its age is indicated at the close, as was the practice in early times, in a brief paragraph of which the following is the translation:

A Bible set forth imprinted at Venice by Leonard Vuid of Ratisbone at expense of Nicolaï of Frankford.

MCCCCXXVIII [1478]

On the fly leaf is written “This venerable copy of the most venerable of books, was presented to the Bible Association of Friends in America by Samuel George Morton M. D. Sept. 28, 1833.”

This splendid Bible is about eleven by seven and a half inches in size with broad margins, the letter press which is in two parallel columns on each page, covering about seven and a half by five inches. The old English style of letters is used. The text is paragraphed and the initial letter of each chapter illuminated by hand. There is, of course, no division into verses. As a specimen of printing it is equal to the very best of the present day and excelled by none. It is in excellent condition in all its parts and bears no marks of decay though its life has been four hundred and twenty-four years.

It will be noticed that this Bible was printed fourteen years before America was discovered by Columbus, and seventy-five years before the Zurich Bible mentioned in THE FRIEND was produced in 1553 by the Carthusian monks, and most probably long before they were born.

It may be added that it is generally admitted that the first Bible printed (and also the first book printed with movable types) was produced at Mentz by Gutenberg. It is without date, but is believed to have been issued some time between 1450 and 1456. The second and third printed Bibles were also without dates, but the former is supposed to have appeared in 1460 and the latter in 1460 or 1461. The fourth printed Bible was the first with a date, and it was issued in 1462 also at Mentz.

GEORGE VAUX.

Twelfth Month 30, 1901.

CHRIST’S WAY WITH THE HOPELESS.—Nothing is more touching in the history of our Lord’s earthly life than his manner of intercourse with the despondent and even desperate. His presence inspired them almost inevitably with courage, and He evidently addressed them in a way to which they were unaccustomed and which others seldom used. No matter how forlorn the case, how despondent the heart of any man or woman whom Jesus met, He never rebuked them unless rebuke was actually the one means of revealing his absolute comprehension of their hearts’ necessities. That was the thing which had to be done if they were to confide in Him and receive a blessing from Him, and once in a while it could be done only by sharpness of speech.

But ordinarily a milder method sufficed, and He spoke to them in tender words to welcome and sympathy, revealing to them from his first

syllable that they were not repulsive, as others usually regarded them, that He valued them highly as God's own children and his brethren. . . . The service which we render the poor and the needy, the downcast and disheartened from a sense of duty is better than nothing and often is valuable to them. But only that service which is the gift of love, and of that degree of love which in some measure approaches the love of Christ for them, only that can do for them such a work as He did.—*Selected.*

FOR "THE FRIEND."

Certificates to Friends Traveling in the Ministry.

Friends have never considered, nor do they now, that as brethren in Christ there is any power vested in us as a church, whereby we can either call or send one of Christ's ministers to labor, either among ourselves or to others. This is the prerogative of Christ alone, the Master and Head over all. The call and qualification for the work must first come from Him. And even after having been sent to labor, God reserves to himself the times and seasons of his favor. They are essentially his laborers, sent forth to do his work, imbued with power from on high to do it. Without this power, they of themselves can do nothing. A memorable precedent is related in Holy Scripture. "And it came to pass on a certain day, as Christ was teaching that there were Pharisees and doctors of the law sitting by . . . and the power of the Lord was present to heal them" (Luke vi:17). It was for this power the apostles, after having received their commission were yet to wait for at Jerusalem until they had received this essential qualification for the work of the ministry. Consequently their ministry was "in the demonstration of the spirit and of power;" they were not "ministers of the letter [only] but of the power." And it was only through this power of the Spirit by which sinners were converted to God, or saints edified or built up in their most holy faith. This baptizing ministry, converting sinners, tendering hearts, warming brethren in Christian love to God and one to another is the true sign and seal of one being truly sent of God, the surest proof of God speaking in and through him.

Yet these certificates are the outcome of that comely gospel order and discipline bequeathed to us by our forefathers in the Truth, to guard against any one traveling in the ministry whose gift, or life and conversation are not approved of or accepted by his brethren at home. The certificates given simply testify to the unity of his Friends with his call, his ministry, and the particular work or concern in which it is his prospect to be engaged. With their indorsement he becomes, as Paul said, not only the servant of Christ, but a messenger of the Church which "sends" him, to the churches to whom he may be sent. All such ministry, rightly exercised under the direction of Christ by his Spirit, and in his power, time and again vouchsafed as needed, is one of the chief means by which the Lord brings his children into the unity of the faith, into the oneness of word, mind and heart. Rightly spoken and rightly heard, its fruit is peace.

How beautiful upon the mountains are the feet of him that bringeth good tidings, that

publisheth peace; that bringeth good tidings of good, that publisheth salvation; that saith unto Zion, "Thy God reigneth" (Isa. lii:7).

These coming in the name and power of the Lord, are the harbingers of the day of Christ, as it is written, Christ "sent them two and two, before his face, into every city and place, whither He himself would come" (Luke x:1).

He who is faithful and true did promise, "Lo, I am with you always, even to the end of the world," and these his weak, dependent ones, and his flocks whom He commissions them to feed, have oftentimes realized the power and glory of his presence, and have blessed his great and glorious name, whose goodness and mercy endureth forever. W. W. B.

FOR "THE FRIEND."

In reading reminiscences of departed worthies of Philadelphia Yearly Meeting my memory was revived of the introduction I had to Joseph Scattergood by John Read introducing me as a Friend from Farmington, New York. Joseph says, "John, I was not aware there were any Friends in Farmington," asking me if I took the FRIEND paper.—I replied, "I take the Friends' Review."

Knowing Philadelphia Yearly Meeting did not correspond with New York Yearly Meeting, I felt the question as a rebuke. But having heard others refer to Joseph as a very strong conservative, I accepted it as lacking in Christian charity. But some years after, my experience taught me Joseph was right in his conclusion, and saw me as I truly was. For I was not qualified to judge by the mind of Truth or by what little I had read of the inroads being made upon the principles and religious doctrine of the Society that were then developing a separation.

It is not my purpose to reflect on the past, although I often think there was a mistake on the part of many sound-minded Friends by keeping the existing unsound sentiments a secret from the young portion of the Society.

I think the Society would have suffered less if the unsoundness being cultivated had been met in its early rise. For when the unsound mind was sufficiently developed to assert itself, that knowledge needed to meet the unsoundness that was undermining the growth of spiritual experience, was lacking. An Episcopalian minister living in a western State writes a letter to another minister living in Canada, that the Quakers were conducting a revival in the city where he lived, expressing great surprise that Friends would carry on such methods contrary to the established order as he understood existed in the Society.

The Episcopalian minister who received this letter, meeting with an elder of the Monthly Meeting of which I was a member, related what his brother minister had written him, stating he was sorry to hear of "such departure from your established example. I fear it will shake Christendom from centre to circumference."

Recently in conversation with an Episcopal Methodist minister reference was made to the different bodies of the Quakers (as he called them), and particularly of the late separation of those who had taken the name of "The Friends' Church," expressing fear lest the cause of Christ had not been advanced by them.

Such minds as these ought to be subject

for serious thought in the members of our Society at the present time, lest the speculative mind supersede the age of sincere seeking and intellectual imagination be taken for spiritual guidance.

The conservative doctrine of the Society Friends will not be lost to the world for its primitive Christianity revived.

I fear too many of the past, as well as the many of us of the present time, fail to value the privileges we enjoy. How true, "Thy letter killeth, but the Spirit giveth life."

If we sow to the flesh we shall reap corruption, but if we sow to the Spirit we shall reap life everlasting.

This was the watchword of the worthy of who have finished their course and died peace, the sweet benediction of a well spent life. ANDREW ROBERTS.

CALDWELL, Idaho.

WAITING.

Sometimes there is more beauty shown
And greatness of his power
Within the sweetly waiting bud
Than in the open flower.

Christ's children have their waiting times
Beside some hindering sea,
To view the triumphs of his power
And blessed ministry.

These seas are all with blessings strewn,
And bordered by his grace,
And give within their hidden depths
To memory stones a place.

E. P. 1

SELF-STUDY.—When I was a boy I found I could always study better on a rainy day. I have since found that many people rather welcome a stormy day, because they say they get so much work done. Of course, the shallow reason is that they are less interrupted and less tempted themselves to go out. The fact is that there is something in the very atmosphere of a dark day which seems to tune up the hidden forces of brain and emotion. It is said that a great composer wrote his first symphonies when he was suffering the greatest physical pain. Certainly we know that some of our richest poems, like the *In Memoriam*, were written when tears flowed and heart ached. There is something of mystery in it; but the fact remains. I think one reason for it is that pain and grief clear the mind and leave the man to know himself. Trouble sways away as a mist all deceptions and false living, it leaves the man to see himself just as he is. Hence he can study his motives, his tendencies, his character honestly. Temporary pleasures, momentary delights, the glances of sunlight, are all taken away, and just as the eyes can often see farther on a cloudy day than in the full sunlight, so the man sees more exactly his life and all that touches his soul. Thank God that sometimes all the fine touches and adornments of existence are removed, and we see plainly. For God looks at the heart of us, not at the dress; and to enter life is to see it with his eyes. So, when trouble comes, when loneliness or grief approaches, when a dark day dawns, be glad that there is a chance for self-study, for stock-taking, for a clearing up, for a moral and spiritual house-cleaning. —*Tomkins.*

"No man has yet been able to tell the value of one hour."

Science and Industry.

VARIATION OF THE COMPASS.—Few familiar sayings convey a more erroneous notion than the phrase "true as the needle to the pole." In order to keep track of the unfaithfulness of the needle to the pole, or the "variations of the compass" from the true north, the United States maintains a separate bureau, the United States Department of Terrestrial Magnetism. The government is now preparing, in co-operation with European countries, greatly to enlarge its work, and to make the investigations of 1902 memorable for their thoroughness.

The magnetic needle varies not only at different places, but the variation changes from year to year, and even at different times in the day. On the "magnet survey" charts are places which at a particular time have the same amount of variation are connected with what is known as an isogonic, or equal variation line.

Through those points on the map, in which there is no variation of the needle from the true north, a line, known as the agonic, passes. Iron deposits and mountain ranges modify the action of the unknown causes of the peculiar variation, and cause these lines to become even more crooked than those which mark equal temperatures, known as isothermal lines.

Isogonic charts may be accurate to-day and of small errors in a few years. The celebrated Mason and Dixon's line between Pennsylvania and Maryland, which was surveyed in the years 1763 to 1767, was run by the stars, not by the needle, a great piece of foresight in that day. If it had been surveyed by compass, in 1800, it would have shown a variation in some places of two miles. Were the line to be run by uncorrected compass to-day, the variation would reach nearly nineteen miles to the south and the rich coal fields of Maryland counties would be thrown into Pennsylvania.

The discovery of the magnetic needle's variations is believed to have been made during the age of Columbus. The disclosure really constituted a high tribute to the scientific notions of that day, even though it spread superstition among the ships' crews.—*Late Reviewer.*

The ocean used to be considered about as deep at its deepest as the highest mountains high. It has now been proved to be half feet again—that is, forty-six thousand two hundred and thirty-six feet.

MORE AMERICAN BRIDGES FOR AFRICA.—"A contract has recently been given the American Bridge Company of New York for the construction of twenty steel bridges along the line of the Uganda railroad in East Africa," says the *Railway and Engineering Review*. The amount involved is about one million dollars. English and Continental firms competed in the bidding, but their figures were too high, and they could not guarantee to complete the work in so short a time as that required by the American company."

CONSUL RAVNADOL reports from Beirut, says the *Scientific American*, "that olive oil has been used in large quantities, but more substitutes, and few salves are compounded without the aid of one of

them. Cotton-seed oil is a favorite substitute, but, according to an Egyptian newspaper, this is soon to find a sturdy rival in the form of the seed of the sunflower. Experiments made by German chemists have convinced them, it seems, of the availability of this cheap raw material and it may shortly become a valuable article of commerce. It is said to be convertible to many uses, and, besides having possibilities as a lamp oil, may be used for dyeing purposes, and will be of service in soap making.

THE remarkable performance of the submarine torpedo boat *Fulton* in staying under water fifteen hours, has elicited widespread comment. This was in the midst of a heavy gale, of which those on board knew nothing. The craft is sixty-three feet long. Its electric motor is of seventy horse power. It also has one hundred and forty horse power gas engine, and could travel one hundred and forty miles under water, coming to the surface only occasionally to take observations. When the time came for it to rise a large crowd had gathered on the shore to witness the finishing test. Promptly at 10.30 in the morning it rose so suddenly as almost to startle the people. The people within this ship of steel had been as comfortable as if in their rooms at home.

DURING the late hunting season Maine hunters killed five persons and wounded several others. In many parts of Pennsylvania a man can be mistaken for anything bigger than a rabbit. An end should be put to the acceptance of the declaration that such affairs are accidental. As some paper justly remarks, "Hunting moose and hunting squirrels appear to be alike fatal to human beings."

PEOPLE are asking why it is, with the growing use of the trolley and the automobile, that horses are dearer than ever. One reason is this: there are seven British transports at the docks and one in midstream, each awaiting for its turn to receive a cargo of horseflesh. These eight vessels in port Twelfth Mo. 5th, represent eight thousand head of horses and mules. Agents of the British government are scouring the West for more horses and mules, and for the past ninety days shipments have broken all records.

A LESSON IN ELOCUTION.—"The queer thing about the people who boast of always speaking their minds," said the merry girl, "is that they nearly always have such very disagreeable minds to speak. Did you ever hear any one preface a compliment, a commendation, or anything gracious or pleasant, by saying, 'I always must speak my mind?'"

"When any one begins that way, I wonder whether it is my conduct, my friends, or my last new gown, that is coming up for adverse criticism. Of course, if it is some of your elderly relatives or acquaintances, who have the habit, you can only be as resigned and respectful as possible; but I had a room-mate at school, a girl no older than myself, who had exactly the same kind of a mind. She had confronted me with it on several occasions, and so one day when she began, 'You know I must speak'—I interrupted her.

"Must you? Well, then, I've just come from the elocution class, and I'll tell you what the professor said: 'Never speak anything until you have studied it and feel sure that it is that worth speaking, that you are the person to do it properly, and that it will suit your audience.'"

"She looked at me a full minute without a word, but the professor's rule worked so like a charm that I've often wished since that all persons with minds they must speak could take lessons in elocution."—*Forward.*

Items Concerning the Society.

At New Garden Monthly Meeting, Pa., on the 8th inst., Cyrus Cooper was liberated by minute for religious service among Friends in Canada. Also to appoint meetings, as he may feel drawn to such service, in other places on his way to Ohio.

Harriet Green, from England, who has been laboring in the limits of Baltimore Yearly Meeting, has been expected to arrive in Philadelphia this week.

It is announced that George A. Barton, professor of Biblical Language and Literature in Bryn Mawr College, has been appointed director of the American School for Oriental Research in Palestine, and is released for the next collegiate year to have charge of this work.

There are many besides Friends who have never advocated war for the protection of Christian missions; would that their number were very much larger.—*London Friend.*

The Yearly Meeting has not been remiss in calling attention, from time to time, to the duties of parents towards their children; but I think many of our schoolmasters and mistresses could tell us of sorrowful evidence that has come under their notice, that there is still, in some quarters, room for improvement in the home-training of our children. . . . If children are sent to school without this religious training, the work of the schoolmaster or mistress is hard indeed. No sermons in the meeting-house, no instruction in 'Friends' principles' will avail to fill the void; the seed will fall on barren ground.—*Alfred W. Bennett.*

SUMMARY OF EVENTS.

UNITED STATES.—A resolution has been introduced into Congress by Senator Hoar asking for a special committee of investigation upon the present military and civil situation in the Philippines.

Since the offer has been made to sell the Panama Canal to the United States, the Isthmian Canal Commission has reversed its former recommendation in favor of the Nicaragua route, and has made another report in favor of the Panama route.

The Philadelphia County Medical Society on the 15th inst., placed itself on record in favor of vaccination. These resolutions were adopted unanimously:

"Whereas, Smallpox is continuing to spread among the people of the city; and

"Whereas, Sensational newspaper articles minimizing the importance of vaccination have caused a number of people to refuse the vaccination offered by the city physicians; and

"Whereas, Of the 977 cases of smallpox admitted to the Municipal Hospital during 1901 there was not a single patient who had been successfully vaccinated within a period of four years, those afflicted being almost exclusively unvaccinated persons or adults not vaccinated since infancy; therefore be it

"Resolved, by the Philadelphia County Medical Society, representing the physicians of the city and county, that this society deems it necessary to impress upon the community that universal vaccination is the most effective means of stamping out smallpox, and that, although fumigation and disinfection are valuable adjuncts, they can by no possibility do away with the necessity for vaccination since smallpox patients are the most important carriers of infection, and such infection cannot be in-

fluenced by the disinfection of smallpox. Be it further
 "Resolved, That publications which slur the importance of vaccination despite the incontrovertible testimony of science are to be deprecated as contrary to the best interests of the community. Such articles are known to have dissuaded people from vaccination who have subsequently died of smallpox."

The total membership in religious bodies throughout the United States, by the last census, is put down at 28,990,587, an increase of 1,000,000 over the last census. The increase of the general population in the last ten years was 2.18 per cent, showing that the membership in these bodies is growing rather faster than the population. The largest number in any one denomination is of Roman Catholics set down at 9,158,741. A dispatch says: "It has been long known that Quakers in the East are losing their old style in dress, language and forms of public worship, have been losing in numbers and influence, but for many years they have been growing in Indiana, Illinois and Iowa. Now it is shown by Dr. Carroll that Quakers in the West, where they have adopted the progressive methods of other religious bodies, are losing also, and that at a steady rate. Between 1870 and 1890, 7852 homicides were committed in this country last year."

Oscar S. Straus, of New York, formerly United States Minister to Turkey, has been appointed as a permanent member of the Committee of Arbitration at The Hague, to fill the vacancy caused by the death of ex-President Harrison. He presided at the recent great conference between capital and labor, and was made Chairman of the committee appointed to bring about a lasting basis of peace between the two. He now, therefore, holds a double position as peacemaker. He says that he will accept the appointment, which he regards as one of high honor.

A despatch from Washington of the 17th says: President Roosevelt took to-day the first step in restoring to the China the property belonging to her, seized by the United States. He directed Secretary Long to deliver to the State Department, for transmission to Wu Ting Fang, the Chinese Minister, the sum of \$375,000. This amount represents the value of the silver bullet seized in the Salt Water case, at Tin Tin, by United States marines. The silver was found by American marines immediately after the capture of the city. It was appraised by a board of officers and sold, and the proceeds were transmitted to this country and deposited in the Treasury by Secretary Long. It was thought that an act of Congress would be necessary in order to draw the money out of the Treasury in case of its repayment to China. The authorities have decided, however, that Congressional action is unnecessary.

A circular letter sent to Indian Agents throughout the country by Commissioner Jones contained the following: "You are directed to induce your male Indians to cut their hair by the use of the safety razor. With case of the Indians this will be an easy matter; with others it will require considerable tact and perseverance on the part of yourself and your employees to successfully carry out these instructions. With your Indian employees and those Indians who draw rations and supplies it should be an easy matter, as a non-compliance with this order may have serious results in withholding their rations and supplies. The wearing of citizen's clothing, instead of the Indian costume and blanket, should be encouraged. Indian dances and so-called Indian feasts should be prohibited. In many cases these dances and feasts are simply subterfuges to cover degrading acts and to disguise immoral purposes. You are directed to use your best efforts to suppress such dances and feasts."

An invention is announced which by means of wireless telegraphy notice is given to a locomotive engineer, when another locomotive is within 2000 feet of it on the same track, whether it is moving or standing still.

The Director of the Census has announced the percentage of increase of population in different parts of the country, showing that the rate of increase has decreased from previous rate of growth of population in the West, a less marked but decided decrease in the North, and a slight decrease in the South. For the first time in the history of the country the population of the South has increased somewhat more rapidly than that of the North. Prior to the Civil War the North had nearly doubled in population with each twenty years, while in the Southern States the increase of population was only about two-thirds as great. Since 1860 the rate of growth in both parts of the country has been much less; but while the rate of growth in the North has decreased steadily, that in the South during the last twenty years, from 1860 to 1890, has been slightly less. During the nearly twenty years there has been no substantial difference in the rate of growth of two sections. The frontier, as a large area of rapid but intermittent growth, is no longer an

important factor in the progress of American population, and the rate of growth in the several great areas in the United States is now nearly the same. The case of cancer has been successfully treated in New Haven, Conn., by the X-rays. The cancerous growth was of three years' duration, and was not susceptible to the usual treatment. It was eleven inches wide and seven inches deep. Twenty minutes every day the patient sat before the X-ray machine. He stated that the right rays pierced the growth with intense burning sensation, eating through and through. The growth diminished gradually, until at the end of five weeks the patient is declared cured.

A despatch to the *Public Ledger* from Washington of the 16th says: "The proposition as to whether the United States shall be considered in the singular or plural number was under consideration to-day by the House Committee on Revision of the Laws. Those who contend that 'are' is the proper verb to use in reference to the United States rested their contention upon the language of the Constitution. It having been decided to refer the matter to the Librarian of Congress for investigation, it was found that nearly all the messages, documents and laws in the early days of the Republic used the plural verb. The tendency, however, has been steadily toward the singular form, while for the last fifteen or twenty years the singular form had obtained almost exclusively. The Committee decided after consulting the authorities that legally it is proper to use the singular verb, 'is.'"

There were 502 deaths in this city last week, reported to the Board of Health. This is 31 more than the previous week and 25 more than the corresponding week of 1901. Of the foregoing, 261 were males and 241 females: 42 died of consumption of the lungs; 99 of inflammation of the lungs and surrounding membranes; 18 of diphtheria; 18 of cancer; 12 of apoplexy; 5 of typhoid fever; 2 of scarlet fever, and 16 of small pox.

COTTON closed on a basis of 8½¢ per pound for middling uplands.

FLOUR.—Winter, super, \$2.75 to \$3.00; Pennsylvania roller, straight, \$3.00 to \$3.80; Western winter, straight, \$3.70 to \$3.80; spring, straight, \$3.60 to \$3.85.

GRAIN.—No. 1 hard wheat, \$6.60 to \$6.65.
 No. 2 mixed corn, 66½ to 67½.
 No. 2 white oats, clipped, 54.

BEEF CATTLE.—Best, 6¼ to 6½¢; good, 5½ to 5½¢; medium, 4½ to 5¢.

SHEEP.—Extra, 4½ to 4½¢; good, 4 to 4½¢; common, 2 to 3¢.

LAMBS.—4½ to 6½¢.

HOGS.—Western, 5½ to 9¢.

FOREIGN.—The Empress Dowager of China has issued an edict which has been conveyed by telegram of the 11th instant to the Chinese minister at Washington: "During the disturbances caused by the Boxers last year the American commanding officers issued strict orders to their troops to use strenuous efforts to protect the buildings within the Forbidden City. This was an act of friendship worthy of imitation, for which we feel extremely gratified and grateful. Therefore, instruct Wu Ting Fang to convey our expression of thanks through the Secretary of State to his Excellency, the President of the United States. The people of China are very grateful to the United States for the protection of their lives and property. In a recent book of travels in China special notice is made of the general honesty of the people, as illustrated by the numerous stalls and shops that are left to look after themselves without danger of theft."

The Empress has also issued an edict which in strong terms admonishes all officials to protect and maintain the rights of Christians, and forbids discrimination against Christians. And again she directs that a large number of officials for complicity in the Boxer movement.

The British Parliament was opened on the 16th by King Edward in person with elaborate ceremonies. In a discussion upon the war in South Africa the premier Salisbury said that no overtures for peace had been received from the Boers.

Of all the newspapers published in the world 68 per cent. are in the English language.

Vladivostok, on the Sea of Japan, which forty years ago consisted of four Chinese fisherman's huts, is now a flourishing city of 50,000 people.

The North German Lloyd Company is building a steamship which will have a contract to leave New York in 24 hours, calculated to propel it from Lizard Head to Pireland in four days and twenty hours. The vessel will exceed its predecessors in every respect. Its length will be 707 feet. Its horse power will be 40,000—4400 greater than its nearest rival, the *Deutschland*.

During the reigns of Reuben and Elias, who ascended from Berlin in a balloon driven by a motor, on the 15th instant, write from a village in Southern Russia, in the Government of Poltava, that they made 868 miles in

twenty-nine hours. The highest altitude reached 16,250 feet.

Excavations of the remains of prehistoric lakes dwellers on the river Save, near Dolina, in northern Bosnia, have brought to light four dwelling houses built on piles, numerous products of the potter's art, utensils of brass, silver, gold and amber, seeds and bones. A boat 12 metres long hollowed out of the trunk of an oak has been exhumed, which is estimated to be 8,000 years old.

Earthquake shocks were felt in different parts of Mexico on the 16th and 17th instants, doing great damage certain localities. In the town of Chilpancingo, 120 miles southwest of the City of Mexico, it is reported that 300 persons were killed; and that it will have to be thoroughly rebuilt. The volcano of Colima, about 100 miles west of the City of Mexico, is again active.

NOTICES.

FRIENDS FREEDMEN'S ASSOCIATION expect to send good to their school for colored youth at Christiansburg, Va. A sewing class there is thrifty in making over partly worn clothing—men's or women's. The library needs book clothing, materials, shoes and books may be sent Friends' Institute, 20 S. Twelfth Street, on or before Third Month last, marked "For Christiansburg Industrial School."

WESTWON BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard instruction and discipline should be addressed to WILLIS F. WICKERSHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded EDWARD G. SMEDLEY, Superintendent.
 Address, Westtown P. O., Chester Co., Pa.

WESTWON BOARDING SCHOOL.—For convenience of persons coming to Westtown School, the stage will train leaving Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met when request Stage fare, fifteen cents; after 7.30 P. M., twenty-four cents each way. To reach the school by telegraph, W. West Chester, Phone 114.

EDWARD G. SMEDLEY, Sup't.

MARRIED, at Friends' Meeting-house, Moorestown, N. Tenth Month 10th, 1901, WILLIAM MARTIN, M. D., Bristol, Pa., and ELIZABETH E. KAIGHN, daughter of Ab E. and Lucy E. Kaighn of Moorestown.

DIED, Ninth Month 23rd, 1901, at her home in Ches Hill, Ohio, GAYNOR P. BURGESS, widow of Elwood Barr, and daughter of David and Julia Ann Barr; was seven years the seventh of Eighth Month. She had suffered mortally affliction through life, and had been in declining health for some years. In her last sickness, of a few weeks' duration, she was visited by a number of those who waited on her, manifesting an affectionate interest in Friends who called to see her, and saying, "I am glad to see all."

—, at her residence near Chesterfield, Ohio, on the sixth of Eighth Month, 1901, TACY MORRIS, daughter of Jonathan and Mary Perkins, and widow of the late Nathaniel Morris, age ninety-five years, one month and twenty days. She was a beloved member of Chesterfield Monthly and Particular Meeting of Friends, having submitted early life to the purifying baptisms of the Holy Spirit and joined Friends' Society as that of her choice. When about eighteen years of age she became very much affected with the "falling sickness" and testimonies of early Friends, attending meetings twice a week, until infirmity of old age increased and confined her to her bed for several years; but she was never heard to mourn. The writer has heard her say, she longed "to go and be rest, but wished to wait her Master's time." She continued in a sweet, innocent frame of mind until the close. She leaves eight children to mourn their loss with her many friends. She was universally esteemed by all who knew her. We feel the blessed assurance that our loss is eternal gain, in that happy home with her dear Redeemer, in Moorestown, N. J., on the seventh of Ter Month, 1901, EDMUND C. WORTHINGTON, son of Susan R. and the late J. Willits Worthington, in the twenty-fourth year of age; a member of Chester Monthly Meeting of Friends, N. J.

Authorized Christian Endeavor.

To-morrow marks the twenty-first birthday of the "Christian Endeavor" societies, spelt so called; whose beginning was in Portland, Maine, under a simple plan of Francis Clark to gather the young people of his church together that he might organize them for "for Christ and the Church." This movement grew to unexpected proportions. To-day it has about seventy-five thousand societies, and a membership of over three millions. The event is a wide-spread echo to young people's natural desire to have something to do in societies of which they are members; and if they were rightly set to work as was the case in the days of "our young Friends" James Parnell, Edward Burroughs, Robert Barry, and a strong list of valiants under the age of thirty, in whom the Spirit of Christ depended on as the fresh initiative of every work and service, and young men not only saw but were obedient to their heavenly Father, then the problem of Christian endeavor would be demonstrated on lines not of law, but of the gospel.

For law-work and gospel-work differ in this, that whereas the key-note of the law says, "thou shalt live," that of the gospel "Live and thou shalt do." But "by the deeds of the law shall no flesh be justified." Law-work may serve in the line of education, but may eventuate as "a schoolmaster to lead to Christ;" but our efforts need to spring from our life in Christ Jesus, as prompted and pressed in his living authority, if they are to be truly of Christian endeavor. "Without us we can do nothing" in his cause. "He that abideth in me and I in him, the same shall bring forth much fruit." "No fruit remains," says Mary Ann Kelly, "but that which

has been wrought of God, and which has been conceived and brought forth in the abiding Spirit of truth. Look, with a serious and devotional mind, upon your own past doings, and the doings of those with whom you were most intimately connected; and see if they have not been 'as water spilled upon the ground that cannot be gathered up again,' utterly profitless and fruitless, except in so far as a sense of God was prompter of them?"

The drill of man-made and man-appointed services,* the gymnastics of organized effort, have indeed all the ethical value in church work that they develop in club or association work and with this superiority that their object being Christ and one's church, the higher aim is believed to raise up a nobler zeal.

But whatever spiritual, connected with the numerical gains have been given through this rapidly expanding movement, doubtless every Friend would rejoice in every evidence of them. For spiritual gain is our business and as we are faithful in it, it will be our rejoicing wherever seen and through whosesoever hands it is prospered. But should we see the work of worship superseded by the worship of work, we could only acknowledge the increase of vivacity while deploring the decrease of life. Then the living Friend, and therefore living endeavorer as a "laborer together with God," should be the one who could say, "and yet I show you a more excellent way."

The world wants a Christian endeavor that is Christian because Christ in every instance is its initiative,—the Word in the beginning of it, without whom not any thing is done that is done. This is the more excellent way given to us as a people to show, and not idly to profess while pointing back to the sons of our morning who did practically show it.

The popular view of Christian work or endeavor work looks to the desirable end to be accomplished as the worker's warrant to proceed in it. Whereas the Friend's view looks to the opposite pole—the authority of Christ at the beginning for him to enter upon the

*The importation into our own religious Society of a system which looks to the assignment by a "leader" (or book) of parts to be performed in worship, would be as destructive of Quakerism in devotional meetings of one class under our name as of another. Once the principle of stated or studied exercises for worship gets entered, in any apartment, then that of a waiting on the "Head over all things to his church" sees its excommunication awaiting.

service, and looking to that inspeaking authority to be his good courage all through. Or the popularly assumed warrant may be some general text of Scripture which one may appropriate to himself as one of those on whom the verbal commission was charged. Indeed he is frequently taught that the gospel is a gospel of "go," while the Friend is taught that the gospel is "power unto salvation," and it is a gospel of "therefore" before it is a gospel of "go." In what is sometimes called the "great commission," and sometimes "the marching orders of the Church," the "therefore" of the Christian "go" expressly refers back to Christ's authority. "All authority is given unto me in heaven and in earth. Go ye therefore,"—or in that "authority," which must be the witness of his Spirit anointing one with his commission. And he immediately reinforces this, by making the "go" inseparable from authority to baptize souls into the Divine name; which is his power and holy life, in the three great manifestations by which He is known. Because then we say that the right authority for any piece of Christian endeavor or service must be the fresh witness and commission of the Spirit, do we preach therefore a chronic inactivity? Sloth may indeed be fixed on the sluggard because he prefers a little more slumber to the hearing of the word, "Arise and shine, for thy light is come," and so he perpetually excuses himself on the plea of absence of a commission. When commissions to duty are inconvenient or disturbing to the creature, it is easy not to be on the alert to hear the still, small voice; and so the abuse of the best doctrine of work may turn it to a doctrine of stagnation—"a savor of death unto death in them that perish." But how can obedience to the movings of Christ's Spirit, even if it require waiting and hearkening, be inactivity? If for every watchful sense of his authority there was the responsive deed done, if obedience had kept pace with knowledge, the earth would ere now have been filled "with the knowledge of the Lord as the waters cover the sea." But in a world where many who will work will not wait on the Lord for his word of movement, and many who will wait would turn waiting rather than hearkening to obey into a habit, and so lose their hearing, the increase of Christ's government and peace on

earth, has been sorrowfully frustrated for lack of the true Christian endeavor.

"If by the Spirit we live, by the Spirit let us also walk."

The George Junior Republic Vindicated.

Quite recently two great daily papers, one in New York the other in Philadelphia, have published serious charges against the work of William R. George at Freeville, New York. These charges were summarized under ten heads and included such matters as cruelty, under-nourishment, overwork and immorality in the association of the sexes. In order to investigate the situation most thoroughly the Bureau of Labor and Charities and the Society for the Prevention of Cruelty to Children in Syracuse, New York, combined in appointing a committee of three and in sending them to Freeville to study the case at first-hand. The public now has the benefit of a printed report from this committee dealing with each point of the newspaper charges. The report is a satisfactory indication of the unique work of the Republic. So far as the serious charges that concern health and cleanliness and morality were involved, the committee satisfied themselves that there was not a little malignity in the evidence upon which they were based. The children are adequately fed, fairly housed and carefully guarded from corrupting influences.

Upon the broader lines of the practical working of the democratic principles in a Junior Republic the committee does not impress us as enthusiastic. Our own observation at Freeville has been that self-control and self government predicate a rightful exercise of authority beyond that which is spontaneous in child life. Authority wrongly used is doubtless the prolific source of juvenile delinquents, but part of the Truth that makes us free is that often neglected truth that adult judgment and direction and control are essential parts of education for freedom.

The concluding paragraph of the committee's report is as follows:

The Committee finds that the working of the democratic principle among children has not shown a uniform grade of excellence, that the citizens have not had at all times the same enthusiasm, nor have the officers always felt the same degree of responsibility. Slack times will inevitably recur in the future, and if the management were inefficient such experiments would fail. But making all allowance for occasional lapses, the Committee considers the Republic to have realized more than it promised at its inception, and that it has well demonstrated that the democratic principle may be adapted to the needs of the children who are not blessed with the most helpful home surroundings and confer upon them a wholesome training for mature citizenship in the Larger Republic. J. H. B.

Barbara Everard.

In reading in Volume No. 2 of Friends' Library the life of Joseph Oxley, page 431, I was much interested in what he writes of a young woman, by the name of Barbara Everard, who seemed to be much afflicted in speech, etc., and yet her Lord and Master, whose power is not limited, and can do all things, made use of her as an instrument in his hands, to deliver the Gospel message. It brings to remembrance the Scripture language, "God has chosen the weak things of this world—and things that are not, to bring to naught things that are; that no flesh should glory in his presence." The circumstance seems quite a remarkable one to me. Surely, "His ways are past finding out." I have thought the account might be interesting to the readers of THE FRIEND. E. C. COOPER.

First Month, 1902.

Joseph Oxley in visiting says, "In this place lives Barbara Everard, a poor, honest, decrepit creature, apparently convulsed all over by which her speech is much affected, and understanding also. Yet the Lord has been pleased to make use of this young woman in an extraordinary manner, having bestowed on her a gift in the ministry, in which office she appears above many of far more natural talents; in common conversation she is difficult to be understood, being of a stammering tongue, but very clear in utterance in her ministry, her matter very correct and sound, opens the Scriptures very clearly, and preaches the Gospel with great power and authority and is of singular service in this place. She had at this meeting good service.

[The following is a letter written not long afterwards by Barbara Everard to Jos. Oxley.]
ASHWELL, Seventh Month 9th, 1760.

LOVING FRIEND:—This with my love to thee and thy loving wife, hoping these lines will find you in good health, as we are through the mercy of our God who is the Father and Fountain of all our mercies, to whom be glory both now and forever! Although we are far separated in body yet we are near in spirit, for I do not forget thee nor thy labor of love when amongst us, neither do I think thy labor was in vain, for it tended to encourage us to press forward towards the mark of the prize of our high calling in Christ Jesus that so we might come to the knowledge of the things that belong to our souls' everlasting peace. My desire is, that we may wait humbly for the teaching of that blessed anointing, that so we may witness a profiting, for the Lord is come to teach his people himself; yea, his presence is sometimes sensibly felt among us in our meetings. The sixth of the Sixth Month we were at Baldock Yearly Meeting, which was a large, good meeting. The testimonies were to the reproving of the backsliders from the Truth, and to the encouraging of the sincere and upright-hearted followers of our Lord Jesus Christ to hold on their way. At this meeting Isaac Sharpless gave notice that he intended to be at Ashwell meeting the First-day following; which was very large and a good open meeting, the Lord's presence being sensibly felt amongst us, to the comforting of the mourners in Zion, and I believe the Lord will have a people to bear testimony to his great Name and Truth in the earth, for

He is sometimes pleased to make use of me and contemtable instruments, to bear testimony to his great Name, of which I am so as thou knowest very well. Yet the Lord doth not forsake me, for He is near to be all those that put their trust in Him. For some time I had a concern upon my mind to go to a place called Weson, about two miles from Baldock, to have a meeting, where there had not been a meeting held for about twenty years before, which made me loath to give to it. But when the mighty power of God arose in me, I was made willing, and my cle and one of our young Friends went with me, and the meeting was very large, the being, as was supposed, two hundred people; and I had a good open time among them and they behaved soberly, so that I came away with a reward of peace in my own bosom; the Lord is a rich rewarder of all them that faithfully serve Him. Having given thee account how things have been lately in this parts, I conclude with praises and hallelujah to the everlasting God, who is near unto people in all their exercises, to whom be glory both now and forever, amen. My uncle Jo with me in love to thee and thy loving wife, our love is also to all sincere and true-hearted Friends." BARBARA EVERARD.

LADY MONTAGU INTRODUCED INOCULATION.—It was Lady Mary Wortley Montagu, surnamed the *Ledger*, who first introduced inoculation for smallpox in England. While residing in Belgrade, in 1717, she saw the Turks practice "engrafting," as they called it, to produce a mild form of smallpox, and stay its ravages. She examined the process, and, being convinced of its efficacy, applied it to her year old son. On her return to England she introduced it in London. At that time it was computed that one person in every seven died of the smallpox. Yet she was opposed by the entire medical faculty. By order of government, an experiment was made upon five persons then under sentence of death, and proved perfectly successful.

But, instead of Lady Mary being acknowledged as a public benefactor, she was persecuted with the most relentless hostility. "Listen," in the *Boston Transcript*: "the faculty rose to a man against her; even clergy desecrated on the awful impiety of going to take events out of the hands of Providence. The common people were urged to hoot her as an unnatural mother, who risked the lives of her own children. However, the Princess of Wales, afterward Queen Caroline, stood her friend, and truth and science finally prevailed. Some historian has said that England has owed her greatest blessing to women. It was about the year 1752 that Lady Montagu was honored by a monument erected to commemorate England's gratitude to her for introducing inoculation. Dr. Edward Jenner substituted cowpox inoculation in 1799. He lived to be rewarded by Parliament by a grant of £10,000, and later by a second grant of £20,000; and, in 1858, a statue was erected to him in London. As usual, on bare credit was vouchsafed to Lady Mary Wortley Montagu, who bore all the persecutions without any of the pecuniary reward she was entitled to, and by no means a fair share of the glory."

Sea Children.

Countless hosts of tiny creatures live in the sea. They are so very tiny that their very existence would have remained a secret had it not been for the microscope.

These minute creatures are so small that a drop of water contains many millions, and a drop of water is to them a complete world. They are called infusoria.

They exist everywhere, in salt water and in fresh, in hot regions and in cold. The great rivers carry enormous quantities of them to the sea. In a single year the river Ganges carries down to the ocean a mass of infusoria equal to the size of the largest pyramid.

Their bodies are transparent and of all kinds of shapes. Some are like a bell or a flower, or even like a mere grain. The most tiny of all are called monads. They are mere atoms that spin about in the water. For a long time people thought that the infusoria were transparent cells or bags that were filled with nothing but water, but this was found to be a mistake. The creature, instead of being a mere bag has four distinct stomachs. Indeed, some of its neighbors have as much as four hundred. Think of it! Four hundred stomachs!

You may imagine how difficult it is to study the habits and the mechanism of things so very small. Thanks to the microscope, it has been made possible. Professor Ehrenberg was one of many who gave himself up to this study, and I will tell you how he managed to make his observations. He put a drop of colored water on a piece of glass, and beside it he put another drop that had no color in it at all. Then—with the point of a needle he made a canal between the two drops. This answered his purpose. Through the microscope he saw the tiny creatures pass from the colored drops to the colorless. He could distinguish their stomachs and of color and he could count them, too, through their transparent sides. He amused himself with making the experiment first with red and then with blue.

These tiny creatures multiply in a variety of ways, some of which are very curious. One creature will divide into two equal parts, and of these parts being the exact image of the parent. Others drop tiny germs, or in eggs, which each in time begins to grow and whirling about in the sea a perfect creature. You would you believe it, minute as these infusoria are there are creatures smaller still, called parasites, because they feed on others, and fasten upon them and suck the juices of their bodies, one infusorium sometimes having many parasites living on it. I have not told you the most curious fact of all, however.

Infusoria has the power of dissolving itself into several parts or even into nothing. If we disturb with a feather the water which the little creatures are swimming in, they all stop whirling about in a moment. Then you will see a hollow place come in the body of the infusoria, that is, of course, as you look through the microscope. The hollow place increases little by little, and the creature is gradually dissolved. The creature was dipped in spirits of wine.

What agitated our little friend so violently. But add a drop of pure water before as had time quite to dissolve. Wonder of wonders! The creature stops in its work of

self-destruction. What is left of its body begins to swim about as if nothing had happened.

Have you ever seen the curious sponge called "Neptune's glove"? It is not very handsome to look at when alive. It is dull black above and a dirty white beneath. For a long time people could not make up their minds whether the sponge was a plant or an animal. It has a kind of animal life, and naturalists have placed it in the lowest rank of the animal kingdom.

When it lies in the sea it has a horny or stony network of a body, something like a skeleton. This network is full of passages or holes, and is covered with a jelly-like matter, which is really the living sponge. In its life, even, the sponge does not move. It remains all its days in the place to which it is attached under the water; all it does is to draw water through its pores or holes and let it flow out again. This is the means of nourishing it, for the water is full of particles on which the sponge may be said to feed.

The little points or buds sometimes seen sticking to the sides of the sponge are little baby sponges beginning to grow, which at last break away and move about in the water for a few days, until they, too, become fixed. Men dive down to get the finer sponges as they dive for coral, and when the sponge is brought out of the water the living, jelly-like body drops away and is gone. The skeleton is dried and becomes an article of commerce. So you see your toilet sponge is really a skeleton.

A little animal found in the sea, in rivers and in lakes of fresh water, etc., called a Polyp, sometimes a Hydra. It is very simple in its make-up. Its body is a mere bag with an opening at one end crowned with six very slender threads. This opening is the creature's mouth. The threads are its arms and the bag is its stomach. The polyp leads a very merry life. It fastens itself to some leaf or plant that grows in the water, and when it is quite settled it stretches out its arms to find something to eat. It can eat more than you may imagine. It often draws in more than its bag of a stomach can hold, and, what is funnier still, it will use one of its arms to keep the food in its place. If it did not do this when it had swallowed a worm, the worm would wriggle out of its mouth. After the worm is digested, the polyp pulls out its arm and becomes as lively as ever. You may think a worm is too large for greedy little polyps to handle, but it is not so. The polyps crowd around the worm, no matter how big it is, and tie it up in a network of arms until it cannot get away. When the battle is over, these strange little creatures slip away from each other and go on alone again, uniting to help each other when necessary only. What may seem still more odd to you is the fact that if by chance half of the polyp's body were cut away, it would go on eating just the same, swallowing and swallowing, even though the food keeps dropping out through the opening made in the back by the cut.

Each piece of a polyp, if cut up, soon grows into a completed polyp. A polyp has even been turned inside out like a glove, and been none the worse, its outside doing the work of the inside, and vice versa. The baby

Polyp grows like tiny buds on the body of the mother. These buds grow so quickly that a bud will hardly have become a polyp before, it in turn, puts out another bud.

Have you ever seen coral? Well, there are social or coral making polyps who live in harmony, each in its cell, a number of which forms one entire house full of polyps. The living polyp is at the top of these houses; the dead part is at the bottom and this is the history of the coral reefs. These greedy little eaters work their way up through the various changes, and in time build up this house, which is really a kind of living house, and, as the polyps go on building new parts of this house, they keep on climbing higher and higher, leaving the old part below, which becomes dead and hard like stone. Their useful appetites clear the ocean and other waters of quantities of dead and decaying matter, so you see these tiny creatures are really minute scavengers, each one doing its part, no matter how tiny it is.

A fish that walks on dry land. You may wonder what kind of a fish that can be, because you know, perhaps, that a fish gets its air from the water not on land. When a fish wants to breathe, he opens his mouth and takes a gulp of water. The water passes from the mouth through a little grating into the gills. Here it cannot get out, for some bony lids, called gill covers, shut down and keep it in. While the water is shut up it bathes a number of feathery membranes in the cavity of the gills. These membranes are covered with delicate blood vessels, and thus the blood gets a supply of oxygen. When this business is over, taking but an instant, the gill covers open and let the waters out again. At the same moment more water comes in at the mouth, and the fish keeps on breathing.

Thus you see how, when a fish is taken out of the water, it dies for want of air. The delicate gills fold together and get dry, and then the fish cannot breathe, but in some fishes the opening of the gills is very narrow and does not dry up so quickly; besides, there is a little cell full of water, which opens on to the gills and keeps them moist. These fishes can live much longer in the air, and one kind can live some days out of the water. It even climbs up trees to look for insects, of which it is fond. There is what Aristotle called a fishing frog that belonged to this tribe of fishes. It has a famous line and hook in the shape of a long tentacle which sticks up on its head with a joint, allowing it to move about freely. At the end of this tentacle it has a little membrane of shining color which it uses as a bait whilst burying itself in the mud out of which this shining tip extends to catch unwary fishes.

Some sailors once caught such a fish with a net which it caught in its great cavern of a mouth. In its greediness it caught its teeth fast in the wood and as a result it was hauled into the boat and killed.

A fish that shoots has a kind of popgun in its round snout, and he shoots at flies and other insects. When he sees a fly settle on one of the plants that overhang the water he fixes his eyes upon it. Then he swims to the place from which he can best take aim. He keeps under water and does not let himself be seen. But all in a moment a drop of water is

shot with such force against the fly that it is brought down. Then the fish swims up and seizes it without any more trouble.

This shooting fish does not really live in the sea, but in the rivers and lakes of India.

Elizabeth Kirby tells in "The Sea and Its Wonders" of one fish that utters a cry when it is seized; of another that wails like a child when taken from the water; still another that makes a sound as it swims at one season of the year, and all the rest of the year keeps silent. But there is a fish that sings.

There is a little white fish with blue spots on its back in America which actually makes a sound like music. She tells us how a traveler was one day lying on the beach resting himself, when suddenly he heard a sound; it was like music in the distance. He got up and looked about him, but nothing was to be seen. A boatman was close by, and he asked him if he heard anything. "Yes," said the boatman, "I hear a fish singing."

The traveler pushed off in a boat to hear the music better. He heard a number of voices singing together. It was like a concert in the water. The sound was a little like an organ playing at some distance. These musical fishes are said to begin to sing at sunset and keep on singing during the night. They are not very timid, and will continue their music even if people are standing by to listen. The fish was called by some people the "siren;" by others musico, or "musician."—*Retold by Louise E. Hogan in the Public Ledger.*

BURNING BOOKS.—"How can you afford all these books?" asked a young man calling upon a friend; "I can't even seem to find spare change for even the leading magazines."

"Oh, that library is only my 'one cigar a day,'" was the reply.

"What do you mean?" inquired the visitor. "Mean? Just this: When you advised me to indulge in an occasional cigar, several years ago, I had been reading about a young fellow who bought books with money which others would have burned in cigars, and I thought I would try to do the same. You may remember that I said I should allow myself one cigar a day?"

"Yes, I recall the conversation, but don't quite see the connection."

"Well, I never smoked, but I put by the price of a five-cent cigar every day; and, as the money accumulated, I bought books—the very books you see."

"You don't mean to say that your books cost no more than that! Why, there is dollars' worth of them."

"Yes, I know there is. I had six years more of my apprenticeship to serve when you advised me 'to be a man.' I put by the money, which, at five cents a day, amounted to \$18.25 a year, or \$109.50 in six years. I keep those books by themselves as a result of my apprenticeship cigar money; and, if you'd done as I did, you would by this time have saved many more dollars than I have, and would have been better off in health and self-respect besides."—*Facts.*

This is the death of death, to breathe away a breath and know the end of strife, and taste the deathless life.

Remember the Days of Old.

A Letter to the Philadelphia FRIEND and Its Readers.

When the remembrance of past days brings sweetness and peace into the mind, coupled with the renewed desire to press forward on the heavenward road in the faithful discharge of daily duty, how good it is.

As another year has closed in upon us, with the sense of advancing age and growing infirmities, it is pleasant to look back and remember all the way in which the Lord hath led, and to mark how kindly He cared for his unworthy, yet trusting children, and how, too, in times of trial and of seeming darkness He hath been near and the necessities for the day and hour have been provided; so that the ancient language is made ever new, surely goodness and mercy have followed all the days of our lives; and the renewed assurance is given, as faith and faithfulness is abode in, the Lord's goodness will still follow all the remaining days of our lives here below.

My thought of late has been turned toward the remembrance of not a few of my fellow-travelers, some of whom have been called home. Such as have helped to sweeten the path of life, whose kindly deeds and words have cheered and encouraged in the path of duty.

Thus in your land and in this city as one and another has been removed of late time, the thought of these and their works while with us, of how they helped to smooth away the rough places in life and to give cheer and comfort in the place of sadness, both in sickness and in health, to those that needed it, doth bring a sweet savor upon the spirit.

There are names on your side of the water I might mention as typical, Thomas Elkinson and William U. Ditzler;—different men, yet how truly servants of the one Master, both of whom left their impress of love and goodwill behind them with their fellows.

And on this side of the ocean in the early days of the year now past, dear old Mary Smeal, whose simple faith and child-like trust it was beautiful to behold, whose loving spirit held many in its embrace and whose kindly ministrations were very many.

And yet another I may mention taken away in the meridian of life and from its business activities, James H. Gray, whose kindly hand ministered to the wants of very many.

These come before me not to the exclusion of any others, but such as have come very close and have been made very dear unto me in many ways.

In the sense of love and gratitude for the lives of such men and women, unto God, whose grace doth transform and make anew and meet for his heavenly kingdom, is this written, for such lives sweeten and enoble life, giving praise to his name. The remembrance of Zion's travelers who have thus ennobled life, tend to invigorate and cheer in the pathway of duty, and quicken the step on the heavenward road.

"Inasmuch as ye did it unto one of these the least of my brethren ye did it unto me," is a truth thankfully to be believed, that belongeth unto very many more than can be counted up by us, but they are all known to the One Master, Christ Jesus, our Lord.

Such are fragrant flowers in the garden of

God. Often in hidden paths, yet not unused by the unseen One. And this is a blessing thought the Lord knows.

Thus while it is good for us to remember the days of the right-hand of the Most High and to mark all his gracious dealings with us and the many very precious places and experiences He hath brought us into, still He the unerring balance of all true judgment, his own possession, and He will justly apportion to all their due. Still, so far as is committed us to know and rightly to judge, may do so, ever keeping in view, "It is grace through faith" that we are enabled to triumph over all, and to bring forth fruit to praise and glory.

We may thankfully believe the Lord of the vineyard hath many laborers therein, and in great harvest field. Still, there is abundant room for the prayer that He the Lord of the harvest would send forth more laborers thereinto.

To those, like myself, who have been permitted to enter upon another year and upon whom the shades of evening are falling, we keep our eye heavenward, through the light of his grace in the heart, and so know his keeping power in our daily life to press us to God's praise and glory. And those in youth and middle life,—may you know and come under the yoke of Christ, and become through the work of grace, fruit-bearing branches in the garden of God, and like many that have gone before may your works and your ways be well pleasing to God, so that when to you as to us, doth come the close, there may be welcome of the Master, "well done good and faithful servant, enter thou into the joy of the Lord."

CHARLES W. THOMSON.

4 Kirk Place, Bardsen, by Glasgow, Scotland.
First Month 3, 1902.

THE HABIT OF HAPPINESS.—Happiness is a habit. No person is truly happy who works and hoards up money, building for the future only. You must get happiness out of every day. For if you are irritable, restless, nervous, cranky and impatient, waiting for a time when you will be on Easy Street, you are forming habits that will soon be fixed, when you have affluence you will find that you can't be happy. Here is a rule worth saving.

"Unless I get some happiness every day now, I will never be able to find it on any other day."

This little preachment is addressed to people who are discontented with their work and their environment. To those who have the "luck face," to those who give up easy, brace up and cash in happiness now. Do say "I have nothing to make me happy;" it is not so. Happiness does not require money. Happiness comes much through making the around you happy, and you can do that by sharing your brother's burden, by cultivating cheerfulness, even though it is feigned. Do not speak to get angry. Do not speak a curse word. Do not roast anyone. Do what is right. The world looks and is better if you are kind and sympathetic. And get the happiness habit. It is easy to form, and the brother knows it from experience. The thought that the lines may build up hope and cause some brother to resolve to get the happiness habit.

it makes us happy. We have tried all is of plans, but happiness is the greatest treasure we ever possessed, and we would not lose the happiness we have had and are having every day for all the money in the world could buy happiness. Every day is worth a thousand dollars to us from our standpoint.—*the Paper.*

Christ Our Life.

Oh! the treasures and wisdom and knowledge, the riches of love, mercy, life, power, grace of our God, which are treasured up the soul in the Lord Jesus; and are freely opened and given out by Him, to them that believe in Him, wait upon Him, abide in Him, give up faithfully to the law of his life; and use delight it is to be found in subjection and obedience to the light and requiring of Spirit.

Oh! my Friends, oh! feel your portion, abide in that wherein the inheritance is won, received and enjoyed. For there is no wing Christ truly and sensibly, but by a sense of his life felt in the heart, whereby we are made capable of understanding the things of the kingdom. The soul without Him is dead; by the quickenings of his Spirit it comes to a sense and capacity of understanding the things of God. Life gives it a feeling of a sight, a tasting, a hearing, a smelling, of heavenly things, by which senses it is able to discern and distinguish them from the earthly ones. And from this measure of life, the capacity increase, the senses grow stronger; eyes more, feels more, tastes more, hears more, smells more.

Now when the senses are grown up to strength, then come settlement and stability, and peace and satisfaction. Then the soul is settled, and established concerning the things of God in the faith, and the faith gives peace to the understanding; so that all things and disputes in the mind fly away, the soul lives in the certain demonstration of fresh sense and power of life. It daily has the eternal Word and power of life to it in the heart and soul what is testified of Scripture. It knows the flesh and blood of the Lamb, the water and wine of the kingdom, the bread which comes down from heaven in the vessel, from all other things, by its own feeling on it, and converse with it in it. What heart can conceive the righteousness, the holiness, the peace, the joy, the length of life that is felt here. For indeed, there is no straitness in the fountain, it is fullness; and it is his delight to empty himself into the hearts of his children, and to fill them empty according as He makes them, and as they are able to drink in it, is living virtue. Therefore where the soul is enlarged, where the senses are grown strong, where the mouth is opened wide (the Lord standing ready to pour out of his vessels) what should hinder it from being filled? being filled, how natural is it to run over and break forth inwardly in admiration and sense of spirit, concerning what it cannot but say, oh! the fulness, oh! the depth, oh! the breadth, and length of his love! Oh, compassion, the mercy, the tenderness of Father! How hath He pitied, how hath He pardoned, beyond what the heart could believe! how hath He helped in the hour of dis-

stress! how hath He conquered and scattered the enemies! which, in the unbelief the heart is ready often to say, were unconquerable, and that it should one day die by the hand of one or other of its mighty enemies, lusts and corruptions. How hath He put an end to doubts, fears, disputes, troubles, wherewith the mind was overwhelmed and tossed? and now He extends peace like a river; now He puts the soul forth out of the pit, into the green pastures; now it feeds on the freshness of life, and is satisfied, and drinks of the river of God's pleasure, and is delighted; and sings praise to the Lamb, and Him that sits on the throne, saying Glory, glory! life, power, dominion, and majesty, over all the powers of darkness, over all the enemies of the soul, be thy name for evermore! Now, my friends, ye know somewhat of this, and ye know the way to it. Oh, be faithful, be faithful! travel on, travel on! let nothing stop you, but wait for, and daily follow, the sensible leadings of that measure of life, which God hath placed in you, which is one with the fulness, and into which the fulness runs daily and fills it, that it may run into you and fill you. Oh that ye were enlarged in your own hearts, as the bowels of the Lord are enlarged toward you! It is the day of love, of mercy, of kindness, of the working of the tender hand; of wisdom, power, and goodness of our God, manifested richly in Jesus Christ. Oh! why should there be any stop in any of us?

The Lord removes that which stands in the way; and, in the faithful waiting on the power which is arisen, the Lord will remove, yea the Lord doth remove; and growth in his truth and power is witnessed by those that wait upon Him. So, my dear Friend, be encouraged, to wait upon the Lord in the pure fear, in the precious faith and hope which are of Him; and ye will see and feel He will exalt the horn of his Anointed in you over the horn of that which is unanointed, and will sweep and cleanse and purify, even till He hath left no place for the impure; and then He shall become his full dwelling place, the place of his rest, the place of his delight, the place of his displaying his pure life and glory; and He will be your perfect dwelling place for evermore! May the Lord God, in his tender mercy, and because of his deep and free love unto us, guide our hearts daily more and more in the travel, and into the possession of this; that every soul may inherit and possess, notwithstanding all its enemies, what it hath traveled into, and may also daily, further and further, travel into what is yet before.

ISAAC PENNINGTON.

A WELL-KNOWN and powerful writer has said that one evidence of the supernatural origin and character of the Bible is seen in the fact that it finds men as no other book does. It not only finds men; it also wins them, and always wins them to something better. Some books win men by deceiving them, and those who are won thus always regret the victory achieved over them. It is said that when a celebrated infidel submitted the manuscript of a book which he had written to Thomas Jefferson, that great statesman having read the manuscript, advised the author to burn it, giving as a reason that if men are so bad while they believe in the Bible as

a book of God they would be infinitely worse if their faith in that book were overthrown.

Science and Industry.

SENDING PICTURES OR HANDWRITING BY TELEGRAPH.—There are few people, says Chauncey McGovern, in Frank Leslie's *Popular Monthly*, who know that letters and pictures can be sent by telegraph. Indeed, ninety-nine persons in a hundred imagine that such a thing cannot be done. But they are mistaken. You can send your photograph from New York City to your friend in San Francisco and get his letter of thanks within the space of a single hour. Nor will the letter you receive be a mysterious series of dots and dashes, but will look exactly as your friend has written it. It will be in his personal handwriting; not in the handwriting of a telegrapher. If your friend fails to dot an "i," you will receive it without the dot. If he underlines a word, crosses out another, puts a capital in the wrong place, you will see the letter with all these peculiarities.

The apparatus that makes possible such wonderful feats is called by the inventor the "telegraph." Consult the other words "telegraph," "telegram" and "telephone;" the new term is their second cousin.

The tele-diagraph is not a mere promise made by an over-enthusiastic inventor. The middle of last month it had been in commercial operation for a whole two years. Why, then, do so few people know about the invention? Simply because the inventor saw fit twenty-four months ago to give the exclusive use of the apparatus to a syndicate of six American newspapers for the period of two years. On the nineteenth of Fourth month the time expired, and the picture-telegraphing machines can be installed in every telegraph office in the world.

SINCE 1895 Antwerp has been the most important ivory market in the world. In the three months ending 11th month 1st it sold one hundred and eighty thousand pounds of ivory, of which one hundred and forty-six thousand came from the Kongo basin, now the greatest source of this commodity. Most of the ivory is not from animals recently killed, but comes from native stores or is picked up here and there where skeletons of elephants that died long ago are run across.

ACCORDING to the Treasury Bureau of Statistics, "the people of the United States are sending out of the country more than one million dollars a week in payment for coffee consumed in this country, all of which could be readily produced in Porto Rico, Hawaii and the Philippine Islands."

NUTMEG.—The nutmeg tree is found only in the tropics, mostly in the islands about Asia, but sometimes in America. It is from thirty to forty feet high, shaped somewhat like a pear tree. The leaves are dark green, and glossy on the top, but whitish underneath. The blossoms, which resemble lilies of the valley, are pale yellow, and very fragrant. When the pear-shaped fruit is ripe it is about the size of a peach, and breaks into two parts, disclosing the seed with its covering.

It is taken from the tree by means of a barb placed on the end of a long stick. After it is gathered the outer husk is removed, and then the mace which envelops the nutmeg is carefully taken off with a knife. This mace, when fresh, is bright scarlet, and much divided. After it is dried it becomes the hard, yellow substance which is so pleasant a spice. Between the mace and the nutmeg is a thin, dark brown shell, but before this can be taken off the nutmeg is placed over a slow fire and thoroughly dried, so that the nut rattles in the shell, which is then cracked, and the nutmeg is then freed from all its surroundings. At first the Dutch owned all the islands upon which this tree grew, and they endeavored not to let any one else have any chance to cultivate it. And for fear nutmegs would be sent to market in such numbers as to reduce the price too greatly, they destroyed the trees on all but three or four islands, and even there, if there was an unusually large crop, they burned many of them. One writer says he saw three piles burned at once, "each of which was more than a church of ordinary dimensions could hold."

However, the nutmeg pigeon, which frequents all those islands, and is very partial to the mace around the nutmeg, would not allow the Dutch to keep exclusive possession of this spice. They carried the seeds to other islands in such numbers that localities of which these Dutch had never heard were stocked with them.

ANCIENT TELEGRAPHY.—Long before the dawn of the Christian era wireless methods of communicating intelligence to a distance were employed—not electric telegraphs as the term is generally understood, it is true, but wireless they certainly were.

Polybius, the Greek historian, describes a telegraph system employed for military purposes, 300 B. C., in which torches were placed on high walls in prearranged positions to correspond to letters of the Greek alphabet, and by a suitable manipulation of the torches messages were thus transmitted to a distance. The Gauls, too, were wont to transmit important intelligence to a distance by a cruder but simpler method. A messenger was sent to the top of a hill, where he shouted his message, apparently to the winds. Soon from afar a remote voice answered him, and this voice repeated the message to another listener further on, and thus, from one to another, a message sped, and it is recorded that in three days a message calling all the tribes of the Gauls to arm traveled in this way from Auvergne to the forests of America in one direction, and to the banks of the Rhine in another.

Later on came another wireless telegraph system—the semaphore telegraph and this was in operation all over Europe prior to and for some time after the introduction of the electric telegraph. This semaphore telegraph employed arms on posts akin to those seen to-day along every railway in the world, and a certain position of the arms like the torches in the Polybius system, corresponded to certain letters of the alphabet, and by varying the positions of the arms as required experts were able to transmit messages from one station to the other at the rate of two or three words

per minute. The towers on the top of which the semaphores were erected were often fifty to sixty feet high, and were placed on eminences about six or eight miles apart. In Russia alone there was a string of these towers from the Prussian frontier to St. Petersburg, a distance of twelve hundred miles or more.—*Cassier's Magazine*.

FOR "THE FRIEND."

A Notable Venetian of the Sixteenth Century —Fra Paolo Sarpi.

An English reviewer of the subject of this sketch remarked, that "if we can conceive of a Gladstone, a Huxley, a Virchow, a Helmholtz, a Cayley, and a first-rate theologian and philosopher rolled into one, we shall have some notion of the wonderful attainments and far-reaching genius of Fra Paolo Sarpi. And he was good as he was great." It is pleasant to add, that with the excellence of his character and the greatness of his attainments as scientist, statesman, counsellor and man of letters, he had the clothing of modesty and humility, as the Apostle Peter enjoined. From a recently published, well compiled, though comparatively brief biography of less than two hundred pages, by Alexander Robertson, a Scottish minister, resident in Venice, the following sketch has been mostly taken.

The span of the life of Paolo Sarpi extended from 1552, which was six years after the death of Luther, to 1623, being the year before the birth of George Fox. His birth-place was Venice, his father having come thither for the betterment of his worldly affairs from San Vito, a small fortified village some fifty miles northeast of Venice. In his quest of fortune the father was unsuccessful, and, dying while Paolo (or Pietro, as he was first called) was quite young, the latter was left to the care of a mother who was reputed to be a woman of much sagacity and good judgment. The boy's early schooling was intrusted to a brother of his mother, a priest and schoolmaster, whose pupils were largely the sons of patricians; yet Paolo, mastering all his studies in mathematics, languages and philosophy with a wonderful facility soon took and maintained his place at the top of the class. His remarkable memory, conscientiousness, and habits of close application enabled him to do this, for it was a saying common amongst the scholars—"All we others to our frivolities, and Pierino to his books." The passion for gambling seemed as pronounced then among Italians generally, as it is to-day, but the retiring and thoughtful Paolo would rebuke those of his high-bred companions who were addicted to the habit, by saying—"I cannot understand the taste of those who gamble, if they are not affected by avarice." There were friendships formed then, however, which in after life bore profitable results, as those with Andrea Morosini, the historian, and Leonardo Donato, the future Doge of the Republic.

At the age of twelve, his uncle confessing

that he could teach him nothing more, Paolo was placed with a friar of the monster Servites, first as a scholar, and, a later, as a novice, continuing in that relation while ardently pursuing his studies, for a riot of five years. He early detected the famous reasoning of Duns Scotus, the fanatical "schoolman," and so just and powerful his criticisms that they shook the faith of master, who was frank to acknowledge having learned not a little from Paolo in very simple lessons I am teaching him." It was he appointed disputant in public dialectic contests. At Mantua, when at the age of sixteen, being handed a long list of three hundred and eighteen most difficult theological and philosophical propositions to defend, he acquitted himself so satisfactorily that he was given a professor's position in the city, while the Duke Gonzaga attached him to court as private theologian. At the important Council of Trent, the long series of intermittent sessions of which had continued during a number of previous years (1545—1563), Duke and the Bishop of Mantua had belonged to the progressive Catholic section as opposed to that which was servilely bound to the pope. And now affording shelter to some poor heretics, so-called, and Protestants, Paolo appreciating the position of his friends as incurring the papal censures, identified himself with it, and with the pope, feeling which then obtained at Mantua, indeed throughout Italy, as it does at present day.

In 1575, Paolo Sarpi returned to Venice after a brief, but important visit to Rome, where began his friendship with Cardinal de' Medici, then laboring to repress irregularities and corruptions amongst the local monastic orders, one of the most crying disorders was the immorality that was the result of confession. He even forbade most of the priests from hearing confessions, (his narrative says) "Eager to avail himself of the services of such a pure-minded man as Paolo, [who had taken the holy orders as a priest two years before], he begged him to undertake for a time that duty in his cathedral, but he refused. He thus early took stand that he held through life, that confession is unscriptural and demoralizing to the confessor and confessed. Like Count Camparini, the present leader of the Catholic Revival movement in Italy, when he was canon of Peter's, and other priests [of to-day] might be named, Fra Paolo would never accept a license to hear confessions, and becoming an accomplice with his penitents in their sin, as is the case with so many priests in Italy at the present day. He directed those who came to him to confess to God."

The year 1578 in Paolo Sarpi's life, as he was transferred from the chair of philosophy in the Servite monastery at Venice to that of mathematics, of which science he was the acknowledged head, was marked by forming the acquaintance of Arnauld Ferrier, the French ambassador to the Venetian Republic. Representing his sovereign as ambassador at the recent Council of Trent, Ferrier advocated the return of the church to its ancient usages in the matter of giving Scriptures to the people generally, of reviv-

* Only about an hour after the above was written, the telegraphic information from Monte Carlo was read in my daily paper, telling how a millionaire steel mill owner of Pittsburgh had taken a hand at the gaming tables of that seductive resort by the sea so close to the Italian border. This mill owner, who could hardly have played from motives of avarice, seems to have placed a low estimate on the influence of his pernicacious example.

rewards and missals, of having the sermon all its parts read in the vernacular, permitting the clergy to marry. This part, the teaching of the Old Catholic Reform Catholic element to-day, as it then, and it was accepted by Fra Paolo as done with truth.

Fra Paolo's studies at this time were as common as they were varied and thorough, for, as being deeply read in history, he mastered (so far as the knowledge of them then led), in addition to Hebrew, Greek and Latin, all referred to astronomy, arithmetic, life in animals, geometry—including conic sections, magnetism, botany, zoology, hydraulics, acoustics, animal magnetism, atmospheric pressure, the rising and setting of objects in air and water, the refraction of light from curved surfaces, mechanics, civil and military architecture, medicine, herbs, anatomy. Withal, his moral and spiritual knowledge seem not to have been neglected or driven into a corner by his brother friars testifying—any life I have never known any one more devoted to himself." Well versed in the Scriptures and seeking to regulate his life by the precepts of Christ and by the principles of philosophy, it was said his very presence sufficed to raise the tone of manners and conversation.

Appointed a Provincial of the order of Sorbonne (1579), Fra Paolo quickly showed that his administrative faculty was not inferior to that of a legislator, he was at the same time a just ruler, and when asked for an unwarranted concession or modification of a rule, say "I am not able to do it, for justice is not my favorites." Advanced to the post of Procurator when only thirty-three years of age, Fra Paolo changed his residence to Rome in order rightly to fulfil the duties of his office, that of appearing before the courts and congregations in defence of the rights and discussions that might be demanded of him. With the then pope, Sixtus V., he continued on good terms of friendship, being frequently appointed by him to settle ecclesiastical controversies and to act as a mediator, his decisions being always just.

But with the intriguing of the Jesuits, with whom his own straightforward character could not be at peace, there was nothing common. "I hold in little account," he once said, "these church dignities and intrigues, in fact I abominate them." Many of several years at Rome enabled him to amass a fine library of literary and scientific works of the Vatican library, and also of private collections of private friends.

Fra Paolo's narrative gives numerous interesting details of his critical researches in various branches of science, and of his anticipating, and agreeing, a number of noted discoverers, as, in anatomy and physiology; Acquapendente, in optics; Galileo, in astronomy; Torricelli, in pneumatics; Porta, in magnetism. Bacon sent him his books on jurisprudence; in metaphysics Lord Macaulay says that Locke was anticipated by Fra Paolo. Several Venetian palaces designed by him exhibited his practical acquaintanceship with architecture, as, in botany, did the laying out of the first botanical garden ever seen in Padua. Fra Fulgenzino, his devoted amanuensis tells us that all inventors brought their instruments and contrivances to Paolo Sarpi, and that he would, on the instant, tell the uses they were intended to serve, and whether or not they were well adapted, and how they could be perfected. Doubtless his studies in anatomy, of which he was exceedingly fond, showed him in the human structure many anti-types of the mechanical principles employed in these various devices, so that he could adoringly say, with such devout investigators as Newton, Faraday and Agassiz—"All Thy works praise Thee!" Following, is an interesting anecdote of this period of Fra Paolo's life, as told by Alexander Robertson:

"There lived at Padua at this time a most worthy scholar named Gian Vincenzo Penelli. He was very rich and very generous—seeking out and encouraging struggling talent in the world of letters. It is said that he helped many students at the University of Padua. When Fra Paolo was visiting him one day (for they were great friends), there chanced to be with Penelli, Marino Ghetaldio, a famous mathematician. As Fra Paolo was leaving, Penelli showed him most marked respect, accompanying him to the door, although he was hardly able to move a limb through out. The mathematician noticed this with astonishment, and afterwards asked rather disdainfully, 'Who is that friar to whom you pay so much attention?' 'He is the miracle of this age,' was the answer. Ghetaldio, judging he referred to scholarship, inquired, 'In what profession?' The answer was, 'In whichever you please.' Then Penelli, seeing the increased surprise of his friend, said, 'I will give you a proof. All know that you are a great mathematician. I will invite Fra Paolo Sarpi to dinner to-morrow. Meantime you can prepare, as a touchstone, the most difficult problems in your science that you can think of. I do not wish you to tell me anything about them, and Fra Paolo will be quite unprepared. At dinner I will introduce mathematics as a subject of conversation, when you can put your questions.' The plan was carried out. Fra Paolo, without the slightest hesitation, resolved all Ghetaldio's problems, and showed a knowledge of the science so vastly superior to that which the mathematician himself possessed, that he remained 'astonished and confounded,' and said that he never believed any one to have the knowledge possessed by Fra Paolo. From this time onward—some thirty years—Ghetaldio remained not only his friend, but his pupil, for he communicated to him everything he did as a mathematician, that he might receive his guidance and approval."

(To be concluded.)

CORRECTION.—On page 219 (account of Samuel Bettle, Jr.), in last number, tenth line of third column, for "talk" read *talkers*.

Items Concerning the Society.

Be careful of the hour before meeting.

Probably no more complete collection of early Friends' literature in original editions, whether tracts, pamphlets, broadsides, engravings, autographs or bound volumes—exists in this country, certainly in any private library—than that which has been left in the rare antiquarian and historical collection of our valued Friend, the late Charles Roberts, member of the Common Council of this city. His watchfulness to detect and import from England every original imprint not already in his possession of Friends' writings offered for sale, was diligent and fruitful. He recently came into possession of the original manuscript journal written by William Penn during his religious journey in Ireland, and never yet printed. It has been in process of transcription by a copyist familiar with William Penn's handwriting.

Most of the historical works published of late years relating to the history of Pennsylvania and its founders, have found valuable supplies in material and illustrative engravings, of which he kindly gave to authors the benefit.

Notes From Others.

Suffer not one thought of separating from your brethren, whether their opinions agree with yours or not. Do not dream that any man sins in not believing you, in not taking your word; or that this or that opinion is essential to the work, and both must stand or fall together. Beware of impatience, of contradiction. Do not condemn or think hardly of those who cannot see just as you see, or who judge it their duty to contradict you, whether in a great thing or small. I fear some of us have thought hardly of others, merely because they contradicted what we affirmed. All this tends to division; and by everything of this kind, we are teaching them an evil lesson against ourselves. —John Wesley.

For "EUCHEE" MOTHERS.—A certain mother in one of our small cities was very fond of paying "progressive auchoe." One evening she received a fine silver cup for being the most successful player in a group of her society friends. She was much delighted with her success, and, on showing it to her family the next morning, her son, in his early "teens," said "Huh! I can beat that, for I made ten dollars at the pool table last night!" Immediately the eyes of the mother were opened to more senses than one, for, in the first place, she had no idea that her son had thus been spending his time, and, in the next place, partner in sin, how could she condemn him? It taught her a lesson once for all.

News comes from ice-bound Siberia of a gospel movement essentially the same as that of Rabinowitz. The leader is Jacob Scheinmann, a Polish Jew, who, thirty years ago, through independent thought, came to the conclusion that the Messiah, the son of David, was the true Saviour. The strict Talmudic Jews got him transported to Siberia, where for fifteen years he labored, almost unheeded, to awaken faith in his fellow exiles. Among the uncalled-for mail matter which he found at Tomsk, where he was engaged in business, was a pamphlet by Rabinowitz, with whom he at once communicated. He has been busy disseminating his views through pamphlets called "The Voice of One Crying in the Wilderness." Deltst's Hebrew translation of the New Testament is being eagerly read and studied by the Siberian Jews. It is said fully thirty thousand copies have been used. —*Freshwater Witness*.

FORM OF OATH IN U. S. COURT.—By an order passed First Month 3rd by the Circuit and District Courts sitting in Maryland, Judge Morris presiding,

the form of oath prescribed in this State by act of Assembly of 1898, Chapter 75, will be conformed to in those courts.

The law prescribing the present form, which has now been in use in all the State courts for more than three years, is as follows:

"The form of judicial and all other oaths to be taken or administered in this State, and not prescribed by the Constitution shall be as follows:

"In the presence of Almighty God I do solemnly promise or declare," etc., and it shall not be lawful to add to any oath the words "so help me God," or any imprecatory words whatever.

The manner of administering oaths shall be by requiring the person making the same to hold up his hand in token of his recognition of the solemnity of the act, except in those cases wherein the form is not practicable, or when it shall appear that some other mode is more binding upon the conscience of the swearer.

Thus, practically, the new form of oath, which alludes to the imprecation and the kissing or laying the hand upon the Bible, has become uniform for all purposes throughout the State.—*Baltimore American.*

SUMMARY OF EVENTS.

UNITED STATES.—A treaty ofcession by Denmark of its West Indian islands to the United States has been signed at Washington. In order to become effective it must be ratified by the Senate and the Danish Riksdag, and by the U. S. House of Representatives, which must make the necessary appropriation for the purchase. The islands are St. Thomas, Santa Cruz and St. John. The people of the islands are to have a voice in the question of cession, but the plebiscite will not be submitted until the United States has received the ratifications of the two Governments. No provision is made in the treaty for a plebiscite, but the Government of Denmark has given notice to the people of the islands that the question of cession will be submitted to them.

The wholesale leasing of Indian lands which had been arranged for by Commissioner Jones at Washington has been stopped, at least for the present, by the prospect of an official investigation into these matters by Congress. A delegation of Sioux Indians has lately visited Washington to protest against the leasing of their Standing Rock reservation in Southern Dakota. Among other objections the Indians say that they will not be able to hold their own against the white cowboys, and that their cattle will be gradually run into the herds of the lessees and they will be robbed of them.

Slight earthquake shocks were felt in St. Louis and its neighborhood about five o'clock on the morning of the 24th ult.

The largest gas well in West Virginia has been struck in Pleasants County. It is flowing about 15,000,000 feet of gas a day, and is also producing over 250 barrels of oil.

The census preliminary report on the manufacture of liquors in the United States in 1900 shows the following results, with percentage of increase: number of establishments, 2,849; increase, 48 per cent.; capital, \$457,674,087; increase, 70 per cent.; wage earners, average monthly, 44,411; increase, 23 per cent. Total wages, \$28,005,484; increase, 20 per cent. Value of products, \$34,016,156; increase, 18 per cent.

The mortality from cancer among sailors is very high—44.5 per 100,000, while that of miners is only 12.2.

In ten years the mortality from diphtheria fell from 70 to 35 per 100,000 population, largely through the use of antitoxin.

Prof. Jewett, of the Fredonia Normal School, New York, has found that walls and floors seem to present no obstruction to the passage of electrical waves in wireless telegraphy, and that with the apparatus which he used, these waves seem to be sent with nearly equal force in all directions. With collections in a room on the third floor signals were received readily at widely separated rooms on all three floors of the building and also upon the sidewalk in front of it.

In a recent report the Milk Commission of New York suggested that a man with whiskers milking a cow was liable to impregnate the milk with germs, because such a man is likely to be a collector of milk. The various managers of the milk depots in Birmingham, N. Y., it is said will issue an order that all milk delivered them must be drawn by heedless men.

There were 563 deaths in this city last week, reported to the Board of Health. This is 61 more than the previous week and 27 more than the corresponding week of 1901. Of the foregoing, 274 were males and 289 females: 72

died of consumption of the lungs; 102 of inflammation of the lungs and surrounding membranes; 10 of diphtheria; 18 of cancer; 11 of apoplexy; 9 of typhoid fever; 3 of scarlet fever, and 19 of small pox.

Cotton closed on a basis of 8 $\frac{1}{2}$ c. per pound for mid-lands.

FLOUR.—Winter, super, \$2.65 to \$2.90; Pennsylvania roller, straight, \$3.50 to \$3.70; Western winter, straight, \$3.60 to \$3.80; spring, straight, \$3.55 to \$3.80.

GRAIN.—No. 2 red wheat, 83 $\frac{1}{2}$ to 84c.
No. 2 mixed corn, 64 to 64 $\frac{1}{2}$ c.
No. 2 white corn, clipped, 53 $\frac{1}{2}$ c.

BEF CATTLE.—Best, 61 $\frac{1}{2}$ to 62c.; good, 54 to 55 $\frac{1}{2}$ c.; medium, 51 $\frac{1}{2}$ to 52c.

SHEEP.—Extra, 43 to 42 $\frac{1}{2}$ c.; good, 4 to 4 $\frac{1}{2}$ c.; common, 2 to 3c.

LAMBS.—4 $\frac{1}{2}$ to 6 $\frac{1}{2}$ c.

HOGS.—Western, 8 $\frac{1}{2}$ to 9c.
FOREIGN.—The ministers of the foreign powers have lately been received at Peking by the Chinese emperor as representatives of sovereigns of equal rank. The Empress was not seen during the interview.

A despatch from Peking says: Chinese officials have found treasure to the value of over 100,000,000 taels in gold and silver, which was hoarded by the former quarters of the Tartars before the Court fled from Peking.

It is declared officially in China that 3,000,000 persons in Shensi out of 19,000,000 have succumbed to the famine.

An animal hitherto unknown to naturalists has lately been found in Central Africa. It is called the okapi and is about two-thirds the size of a giraffe, which it resembles. It is said to be the American bison, though horned antelope, and is the only living representative of the fossil Helladotherium, of Greece and Asia Minor. Another species of giraffe with five horns has also lately been discovered in Central Africa.

Official data show that 614 houses, not including the Government buildings, were destroyed in the first and second earthquakes in Chilpancingo, Mexico. The people continue panic stricken, and fear additional shocks. They are leaving homes there to establish themselves in other towns and cities.

The postoffice of Buenos Ayres has adopted X-rays to discover smuggled articles in registered letters without opening them. Watches, rings, chains and other valuables have lately been found in stolen mail. More than \$25,000 worth of smuggled property was confiscated in one week.

A despatch of the 24th ult., from Seres, Macedonia, says: The bearers of the ransom for Ellen M. Stone and her companion Telika, having with them \$72,500, reached Demir-Hissar (Romelia), on the 21st, and proceeded to the mountains, on horseback, accompanied by a strong escort.

At Charkov, in Southern Russia, recently, an epidemic of tuberculosis broke out among the officials of the municipality, and particularly among those who worked in the recorder's office. The archives, after being subjected to a bacteriological and micrographical analysis, proved to swarm with bacilli. A further investigation disclosed the fact that a former official in charge of the records and affected with consumption, in turning over the pages was accustomed to touch them with fingers moistened with saliva. In this way the records became contaminated. The bacilli had developed in the course of time and created the source of tuberculosis that affected the other officials.

One hundred and nineteen people were killed in the Swiss Alps last year in attempts to scale mountains and do other dangerous things.

A report to the War Department lately published by J. Franklin Bell, military commander in Batangas Province, southern Luzon, indicates the adoption of a merciless policy towards the Filipinos, involving reconcentration in a modified form, the application of martial law in all directions, and the unsparring pursuit and punishment of the natives who act as spies and traitors to the United States.

In reference to other parts of the Philippines that the province of Batangas and the island of Samar, Governor Taft, who is now in this country, recently said: "I wish to impress upon everybody that civil government is a success. There is a strong peace party in the islands, and it is composed of the most influential men among the Filipinos. They are working earnestly and zealously toward bringing about happy relations between their countrymen and the Government."

There are now about 40,000 American troops in the Philippines. About two-thirds of the people of the islands are under civil government. A large part of the agricultural lands are unavailable because there is no communication except by water, and, therefore, only strips of the coast of the water are available to raise anything for market. The people live largely on rice.

It is proposed in the Senate to appoint a committee to make a thorough investigation in regard to the conduct of the Philippines before enacting further legislation respecting them.

The Philippine Chamber of Commerce of Manila formulated an appeal to Congress, in which it asks for the enactment of laws allowing Chinese enter the Philippine Islands, under such restriction the Philippine Commission may enact.

Japan's foreign trade has in thirty years increased from less than \$1 to nearly \$7 per capita per annum. Gardens are attached to all public buildings in Tokyo in which the children are taught to raise vegetables, part of school work. School gardens are common in France, Saxony, Switzerland, Russia, Sweden and part of Austria. There are now about 500,000 children receiving instruction in Russia. During the week three hours are allotted to school room study, and for work in the garden, and the remainder of the day is spent last but one or two hours and "practical" study out of doors receive six to eight hours daily. In cases the teachers are permitted to derive a profit from the produce sold. In Belgium the Government has instituted special courses during vacation to prepare instructors for this work and lectures bearing on the subject.

In Copenhagen, a Municipal Labor Exchange has been established under the management of a board composed of four members of masters' unions, four members of workmen's unions; two members of the city council and the mayor of the city, who acts as chairman. It is intended to handle the exchange, when it sends an applicant into contact with employer. The municipal exchange conducted without expense to its patrons, and experts have taught the authorities that it is a good financial speculation, as when work is provided it gives support to individuals who otherwise would become charge on the community. No written recommendation is needed by the exchange. When it sends an applicant for work it guarantees nothing, it simply brings applicant and the employer together, and it becomes private and personal matter as to what arrangement of effect. No rules of labor unions or kindred organizations are recognized by the exchange.

NOTICES.

ON ACCOUNT of alterations now being made in the committee room of the meeting-house at Fourth and Chestnut streets, it is respectfully requested that the Quarterly Meetings of Ministers and Elders, occurring Second Month last, be in the second story of No. 304 Arch Street.

GEORGE J. SCATTERGOOD, Clergyman.

FRIENDS FREEDMEN'S ASSOCIATION expect to send to their school for colored youth at Christiansburg, sewing class there is thrifty in making over party clothing—men's or women's. The library needs clothing, materials, shoes and books may be sent to Friends' Institute, 20 S. Twelfth Street, on or before Third Month last, marked "For Christiansburg Industrial Training School."

WESTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to W. F. WICKERSHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westown P. O., Chester Co., Pa.

WESTOWN BOARDING SCHOOL.—For convenience persons coming to Westtown School, the stage will now train leaving Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met when required at Stage fare, fifteen cents; after 7.30 P. M., twenty cents each way. To reach the school by telegraph, West Chester, Phone 1144.

EDWARD G. SMEDLEY, Supt.

MARRIED, at Friends' meeting-house, West Philadelphia, Ninth Month 26th, 1902, DAVID BRINTON, of Philadelphia, to ELEANOR P. FISHER, daughter of Abraham Sarah Fisher.

(British Friend please copy.)

DIED, First Month 18th, 1902, at the residence of parents, 1636 Mont Vernon street, Philadelphia, AMELIA daughter of Conly B. and Martha L. Shoemaker, nearly sixteen years; a member of the Monthly Meeting of Friends of Philadelphia.

The Prophylactic Against Contamination.

In considering our care to preserve the young "from the corrupting influence of world-associations"—a care which usually deals with outward surroundings, and it is very important that it should,—it was feared that the important protection *from within* does not receive that foremost attention which is due. ere a child is early helped to take note of inward Witness for truth, the habit of discriminating between that which serveth God and that which serveth Him not, both in himself and in his associations, will guard him from many a social pitfall and snare. A little was instanced on whom a new plaid jacket, according to the style of the day, was placed, ere going to meeting. On his remarking that he would have to suffer with heat in sitting, being asked to explain, he said he would have to keep on his overcoat, for he did not feel right in displaying so gay a set. Again, in a visit to the country, the next day came around, and it was decided, on account of the weariness of horses and men in the haying season, the family would not be taken to meeting. Later on the boy was found sitting on a door step with his face covered by his hands. Being asked what troubled him, he said it was because he could not go to meeting. Means were speedily found of conveying him to the gratification of his desire.

These were simple and early exercises in prompt and square discrimination which gave him a decided stand on the right side, as he saw the right, in his business and political career as a man. His faithfulness made him the truest man of especial mark for eighteen

years as the "Quaker Councilman" in the Common Council of this city. In a position where some find it so easy to drift into the maelstrom of corruption, the principle of the witness for truth in the heart clearly solved the problem of preservation from the "corrupting influences of worldly associations." Decided for right and truth as inwardly felt in boyhood, when he became a man he put on righteousness as a breast-plate, and recently dying (according to his oft-expressed wish) "in the harness," he could also acknowledge the everlasting Arm to be underneath, and an assurance of life beyond.

THOSE interested in the bill presented to this Congress, known as the Lodge-Gillette bill, and which is intended to prohibit the sale of fire-arms, intoxicating liquors, etc., by United States traders to the natives of the New Hebrides islands, will be glad to know that it passed the Senate on the 8th of the First Month. As to its prospects before the House, Representative Gillette now reports that "The New Hebrides bill has been favorably reported by the committee, and is on the calendar. It will be brought up very soon."

L

For "THE FRIEND."

Reminiscences.

(Continued from page 219.)

Joseph and Hannah Snowdon were succeeded as Superintendent and Matron of Westtown Boarding School by our friends David and Rachel H. Roberts, of Moorestown, N. J., who entered upon their duties in the autumn of 1858.

In reply to a letter to Robert Forster, of London, transmitting some papers left by Susanna Biggs, Joseph Scattergood thus refers to his honored grandfather:

PHILADELPHIA, Twelfth Month 5th, 1853.

Few persons, I apprehend, have been preserved more steadily in a state of inward exercise and retirement of spirit than he was. His humble dedication to the work whereunto he was called, his care to wait for the fresh putting forth of the Great Shepherd, and patient submission to the many proving dispensations allotted to him, have been very instructive to me, and I have reason to believe to many others.

He did not establish a school for colored children; the school which he assisted in establishing, and for which he gave a lot on which a school house was built for "poor children" (now known as the Adelphi school). For many years white children only received instruction. When similar schools were established by law in this city, and that class

well provided with free instruction, the Association under whose charge the school had been from the first, turned their attention to the education of colored children exclusively. That Association is still in existence, is composed of members of our religious Society, and supports two schools,—one for girls, the other for both sexes, somewhat on the plan of an infant school. There are at present about one hundred and fifty children attending these schools. There are six other schools for colored children supported by and under the care of Friends in this city. Two of these are evening schools, designed for the instruction of colored men and women.

The following letter written to C. W. of Liverpool, England, shows his concern on account of the lapsed state of Society in that land:

PHILADELPHIA, Eighth Month 5th, 1858.

I do not know how thou views the attempts which have been made for sometime past, more or less openly to modify and remodel the views and particularly the practices of the Society, but in the freedom which ought to subsist among fellow professors, I may remark that the late discussions in your Yearly Meeting have given rise to very sorrowful feelings and sad forebodings. I cannot say that I am much surprised at the sentiments uttered on the occasion alluded to, for they seem to be the natural fruit of that unquakerly spirit which through the unwatchfulness or unfaithfulness, or both, of those who no doubt once knew better, has been allowed to gain such an ascendancy in your land, even may I not say among those who have been regarded as the "heads of the tribes." My dear friend, I feel it to be a day of peculiar trial to those who verily believe that the doctrine and testimonies of the Society of Friends are the teachings of the spirit of Truth, and believing so, cannot admit for a moment that that infallible guide can lead any pretending to its influence to endeavor to set them aside as obsolete and impracticable. I sometimes am led to inquire where will we float to as a Society, if those who entertain the views so unreservedly expressed among you, get such an ascendancy as to entirely control its proceedings. Our profession is a high and holy one. We believe, or profess to believe, in the necessity of waiting for the openings of the Spirit of Truth in our minds, especially in transacting the business of the Church. Is this profession compatible with the long argumentative and studied parliamentary speeches so generally indulged in your meetings? Is not your practice in this respect of itself an abandonment of the ancient profession of the faithful members? Then alas, what may be said of the sentiments uttered! How can the meeting with any consistency continue to profess its adherence to ancient doctrines, testimonies,

practices, which in some of its published essays are still upheld, if it allows itself to be controlled by those holding such opinions?

May it not be said of the Society in your land as well as this, "I had planted thee a noble vine, wholly a right seed; how then art thou turned into a degenerate plant of a strange vine unto me?" We have but little of an encouraging character among us. What is to be the end of our trials and difficulties I do not see. I cannot, however, believe but what there will be preserved some, I hope many, who, through an humble, self denying life and conversation will manifest they are not ashamed of the profession of their forefathers, and which through Divine Mercy enabled so many of them on the borders of the unseen world to declare that they "had not followed cunningly devised fables," but the unchangeable Truth.

Well, my dear friend, I did not expect or intend to write in this strain when I look up my pen. If I have exceeded the liberty allowable in such communications, and especially in the first, I hope thou wilt excuse me, and attribute it to the concern I feel that we may not all abandon the old-fashioned ways or lose sight of the land-marks by which our fathers were led safely along.

(To be continued.)

FOR "THE FRIEND."

Business Ethics.

BY WALTER T. MOORE.

It becomes quite manifest to those who closely observe the course of current events that the period through which we are now passing is marked by unusual expansion and prosperity in trade.

At no time perhaps has business been pursued with more avidity and at such cost of the highest mentality and physical energy.

Especially is this true of our own country, so favored by Providence in the abundance and variety of its resources, where commerce both foreign and domestic, manufacturing, agricultural, mining, transportation and kindred industries are conducted on a scale of magnitude and efficiency unequalled in other lands.

In this connection we read in the public journals of America's commercial invasion of Europe and further that prominent officials identified with large enterprises abroad are coming here for the express purpose of studying our advanced methods and acquiring the secret of our apparent supremacy.

We see on every side as a conspicuous feature of the day a tendency towards combinations in money and trade which have for their object the elimination of excessive competition and the control of the supply of many standard commodities.

This process of organization which pervades so many lines of human effort may be the proper exercise of power or vested rights, but it involves as a necessary feature the concentration of vast influence in comparatively a few hands, and the outcome of the movement is a cause of apprehension to some who view with solicitude the religious as well as the material welfare of our country.

We are regarded, and with reason, as a people who lead strenuous lives and devote a large share of our time to the acquisition of wealth, not so much for its personal use or

gratification as for the power and prestige which it confers upon the possessor.

Under such conditions, and recognizing the extent to which many are absorbed in the arduous devotion to business, it is opportune to pause at intervals for introspection, and to consider a few fundamental principles as applicable to our various avocations and on which true success depends. Starting at the source and spring of morality, it is a marvelous and deeply impressive fact that God was made flesh and dwelt among us.

"In all points tempted like as we are yet without sin."

It is also an unspeakable blessing that we enjoy access in the Holy Scriptures to a record of the life of this Saviour who came to redeem the world and to his own words and those of his inspired followers as an unerring guide to pure wisdom and truth. He is the Word and the Truth. "Let your communication be yea, yea; and nay, nay; and whatsoever is more than these cometh of evil"—is one of those notable sayings so replete with meaning as to form in itself a text broad and comprehensive enough on which to construct any system of ethics. It defines the position we should occupy towards oaths or affirmations and at the same time is a plea for an adherence to the truth in its purity and simplicity.

In the dealings and intercourse with others we should abide strictly in the truth, and so guard our words that no misunderstanding or question of veracity can justly arise. There is, perhaps, no habit so insidious in its formation and fraught with more danger than that of inaccurate expression. Such a departure from rectitude may be ascribed to hasty or superficial thinking, and sometimes to an intention to deceive; but falsehood in any form is fatally harmful to the individual and correct morals. As one of the chief elements of a business qualification one should strive to cultivate terseness, clearness and absolute truthfulness into all statements whether by pen or tongue.

This attribute is a natural feature of the Christian character and will prove of inestimable value to the man of affairs.

The power of truth is inherent and cannot be strengthened by a needless redundancy of words in the ordinary prosecution of our work.

Honesty, integrity and other cardinal virtues which are fruits of the Spirit, should characterize every motive and action in the conduct of business.

As an illustration—it is sometimes a topic of remark that you can rely on certain persons fulfilling an agreement if once they sign it, but it must be borne in mind that the utility of such an instrument rests upon the ground of mutual advantage, and otherwise it becomes a source of friction and contention. One party cannot afford to profit too much at another's loss. Hence in contractual relations one should not push his own individual rights to the uttermost, but follow the golden rule by also viewing matters in question from the standpoint of the other parties, and thus reach a conclusion eminently fair and equitable to all concerned. Obligations framed on any other basis, though legally valid, are morally unsound, and apt to become in operation one-sided, and only invite litigation. All

such practices as come under the head of smartness, shrewdness and the like should be regarded as reprehensible and be scrupulously avoided.

It may safely be asserted that no religious body has done more than the Society of Friends to inculcate and stimulate among its members and others, both by example and precept, those ethical principles which underlie real prosperity and form an integral part of consistent Christian life. Philadelphia Yearly Meeting in its advices and in other ways has extended timely admonition of the standard of uprightness which should govern our opinions and actions in trade and business. The Seventh Query as provided in the Book of Discipline brings periodically and directly to our attention the matter of our responsibility in this respect. It says in part "Are Friends careful to live within the bounds of their circumstances and to keep to moderation in the trade or business."

Reverting to the fact already mentioned an irresistible current towards combinations many departments of life, the question may arise in the minds of some as to how this pertinent inquiry can be respected without unduly restricting legitimate enterprise. The answer and concern are, as I take it, that Friends should not embark in undertakings beyond the capacity, whether physical, mental or financial and to the detriment of their lasting welfare. A business that has been long established on safe basis and managed with skill and intelligence is quite sure to grow in time to extensive proportions and may do so without special injury to those engaged in it. The remedy, however, we permit any occupation though commendable in itself, to overtax our resources, then it becomes a source of danger both to ourselves and the body to which we belong.

Any one who aspires to and attains a commanding position in the commercial world which calls practically for all his talents, time and energy, cannot possess that tranquillity of mind and repose of body which serve as anchor to the soul.

There are many and diverse lines of employment and therefore in choosing an occupation one should keep this thought in remembrance and reserve adequate opportunity even at some sacrifice, for home, social and religious duties, all of which when rightly performed make for righteousness.

The injunction is "Let your moderation be known unto all men. The Lord is at hand."

The leading idea that passes through a mind in preparing this brief paper can be conveyed in the word "personality," as signifying a convinced and consistent Christian character. Allusion has been made to the process of organization which tends to centralize authority and eliminate the individual. The evolution of this doctrine, however, in its limitations, and, after all, the virtue of strength of any community or nation depends upon the nature of its constituent members or units.

We have reason to know the far reaching influence of a vigorous individuality and the influence works for good or evil as it emanates from a consecrated life. If we examine carefully the gradual development of any grand undertaking that has been particularly successful

asful, it will be found that the management as directed by men who were imbued with and actuated by Christian principles. It is also a noticeable fact that in the administration of government and corporations there are certain individuals with clear convictions of duty who may not occupy conspicuous positions in the public eye and yet in the decision of questions of moment are the main reliance of their superiors for sound advice and counsel. In a more striking manner, how vital becomes the element of individuality on the wider sphere of social, national and even international affairs.

History and the events of our own day abundantly reveal that in the consideration of these public questions, popular opinion swayed by a hasty impulse is often unsound and can only be restrained or corrected by a few courageous men or women who, wise in judgment and cautious in action, firmly stand for righteousness which alone exalteth a nation.

As against the clamorous majority there is a silent yet potent minority and such a minority constitutes the saving remnant which is the hope and leaven of a community in prosperity or adversity, and especially in any crisis that may befall it. Hence becomes clear the obligation that devolves upon each and every one to seek the possession of those qualities of both mind and heart which form a sterling character, or, in simpler and better words, embrace a Christian life.

We cannot overstate the urgent need, in the face of conditions pervading the business world to-day, of adequate preparation for any crisis to which we may be called and of directing our course aright upon the very threshold of a commercial career.

The conception and practice of ethics demands in a large measure upon early training. We have not in this respect been bountifully endowed with advantages far above the ordinary, in that many apart from Christian parents and homes have derived instruction from the street and other institutions under care of the State, and there came under the religious influences which they so distastefully represent.

In a retrospect of this epoch in our lives we do not but feel that a tribute of gratitude is due to these institutions for the guarded education which they have conferred upon us, and only obedient to their teachings we shall be blessed with ability to see and do the right. As we emerge from the scholastic life and enter that of business, we are confronted at once with realities and temptations which only the best test the ground on which we stand. At this early and critical juncture we must be prepared to discriminate clearly between the good and evil in order correctly to shape a course on the long and arduous voyage that is to ultimate success.

This brings us to a consideration of those parts of mind and body that are calculated to contribute most effectively to the growth and perfection of individuality. As among these can be commended the discipline at seasons of rest, contemplation and prayer. Both the outward nature and in human existence we find activity and rest are co-ordinate conditions and if followed independently are injurious, and if wisely regulated are conducive to the most beneficial results. In the Divine econ-

omy there exists as between energy and repose a harmony which, if cultivated, will invigorate and qualify us to perform any act of duty. The Saviour himself exhibited in an impressive manner energy combined with calmness and as recorded in the Scriptures not infrequently withdrew to solitude for communion and renewal of strength.

Imitating this example, it is also fitting for his followers, whatever their vocation, when struggling for a solution of the vexed problems of life, to retire for silent and devoted reflection and while in this attitude there will arise an illumination of the truth which will open clearly the course to pursue.

How beautifully and aptly the words of the Prophet here apply, "In quietness and confidence will be your strength."

"There is a time to act, and equally so there is a time to wait." Thinkers,—earnest, conscientious thinkers,—are the need of the hour, and it is such that are sure to advance from opinions to convictions, and from convictions to good works which typify the genuine personality. It is the doing that is so acceptable in the Divine sight. This personality derives its essence from individual faithfulness,—an expression very familiar to many, and yet sometimes sinking into such triteness as to lose its full significance. It is the Spirit that quickeneth. Adorned with a personality in the sense already mentioned, one is equipped to attain a full measure of success and with it preserve the integrity of his principles.

There can be no more imposing and potential figure than that of a man who by diligence, honesty and perseverance has reached the fruition of a commercial career full of honor, and in and through all consistently maintained true Christianity. What a double blessing attaches to such an experience! "Seest thou a man diligent in business? He shall stand before kings—he shall not stand before men."

The capacity to do constructive work, to originate and execute large undertakings, is a gift to be exalted and cherished. But none the less commendable and laudable is the work of those who by humble and devoted service are fulfilling their respective missions in a smaller sphere.

We should love our business, and if with and above it we love the Truth, I hold implicit faith that a rich reward will not fail us.

We cannot ignore certain characteristics which dominate American life—the restless activity, the inclination to push to extremes and to take precipitate action without prudent forethought. All these combine to foster speculation and aggressive competition.

No one unless conversant with the situation can conceive of the volume of speculation that is constantly carried on in this country and centered principally at New York and Chicago. It is a matter of public knowledge that about \$80,000 are now paid for a membership in the New York Stock Exchange and this indicates the enormous value of transactions legitimate and otherwise effected on the floor of that institution.

All classes of society are engaged in the exhausting excitement, and it is needless to say the baneful consequences are incalculable.

Why such eager haste to acquire money? In the average span of life there remain after the completion of a college education thirty or

more years to pursue an occupation, and within that period is abundant opportunity to accumulate a competence by safe, conservative and honorable method.

As Friends therefore let us gird ourselves, take courage and perform our allotted tasks in a manner worthy of our inheritance and our environment.

In seeking this end, it is not incumbent upon us to avoid contact with the world, but rather to become according to the measure of our faithfulness living epistles and ministers of righteousness while walking up and down the earth among our fellow men in the great domain of commerce.

Finally, we cannot escape the higher aspect of this subject. Sound ethics have their root and their life in the gospel of our Lord and Saviour Jesus Christ, and we all come within the purview of that solemn admonition, "without me ye can do nothing."

Although late, perhaps sadly late in reaching a clear apprehension of this impressive truth, yet we know the true Shepherd slumbereth not and ever stands at the door of our hearts and knocks.

With the extension of such grace how can we neglect so great salvation?

For "THE FRIEND."

A Concern for the Present Season.

It is now near the accustomed time for framing the answers to valuable queries handed down to us. I suggest that each member shall read carefully the book of Discipline, not parts of it, but all, and see if he or she can truthfully say, I try to live by what that calls for; it may seem to some more than they can accomplish, but with an earnest desire, we are helped in all that is good. This desire keeps us from entering into good works unbidden—which is so prevalent at this time.

There is much reading matter put before us that is interesting for older and younger Friends, but it so dissipates the mind that there is no taste nor time for the retirement necessary for any of us who profess to be Christians. There is the cross. It matters not what we disobey in, if we do not bear the Cross we cannot wear the Crown—let us put not off till to-morrow what should be done today. "For I am not ashamed of the gospel of Christ, for it is the power of God unto salvation, to everyone that believeth" (Rom. 1:16).

R.

WHEN Para Rubber trees are tapped, after the gum has run into receptacles and stiffened, a species of large black ant is accustomed to cut out pieces of the rubber and carry them away. Bees also find uses for India rubber, and some species in South America actually cut the bark of trees that produce resinous substances in order to cause a flow of the sap. The gum is employed by the bees as a ready made wax for their nests.

The pathway to the Land of Life
Passes the threshold of my door.
It turns down yonder narrow street
Hedged by the dwellings of the poor.
It winds beside the house of woe,
Under lit panes where watchers wait,
Who strides too swiftly on that road
Reaches the end too late.

For "THE FRIEND."

A Notable Venetian of the Sixteenth Century —Fra Paolo Sarpi.

(Concluded from page 231.)

Some works of Fra Paolo that partook of a religious as well as of a scientific character, were, his "Unity of all Science and of all Goodness;" "Atheism Repugnant to Human Nature;" and "The Medicine of the Soul," in which he applied to the soul the principle of health and healing which he applied to the body. The prayer of David beginning, "Search me, O God, and know my heart, try me and know my thoughts," was often on his lips, as we learn from his having written the tractate, "An examination of our own Defects, and how to cure them." Defects visible to no one else he saw in himself, and mourned over.

By a new *Index Expurgatorius*, published in 1596, the then pope, Clement VIII., sought to control the printing and sale of books, and this became a matter of disagreement with the Republic, for Venice was at that day a great printing and publishing centre, and one of the chief markets for books in Europe. Now, as to this Index, few immoral or irreligious books were condemned, but mainly such as upheld the rights of conscience and of States, so that it was evidently issued not in the interest of religion, but mainly to uphold the temporal power. Venice, therefore, refused to accept it until the pope signed a concordat by which only books printed out of that city, that attacked religion, were prohibited. Correctly surmising that Fra Paolo counselled this course, Clement denied the desires of the friends of the former that he should be promoted to a bishopric. Nevertheless, the Doge and the Senate, because of the frequently recurring controversies between the Republic and the Vatican, appointed Fra Paolo to a special position (1606) of that of Theological Counsellor, being additional to the three permanent officials who were called the Counsellors of Law, or State Counsellors. Before accepting this place, however, Paolo made the wise stipulation that the Doge and the Senate obtain first of all, the sanction of the general of the Servites, who was supposed to act directly under the pope. So, in the seventeen years until his death that Fra Paolo held this position, he was enabled to stay at his post, when summoned again and again to Rome to answer for his conduct; yet it is said "that the history of the Republic during these seventeen years was one unbroken record of great intellectual and moral victories. In every case Fra Paolo's advice was sought, in every case it was followed, and in every case it was right."

In the first year of Paolo's service as *Consultore*, the Republic having resisted certain papal demands, a bill of interdict and excommunication on behalf of Pope Paul V., was launched against it. By the like method, during the one year that the pope had been in power, Naples, Genoa, France and Spain had been humbled, and similarly, he thought, the stubborn Republic would be brought to its knees. The Republic, however, proclaimed the continuance of the religious services, though the pope had interdicted them; it ordered the church buildings kept open, though the pope had commanded them to be shut; the priests to remain in their places, though given liberty by the pope to quit the "ac-

cursed land," and so on. Very few of the priests departed, but the Senate, recognizing the mischief which had been worked by the Jesuits, passed on them the punishment of perpetual banishment, with the forfeiture of all their possessions. Paolo, not responding to the command of the pope to repair to Rome, a decree of the curia was issued to burn his books wherever found. Eventually, the episode passed away without bloodshed and the papal censures were removed.

The year 1607 brings us to a tragic period in the life of Fra Paolo. The three Counsellors of State successively dying, the Senate formally made over to Paolo the duties of their offices, additional to his own, so that everything of national interest, no matter what its nature, came before him for sifting and settlement. A signal mark of their favor and confidence in his judgment was shown in throwing open to his inspection the secret Archives of the Republic, than which nothing had been guarded with greater vigilance. The pope, meanwhile, resenting the bestowment of such rewards upon one whom he considered a heretic and his opposer, made attempt to lure Fra Paolo to Rome under pretense of showing him honor, but the intended victim would not be entrapped. Then, in the autumn of the year, Contarini, the Venetian Ambassador at the papal court, sent definite and detailed information to the Senate, of a plot on Fra Paolo's life. The latter acceded to the request of the Senate that he should no longer walk alone in the narrow streets of the city. Late on a certain afternoon, however, as he was about to cross the bridge over a waterway, to the Servite monastery, accompanied only by his servant and an aged friend, five ruffians sprang upon them out of the darkness. Paolo was left for dead with several stiletto wounds upon his head, and the assailants made their escape. In the last thrust, which was of a most remarkable character, the stiletto had entered the right temple, and had come out between the nose and the cheek, breaking the upper jaw in its passage, and, being bent by the violence of the stroke, could not be easily withdrawn, and so was left by the assassin in the wound. For three weeks Paolo's life hung in the balance, but ere long he recovered. "It pleased God," wrote Paolo to a friend, "that all the wounds were oblique ones, a mercy which I know was from God alone, whom it pleased to work this wonder. I have no doubt that they could have killed me on the spot a thousand times if the Divine protection had not succored me, which he always praised."

The Senate doubled his stipend, (and later doubled it again), and would have provided him a more central residence, but he preferred his simple cell which he had chosen for himself when a boy, though a special staircase was built from it to the canal, that he might go to and fro in a gondola, without being so much exposed as formerly. Other violent attempts were made upon his life, as well as repeated attempts to poison him, but, as Fra Fulgenzio relates, there was no probability of such a plan succeeding, for "his sense of taste was so exquisite, that he could infallibly distinguish the ingredients in his food and drink."

The narrative reviews a number of the works written by Fra Paolo during the later

years of his life, but only two of them will be here alluded to. One of these, of great and lasting value, was "A History of Ecclesiastical Benefices." Not unlikely the vicious example of Paul V. in loading his nephews with estates unscrupulously acquired, served as stimulus to the production of this timely protest. One of the beneficiaries of this papist simony was the Cardinal Scipione Borghese, who already held thirty benefices of a gross annual rental of two million francs, but whom still another was conveyed, by excommunicating a worthy monk who had been chosen by his brethren as abbot. Fra Paolo advocated, what has come to pass in large part in our own day, the stripping of the pope of curia of all their temporalities, and the return of their illegal wealth to the separate congregations for which it had been intended, if the supplying of the needs of the clergy at the poor, particularly the latter. It may be pertinent to add that Paolo himself was so mercenary, that though his counsel and services were given in so very many cases outside his State position, he in no case would accept compensation.

It finally remains to speak of Paolo Sarpi's literary work, and the one by which he is most known to the world, "The History of the Council of Trent." In the course of his life he had been the intimate friend of eminent men who were not only present at the Council, but had had much to do with its proceedings. There had been handed him the copy of the minutes made by the Secretary to Cardinal Gonzaga, President of the Council, and he had also been given the notes taken by Yvan Ferrier, Ambassador from France. It is believed also that the minutes of the Council, and other explanatory documents were open to him when in Rome, and we further know that access was given him to all the secret archives of Venice. Although afterwards the completed work was sought to be discredited by the Vatican, yet many editions of it were issued in most of the European languages, and (as stated in the narrative of Robertson) "it stands the most complete and accurate repository of facts connected with the Council." The original manuscript of the History, in the handwriting of Marco Pisano, one of Fra Paolo's secretaries, with corrections and notes by the author himself, is preserved in the library of St. Mark's, in the Doge's palace.

In the spring of the year 1622, Fra Paolo was laid low with inflammation of the lungs and fever. As the evidences appeared that the time of his passing away was not far distant, he was wont to say, "Lord, now thou art letting thy servant depart in peace." He rallied, however, and continued attending to his duties as they came before him until the forepart of the following year, when, after a fainting spell which overcame him as he was dressing, being told that he was dying, he calmly said, "Let God be praised, what pleases Him pleases me." Afterward, more than once he repeated such sentences of the Scriptures as "Being justified freely by his grace through the redemption which is in Christ Jesus, whom God hath set forth to be a propitiation through faith in his blood." On the fifteenth day of the First Month, 1623, Fra Paolo Sarpi, whom Robertson, with others,

signates "the Greatest of the Venetians," parted in peace.

We need not follow the details given by the biographer, of the several attempts to remove and scatter the poor body's remains from the several local resting places where they were successively interred. One sentence, further, on his life service I add, the sentiment of a scholarly noble, that Paolo Sarpi "exhibited the Venetians a greater degree of liberty of belief in his own person than in towers and cities." The reader of the biography of Catherine of Siena, unlettered woman that she was, will recognize a parallel (perhaps with an added emphasis upon prayer) with the life of a Paolo in religiously dedicated efforts for the common good, and for the removal of evils and wrongs which are the occasions of war.

JOSIAH W. LEEDS.

FOR "THE FRIEND."

Education at the South.

No doubt all the readers of THE FRIEND feel indebted to those Friends who gave us the merit of their visit to Tuskegee. I read the account with much interest, and am in thorough sympathy with this great work for the racial emancipation of the negro; and I do not wish my future remarks to be in any way construed as contradicting this statement. The feeling which prompts this utterance is in no sense out of sympathy with this beneficent work; hence, if such an idea is conveyed to your mind, it is because I do not adequately express myself.

The sentence which fixed itself like a nail in my mind was this in the description of the visit to a "Female College": "white girls, 'Those who saw the equipment felt regret for its limited character, and the idea that the young ladies would be better off in some well equipped college in the North.' In that sentence 'the tale of our sorrow is told,' though to those who know us, it will convey but a small and very distorted idea of the real situation. The same thing doubtless might be said of most of our other colleges, whether female or otherwise. The Northern colleges are exactly in the position of the talented man in the Bible, "To him that hath shall be given, and he shall have more abundance." With fine equipments, large endowments, they are the constant recipient of largess from the philanthropic elite here in the South, "From him that hath not, shall be taken away even that which he hath," has been exemplified over and over again, with nothing by any means adequate with which to educate the white children within our borders, we have been compelled, by our sense of right and knowledge of expediency, to understand, to educate the colored population as well. If any one doubts this statement, I refer him to the statistics of the Bureau of Education. There he will see just how much the South pays yearly to educate negro children. This is nearly all paid by white people, and is consequently deducted from what might otherwise go to their own school fund. It is well to remember in connection with this that those of us who are doing this are no more responsible for the position and condition of the negro in our midst than are our friends of the North and West. We are thankful that hundreds of our young

men and women do avail themselves of the splendidly equipped colleges in the North; but what are the thousands to do to whom the Northern Institutions are about as accessible as the mountains of the moon? Often it is all the parents can possibly do to pay the expense of school, without the additional expense of travel and the considerable extra expense of clothing in northern latitudes. The schools are taxed to the utmost to keep open doors. If endowed at all, endowments are small. Charges are far below the charges in Northern schools; if they were not, the number of pupils would be greatly decreased. There is a constant appeal to "be allowed to come and work the way," until those in authority get sick at heart from the necessity of saying "there is nothing here." I have heard this from other colleges than the one with which I am most familiar, and of other denominations than Friends.

There has prevailed at the North among the Friends and others, and especially has this been the case with certain English Friends, an idea that the Friends of the South do not exert themselves in behalf of the negro as they should. Nothing can be farther from the facts in the case. But this help is given in ways that do not get into print. No great schools are founded, because we have nothing to found them with; but there is constant almsgiving, an unceasing assistance in daily life, in sickness, in death. The negroes do not take account of such things. They forget benefits very easily, and almost never feel in any way obligated, no matter what is done for them. And were they questioned by any Northern person, in nine cases out of ten, they would say, "the white folks do not pay us any attention;" but as soon as want or trouble comes, they return at once to the source that does not fail them.

This statement is the literal truth, as hundreds of college could testify. I make a digression in order to say this because I know the condition, and I know the Southern Friends have all along been the friends of the colored people.

In the State schools the negroes have an equal opportunity with the white children. Indeed, they frequently have longer school terms than the whites because their teachers are willing to take lower salaries than are the white teachers. In addition to this great provision by the State, there are numberless fine Institutions founded and supported by Northern philanthropy, where for a pittance, so far as the real expense is concerned, those who so desire may receive a fine education.

In our own immediate vicinity, that is, within easy reach of this place, there is at Winston-Salem the Slater School, very much such as the Tuskegee; at Greensboro is Bennett Seminary; at High Point a fine school maintained by New York Friends; (in Greensboro, too, is a fine graded school for the negroes, also the State Agricultural and Mechanical College for negroes). The expense at all of these is very small, because of the provision made. There are many more just such establishments in this State; these are all within a radius of twenty miles. At Raleigh is Shaw University, and at Kittrells another fine school; and others in all parts of the State.* Now there is nothing of the kind for white people. The State does for them just what it does for the

negroes. In the main, Northern philanthropy does nothing for them, while it is lavished upon the negroes. People have a perfect right to give their money where and when and how they please, and I am glad that so much has been done for the negro; but I wonder if there are not yet other people of wealth, who might become as much interested in these struggling white girls and boys as the benefactors of the negro are in them, who will find it in their hearts to endow some of these heroic Institutions which have battled along through very adverse circumstances. Were these endowed and scholarships founded, so that the expense might be reduced to a minimum, there would then be a possibility for our people to become educated. They would then have the opportunity now open to the negroes throughout the South.

There are negro girls belonging in this neighborhood who are at the present time receiving a far better education than many, and I might say, most of the girls in our own denomination in this State. Do I regret it? Indeed, I do not regret that the negroes are getting it; but it does come like an arrow to my heart that so many bright and worthy girls must remain uneducated because the same kind of arrangement cannot be made for them in schools and colleges open to them.

In a late number of *The Sunday School Times*, Dr. Curry—that champion of universal education—gives a very concise and unquestionable account of this whole matter. He knows the situation as few men can know it, and from the vantage of a life-time spent in assisting the education of both races, he speaks with an authority which should command attention and acquiescence from all who desire the welfare of this section of the country. After showing the conditions which existed previous to the war, and then the position in which the South was left after the war, Dr. Curry goes on to enumerate the vast sum which the South has devoted to the education of the negro, closing this enumeration with this sentence, "Nothing in the history of modern civilization surpasses this sublime self-denial." He shows that the negro is not a sectional, but a national problem, and then records the efforts which certain far seeing men made toward securing national assistance. ("The general agent (of the Peabody fund) twice presented petitions and appeared before committees. Senator Blair and other members of Congress, for several years pressed the matter upon the public mind and conscience, but all in vain. Since then, with profuse hand, the Congress has appropriated money and sent teachers to Alaska, Hawaii, Porto Rico, and the Philippines, but in the Southern States the white man's burden has to be borne unaided.")

Next, the negro schools are described and full justice done the great leaders, Drs. Friswell and Washington, "with whom I have cordially co-operated for twenty years, and whom I have much pride in classing as my special friends." We are shown how Northern philanthropy has put its shoulder to the wheel, and helped roll back the tide of ignorance and

*Of course, there are private schools, and denominational schools and colleges, but these are quite beyond the reach of multitudes of our people, inexpensive though they be.

lifted the negro upward. "Philanthropists and liberal benefactors and religious denominations have done generously for the education of the black man, for which grateful praise is indeed due. Such as these have been moved to helpfulness to fit the negroes for the citizenship and suffrage suddenly thrust upon them. They are not so easily moved by the spectacle of the white race striving to fit itself for the noble discharge of an unparalleled duty. If Southern colleges and universities could, in endowments and equipments, be placed on a better footing, their power and utility would be multiplied tenfold;" and then thus describes the situation and urgent needs of Southern schools and colleges. "At the South, since the war, these institutions have had a hard struggle to provide necessary facilities and means to pay professors, to encourage special gifts and aspirations, to keep pace with rivals, to heed the pathetic appeals of young men and young women hungry for an education; and they have, in hope and patience, made sacrifices almost incredible. While Northern and Western institutions have been endowed with prodigal munificence, and negro schools have received from the national government and ecclesiastical bodies and individual benefactors many millions, the South has received, from beyond Mason and Dixon's line, not probably, all told, one million of dollars, after subtracting the noble Vanderbilt gift, where a Southern woman is supposed to have had some healthful influence. The University of Virginia, Washington-Lee, Richmond College, Roanoke, Sewanee, and a few others, have had some acceptable gifts, but, as stated, not as much as a million. The *Philadelphia Record* patriotically bemoans the "strange fact" that, while millions have gone to the East and West, very little has gone to Southern colleges. "It is to the interest of the whole country that the heroic efforts which the Southern people are making in behalf of education should be aided by those who are seeking to place their money where it will best advance the cause of learning."

While Friends have always been generous toward their brethren of the South, they too, have largely endowed Northern and Western institutions; and the only institution belonging to them in the South stands to-day in urgent need of larger endowment and better equipment. This is a matter of vital import to the name of Quakerism in all this Southern country. Our college stands more in the situation of a stronghold than do the colleges in other Yearly Meetings.

MARY M. HOBES.

GUILFORD COLLEGE, N. C., First Month 29, 1902.

"No fear shall move thee, doing right,
And trusting God and loving all that lives,
Peace shall enfold thee like a flood of light,
And that sweet joy which faithful service gives."

For age is opportunity, no less

Than youth itself, though in another dress;
And as the evening twilight fades away,
The sky is filled by stars, invisible by day.

—Longfellow.

"CAN Friends live in worldliness and ease, and maintain a testimony to the freeness and spirituality of the Gospel dispensation?"—N. C. Friend.

On the Right Use of the Lord's Outward Gifts.

As our understandings are opened by the pure light, we experience that through an inward approaching to God, the mind is strengthened in obedience; and that by gratifying those desires which are not of his begetting, these approaches to Him are obstructed, and the deceivable spirit gains strength.

These truths being as it were engraven upon our hearts, and our everlasting interest in Christ evidently concerned therein, we become fervently engaged, that nothing may be nourished which tends to feed pride or self love in us. Thus in pure obedience, we are not only instructed in our duty to God, but also in the affairs which necessarily relate to this life, and the Spirit of Truth which guides into all truth, leavens the mind with a pious concern, that "whatsoever we do in word or deed, may be done in his Name." Hence such buildings, furniture, food and raiment, as best answer our necessities, and are the least likely to feed that selfish spirit which is our enemy, are the most acceptable to us. In this state the mind is tender, and inwardly watchful, that the love of gain draw us not into any business which may weaken our love to our heavenly Father, or bring unnecessary trouble to any of his creatures.

Thus the way gradually opens to cease from that spirit which craves riches and things fetched far, which so mixes with the customs of this world, and so intrudes upon the harmony of life, that the right medium of labor is very much departed from.

As the minds of people are settled in a steady concern, not to hold or possess anything but what may be held consistently with the wisdom from above, they consider what they possess as the gift of God, and are inwardly exercised, that in all parts of their conduct they may act agreeably to the nature of the peaceable government of Christ.

A little supports such a life; and in a state truly resigned to the Lord, the eye is single to see what outward employ He leads into as a means of our subsistence, and a lively care is maintained to hold to that, without launching further.

There is a harmony in the several parts of this Divine work in the hearts of people: he who leads them to cease from those gainful employments, carried on in that wisdom which is from beneath, delivers also from the desires after worldly greatness, and reconciles the mind to a life so plain that little suffices. Here the real comforts of life are not lessened. Moderate exercise, in the way of true wisdom, is pleasant both to mind and body.

Food and raiment sufficient, though in the greatest simplicity, is accepted with contentment and gratitude.

The mutual love subsisting between the faithful followers of Christ, is more pure than that friendship which is not seasoned with humility, how specious soever the appearance.

Where people depart from pure wisdom in one case, it is often an introduction to depart from it in many more; and thus a spirit which seeks for outward greatness, and leads into worldly wisdom to attain it and support it, gets possession of the mind. In beholding the customary departures from the true medium of labor, and that unnecessary toil which many go through, in supporting outward greatness,

and procuring delicacies; in beholding the true calmness of life is changed into hurry, and how many, by eagerly pursuing outward treasures, are in great danger of withdrawing as to the inward state of the mind; meditating on the works of this spirit, and the desolation it makes amongst the professors of Christianity, I may thankfully acknowledge, that I often feel pure love beget longings in my heart, for the exaltation of a peaceable kingdom of Christ, and an engagement to labor according to the gift bestowed on me for promoting an humble, plain, temperate way of living; a life where no unnecessary cares or expenses may encumber our minds, or lessen our ability to do good; where no desires after riches or greatness may lead into hard dealing; where no connexions with worldly-minded men, may abate our love to God, or weaken a true zeal for righteousness; a life wherein we may diligently labor for a signifiedness to do and suffer whatever our heavenly Father may allot for us, in reconciling the world to himself. When the prophet Isaiah had uttered his visions and declared that time was coming wherein "swords should be beaten into plowshares, and spears into pruning-hooks, and that nation should not lift sword against nation, neither shall they learn war any more;" he immediately directs the minds of people to the Divine teacher in this remarkable language: "O house of Jacob, come ye and let us walk in the light of the Lord." We wait for the direction of this light, in all temporal as well as spiritual concerns, appear necessary; for if in any case we enter lightly into temporal affairs, without feeling the Spirit of Truth to open our way therein, a thorough love of the world proceed on, and so for gain by that business or traffic, which is not of the Father, but of the world." We find in our testimony to the purity and peace his government, and get into that which is chastisement. This matter hath lain heavy on my mind, it being evident, that a life so humble, less simple and plain, than that which Christ leads his sheep into, necessarily requires a support, for which pure wisdom do not provide; hence there is no probability of our being "a peculiar people, so zealous of good works, as to have no fellowship with the works of darkness," while we have wants supply which have their foundation in custom, and do not come within the meaning of the expressions, "your heavenly Father knoweth that ye have need of all these things." The things which He beholds to be necessary to his people, He fails not to give them in his own way and time; but as his ways are above our ways and his thoughts above our thoughts, the imaginary wants are different from the things which He knoweth that we have need of.

As my meditations have been on these things, compassion has filled my heart toward my fellow creatures, involved in customs which have grown up in the "wisdom of this world, which is foolishness with God." O that the youth may be so thoroughly experienced in an humble walking before the Lord, that they may be his children, and know Him to be their refuge, their safe unfailing refuge, through the various dangers attending this uncertain state of being. If those minds are redeemed from the love of wealth, and

contented with a plain, simple way of living, and that to conduct the affairs of a city, without giving countenance to unrighteous proceedings, or having fellowship with works of darkness, the most diligent care necessary; if customs, distinguishable from vulgar righteousness, and opposite to the self-denying life, are now prevalent, and mixed with trade, and with almost every policy, that it is only through humble waiting on the inward guidance of Truth, that we reasonably hope to walk safely, and supply an uniform testimony to the peaceable government of Christ; if this be the case, how untowardly they expose themselves to temptations, who give way to the love of riches, conform to expensive living, and reach forth again, to support customs which our holy shepherd leads not into. JOHN WOOLMAN.

What Perseverance Did for a Slave.

Henry Boyd having an aspiration after freedom, made a bargain with his claimant purporting to buy himself for a price. He then went to the Kanawha salt works, the place where Senator Ewing, of Ohio, chopped out education, and there Henry Boyd chopped his freedom. This accomplished, he applied himself to a carpenter and joiner, and fully mastered that art, he proceeded to Cincinnati, purposing to work at his trade. To his astonishment he found the color prejudice so strong that no master carpenter would employ him.

After many repulses he at length found an Englishman, not resident there long enough to have imbibed the prevalent prejudice. What surprised, however, he asked, "Are you a mechanic?" and handing him a plane, asked that he should make trial of his work.

"But this plane is not in good order," Henry said, and he gave it a few taps till he brought it to suit his practised eye. As he was about to leave, he said, "O, I see you are a man. I will employ you." Henry, however, proceeded to dress a board in a masterly manner. The hands from several benches gathered around, interested spectators, and began to unbuckle their aprons. "What does this mean," asked the Englishman, in surprise. "It means that we won't work for a nigger." "Then I will build him a house outside, and he shall work there." "We won't work for a man who hires a nigger." "Pay us up and we'll be off." To Henry, I am sorry, my friend, but you see my men will leave me if I employ you." Henry was sufficiently trying, but Henry was not entirely discouraged. There might be one man in the city who would give him a chance, nor did he desist until he had applied for one he could find in the then comparatively small city. The refusal from the last man and him near the bank of the river. He himself down in utter discouragement. Graduation of his position had never applied to him so great, even when a slave. What should he do? The river at his side left him to offer the only resource. This was a strait as tries men's characters. The wrong ones succumb in the manner pointed out by the tempter. Some of those of stronger become preceptors upon society. Only of a high order can rise superior to adaptations, and achieve victory over imminent dangers. But of this character was Henry

Boyd. As he lay there a new thought came to him. He arose and walked rapidly toward the business part of the town; his attention was soon attracted by a man inquiring for someone to help in unloading a flat boat containing pig iron. "I am the man for you," said Henry, taking off his coat and laying hold of the work with a will. "Yes, you are the man for me," said the merchant, observing his motions, during three or four days in which flat boats were being unloaded with uncommon dispatch. An acquaintance was formed, which resulted in Henry's being established as porter at the store. Now the merchant was annoyed because a carpenter, whom he had engaged to make a counter, had repeatedly disappointed him. At last he said, "Henry, you can do almost anything; why couldn't you make this counter?" "If I had my tools and the stuff, perhaps I could," and then he learned that Henry had learned the trade, and had no objections whatever to try his hand. Some money was thrown down and he was told to get the board and make the best counter he could. The work was done with such promptitude and finish that his employer broke off a contract for the erection of a large warehouse, which he was about closing with the man who had disappointed him about the counter, and gave the job to Henry. He furnished the money and allowed Henry to manage it as he pleased. Among the many hands he employed were some of the same men who had taken off their aprons to him at the Englishman's. The merchant was so pleased with his warehouse that he recommended the intelligent builder to his friends, and thus Henry soon had his hands full of contracts. "He is now living in his own house at Cincinnati, a man knowing his rights and fully competent to maintain them." This account appeared in the *Baltimore American* about forty years ago. An anti-slavery tract of that period names among the enterprising colored people of Cincinnati, Henry Boyd, represented to be worth, in property, nearly four thousand dollars.

Indians Must Cut Their Hair.

The toilet of the Indian has been decreed by the Secretary of the Interior, says the *Washington Star*. Hereafter, unless the orders of the Department are speedily repealed, the red man will cease to wear his hair long, paint his face and enliven the journey to the happy hunting ground with sacred dances.

The explanation is that Commissioner Jones has sent to the agent in charge of nearly every Indian reservation a circular letter directing him to forbid, in the name of the Interior Department, the wearing of long hair by the male Indians under his charge and the painting of their faces by Indians of either sex. To accomplish the complete cessation of these practices the agent is directed to employ all the means at his hand—to suspend rations and other supplies, to confine the younger recalcitrants in the guard house at hard labor, and by tact, perseverance, and firmness to induce the old men to give up the customs which bind them to barbarism. Even the blanket is to give way to the clothes of American civilization.

It happens that several small tribes have anticipated this action of the bureau, and have

given up the signs of their nomadic life voluntarily. By far the greater number, however, still cling to costume and custom with the saturnine tenacity characteristic of their race. It is thought possible, therefore, that the new attitude of the Department may provoke some determined remonstrance, and in preparation for this the agents have been cautioned against proceeding with precipitate haste, and to rely on tact rather than force until the latter becomes finally necessary.

The text of the order is embodied in the following circular letter, a copy of which is now in the hands of nearly every agent employed by the Indian Bureau:

"This office desires to call your attention to a few customs among the Indians which, it is believed, should be modified or discontinued.

"The wearing of long hair by the male population of your agency is not in keeping with the advancement they are making, or will soon be expected to make, in civilization. The wearing of short hair by the males will be a great step in advance, and will certainly hasten their progress toward civilization. The returning male student far too frequently goes back to the reservation and falls into the old custom of letting his hair grow long. He also paints profusely, and adopts all the old habits and customs which his education in our industrial schools has tried to eradicate. The fault does not lie so much with the schools as with the conditions found on the reservations. These conditions are very often due to the policy of the government towards the Indian and are often perpetuated by the agent's not caring to take the initiative in fastening any new policy on his administration of the affairs of the agency.

"On many of the reservations the Indians of both sexes paint, claiming that it keeps the skin warm in winter and cool in summer; but instead this paint melts when the Indian perspires, and runs down into the eyes. The use of this paint leads to many diseases of the eyes among those Indians who paint. Persons who have given considerable thought and investigation to the subject are satisfied that this custom causes many of the cases of blindness among the Indians of the United States.

"You are, therefore, directed to induce your male Indians to cut their hair and both sexes to stop painting. With some of the Indians this will be an easy matter; with others it will require considerable tact and perseverance on the part of yourself and your employees successfully to carry out these instructions. With your Indian employees and those Indians who draw rations and supplies it should be an easy matter, as a non-compliance with this order may be made a reason for discharge or for withholding rations and supplies. Many may be induced to comply with the order voluntarily, especially the returned student. The returned students who do not comply voluntarily should be dealt with summarily. Employment, supplies, etc., should be withheld until they do comply, and if they become obstreperous about the matter a short confinement in the guard house at hard labor, with shorn locks, should furnish a cure. Certainly all the younger men should wear short hair, and it is believed that by tact, perseverance, firmness and withdrawal of supplies the agent can induce all to comply with this order.

"The wearing of citizen's clothing, instead of the Indian costume and blanket, should be encouraged.

"Indian dances and so-called Indian feasts should be prohibited. In many cases these dances and feasts are simply subterfuges to cover degrading acts and to disguise immoral purposes. You are directed to use your best efforts in the suppression of these evils.

"On or before June 30, 1902, you will report to this office the progress you have made in the suppression of these evils."

Items Concerning the Society.

Philadelpia Quarterly Meeting was held on the 3d instant, and was favored with living exercise. The way of holiness was evidently set forth, and much of spiritual value appeared. The meeting continued in joint session to hear and consider the report of the committee in care of three evening meetings for Divine worship, two of which had been held at Twelfth street, and the third at Fourth and Arch streets. The interest in these meetings had increased to the end, the closing one being attended with special life and power. The committee in their report brought to view its concern for the more distant parts of the membership, whom these meetings could not reach except in spirit. A goodly savor attended their counsel to distant meetings, and a covering of exercise on their account seemed to overspread the assembly. The language of the report was directed to be sent to these and all the subordinate meetings. In the separate men's and women's sessions, a measure of the life vouchsafed seemed to abide to the end.

SUMMARY OF EVENTS.

UNITED STATES—The amount specified in the treaty with Deomark for the cession of its West Indian islands is \$5,000,000.

A bill providing for the creation of a new department that of Commerce and Labor has passed the Senate.

Discussions of the Philippine tariff bill has occupied much time in Congress lately, and has assumed the form of a struggle between political parties. An amendment proposed by Democratic members, commits that party to the policy of relinquishing the islands.

The question of reducing the duties upon certain products of Cuba, especially sugar brought to this country is receiving much attention at Washington. The producers of sugar in this country oppose these concessions, and a final decision in regard to the subject has not yet been reached.

In a public speech, Andrew Carnegie has lately declared: "The killing of men by men under the name of war, is the foulest and most unchristian thing that has been discussed as to what is or what is not permissible under civilized warfare. My view is that it is a contradiction in terms. There can be no such thing as civilized warfare. Britain, having refused arbitration in its dispute with the Transvaal Republic, is responsible for the extermination of a brave and heroic Christian people. But let us also remember that we are to-day engaged in shooting down Christian Filipinos, whose only crime is that they believe in the Declaration of Independence. Sad, that both branches of the so-called most highly civilized race should be guilty of the most uncivilized crimes. Let us pray that this disgrace is soon to pass away."

A dispatch from Memphis of the 31st ult., says: "The weather of the present week has brought disaster to all the small and many larger towns and villages in the States of Tennessee, Arkansas and Mississippi. It is difficult to estimate the amount of damage. It is known that at Little Rock, Ark., the damage amounts to half a million dollars. The damage to stocks of goods is due to the tremendous weight accumulated of ice and sleet and to the insufficiency of roofs to sustain such loads. Such a siege of sleet and cold rain is altogether unprecedented. In some places the ground has been covered with ice to a depth of six inches.

A dispatch from Washington of the 31st ult., says: "The disputed question as to permitting the leasing of the grazing land of the Standing Rock Indian Reservation in the Dakotas was settled to-day by a decision to go ahead with the leases. The Interior Department will proceed immediately with the execution of leases to W. I. Walker, of Rock Island, Ill., who gets 460,800 acres, and a cattle-

man of South Dakota, who gets 477,480 acres. This leaves over half of the reservation unleased and remaining for the use of the Indians themselves if they so desire. The signing of the leases, which seems to be a sudden reversal of the Government policy towards the Sioux Indians, and the abrupt and hasty manner in which it has been accomplished, are much criticized by those who are interested in the welfare of the Indians.

In answer to questions before the Senate Committee of Inquiry in Washington, Governor Taft stated that he estimated that from 5 to 7 per cent. of the people of the Philippines read and write the Spanish language, but that he could not say what proportion of the people could write their own language. One great difficulty encountered is the fact that the people of the different provinces do not understand the language of another. The witness said that many of the 835 American teachers are engaged in instructing the Filipino teachers. As a rule, the people appeared anxious to get the education thus given, but in some cases the priests were manifesting a disposition to establish parish schools for their people. Governor Taft said that Spanish is the only language that is common throughout the archipelago, and that this was the only instrument of communication with outside thought. This condition of affairs, Governor Taft said, had led him recently to vote for the continuance of Spanish as the official language of the islands.

The report of the Commissioner of Patents shows that in proportion to population, more patents were issued to citizens of Connecticut than to those of any other State—one to every 1128.

A collection of butterflies and moths, made by the late Dr. Strecker, of Reading, Pa., is said to contain more than 100,000 dried specimens from all parts of the globe.

The Tennessee temperance law provides that no saloon can operate within four miles of a school-house in cities of less than 10,000 population.

It is said that the list of gifts and bequests made during the year 1901 for public uses amounted to \$107,260,000, far exceeding previous records. The highest previous record for the year was \$45,000,000.

South Carolina and Mississippi are the only two States now in which the negroes outnumber the whites. In Louisiana the relative decrease of negroes has been very marked, but in Alabama and Florida the relative proportion of negroes has increased. The black population appears to be concentrating in the low and warm regions of South Carolina, Georgia, Florida, Alabama, Mississippi and Louisiana.

The monthly statement of the public debt shows that at the close of business First Month 31, 1902, the debt, less cash in the Treasury, amounted to \$1,005,926,898, which is a decrease for the month of \$5,701,388.

Deceased to 53 deaths in this city last week, reported to the Board of Health. This is more than the previous week and 22 less than the corresponding week of 1901. Of the foregoing, 257 were males and 273 females: 51 died of consumption of the lungs; 96 of inflammation of the lungs and surrounding membranes; 16 of diphtheria; 21 of cancer; 15 of apoplexy; 21 of typhoid fever; 9 of cholera fever, and 13 of small pox.

COTTON closed on a basis of 8½c. per pound for midland uplands.

WHEAT—Winter, spring, \$2.65 to \$2.90; Pennsylvania roller, straight, \$3.50 to \$3.70; Western winter, straight, \$3.60 to \$3.80; spring, straight, \$3.55 to \$3.80.

GRAIN—No. 2 red wheat, 85 to 85½c.

No. 2 white, 84 to 84½c.

BEEF CATTLE—Best, 6½ to 6½c.; good, 5½ to 5½c.; medium, 5¼ to 5¼c.

SHEEP—Extra, 4½ to 4½c.; good, 4¼ to 4¼c.; common, 2 to 3c.

LAMBS—4½ to 5½c.

HOGS—41 to 41c.

FOREIGN—The Government of Holland has offered, in the most friendly terms, to help in bringing about peace in South Africa. In a communication to the British Government the Dutch Government suggests that it might be permitted to act as a sort of diplomatic agent for the Boer delegation. The Government, however, expressly disavows any attempt at intervention, and does not mention any terms. It is said that these overtures for peace are approved by Germany.

Great Britain has announced her purpose to observe the policy determined upon by the United States with respect to the return to China of that portion of the opium indemnity which may be in excess of actual injuries and expenses.

An edict which has issued by the Dowager Empress of China to discourage the binding of the feet of Chinese female children, because this is a barbarous custom.

A treaty of peace, signed by the Central American

Presidents recently, has been subscribed to by the States of Foreign Relations of Salvador, Honduras, Nicaragua and Costa Rica. The treaty provides for maintenance of harmony between the four republics for the establishment of compulsory arbitration for settlement of all troubles between the countries.

The London Graphic now estimates the total cost of the Boer war at \$220,000,000, or about \$1,100,000, and notes by way of comparison, that England's cost was during the last hundred years was the Polar war, which cost \$145,000,000. The cost of life as 931 officers and 15,033 men. It is officially stated that in Russia the average acre of land, because of bad cultivation, produced but one the amount produced by an acre in America.

It is estimated that there are at present about 300 domestic ostriches in South Africa. The plaestoids, of which there are over 300 known, have all been discovered since First Mo. 1st, 1901.

NOTICES.

A STATED MEETING of the Committee on Admission will be held at 304 Arch Street, on Seventh-day, the instant, at 10 o'clock, A. M.

JOHN W. RIDGLE, Clerk.

WESTTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to Wm. F. WICKERSHAM, Principal.

PAYMENTS on account of board and tuition, and nominations in regard to business should be forwarded to EDWARD G. SHEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

DIED, on the sixteenth day of First Month, J. THEOPHILUS MORLAN, in his seventy-sixth year, an ardent member of Middleton Monthly and Particular Meeting of Friends, Ohio.

—, on the thirtieth day of First Month, 1901, his home in Mariopolis, Ontario, Canada, ELIHU ROSS of Wing and Rebecca Rogers (both deceased), of the age of seventy-four years, nine months and six days was a member of Mariopolis Monthly Meeting, a man of meek and quiet spirit, breathing love to God and man.

—, at her home near Burr Oaks, Kansas, First Mo. 3, 1902, MARY M. DILLON, widow of Samuel Dillon, of seventy-seven years, four months, sixteen days and six hours, of Walnut Creek Mo. Monthly Meeting (said meeting about to be attached to a new meeting). She was a life-long member of the Society of Friends, ever endeavoring to live by precept and example according to the principles and doctrine of her much loved Society. Her friends and relatives have the constant belief that her end is peace. Deceased was the wife of a Deaver Co., Pa.

—, at his home in Mariopolis, Ontario, Canada, the eldest son of John and Eliza Cruick, the former, ceased, at the age of thirty-nine years, eighteen months and sixteen days, having been a member of Mariopolis Monthly Meeting. This promising young Friend leaves a wife with four young children, all of school age. During the course of a long illness the Lord visited him, tendering him heartily by the most precious promises, through the anointing of the Holy Spirit, he was permitted to see his many shortcomings in not having served the Lord with more of a holy zeal, more especially with respect to his non-attendance of all the mid-week meetings of worship, and he vowed to the Lord, should it please Him to raise him up from his bed of sickness to seek after the Lord, that he would be more diligent in the known requirements of God. Nevertheless the Lord graciously manifested his forgiveness, affording him sufficient to bear a long and painful illness in quiet submission to the Divine will, and enabling him peacefully to trust in his mercy in Christ Jesus. He prayerfully committed his dear wife and children to the care and keeping of the Lord's Shepherd. The presence of his dear sympathizing Saviour, spread a holy solemnity over him in the sick chamber, witnessing to them that He is indeed "a present helper in every time of trouble," and thus sealed to them as an evidence that his spirit had been permitted to join that holy throng, who "having passed through great tribulations, have washed their robes and made them white in the blood of the Lamb."

Another Voice for Spiritual Christianity.

A new periodical comes to us from England, entitled "WAYMARKS. A Religious and Literary Journal in unity with the Testimony of Early Quakers." Published by J. E. Chall, Newport, Mon. (Subscription, 3 shillings 6 pence.)

We have no doubt there is a large void which a rightly conducted paper with the purpose announced might fill, and we hope the "Waymarks" may be blessed to fit and occupy the field for which it is intended. We would welcome the advent of this monthly, as a coadjutor with us in the cause of the same testimony. Its prospectus, entitled "Our Message," is too long and full to be quoted here, but it is addressed in one portion "To the Consistent," next "To the Seekers," then "To the Families," and then announced "To the Springs of Human action." It concludes with this language:—

"It is through a people gathered into dependence upon the inspeaking Word, that the reign of Christ, by the Spirit, will be extended in the earth, when all the temporary and outward manifestations which have been permitted in the age of ignorance, and when forms or faiths have been set up by men in the apostasy from God, pass away in the fire of the day of judgment."

Names to denote things and principles as we have hinted above, necessary to the completeness of human intercourse, but we must never idolize a word or phrase. The use of such is of secondary importance, and whether the people has the Quaker name or not, they carry out the Quaker work and represent the same principles, if we may so distinguish the truth of Christ and his Apostles in this age. It is with these principles that we are to be associated."

The editor of *Waymarks* takes note of our saying with the remark of "a Friend in

search of a Society," who had said, "Among the confusing, varying, conflicting practices of those calling themselves Friends, I see only one way for me to go, that is to be led by the blessed Shepherd himself, and go where he shall bid me, looking unto Jesus the Author, to finish my faith."

While commending so much of our answer as said, "We see no better course for our friend to take," the editor of *Waymarks* finds in our next remark a permission to join in several unsound departures which we cannot believe "fellowship with Christ would lead or place" a Truth-seeker in,—our remark being this: "It is not for us to assume to prescribe to a Truth-seeker where his fellowship with Christ should lead or place him."

Such is our confidence in the leading by Christ of those who are in fellowship with Him that we could not presume such leading could be into "a hireling ministry, and a denial of the fundamental doctrine of the light of Christ, as God's gift for man's salvation," or into unity with any other Society, than one "which the power of God has gathered out of worldly ways and fashions and worships into a pure testimony for Him and his Truth."

This is what it is advised we should rather have said: "Feel thy way in the leading of Truth, but thou canst not, while in the Truth, unite with those who hold it in the notion and not in the Life; neither canst thou unite with those who are neither in the notion nor in the Life; but thou must unite with those who are gathered into a living testimony such as has arisen in thy own breast and who will help thee therein."

We accept with gratitude the help of the Editor in unfolding more explicitly this portion of the contents of our remarks,—for we did not see that the remark could cover anything but pure Quakerism,—even as was doubtless intended by George Fox when he said that his concern was to bring men to the foot of the Cross "—and leave them there."

While adopting the Editor's language, the present editor may acknowledge that it was the Scriptural answer that soberly confronted his mind in responding to the seeking Friend: "Come and have fellowship with us, for our fellowship is with the Father and with his Son Jesus Christ." Our mind was saddened with humiliation that we could not confidently give

the answer of the apostolic church,—that we could not with a holy boldness feel warranted in vouching for the ranks of our neighboring membership, that truly, "Our fellowship is with the Father and with his Son Jesus Christ." If there is any meeting, or body that can, in all humility, declare this, happy is that people. But we know not where to look for it. It is our concern that this should be the case with us, and we look upon many of our local membership as having this experience and fellowship. But we feel that our shortcomings as a professing people forbid us to arrogate to ourselves generally that apostolic fellowship which could warrant the claim, "Doubtless we are the people;" and so, while welcoming any true knocker at our doors, we would refer every Truth-seeker to the previous and continued guidance of his Master, desiring we may be found worthy to receive him that he may have fellowship with us on the grounds marked out by our well-concerned cotemporary.

Live and Let Live.

The humanity for which our Spanish war was alleged to be declared will receive its vote of sincerity according to our Congress' grant to Cuba of a possibility to live industrially. If, as indicated below, one third of the present tariff on sugar will not solve the problem of her depression, shall we not counsel our representatives to vote for a concession of fifty per cent. towards confirming the "humanity" fought for by some, and now yearned for by the moral sense of the better class of the people?

We follow up a letter received from one of our citizens now in Cuba, by a statement from Tomas Estrada Palma, the President-elect of Cuba, and by a portion of a letter from ex-President Cleveland.

JARUO, Cuba, Second Month 2, 1902.

TO THE FRIEND:

Yesterday we visited the sugar estates of the De Castro family, about four miles from here, and employing in the mills some three hundred and fifty men and in the cane fields some five thousand people.

Rafael Fernanda de Castro informed me that they were losing a great deal of money, and as we were walking through his garden he said, "The only rose I now think of is *Rosevelt*, the only root, Secretary Root, and the only wood General Wood," which for one

speaking indifferent English, I thought showed the trend of his mind.

General Wood gave me the following statement as near correct as could be made. The words are his own:

"The average cost production of sugar (which includes the handling of the cane, grinding of the sugar, sacking and putting alongside of ship) is two cents a pound. Two or three plantations can produce for less, but with a great many it costs more.

"The selling price is 1.6 cents per pound, or \$4.80 per sack of three hundred pounds. The cost price at an average of two cents, is \$6 per sack, which makes an average loss of \$1.20 per sack.

"The duty is \$5.04 per sack. Thirty-three and one-third per cent. reduction means \$1.68 off, which added to \$4.80, the present selling price, is \$6.48, leaving an average net possible profit of forty-eight cents per bag, which is very low."

When I see and live with these people and see how without a reduction in the United States duties they will, humanly speaking, be reduced to starvation shortly, I do appeal to all Friends who see that article that they will immediately communicate with their Senators and Members of the House of Representatives requesting them to vote for a reciprocity tariff with Cuba, of not less than fifty per cent., though General Wood hopes only for one-third off the present tariff rate.

These people are our neighbors, they are very industrious, they certainly have the entire sympathy of every one of this mission, now seven in number. They live in a town of some twelve hundred people and, against the advice of the priests of the late Cuba church, flock to hear the gospel; our meeting before cane-cutting numbering at times five hundred present.

Last Fifth-day night I counted one hundred and twelve present. They listened attentively for two hours, and then nine present expressed their conviction that we are right, and desired to join in with us in their belief.

William Penn said, "Let men be good and the government cannot be bad." And when men like General Wood are striving for good government, should not we join and help? For about five hundred years these people have been taught only to look out for themselves. Won't you, dear Friends, exert yourselves a little to look out for these your neighbors in the way I have before indicated as an example to them, and believe you are doing your Master's will? I feel very sure both He and they will appreciate it. We will tell them about it, if you will inform us.

JOHN B. WOOD.

President-elect Palma, in his statement to a correspondent of the New York Tribune said:

Unless we receive a reasonable reduction property will be an impossibility. If this is denied it will be the ruin of the country. It is impossible to improve the bad condition of our principal staple, sugar, by reducing the American duty one-third. In that way the problem will not be solved at all. The clamor for further reduction will continue. The producer, unreleased from the embarrassing conditions which confront him now, would be unable to operate his mills for lack of money or credit to meet the expenses. Some figures will clearly explain that the reduction of one-

third of the actual duties is not sufficient to place our sugar on the footing needed to give the growers some benefit. Under the present scarcity of labor, increased taxes and scantier yield from neglected and impoverished fields, the average cost of production may be reckoned as not less than two dollars and a quarter a hundred pounds.

Then General Palma went to his desk and compiled the following table to substantiate his argument. [We omit all but the footings.]

Total expenses, per 100 pounds [production freight reduced duty]	\$3.87
Gross market value in New York	3.75

Net loss per 100 pounds (probably more) . 12

Continuing, he said:

Therefore, it is absolutely necessary that the concessions should reach fifty per cent. of the actual duties, so as to give the producer a reasonable gain. The question of reduction for Cuban products is certainly one of the most important problems that the United States has to deal with, and much depends on its solution.

The discharge of the nation's moral obligation to Cuba in opening the only market that is possible to Cuban products, after what he calls "all our fine words and lofty professions," is thus commented on by ex-President Cleveland in a letter to a friend of his:

I received your letter yesterday, and was much impressed by the manner in which you discuss our relations and our duty to Cuba.

The arguments used in opposition to the tariff concessions she implores, based upon our material interests, are fallacious, mistaken and misleading, while their source and the agencies of their propagation and spread cannot fail to be recognized by every honest, patriotic citizen with shame and humiliation.

It seems to me, however, that this subject involves considerations of morality and conscience higher and more commanding than all others.

The obligations arising from these considerations cannot be better or more forcibly defined than was done by President Roosevelt in his message to Congress, nor better emphasized than has been done by Secretary Root, and yet Congress waits, while we occasionally hear of concessions which rich sugar interests might approve in behalf of trembling Cuba.

I do not believe that nations, any more than individuals, can safely violate the rules of honesty and fair dealing. Yours very truly,

GROVER CLEVELAND.

THE GUEST.

One answered, on the day when Christ went by,

"Lord, I am rich; pause not for such as I.

My work, my home, my strength,

My frugal store,

The sun and rain—what need have I of more?

Go to the sinful, who have need of Thee,

Go to the poor, but tarry not for me.

What is there Thou shouldst do for such as I?"

And He went by.

Long years thereafter, by a palace door,

The footsteps of the Master passed once more,

From whence the old voice answered piteously,

"Lord, I am poor, my house unfit for Thee;

Nor peace nor pleasures bless my princely board,

Nor love nor health; what could I give Thee, Lord?

Lord, I am poor, unworthy, stained with sin."

Yet He went in.

MABEL EARLE.

AT no period of life and of service can we dispense with faith in the unseen forces in the spiritual realm.

Reminiscences.

(Continued from page 224.)

Joseph Scattergood was appointed clerk to the Meeting for Sufferings Twelfth Month 8, 1863.

His feelings in regard to the qualifications for such services are thus expressed in a letter dated Twelfth Month 25, 1863, to my friend Joseph Snowdon, whom he succeeded in that appointment:

"I received at Westtown thy kind, sympathizing letter of the 20th inst., and felt a little cheered, and strengthened by its perusal.

"I can say, as Rebecca Jones did to grandfather, 'I'm a much poorer thing than my friends have any idea of,' and I am very aware of it. There are times, however, I may greatly acknowledge, wherein I've had such a sense of the degeneracy among us as a society, and the need there is for faithful labors, that earnest desires have been raised for a qualification to be made useful in building up the waste places of our Zion, having been in measure clothed with a feeling in which I said say, 'Here I am, send me, if thou deemest me worthy to be employed in so great and important a work.' But notwithstanding these seasons, when I come to perform the state or other services which the partiality of my friends have introduced me into, there seems such a lack of life and right authority that I am disposed at times to think I do the more no good, and might as well be set aside. I feel very sensibly the additional responsibility that attaches to prominent stations at the present time. When there is such a diversity of sentiment among us as to what we should do or leave undone in reference especially to the course of those meetings which have mentioned those things which a faithful adherence to the pointings of Truth would lead of old and which some of us can not approve in reflecting upon them, I cannot but shrink from the responsibility attached to the station which I have recently occupied, for I can honestly say that I do not like to differ with them as I am disposed to prefer before myself. But I know no better method than to endeavor to do the best and leave the rest. I hope I may be permitted to bring reproach upon the Truth by anything I may do, either in or out of that station, and that no spirit of exaltation or resemblance to it may be raised within a body by the confidence and esteem which my friends show me. I am abundantly convinced that it is only as we are kept in true humility seeing daily Divine strength that we can expect to become helpful to each other or to the Church or enabled rightly to stem the current which seems likely to carry so many into the wilderness of an empty profession. That this may be more and more our mutual concern and experience is the desire of my friend."

The outbreak of the rebellion of the Southern States, brought much anxiety and many exercises to Friends in this neighborhood, not only to those who were of an age to be called upon to serve in the army, but to those who were deeply concerned that our Christian principles should be maintained in this trying period. The Meeting for Sufferings in 1864 appointed a committee of twenty-five of its members "to give such advice and assistance to our young Friends as they may be favored to give, encouraging and strengthening them in

the faithful support of our Christian testimony against war."

Joseph Scattergood was named on this committee, and was frequently called on to render assistance to Friends who were drafted, the members of our own and of other Yearly Meetings. "This a cause of deep gratitude to the Almighty Disposer of events that this committee in making their report to the Meeting of Sufferings, Ninth Month 15, 1865, could say 'They had given attention to every case which had come to their knowledge on which vice was desired or assistance needed, through the blessing of the Most High, and the kindly consideration of the officers of our government, their labors in behalf of those suffering have been in every instance successful.'"

FOR "THE FRIEND,"

Aubrey de Vere.

The death of this aged poet, who was born at Limerick, Ireland, in 1814, the year before Waterloo, has recalled to mind the following lines, which the writer has thought applicable to the life of our dear Friend Anna Hooton, recently deceased at Moorestown, New Jersey.

De Vere, it is said, was essentially a religious poet, and one of the most interesting figures of the Nineteenth Century. He was a close friend of Wordsworth, Leigh Hunt, Tennyson, Browning and Matthew Arnold.

W. E.

TO THE MEEK.

How much that genius boasts as hers,
And fancies hers alone,
On you, meek spirits, Faith confers!
The proud have further gone
Perhaps, through life's dull maze; but you
Alone possess the labyrinth's clue!

To you the costliest spoils of Thought,
Wisdom unclaimed yields up;
To you her far-sought pearl is brought,
And melted in your cup:
To you her hard and myrrh she brings,
Like Orient gifts to infant kings.

The "single eye" alone can see
All truths around us thrown,
In their eternal unity:
The humble ear alone
Has room to hold and time to prize,
The sweetness of life's harmonies.

Notions to thought made visible,
Are but the smallest part,
Of those immortal Truths which dwell
Self radiant in man's heart.
With outward beams are others bright,
But God has made you "full of light."

One science we lay know: the will
Of God—to man laid bare;
One art have mastered: to fulfil
The part assigned you there.
If other, meaner lore ye sought,
This first ye learned—to need it not!

on the door of the soul, let in
ong, pure thoughts, which shall banish sin;
y will grow and bloom with a grace divine,
if their fruit shall be sweeter than that of the
vine.

Open the door.

on the door of the heart, let in
mpathy sweet for stranger and kin;
will make the hall of the heart so fair,
that angels may enter unaware.

Open the door.

The Fellahs Children of the Nile's Side.

FOR "THE FRIEND."

While the larger part of that interesting book, "A Thousand Miles Up the Nile," by Amelia B. Edwards, (1889) is devoted to descriptions of the ruined temples and other stone monuments which are the characteristic historical features of the great river of Egypt, the authoress nevertheless gives many details of the people and the land which add to the value of the narrative. The passages that follow, for a reason not far to seek, exhibit the woe of the sides of the river.*

"It may be," she says, "that ophthalmia especially prevailed in this part of the country, or that being brought unexpectedly into the midst of a large crowd, one observed the people more narrowly, but I certainly never saw so many one-eyed human beings as that morning at Minieh.† There must have been present in the streets and market-place from ten to twelve thousand natives of all ages (it was the Christmas time), and I believe, it is no exaggeration to say that at least every twentieth person down to little toddling children of three and four years of age, was blind of an eye. Not being a particularly well-favored race, this defect added the last touch of repulsiveness to faces already sullen, ignorant and unfriendly. A more unprepossessing population I would never wish to see—the men half stealthy, half insolent; the women bold and fierce; the children filthy, sickly, stunted and stolid. Nothing in provincial Egypt is so painful to witness as the neglected condition of very young children. Those belonging to even the better class are for the most part shabbily clothed and of more than doubtful cleanliness; while the offspring of the very poor are simply encrusted with dirt and sores, and swarming with vermin. It is at first hard to believe that the parents of these unfortunate babies err, not from cruelty, but through sheer ignorance and superstition. Yet so it is; and the time when these people can be brought to comprehend the most elementary principles of sanitary reform is yet far distant. To wash young children is injurious to health; therefore the mothers suffer them to fall into a state of personal uncleanness which is alone enough to engender disease. To brush away the flies that beset their eyes is impious; hence ophthalmia and various kinds of blindness.

"I have seen infants lying in their mother's arms, with six or eight flies in each eye. I have seen the little helpless hands put down reprovingly if they approached the seat of annoyance. I have seen children of four and five years old with the surface of one or both eyes eaten away; and others with a large fleshy lump growing out where the pupil had been destroyed. Taking these things into account, the wonder is, after all, not that three children should die in Egypt out of even five

—not that each twentieth person in certain districts should be blind; but that so many as forty per cent. of the whole infant population should live to grow up, and that ninety-five per cent. should enjoy the blessing of sight. For my own part I had not been many weeks on the Nile before I began systematically to avoid going about the native towns where it was practicable to do so. The condition of the inhabitants is not worse, perhaps, in an Egyptian beled (village) than in many an Irish village; but the condition of the children is so distressing that one would willingly go any number of miles out of the way rather than witness their suffering, without the power to alleviate it."

This corroborative evidence is given in a footnote: "Miss Whately, whose evidence on this subject is peculiarly valuable, states that the majority of the native children die off at, or under, two years of age; while M. About, who enjoyed unusual opportunities of inquiring into facts connected with the population and resources of the country, says that the nation loses three children out of every five."

At Siout, a hundred miles further south, and with more than double the population of Minieh, the writer says: "The thoroughfares are dusty, narrow, unpaved and crowded, as at Minieh. The people are one-eyed, dirty, and ungracious, as at Minieh. The children's eyes are full of flies, and their heads are covered with sores, as at Minieh." Referring to the persistence of the Egyptian racial type, she remarks: "So strange is the tyranny of natural forces. The sun and soil of Egypt demand one special breed of men, and will tolerate no other. Foreign residents cannot rear children in this country. In the Isthmus of Suez, which is considered the healthiest part of Egypt, an alien population of twenty thousand persons failed in the course of ten years to rear one infant born upon the soil. Children of an alien father and an Egyptian mother will die off in the same way in early infancy, unless brought up in the simple native fashion. And it is affirmed of the descendants of mixed marriages that after the third generation the foreign blood seems to be eliminated, while the traits of the race are restored in their original purity."

The trip up the Nile was not made by rail, but in the native, sloop-like dahabeyah, having a good-sized deck-cabin, with promenade above, in the aft part, and seats forward for the use of the rowers, when head winds or calms made the sails unavailable. The crew for the Edwards' small party numbered fifteen, including the captain, dragoman and cook.

"We had now been long enough aloft to find out that we had almost always one man on the sick list; and were, therefore, habitually short of a hand for the navigation of the boat. There never were (seemingly) such fellows for knocking themselves to pieces, as our sailors. They were always bruising their feet, wounding their hands, getting sunstrokes, and whitloos and sprains, and disabling themselves in some way. L., with her little medicine chest and her roll of lint and bandages, soon had a small but steady practice, and might have been seen about the lower deck most mornings after breakfast, repairing these damaged Alis and Hassans. It was well for

* It may be as well to say that these memoranda were not prepared at the request of any Friend directly interested in the amelioration of the condition of the blind and orphan children of Egypt, but arose from the desire of the writer and another, independently of each other, to present corroborative data supportive of a concern which seems to call for sympathy.

† Minieh, on the west bank of the Nile, 136 miles by rail south of Cairo, with a population of 11,000, has an earthenware manufactory, and a government cotton factory.

them that we carried "an experienced surgeon," for they were entirely helpless and despondent when hurt, and ignorant of the commonest remedies. Nor is this helplessness confined to natives of the sailor and fellah class. The provincial proprietors and officials are to the full as ignorant, not only of the uses of such simple things as poultices or wet compresses, but of the most elementary laws of health. Doctors there are none south of Cairo; and such is the general mistrust of State medicine, that when, as in the case of any widely spread epidemic, a medical officer is sent up the river by order of the Government, half the people are said to conceal their sick, while the other half reject the remedies prescribed for them. Their trust in the skill of the passing European is, on the other hand, unbounded. Appeals for advice and medicine were constantly being made to us by both sick and poor; and there was something very pathetic in the simple faith with which they accepted any little help we were able to give them. Meanwhile, L.'s medical reputation, being confirmed by a few simple cures, rose high among the crew. They called her the Hakim Sitt (Doctor's Lady); obeyed her directions and swallowed her medicines as reverently as if she were the College of Surgeons personified; and showed their gratitude in all kinds of pretty, childlike ways—singing her favorite Arab song as they ran beside her donkey—searching for sculptured fragments whenever there were ruins to be visited—and constantly bringing her little gifts of pebbles and wild flowers."

It being a market day when the dahabeeyah reached Esneh, they walked through the town, diverted by the strange sights of the bargaining. "Most welcome of all, however, was a dingy chemist shop, about the size of a sentry-box, over the door of which was suspended an Arabic inscription; while inside, robed all in black, sat a lean and grizzled Arab, from whom we bought a big bottle of rose water to make an eye lotion for L.'s ophthalmic patients."

Approaching Denderah, famed for the well-preserved ruins of a large and handsome temple of the Roman period, an object, appearing like a large grizzled ape, was seen on an eminence near the river bank, sitting on its haunches. Several Arabs stood around, one of whom had dismounted from his camel for the purpose. A strange excitement broke out among the crew, who crowded the boat's side, shouting and gesticulating. "That is Sheyk Selim!" the voyagers were triumphantly told. "And so we find out that it is not a monkey but a man—and not only a man, but a saint. Holiest of the holy, dirtiest of the dirty, white-pated, white-bearded, withered, bent, and knotted up, is the renowned Sheyk Selim, he who, naked and unwashed, has sat on that same spot every day through summer's heat and winter's cold for the past fifty years; never providing himself with food or water; never even lifting his hand to his mouth; depending on charity not only for his food but for his feeding. He is not nice to look at, even by this dim light, and at this distance; but the sailors think him quite beautiful, and call aloud to him for his blessing as we go by." He did not raise his head.

Perhaps this incident will help to explain why cleanliness is not highly extolled as a vir-

tue along the Nile, and to that extent may also offer an explanation why eye complaints among the children are so common. Further, the irritation arising from the frequent sand storms should likewise be taken into account. While there are very many wide expanses of fertile, alluvial soil (kept so by the annual inundations) along the great river, in other places the desert and hill country reaches close to the bank, and the yellow, moving sand is sifted down, and when a high wind rises is caught up and dashed about in a way very uncomfortable to those who have to encounter it. "At Beni Suef," says the narrative, "we encountered our first sand storm. It came down the river about noon, showing like a yellow fog on the horizon, and rolling rapidly before the wind. It tore the river into angry waves, and blotted out the landscape as it came. The distant hills disappeared first; then the palms beyond the island; then the boats close by. Another second, and the air was full of sand. The whole surface of the plain seemed in motion. The banks rippled. The yellow dust poured down through every rift and cleft in hundreds of tiny cataclysms. But it was a sight not to be looked upon with impunity. Hair, eyes, mouth, ears, were instantly filled, and we were driven to the refuge of the saloon. Here, although every window and door had been shut before the storm came, the sand found its way in clouds. Books, papers, carpets were covered with it; and it settled again as fast as it was cleared away. This lasted just an hour, and was followed by a burst of heavy rain; after which the sky cleared and we had a lovely afternoon. From this time forth we saw no more rain in Egypt."

"And the Lord shall smite Egypt; He shall smite and heal it: and they shall return even to the Lord, and He shall be intreated of them and shall heal them" (Isaiah xix: 22).

JOSHUA W. LEEDS.

"THERE is another depth profounder yet. It is prophecy. That is the immediate touch of God upon man's spirit."

EARLY REGARD FOR THE INSANE BY FRIENDS.—Isaac Sharp copies for the London *Friend* the following instruction from the Six Weeks' Meeting to the London Monthly Meeting, in 1671:—

"That friends doe seeke some place convenient in or about ye City wherein they may put any person that may be distracted or troubled in minde, that soe they may not be put amongst ye worlds people or Run about ye Streets."

Through the kindness of John S. Rowntree my attention has been called to an extract from Samuel Tuke's "Selections from the Epistles of George Fox," enjoining Friends "to provide a house for those who are distressed" (second edition 1848, page 125).

Turning to the "Collection of Epistles of George Fox" (1698, Vol. II.), I find that Epistle 264 contains recommendations to Friends, from time to time, to be taken notice of at their Quarterly and other Meetings. Amongst these occurs the following:—

"And Friends to have and provide a House for them that be distressed, and not to go to the World. And to have an Alms House or Hospital for all poor Friends that are past work."

Doukhobor Matters.

Anastasia Verigin will be remembered the aged mother of Peter Verigin, who is in exile in Siberia as a chief man among Doukhobors. The dear old lady is carefully cherished by all the inhabitants of her village Protopervshy, in Canada. Her son writes casually from his distant home, Oboon near the Gulf of Obi, giving counsel, and tentily expressing the hope that he may be permitted to join his loved relatives and friends this year. Asks if the children go to school.

The following is extracted from a letter from A. Verigin to J. S. Elkinton, written before the last wheat harvest:—

(After alluding to the comfort that has been afforded her in her old age to have had visit and conversation with the representative of the Society of Friends, she adds), "To all my love, and good wishes from the Lord to all the spiritual brethren and sisters who live in your land, that have shown us so much love; we are very, very grateful to you that you tried to help us all in our first need, and now, by the mercy of God, we hope to have a full economy. We are very glad that we have sown of the holy gift. The wheat and other vegetables, and everything, is grown in abundance, but the maturity crops is not yet seen, all depends on how much will give the increase."

I will tell you, dear friends, a little to back I was sick, but now by the grace of Almighty God I am a little better."

We received letters from my children in Siberia; they are alive and well.

My children Masha and Graunia, and all brethren and sisters that live with me, send greetings to all the Friends."

The general health of the Doukhobors is good; there being no epidemic. A few are in hospitals, and a number continue to be troubled with inflamed eyes, possibly increased by poor ventilation in their homes. This disease, it would appear, is common among the peasantry in Russia. One of the ill-effects of a lack of general education, from enforced restrictions of the Russian Government, has been to prevent the Doukhobors from being enlightened in some general principles of hygiene. They are, however, careful, from careful ablutions, using vapor bath water is poured upon hot stones in hot erected near the water side.

Anyone going among them must soon discover, notwithstanding the disadvantages thrown around them by tyrannical power, the general superiority of character, arising from their adherence to religious principle, and absence of hypocrisy, or of anything sinister. Their best friends recognize defects of judgment resulting from the teachings of materialists, and from this source probably arise a hesitancy in some, to carry out Government requirements, as to Homestead Entry, Registration of Marriages, of Births and Deaths, etc.

The Dominion Minister, Jas. A. Smith, having traversed a large portion of the Northwest Territory, a few months ago, reported having seen the Doukhobors of the Prince Rupert District, and that none of the Canadian settlers were more happy, contented and prosperous.

The forty thousand dollars contributed

ican Friends and Mennonites, have largely tended to bring about this good result. It is not equal expenditure has ever accompanied more good, as it served to tide the ex- over their worst time, helping to keep soul body together, until they could raise grain vegetables, and obtain employment in tructing railroads. The blessing of Di- Providence in permitting two successive crops to be harvested, without injury frost, is cause for great thankfulness. as estimated that the 7,900 men, women children who came from the Trans Cau- sas, had no more than an average of ten- ars apiece when they arrived in Canada; the patience with which they passed the winter, living largely upon miserable ns, insufficient to keep them in health, inadequate to fit them for their daily la- their plaintive psalms of thanksgiving g up daily to the Throne on High, ough- y to be instructive to us, who are living of comparative luxury.

has been the desire of the Committee in- ge of the contributed funds, to supply village with twenty ewes, of good is, whose wool could be converted into- ing. It is hoped that this has been y attained, and the following report will ow carefully the immigration authori- have performed their duties.

WINNIPEG, Sept. 10th, 1901.

W. K. PEDLEY,

Supt. Immigration, Ottawa.

—I beg to report to you that I have ased and shipped to the Doukhobors at- on, two hundred and forty head of good- ing sheep. These sheep I carefully d over myself and shipped them from e Jaw to Yorkton. I secured a rate of t of thirty-five dollars per car load, was one-half of the regular rate; I also d the cars, and the total freight paid on o hundred and forty head of sheep was y dollars. I paid four dollars and fifty per head for the sheep. I loaded them carefully myself, and arranged when at- on to have them distributed among the- bor villages, in compliance with the s of the donors, the Philadelphia Quakers.

is a balance of a few hundred dollars- ands, but no doubt I will be able to d this money judiciously on a few good sheep, which I will forward to the Sas- wan Doukhobors. The sheep I purchased- rwarded to Yorkton were all two years d under, and were a very desirable lot. I purchased four thoroughbred Oxford- rams, and shipped them with this con- tent.

Your obedient servant,

(Sgd.) C. U. SPEERS, G. C. A.

rael Sherbinin, the Russian teacher sent y the English Committee, reports to- ssioner Smith a careful distribution of- ing, etc., last sent from Philadelphia. subject perhaps now pressing most- the minds of the Philadelphia Committee- may take place if some of the Douk- persist in the refusal to come into the- and just requirements of the Domin- ernment, in the matter of making en- or the sections of land which they now- Their difficulty lies in entering upon- session, as *individuals* and not as a

community. The following notice shows the stand which the Government has taken; and, after the date fixed by the notice, any quarter section not legally entered by a Doukhobor with the Government's Agents, may be entered upon right in the heart of a village; and houses, fences and cultivated fields may at once pass into the hands of unwelcome and uncongenial strangers.

DEPARTMENT OF THE INTERIOR, CANADA.

PUBLIC NOTICE.

The purpose for which the lands, belonging to the Government of Canada within the townships which have been reserved, so as to permit Doukhobor settlers to select suitable homesteads and sites for their colonies, is considered to have been fully served, such settlers having located their villages, and taken possession of parcels of land. As many, however, have not so far arranged to make entry, therefore, in accordance with the provisions of the law, the Government has decided not to further continue the reserve in question.

Notice is therefore given, hereby, to all settlers in the above colonies, that on and after the first day of May, 1902, the lands referred to for which entry may not have been made, shall be thrown open for general homestead- ing, or for such other disposition as may be decided upon by the Government. Settlers interested are hereby notified that entries for their respective homesteads must be made, with the agent of Dominion lands for the district, before the date above mentioned, failing which the lands will be thrown open to settlement by any person who may desire to acquire the same.

By order

(Sd.)

P. G. KEYES,

Secretary Department of the Interior.

James S. Crerar, assistant commissioner of immigration at Yorkton, Assiniboia, who has been a humane and faithful friend of the Doukhobors, has been for a long time seriously ill, part of the time in a hospital. We do not yet learn of his recovery, so as to be able to resume his duties.

A rumor has recently reached us that twenty thousand Molokans, (milk drinkers), are expecting to emigrate to Canada from Southern Russia. They are represented as non-combatants, and that they abstain from swine flesh. Peter Jansen, of Nebraska, whose people (Mennonites) formerly lived in the neighborhood of the Molokans, states that they are not nearly as neat and cleanly as the Doukhobors.

No offer has been made to our Committee for the position of teacher among the Doukhobors, from a member of our own Yearly Meeting; but two young English Friends, Hannah Bellows (daughter of our friend John Bellows, of Gloucester), and Helen Morland, are expecting to enter, next spring, upon the work of teaching Doukhobor girls at Good Spirit Lake, north of Yorkton, under the care of the Committee of London Meeting for Sufferings.

WM. EVANS.

"WE don't really get inside ourselves, even, into the closet of us, where the Lord tells us to go in and shut the door and speak to Him. We act in a hurry, on the outside, according to the way things touch us and people seem. We even say our prayers outside. It's the reason of much of the wickedness and the pain and the trouble."

For "THE FRIEND."

The Decline of Friends in Barbadoes (Supplement).

Subsequent to the preparation of the article under the above title which appeared in THE FRIEND in Third Month, 1898, I obtained from a Friend who visited Barbadoes, some information as to the situation of property there formerly owned by our Society.

At Bridgeton, the old Burial Ground, and former site of the Meeting-house on Tudor street, which adjoins the Jewish Synagogue, is enclosed with a stone wall, and within the enclosure are a modern house and other buildings, all of which are used by a Wesleyan mission.

A resident of Bridgeton who was about sixty years of age, told my informant that he remembered when a boy seeing the tombs in this grave yard, but none are now visible. It was then in possession of the Gibson family, who appear to have been the last survivors of the Trustees who held it for Friends, and they sold it to the Methodists for the use now made of it, probably appropriating the proceeds to themselves. There is in addition to the modern buildings on the lot a small square stone house which tradition says was originally a tomb of the Gibson family, but this is hardly probable. One of that family converted it into something like an office. It has since been further altered into a carpenter shop by making windows and doors in the sides. An interesting photograph of this spot showing the structure above referred to, and also a portion of the stone wall which encloses the mission grounds, is in my possession. Also another giving a view of the interior of the ground, which is tastefully planted with shrubbery and has a large tree growing apparently about the centre of the lot.

At Pilgrim, the site of the Burial Ground is known, marked by a little enclosed grove on the rear of the Governor's house, but there are no signs of grave stones or tombs to be seen.

At Heathcote Bay, near Spightstown, the Burial Ground and the former site of a Meeting-house has been taken possession of by the Episcopalians, who removed the wall formerly surrounding it and merged it into their own graveyard, and there is nothing to mark its identity separate from the rest of the enclosure. There are no gravestones to the graves of Friends to be seen, or at least, none which can be identified.

At St. Philips, the burial place of the Weeks and other Friends' families, which is within the limits of the large graveyard formerly there, is still preserved, mainly in its primitive condition, and is in reality the only remaining monument of Friends in the island. It is undoubtedly one of the most ancient places associated with the history of the Society in any part of the world, dating back nearly two centuries and probably to a considerably earlier time. This venerable place of sepulture is close to the edifice known as "St. Philip's church" and appears to have some kind of care from the minister.

It is comprised in a small lot about twenty-four feet square, and is surrounded with a high stone wall in a good state of preservation. Entering at an iron gate you descend a

number of steps to a considerable depth below the surface of the surrounding ground to an open pit in the shape of the letter T. On the sides of the steps and the sides of the two right-angled passageways are seven rock-hewn tombs, all of which are arched at the entrances. From two of these tombs the arches have crumbled away, disclosing leaden coffins within. There are no inscriptions on the tombs except the initials R. W. on one, and the letter G on another.

It is probable that the larger part of the extensive graveyard which Friends formerly possessed at this place has been absorbed by the Episcopalians. This rock-hewn sepulchre may be said to be all that is left of Quakerism in Barbadoes.

GEORGE VAUX.

HYMN TO THE DEITY.

Oh thou whose vast existence knows
No era while and independent rose,
But full and independent began,
Ere yet eternity began,
Amid the dark and void profound,
To roll its nightly periods round.
Cause of all causes, and the source
Whence universal being sprang;
Thou wert, ere time began its course,
Or morning stars thy praises sang;
When mighty pens, loud and long,
Broke rapturous from the exulting throng.
Age upon age successive hurld,
And myriads joined to myriads still,
The atoms that compose the world,
The drops that ocean's caverns fill;
All but a trifling point appears,
Compared with thine eternal years.
Existing through all ages, Thou
The events of every age can tell
All things above, all things below,
And all within the depths of hell,
For blazing noon and midnight shades,
Alike, thy piercing eye pervades,
Through the vast regions of the air
The trackless wilderness of space,
The worlds and systems wandering there,
Thine everlasting arms embrace;
The various parts, the mighty whole
Submissive own thy strong control.
Thou first, Thou last, Thou cause and end
Of all that is, or e'er shall be;
To Thee their source, all beings tend,
All things that are, exist for Thee,
Thy great designs shall all fulfil,
And bow obedient to Thy will.

—Anon.

WAITING.

Sometimes there is more beauty shown
And greatness of his power
Within the sweetly waiting bud
Than in the open flower.
Christ's children have their waiting times
Beside some hindering sea,
To view the triumphs of his power
And blessed ministry.
These seas are all with blessings strewn,
And bordered by his grace,
And give within their hidden depths
To memory stones a place.

E. P. T.

"The highest duties of our life
Lying upon the lowest ground
In hidden and unnoticed ways,
In household works, on common days;
Whatever is done for God alone
Thy God acceptable will own."

The Mouse's Sermon.

A clergyman has recorded this experience:
"I had lately a very good sermon preached to me by a mouse, and the text was 'Judge not.' I had married a couple and the fee was a fifty dollar note in a dainty little envelope. It was lying on the sideboard in the room in which myself and wife were sitting, when a much trusted servant, who had long been in my family, came in; taking it up, she made some playful remark in relation to it. Presently we were called down stairs to entertain company. Returning to our room after a couple of hours, the envelope was nowhere to be found. No one could have had access to the room except our two servant girls, both of whom bore unexceptionable characters, and it was hard to suspect them. They were informed of the loss, and manifested great concern, for though no charge was made, they could not help feeling that appearances were against them. And as an exhaustive search failed to show any trace of the missing property, we all passed a very uneasy night. Determined, if possible, to solve the mystery, I went at it in the morning with the precision of an experienced detective, and found at length a small opening by the hearth, and removing a brick, there was my note safely stowed away in a mouse's nest. The matter was now clear; seeking what he might devour and attracted doubtless by the gum on the envelope he had carried it off as a prize. It is needless to remark upon the relief thus brought to the unjustly suspected ones, while I was taught a useful lesson: 'Judge not according to appearances.'"

Another case of circumstantial evidence may be thus related. A certain storekeeper being unable to find a twenty dollar gold piece, which he knew had been taken in that day, was induced to suspect his clerk as being the only one who had access to the money drawer. Yet as he had borne a uniformly good character, he refrained from even mentioning his loss, concluding to await developments. Now it happened that soon after this occurrence, the young man made his appearance in a new suit of clothes. This, owing to his known poverty, might have given occasion for remark at any time, but now more especially so. Taking occasion therefore to notice them he asked where he had made the purchase. This was freely told. Proceeding thither the merchant asked if the dealer could remember with what kind of money they were paid for, who answered, "A twenty dollar gold piece." Having now a strong case of circumstantial evidence, as he thought, the clerk was taxed with purloining the gold. At first he seemed unable to realize that he was suspected; but finding he was so, the charge met with an indignant denial, and he affirmed that the money was his own and had been given him by a female friend as a New Year's present. He was asked if he could bring testimony to that effect from her. He said he could not, she being since deceased. This story was disbelieved. And then the young man added, "I have at my lodging—if I have not mislaid it—a note from her in which the money was enclosed." He was told that the production of such a note would be satisfactory. It did not take him long to ascertain that it was not among his papers. What was

he to do; ruin was staring him in the face. He felt that only a Divine hand could aid in this fearful dilemma, and so, kneeling, asked that if consistent with the will of Almighty he might be enabled to find this evidence of his innocence; but if it was found he supplicated that he might be strengthened given him to bear this great trial with becoming fortitude. In rising from knees his foot turned up a corner of the piece of oil cloth that was under his stove and disclosed a piece of paper which proved to be the much desired note. His employer confessed himself satisfied with this evidence. Yet what had become of the money remained for many months a mystery, until putting his overcoat the next winter, the missing coin was found in a pocket where he had put it instead of the drawer, as he supposed. Of this discovery it may be remarked that it might have been too late to have saved the clerk's reputation from irreparable injury, and had not been a man of prayer it seems altogether unlikely that the note would have come to light.

A writer assures us that "Man's extremity is God's opportunity." This truth was plainly exemplified in the experience of a poor widow in one of our Western States. She and her husband had left their Scottish home in view of improving their condition. Having means enough to pay for the land they purchased, they gave a mortgage to one who professed a desire to befriended them. Success resulting in the husband's death, caused great waste of money. Unused to business the widow found it useless to struggle with increasing difficulties, and now in her distress she found her professed friend to be her greatest enemy. Not content with selling farm—so that at a forced sale it did not bring enough to pay claim and interest—she proceeded to bring the household goods under the hammer. It is not easy to conceive the distress of the poor woman, as piece by piece her treasured belongings, some of the heirlooms, passed away from her. All she saw and felt and remained silent, until a sheriff held up the old family Bible and asked for a bid. This was too much and she declared that this at least might be spared her. A man of the law would have given it into his hand, but the relentless creditor declared he would have all that was due him, and ordered the sale to go on. Unable to comfort herself, she started up and cutting six threads which detained a muslin cover, she exclaimed that she would have some memory of those she had loved, intending to keep at least; upon which two pieces of paper upon the floor. These proved to be the Bank-of-England notes, inscribed respectively in her father's and mother's handwriting: "If trouble comes upon you seek to the Bible."

"Your Father's ears are never deaf."

It is needless to say that the hard-hearted creditor being paid to the full, the sympathizing neighbors gladly relinquished their claims.

If you live close to God even the dead have a voice for you. —Alfred A. Wright.

It has been the plan of my life to follow convictions at whatever personal cost to myself. —James A. Garfield.

FOR "THE FRIEND."

An Instructive Narrative.

t long ago I was reading some anecdotes of a Friend, whom I remember in my mood as a very good old man. He has since changed mortality for immortality. Circumstance in particular seemed to have son of deep instruction for us all who ble so easily in the rough road of life, re- ing us that "Verily there is a God that th in the earth."

E. T. son after going into business, when young- s, a stranger, J. W., came to me one ffering to sell me one hundred barrels of s at one dollar per barrel, and deliver at a warehouse on the Ohio River before ain day. After the bargain was closed a man to Pittsburgh to engage a steam- to stop for the apples on its way down iver. For some cause J. W. failed to the apples delivered at the warehouse e boat stopped for them, which was days later than the day set for their de-

When the time fixed for payment arrived, I came to me for the money. I told him the apples had not been delivered in time e boat. I had received nothing from him, fore owed him nothing. He claimed that gent had informed him that after our in- w I had said to him if J. W. could not or them at the time appointed a later date o, as we might go down the river again mbered after due consideration to have some such a statement privately, but ent him no word to that effect.) He re- to compromise the matter and said he sue me in court. I was soon summoned, e trial was a short one. The jury de- ently in my favor. He afterwards ed to the overseers of my meeting, ask- hem to investigate the case. We met e overseers and they heard us fully and ly decided that he had no just claim on Thirty years after the above circum- happened, at a time when my mind was ed in desiring help and preservation all that might be in the way of my land- ly in the end, the pathetic language of per forcibly presented, and was repeated heart: "Lord, if Thou wilt Thou canst me clean," with the gracious reply as in adorable mercy, the Saviour put forth and touched him, saying, "I will, be leaz." Then to my astonishment there immediately brought, pointed and clear to remembrance, the transaction I have just l and I was thus commanded: "Go, o that man money that he claimed of e. These words, in connection with a real- ly the expression, "I will, be thou clean," is distinct as if proceeding from one im- ly by my side.

ould not doubt the Divine source and au- of the impression and command. Al- my conduct was considered right by s of our country and I was justified by sers of our meeting, still I had not done in the eyes of Him who watcheth over children for good, and I saw that obedi- my part was necessary in order to the operation of that great and solemn mplied in the word, "I will, be thou

son as I could conveniently, I took the

one hundred dollars and started for the home of J. W. When about a mile from his dwelling in passing through a small village, and seeing the storekeeper at his door, I asked if he had seen J. W. that morning. He replied, "He is in my store now." I went in and found him alone and apparently disengaged. I soon told him I knew he claimed that I had long owed him one hundred dollars on a transaction we once had, and that I had now brought the money. I handed it to him. He looked at me in evident astonishment, and said as he took it in his hand, "The whole amount?" I told him there was one hundred dollars. "Yes," he replied emphatically, "that is the whole amount. Well now!" he exclaimed, "we will both go to heaven to- gether!"

I came home rejoicing, being permitted to see and feel to my humbling admiration, that in unmerited love and condescending mercy my heavenly Father's hand had guided and di- rected in accordance with his own will and in his own unerring wisdom. Unto Him be all honor, thanksgiving, and praise.

TRUE COURAGE.—Bishop Whipple related the following illustration of the moral courage of Christian Indians: One day an Indian came to our missionary and said, "I know this re- ligious is true. The men who have walked in this new trail are better and happier. But I have always been a warrior, and my hands are full of blood. Could I be a Christian?" The missionary repeated the story of God's love. To test the man he said, "May I cut your hair?" The Indian wears his scalp- lock for his enemy. When it is cut it is a sign that he will never go on the war-path again. The man said, "Yes, you may cut it. I shall throw my old life away." It was cut. He started for home, and met with some wild In- dians, who shouted with laughter, and with taunts said, "Yesterday you were a warrior; to-day you are a squaw." It stung the man to madness, and he rushed to his home and threw himself on the floor and burst into tears. His wife was a Christian, and came and put her arms about his neck and said, "Yesterday there was not a man in the world who dared call you a coward. Can't you be as brave for Him who died for you as you were to kill the Sioux?" He sprang to his feet and said, "I can, and will." I have known many brave, fearless servants of Christ, but I never knew one braver than this chief.

When the elevated railroad was first started in New York the people were a little timid about riding on it; so the proprietors of the road took great pleasure in apprising the public of the fact that this road had been sub- jected to a most abnormal and enormous ton- nage, and that consequently people of ordi- nary weight might deem themselves quite safe in traveling over that road. I feel the same way about the four gospels—that I can take my way to heaven above the din and dust of daily life because this elevated road has had all Germany upon it, and that as yet it has given no sign of instability. —Francis L. Patton.

Why should you be forlorn? Death only husks the corn; Why should you fear to meet the thresher of the wheat?

Notes From Others.

LOWELL'S RELIGIOUS VIEWS.—"I have always been a very Quaker," says Lowell, "following the Light, and writing only when the Spirit moved." In that early book, long out of print, the "Conver- sations," he maintained that "every man has his infallible and inexorable monitor within." Thirty years later he had to say, "I don't think a view of the universe from the stocks of any creed a very satisfactory one; but I continue to shut my eyes resolutely in certain speculative directions, and am willing to find solace in certain intimations that seem to me from a region higher than my reason." —Christian Register.

COLLEGE ATHLETICS VS. STUDY.—President Eliot, of Harvard, in a annual report deals a shrewd blow to the superstition that college attendance is "boomed" by athletic prowess. He cites Har- vard's wonderful recent growth in spite of disas- trous reverses on river, field, and gridiron as proof of his theory that study is still the main purpose of college men—or at least of their parents—and athleticism a "by-play."

Figures seems to bear out his assertion. Har- vard had at the close of the academic year five thousand one hundred and twenty-four students and has now nearly six thousand. In eleven years her roster has grown one hundred and twenty-six per cent., and her primacy among American insti- tutions of learning is practically unchallenged. Columbia, not very prominent athletically, has jumped to second place with a growth of one hundred and eighty-eight per cent., owing largely to removal to Morningside and the addition of new departments under Seth Low's Presidency. Yale, second in age and prestige and long first in mus- cle, has apparently dropped from fourth place to ninth, being now surpassed in numbers by Cornell, Chicago, California, Illinois, Michigan, and Minne- sota, and nearly equalled by Northwestern and Wisconsin.

The public will not regret to learn upon such high authority as President Eliot that a college education is still sought for education's sake. —N. Y. World.

"We give you just what you ask for."

We are glad to seize upon this occasion, says the N. Y. Journal, to pay a tribute to this motto, and, incidentally, to point out a dishonest and very com- mon practice among merchants—that of substituting one article for another.

One business man devotes all his energy, his money and his time in building up the reputation of a certain article. He enables the retailer to make a large profit, and he spends his money that customers may be plentiful.

When a customer asks for the article in ques- tion, it is dishonest to say to him, as many do, "Don't buy that. We have something else just as good and much cheaper."

If the merchant has something good and cheap of his own, let him sell it to his customers by all means. But let him not steal the trade of a man whose energy helps to build up his business. Let him not divert to his own pocket all of the profit which he ought in honesty to share with another.

REVISION OF THE PRESBYTERIAN CREED.—Decla- tory statements have been adopted by the Presby- terian Creed Revision Committee, which set in a new light the doctrines generally known as "pre- destination" and "infant damnation."

The Committee announces that it has decided upon a form of a declaratory statement, "that the doctrine of predestination is held in harmony with God's love for all mankind, and that no man is condemned except on the ground of his sin."

As to the phrase "elect infants," it is declared "that the Presbyterian Church does not teach that any dying in infancy are lost, but that all dying in infancy are included in the election of grace.

The members denied that American Presbyterians ever taught the doctrine of infant damnation.

There are three points in the Confession which remain to be acted upon. One declares that "it is a sin to refuse an oath touching anything that is good and just being imposed by lawful authority." The second refers to "works done by unregenerate man." The third declares that "There is no other head of the Church but the Lord Jesus Christ."

SUMMARY OF EVENTS.

UNITED STATES.—An extensive fire in Paterson, N. J., on the 9th inst., destroyed a large part of the business and dwelling-house sections of the city. The loss is estimated at several million dollars.

Senator Hoar on the 4th inst. presented a petition to Congress, signed by a number of distinguished citizens of this country, praying for the suspension of hostilities in the Philippine Islands, and asking that an opportunity be given for a discussion of the situation between the Government and the Filipino leaders.

The Industrial Commission has submitted its final report to Congress. It is a document of more than 1000 printed pages. Among its recommendations are: That railroad companies be prohibited by law from making lower freight rates upon imports billed to the interior of this country, in connection with ocean transportation or otherwise, than are made on similar articles from the seaboard to the interior, or than are made from one inland point to another, when the distance is not greater.

That the Secretary of Agriculture be given authority: "To inspect dairy products intended for export, and to certify to their grade and quality."

"To fix standard grades for cereals, based on season of growing, quality and weight per measure, and, when intended for export, to inspect and certify the same."

"That adequate regulations be enacted by the several States, where needed, to control such diseases as glanders, tuberculosis, etc."

"That a more comprehensive penalty clause for shipping diseased meat be enacted."

"That adequate legislation be enacted by the several States, where needed, to control such diseases as glanders, tuberculosis, etc."

The increased appropriations be made by the Congress for building sample stretches of improved roads in various sections of the country, so as to encourage the more rapid construction of such roads at State and local expense."

In reference to industrial organizations it recommends that full details should be furnished for information of the public, and that their assets and liabilities should be published yearly.

A delegation of Sioux Indians has appeared before the Senate Committee on Indian affairs and explained their objections to the leasing of their lands to cattlemen. A dispatch from Washington of the 5th inst. says: "The hearing before the Senate Committee on Indian affairs last night laid the inquiry into these leases, precisely as the friends of the Indians have all along claimed would occur if the Sioux could be heard directly. The committee decided that the leases could not be made as they stood, and that the consent of the Indians to the boundaries of the tract to be leased must be had according to law. Notice to allow such an inquiry should not be granted against executing the Standing Rock cattle leases was served on the 5th inst. on Secretary Hitchcock and Indian Commissioner Jones. The suit covers the Lemmon lease, which was so suddenly signed while the Senate Indian Committee was investigating the matter, and the Walker lease, which had been sent to Chicago for the lessee to sign."

The Penna. Railroad Company has adopted a pension system for the purpose of enforcing the action of the Board of Directors, requiring that all officers and employees of the company shall be relieved from service at the age of 70, and that those from 65 to 69 years, in order to have, to have been previously disqualified after thirty years' service, shall retire from work. The company appropriates \$300,000 annually to meet the expenditure for pensions, and the plan has worked to the satisfaction of both company and employees.

A dispatch from Washington of the 7th inst. says: "The United States, Great Britain and Japan have made separate representations to China, opposing the signing of the convention negotiated by the Russian Minister in

Pekin and the Chinese envoys, and the United States has conveyed its objections directly to Russia."

The steamship Philadelphia, of the American Line, has lately been in communication with the land when 150 miles distant from the coast of England by means of the wireless telegraph. Messages were exchanged for more than 24 hours.

Investigation by the State Veterinarian showed that the high death rate among horses in Maryland is due to cerebrospinal meningitis. The disease is the result of poor food, bad drainage and generally unsanitary environments.

The Federal census shows a preponderance of males in the United States equal to 1.2 per cent. of the total population.

In the inquiry respecting the Philippines going on at Washington Senator Carmack quoted from the report of General MacArthur, of 1900, to the effect that there is substantial agreement among the people of the islands in their position to the United States. Replying, Governor Taft said the Commission had not originally accepted the General's conclusion, and that the Commission's tour of the archipelago had convinced them that they were correct in their conclusion. "That originally the people of the Philippine Islands were much aroused and not doubt," he continued, "but the opposition does not continue in its general aspect. Since the second election of President McKinley the great majority of the people of the Philippines have been favorable to peace and to the acceptance of the sovereignty of the United States, and it would be impossible to continue the present system of guerrilla warfare without the system of terrorism which now prevails."

About 40,000 acres in the South Mountains in Pennsylvania have been secured by the Forestry Commission. It is a part of the Commissioner's plan to establish a School of Forestry on it.

Immigrants who are suffering from tuberculosis of the lungs are, according to the Government's present policy, forbidden to settle in our country. When discovered at our ports of entry they are sent back to the places whence they came, the ruling being that they are suffering from a dangerous contagious disease.

There were 581 deaths in this city last week, reported to the Board of Health. This is 51 more than the previous week, and more than the corresponding week of 1901. Of the foregoing, 283 were males and 298 females; 72 died of consumption of the lungs; 117 of inflammation of the lungs and surrounding membranes; 14 of diphtheria; 19 of cancer; 20 of apoplexy; 13 of typhoid fever; 5 of scarlet fever, and 20 of small pox.

Corn was closed on a basis of 8½c. per pound for mid-ling.

WHEAT.—Winter, super, \$2.65 to \$2.90; Pennsylvania roller, straight, \$3.50 to \$3.75; Western winter, straight, \$3.60 to \$3.85; spring, straight, \$3.55 to \$3.80.

GRAIN.—No. 2 red wheat, 55½ to 56c.

No. 2 mixed corn, 64½ to 65c.

No. 2 white oats, clipped, 51c.

BEEF CATTLE.—Best, 64½ to 65c; good, 54½ to 55c; medium, 51½ to 52c.

SHEEP.—Extra, 5 to 5½c; good, 4½ to 4¾c; common, 2 to 3c.

LAMBS.—4½ to 6½c.

HOGS.—Western, \$3 to 3c.

Foreign Minister Cambon at Pekin has received the first payment from the Chinese Government on account of the indemnity, payable to the United States.

The reply of the British Government to the overtures of Holland towards promoting peace in South Africa, firmly repeats the resolve of Great Britain, long since announced, that it will not accept the intervention of any foreign power in treating with the South African situation. The Dutch Government is said to have abandoned further effort in behalf of the Boers.

Chas. F. Gammon, the superintendent of the Bible Society's work in North China, writes: "Aside from the 'rebel bands' all give welcome to us and our colleagues, and our burlins and portions are purchased almost greedily. People move in treating with the South African situation. The Dutch Government is said to have abandoned further effort in behalf of the Boers."

The negotiations for the release of Ellen M. Stone have failed, it is believed, in consequence of the action of the Turkish government in sending troops with the American forces who were to pay the ransom. Secretary Hay has given instructions for a renewal of negotiations.

The wood pulp business in Canada is said to amount to \$8,000,000 yearly, and nearly one-fourth of the product is exported.

Australia has, proportionally, more church-buildings than any other country, the number being 6,013, or 210 to every 100,000 of population, as against 144 to every 100,000 in Russia; only 55 to the same number.

It is stated that Emperor William has decided the persons connected with spiritualists, faith healers, Christian Scientists, or kindred cults, will be rigidly excluded from the Imperial Court of Germany.

Paris consumed 1,750,000 pounds of assails last week. The best came from the Burgundy vineyards, and sold for from eight to nine francs a thousand.

It is said there are 13,958,622 acres of uncultivated land in Italy, which might be developed and made productive by the application of ordinary enterprise.

A dispatch from Puebla, Mexico, says that the 8 Government troops, who are abolishing the fighting, are using its being barbarous and tending to demoralize the 1 classes."

The results of the census show that the population of Italy is 32,900,000. In the north only a slight percentage of people cannot read or write, but in the south as the Italian Islands from fifty to sixty per cent. are illiterate. The resident population of Rome amounts to 2,000,000. The census of 1901, to 424,943, but now, incl. visitors, the number is 462,783.

An Austrian scientist is said to have discovered that cold in the head is due to the presence in the membrane a special bacillus.

Of 26,165 persons treated since 1885 at the Pasteur Institute, in Paris, after being bitten by mad dogs, 165 have died.

The medical reports presented to the local Russian authorities by the doctors of the different districts are an alarming state of things with regard to infant mortality. It appears that in many of the governments proportion of the children who die during the first year as high as forty and even fifty per cent. In no cases it is even higher. The reports ascribe this mortality mainly to the ignorance of the peasants as to the fact that the mothers have frequently to neglect children in order to work in the fields.

Murder is said to be in every way the most unbecoming crime in Europe.

Another famine like that which occurred two years ago, is impending in India, and in the same region that devastated them.

The new Dead Sea, discovered by Dr. Sven Hedin, Thibet, is described as enormous in extent, but so shallow that to navigate it one must wade half a mile to reach the bottom. The boat had a rifle before it and was floated with a load. But the most remarkable characteristic is the almost incredible amount of salt. Bathing is quite becoming as white as chalk; even the driers the rowers soon become whitened, while drops of water sprinkled upon a dry surface leave globules like crystals.

NOTICES.

A STATE MEETING of the Committee on Adms will be held at 304 Arch street, on Saturday, the 10th inst., 10 o'clock, A. M. JOHN W. BIDDLE, Clk.

Friends' Library, 142 N. 16th St. Open on week-days from 11.30 A. M. to 2 P. M., and 3 P. M. to 6 P. M., also on evenings in which Friends' Institute Lyceum is held, from 7 to 7.45 P. M. The loving books are recent additions to the Library: BRADLEY, A. G.—Highways and Byways in the District [England].

CHAUSSÉ, COUFFRE, Comtesse de—Historical Memoirs of Alexander.

DAWSON W. H.—German Life in Town and Country. DODGE, M. A.—Gail Hamilton's Life and Letters (vols.).

GREEN, J. R.—Letters, edited by Leslie Stephen. HUNTING, A. O.—Studies of Trees in Winter.

JOHNSTON, J. H.—The Life of John G. Thompson. LORNE, Marquis of—V. R. I. Queen Victoria.

SCUDDER, H. E.—James Russell Lowell (2 vols.). WILSON, R. R.—Washington, the Capital City (2 vols.).

WESTBORN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to Wm. F. WICKERSHAM, Principal.

For board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

DIED, at Norwich, Ontario, Canada, on the Twelfth Month, 1901, MARY STEPHENS, wife of the late Stephen Stephens, daughter of Edmund and Sarah Lath. She was nearly seventy-five years of age. A member of Norwich Monthly Meeting; she was a diligent attendant of meeting when in health (which was preserved as usual till the night of her departure), strictly adhered to the ancient doctrines as set forth by Friends. We have the belief that she was gathered in peace to live with Jesus whom she loved.

THE FRIEND.

"Use Man and His 'Fruits of Solitude.'"

to come but once into the world, and trifle our true enjoyment of it, and of our life, it is lamentable indeed. This one action would yield a thinking person great content. And since nothing below man can think, man, in being thoughtless, must fall below himself. And that, to be such do, as are unconcerned in the use of most precious time."

As says the wise man whose work we are to commend. Best wisdom has made gathered use of wise men on earth, to save men. We were lately instructed that ought the generations of old by three professions of ministry—priests, prophets and wise men.

The priests taught such of the people would be appealed to only by object-lessons; men, in the sight of the great multitude on the day of atonement most solemn sacrifices and impressive symbols were shown spreading great awe over beholders who for the time, convicted of the sinfulness of costing life for its remission, and made appear exceeding sinful. Others, differentiated, were callous to the teaching of demonstrations, but could stand in awe of God speaking a direct message of authority. When one of homely garb from his flocks or fields could stand at the corners of the streets and proclaim "thus saith the Lord!" further argument was not needed, but reverent hearers crowded round the prophet to hear the message from heaven. Others had no eye for the magnificence of priestly display, nor ear for the voice of the prophet, but could hearken to that which addressed itself to their common sense, or inward witness for truth, as wisdom for living. For these, the wise men were of little use, who by brief and pregnant sentences,

called proverbs, could drive home a truth here and a warning there, as they met men on the street or conversed with them in the quiet; so that many a wholesome counsel was fastened as a nail in a sure place, or were as goads for men to smart under and be stimulated to a better life.

William Penn, sometimes prophet of the faith which overcomes the world as against that which is overcome by it, appears in the little book from whose preface we began with quoting, as a wise man confuting the maxims of this world with maxims of pure wisdom.

Robert Louis Stevenson in speaking of a copy of this book bearing the title "Fruits of Solitude," as he was presenting it to a friend, said: "If ever in all my 'human conduct' I have done a better thing to any fellow creature than handing on to you this sweet, dignified, and wholesome book, I [hope] I shall hear of it on the last day. To write a book like this, were impossible; at least one can hand it on with a wrench, one to another. My wife cries out, and my own heart misgives me, but still,—here it is."

This book has lately been reprinted by the Book Committee of Philadelphia Yearly Meeting, with the title: "Fruits of Solitude in Reflections and Maxims relating to the Conduct of Human Life. By William Penn. Philadelphia: Friends' Book Store, 304 Arch Street." Price 25 cents.

"Reader," says the author, "this enchainment I present thee with is the fruit of solitude; a school few care to learn in, tho' none instructs us better. Some parts of it are the results of serious reflection; others the flashings of lucid intervals; written for private satisfaction, and now published for a help to human conduct."

An Introduction, from John E. Southall's edition, furnishes interesting explanatory matter. "It is impossible," says another writer, "to read these maxims without being impressed with a sense of William Penn's great astuteness and integrity."

SPEAKING of such "Reminiscences" of departed worthies as an aged Friend has of late been furnishing in a series to our columns, a correspondent writes: "I think such recognitions of worthies who have gone to their reward are useful, helpful and encouraging. We

too seldom stop in this treadmill to speak such words to the living, but when we offer our sincere acknowledgment of the merit or virtues of those whom we shall never meet again here, we do encourage many struggling ones by reminding them that they are not out of the minds of their friends, and that the reward comes at the end of the race, even if delayed until then. But of course the object of such publications is to stir up the pure mind, to induce those now living to follow their Master and Leader, as did those who have been taken to their reward."

The account of the impressive season at the Profile House in the White Mountains, when Samuel Bettle, Jr., was present, occasions one who well knew him to write: "He was a remarkable instance of one who followed closely the pointings of the Divine leadership. It matters not how hard the path was for the natural man,—and his was a most sensitive spirit,—he walked in it. The incidents mentioned by W. P. T. are cases in point. He did not do the easy things, he did what he felt to be his duty, no matter how hard to natural inclination.

"I have lived long enough to see that men, or women, who simply and unaffectedly do their duty as they see it without looking over their shoulder to see how the thing strikes others, make their way,—it may be slowly,—but surely. It is not an easy path, but the reward is sure, even if it does not come till the end of the race."

(THUS says an advertisement) Our "REVOLVERS.—Will last a Lifetime."

Yes, by shortening it!

Whatever may be the use of other firearms pistols are for shooting men. And he who carries one, means that.

What young "Friend," then, can carry one for its possible use, unless he is not a Friend?

Not only do such instruments shorten their victims' lives (and remarkably often if they are, presumably, "not loaded"), but we believe more lives of carriers of them are destroyed than if they are not supposed to be carrying them.

Indeed, in some localities it has been found dangerous for a man to reach into his pocket for a handkerchief, for sometimes one while doing so has been shot down, in anticipation that he was reaching for his revolver.

To go prepared for man-killing, often causes that deed to be done on the spur of the moment; when a little delay would have shown there was no occasion for shooting, or the difficulty could have been passed in another way, without entailing life-long remorse.

We know of no circumstances under which a member of the Society of Friends can consistently consent to take the life of a fellow being. But the practice of carrying a loaded pistol is such consent.

Discharged Prisoners.

The Home of Industry for Discharged Prisoners was organized in Philadelphia in 1889 to provide a home and employment for discharged prisoners, that they may prove their worthiness to be employed elsewhere by the character for industry and sobriety they may establish in this Home during the short period of their stay.

Its managers say that "During the past ten years we have had eight hundred men under our care, and it is very gratifying to be able to say that we are fully convinced at least three-fourths of those who have been with us have gone out to take their rightful places among in citizens, and have become good, law-abiding citizens."

A committee from the State Legislature "calculated the expense that a man whom they met at the Home had been to the taxpayers of the State, and although the man was only thirty-four years of age, he had already cost the State of Pennsylvania the sum of \$12,000 in trials, convictions, and imprisonments. We are happy to say the man is now holding a steady position, and is leading an honest, upright, and God-fearing life.

"Every one of these men who is won back to allegiance to law and order, is an added force to society, as he not only weakens the lines of the enemy, but strengthens our own. It is an additional bar to your doors, an additional protection to your streets and the lives and property of the community at large; and, more than this, it is an additional saving to your pockets, and it is a positive saving in the taxes that are paid for the maintenance of police, prisons, and almshouses.

"All the inmates of the Home are kept busily engaged in manufacturing brooms, but a large percentage of the labor is unprofitable. All are paid wages whether their labor is productive of profit or not. Thus the man is saved from being pauperized, and with the money honestly earned is enabled to save enough either to rejoin his friends or get a new start in life."

Aid for the support of this beneficent work is much needed, and may be sent to the treasurer, William H. Wanamaker, Sixth and Market Streets, Philadelphia.

THE NEW TREATMENT OF THE INSANE IN PALESTINE.—The curing of insanity by torture, which the monks of Syria attempt to perform so inhumanly and cruelly, is now receiving an effective protest by the presence in

that country of one asylum recently erected, the Lebanon Hospital for the Insane, which is conducted under Christian feeling and enlightened methods of treatment. "The people of Syria are receiving an object lesson in the rational treatment of the insane and its benefits are more and more appreciated;" and this example of humane methods is likely to spread into other parts of the country replacing the rock-caves, chains and beatings hitherto used for casting out the evil spirits supposed to reside in the insane. Few survive the prevailing treatment, but in the Lebanon Hospital a good proportion are happily restored.

A number of Friends in America have contributed to the erection and maintenance of the new Institution, contributions for which may be sent through Asa S. Wing, 409 Chestnut Street, Philadelphia.

Builders in the Church of Christ.

In the passing of our beloved friend and elder Anna W. Hooton, from works to rewards, the Church has lost one of its ornaments, for in an eminent degree she possessed the ornament of a "meek and quiet spirit, which is in the sight of God of great price."

Her voice was not heard in the assemblies of the people, her pen was unused for addition to religious literature, and yet such was the sweet savor of her life, that she was in the highest sense a preacher of righteousness.

Her Christian solicitude for others manifested by the kindly word, the gentle pressure of the hand, the face beaming with interested love, will be cherished in the memory of those who knew her, when words have faded from the memory.

Love, gentleness, meekness and humility are the great agencies that gather to Christ, and are helpful in building up the Church, and by his grace these Christian attributes may be attained by all his children.

We have no desire to underestimate great gifts, but fear that many, feeling that they are not highly endowed, too much overlook their opportunities of quiet ministration.

Our beloved deceased friend Joseph Walton, who for many years resided under the same roof with the subject of these remarks, was a man of excellent natural abilities and deep religious attainment, and was of much public service in the Church; yet we apprehend that, to those who knew him in his daily life, his circumspect walk, his loving heart, his gentleness, meekness, and humility, were louder calls to Christ, than his excellent writings and more public engagements.

If all of moderate endowment would but reach these possible attainments in grace, our Church would indeed be as "a city set on a hill that cannot be hid," and in the language of conduct we would constantly proclaim "come with us and we will do thee good," beholders would glorify our Father who is in Heaven, and we would thus become a greater power in his hand for the upbuilding of his militant Church.

GEORGE ABBOTT.

THIS world is too small to afford a place of safety to the man who disobeys God.

Reminiscences.

(Continued from page 243.)

How beautiful, interesting and comfortable are many parts of the Holy Scripture!

At this distant day, although written dreds, some of them thousands of years they yet retain for the reader a vigor, freshness, and sublimity as though of recent composition. If no other proof of their Divine authority were present, this alone would be sufficient proof of their truthfulness, for other book than the Bible can this be. Take for instance the "Sermon on the Mount" the inspired expressions of the Evangelist, Isaiah; again in Job xxvi where says: "He stretcheth out the north over empty place, and hangeth the earth nothing."

"He bindeth up the waters in his clouds and the cloud is not rent under them. May the dear young readers of THE FRIEND make the Scriptures their daily companion and read them, especially on retiring for night; perhaps the comforting of them a few may remain on the branches the next season through.

Our late worthy friend and elder in Truth, HENRY COPE of Germantown, although the successful manager of a very large estate, it is said for the last two years of his life read nothing but the Holy Scriptures.

He was a man of sound judgment, firm in the support of what he believed to be right, yet so humble, as to rise from his seat in the upper gallery near the clerk's table in a Yearly Meeting, and say (in substance) refer to some previous proceedings in which he had taken an active part, "that if he had said anything that was improper or out of place, he was sorry for it."

His son THOMAS PIM COPE, also a worthy Elder of Frankford Monthly Meeting, has behind him a rich legacy to the Christian world and to the Society of Friends especially in the preparation and publishing of several valuable works.

The "Passages from Holy Writ," a work of seven hundred and forty-five pages, is of special value for family reading, a large number of copies of which have been gratuitously distributed.

"Passages from the Life and Writings of George Fox." A copy of this work was sent by a friend to J. G. Whittier, who commended it.

"Views of Christian Doctrine held by the Religious Society of Friends; being passages taken from Barclay's Apology," prepared under the desire on the part of the Editor to present in smaller compass, but unchanged, truths set forth in his work, and some of arguments in their support.

"Passages from the Life and Writings of William Penn," collected by the Editor from his published works and correspondence, and from the Biography of Clarkson, Lewis, and Janney and other reliable sources.

These approved works are recommended to our young friends to read.

His contemporary members of the Westcott Boarding School Committee can bear a cheerful testimony to his aid in contributing largely to his means to needed improvements there, especially about the time of the erection of the new buildings; such as the removal of Ind

all, a large three-story brick building; the erection of a comfortable cottage for engineer.

dignified Christian courtesy, and his un-
 ations liberality are pleasantly remem-
 by his surviving associates in the small
 lites on Trees and Grounds of West-
 Boarding School.

following extracts from letters written
 before the battle of Gettysburg, give a
 idea of the consternation which spread
 his city and its vicinity in view of the
 ach of the Rebel army towards Phila-
 and the anticipation that a dreadful
 would be fought not far off. So confi-
 were the Confederate officers in their
 movements from Pennsylvania soil, that
 Rebel scouts ventured far in advance of
 an army and three of them were met in
 road about one-half mile east of West-
 er by two Friends a few days before the
 of Gettysburg. These scouts had

 dollars or more, to the benefit of the
 They did not cross the river. It is
 ved the covenant was faithfully fulfilled.
 was a time when men's hearts were fail-

ing them for fear. Passing along one of our
 principal streets in West Chester the writer
 met one of our prominent citizens, a man of
 fine physique, one of five brothers, all military
 men. We stopped and naturally conversed
 upon our perilous situation, believed to be the
 day before the battle of Gettysburg, and after
 a pause, he remarked, seriously, "Well, it will
 be just as the Lord pleases," showing that his
 only hope was in the Divine Power. About
 the same time he was accosted in the street
 by the wealthiest man in the town (a Presby-
 terian), "Oh William, I wish all the world
 were Quakers."

Science and Industry.

FILTRATION OF DRINKING WATER.—In a
 recent article, William G. Toplis described
 some interesting facts connected with the fil-
 tration of water on a large scale, from which
 the following is taken:

"It has long been known that impure water
 percolated through a deep bed of sand issues
 greatly improved in chemical character, but
 the precise nature of the changes were not
 thoroughly understood until Koch made pos-
 sible the isolation and study of individual spe-
 cies of bacteria. Art seeks to copy the
 changes so long carried out in springs, but
 with the precise care of scientific exactness.
 The sand filter, therefore, means the most ex-
 acting painstaking care to establish the proper
 conditions, together with the wise application
 of much chemical, bacteriological, and en-
 gineering knowledge.

"The sand is not the filter, the sand is sim-
 ply the bones upon which the filter grows.
 Surrounding each individual bacterium, under
 the microscope may be seen a gelatinous enve-
 lope, when many bacteria are joined together
 in mass; this envelope may be seen collective-
 ly without a lens, forming a jelly-like mass,
 and is then called a Zoogloea. In a sand filter
 this Zoogloea attaches to and covers com-
 pletely each grain of sand in the filter. The
 grains form fine avenues through which the
 water is compelled to pass. The bacteria line
 these avenues. The water carrying its or-
 ganic contents brings it as a food for the bac-
 teria in the Zoogloea. As the water passes
 along, it is gradually relieved of its organic
 matter, because it is digested by the bacteria,
 and in its place bears away the products of the
 decomposition. Sublime in its beautiful sim-
 plicity! We have chemical and biological
 proof of each change.

"Winogradsky has shown that nitrifying or
 oxidizing bacteria grow upon media alto-
 gether inorganic. No less than three separate
 and distinct classes of organisms are con-
 cerned in the transition of nitrogenous organic
 matter to the inorganic state, as follows: It
 is broken down into ammonia—as the first
 change by one class of organisms, and here
 becomes truly inorganic. The second step is
 one of oxidation, and the ammonia becomes
 nitrous acid through the agency of another
 entirely separate organism quite different
 from the first. In the third and final step,
 the oxidation is completed by another organ-
 ism entirely distinct from the other two.
 Here the nitrous acid becomes nitric acid,
 which unites with any base at hand, and is
 delivered as such in the effluent. This is why
 our filter, working under favorable conditions,

shows neither free nor albuminoid ammonia,
 but does return the equivalent in nitrates that
 an ammonia determination on the raw water
 would call for. As before stated, the proper
 conditions must be preserved, and one of these
 is the element of time; how rapidly may we
 pass the water through the sand as an econom-
 ical proposition? As might be predicted the
 character of these changes would require a
 slow rate of flow; therefore, filtration must be
 restrained or controlled and maintained at a
 uniform rate, notwithstanding a constantly
 diminishing filtering capacity due to the clog-
 ging. This is accomplished in several ways
 by automatic devices. It is not safe to carry
 the filtering rate much beyond three million
 gallons per acre twenty-four hours. This has
 been found by actual working conditions to be
 the safe limit, so far as bacteriological and
 chemical conditions are concerned. A three
 million gallon rate is equivalent to filtering
 ten vertical feet of water over the entire area
 of filter in twenty-four hours. The problems
 met with in water purification seem to change
 with each source of supply, and so variable
 are they that no municipality would undertake
 the erection of a filtration plant without ex-
 haustive study of the condition covering prac-
 tically a whole year."

THE city of Dallas, Texas is said to be the
 largest depot of farm implement supplies in
 the world. Every big wholesale house in the
 United States which engages in the business
 of manufacturing tools for the farmer has its
 branch at Dallas. There are twenty-five in-
 stitute buildings devoted to this trade.

THE great soap factories of France, the
 largest being at Marseilles, have been forced
 to seek cheaper vegetable oil than that from
 the cottonseed, because the demands for cot-
 ton oil by refiners who make it a foodstuff has
 advanced its price to a point at which it can-
 not profitably be made into soap.

A FRENCH naturalist asserts that if the
 world should become birdless man could not
 inhabit it after nine years' time, in spite of
 all the sprays and poisons that could be manu-
 factured for the destruction of insects. The
 insects and slugs would simply eat all the or-
 chards and crops in that time.

THE effective heat of the sun on the surface
 of the earth at sea-level is capable of develop-
 ing one horse-power for every square yard of
 surface. Sun engines are already used suc-
 cessfully in California, and are to be tried in
 Egypt. Enormous reflectors concentrate the
 heat on to cylindrical boilers, raising steam
 for use in the ordinary way.

HOW WILD SHEEP USE THEIR HORNS.—In
 more than one species are found huge horns,
 curled around the ears, which are very small.
 At first sight it seems as if these big horns
 must seriously interfere with sounds coming
 from most directions, and so be prejudicial
 to safety. But it has recently been pointed
 out that they serve remarkably well for local-
 izing sounds, as these are appreciably louder
 when near the axis of the cone formed by the
 horn with the ear as apex. In fact it acts
 just like the horns now used as ear trumpets

on steamers to localize sounds in fogs. As sheep on mountain sides are ever liable to be similarly shrouded, it is suggested in *Nature* that the horns are shaped to help them in this emergency.

The postoffice of Buenos Ayres has adopted X rays to discover smuggled articles in registered letters without opening them. Watches, rings, chains and other valuables have been found in astonishing quantity. More than twenty-five thousand dollars worth of smuggled property was confiscated in one week.

FOR THE SLEEPING ROOM.—No one need suffer with cold feet if he will fill a quart fir jar with almost boiling water, wrap in a flannel cloth and place to the feet. The water will keep warm until morning much better than a flat iron.

THE following method of determining the age of eggs is practised in the markets of Paris, according to the *Buckered Konditor Zeitung*. "About six ounces of common cooking salt is put into a large glass, which is then filled with water. When the salt is in solution, an egg is dropped into the glass. If the egg is only one day old, it immediately sinks to the bottom; if any older, it does not reach the bottom of the glass. If three days' old, it sinks only just below the surface. From five days upwards it floats; the older it is, the more it protrudes out of the water."

AN average sized man has about twenty-five hundred square inches of skin on his body, and in each square inch there are some twenty-eight hundred sweat glands. There are over thirty-five hundred glands in the palm of the hand, while the number on the entire surface of the body is about seven million. Each of these sweat glands is about a quarter inch long, therefore the average man has something like twenty-eight miles of tubing in his skin.

A GREAT LOG OF MAHOGANY.—Lying on a pier in Baltimore is the largest log of African mahogany ever imported into the United States. It is thirty and a half feet long and each of its four sides has a face of forty inches. It contains thirty-seven thousand superficial feet, board measure, of mahogany.

The average mahogany log is about fourteen feet long with a face of twenty-four inches. It is the first timber of the kind ever imported direct to Baltimore, the trade having previously got its material through Boston or New York.

The timber came from the West Coast of Africa, and was cut down eight hundred miles in the interior. It was hauled miles over swamp land by elephants and then floated down a river to the coast, where it was placed aboard a steamer for Liverpool. The wood is consigned to the Baltimore Mahogany Manufacturing Co., and will be used as counter tops. Its value is unusual, owing to the exceptional length and breadth of the timber.—*Boston Record, Eighth Month 7th*.

BALANCE OF POWER IN NATURE.—It is curious to observe how frequently the progress of an animal or plant race, otherwise triumphant,

is liable to be checked by the attack of some enemy that appears suddenly, or, at least, often unexpectedly, on the scene. Especially is this event witnessed in the history of the insect world; and but for the operation of some such principle in nature, we should be in danger of being overwhelmed by certain species to the exclusion of many other forms.

There is no doubt that the insect tribes inflict much damage on crops and fruits, and in many cases render the efforts and works of the farmer and gardener null and void.

But, on the whole, the balance of power in nature is very fairly sustained. There is scarcely a species of animals which does not include in its history a list of particular foes, and the increase of the one race implies the undesirable attentions of the other. This warfare among insects especially, and between insects and birds, and even between insect species and lower plant foes, can be illustrated by numerous examples drawn from the experiences of naturalists. One of the latest observations on this head relates to the nemesis that follows the trail of the caterpillars known as the "army worms," which in Australia eat up and destroy the wallaby grass.

This devastation is disastrous, but the saving clause appears in the person of a certain microscopic fungus. This low plant organism, apparently following on the track of the caterpillars, attacks the insects and kills them off by the thousand. Here the plant roots the animal, just as in the case of the plague of field mice which devastated not only Greece, but also the south of Scotland a few years ago, a certain bacillus or microbe, cultivated and spread over the fields, afflicted the mice, killed them off and restored peace to the farmers' souls.—*London Chronicle*.

A Modern Need of Sleep.

There is not one man or woman in ten thousand who can afford to do without seven or eight hours' sleep. All those stories written of great men and women who slept only three or four hours a night make very interesting reading, but I tell you, my readers, no man or woman ever yet kept healthy in body and mind for a number of years with less than seven hours' sleep. Americans need more sleep than they are getting. This lack makes them so nervous and the insane asylums so populous. If you can get to bed early, then rise early. If you can not get to bed till late, then rise late. It may be as Christian for one man to rise at eight as it is for another to rise at five. I counsel my readers to get up when they are rested. But let the rousing bell be rung at least thirty minutes before your public appearance. Physicians say that a sudden jump out of bed gives irregular motion to the pulse. It takes hours to get over too sudden rising. Give us time, after you call us, to roll over, gaze at the world full in the face, and look before we leap.—*Ex*.

THOUGHTS OF HOME.—The strong man who goes out into the field to toil for his loved ones may think longingly sometimes of the restfulness of home, but he does not desire to leave his labor while it is unfinished. When the task is ended and the shadows begin to gather, he will be eager to depart, but now, toil is sweetened by thoughts of home.

A Wise Prescription.

Some years ago a woman, who tells the story herself, went to consult a famous physician about her health. She was of nervous temperament, whose troubles—and she had many—had worried and excited her about such a pitch that the strain threatened physical strength, and even her reason. She gave the doctor a list of her symptoms, answered his questions only to be astonished at his brief prescription at the end: "Read what you need is to read your Bible more."

"But, doctor," began the bewildered patient.

"Go home and read your Bible an hour a day," the great man reiterated, with his authority. "Then come back to me a month from to-day." And he bowed her out without a possibility of further protest.

At first his patient was inclined to be angry. Then she reflected that, at least, the prescription was not an expensive one. Besides, certainly had been a long time since she read her Bible regularly. Worldly cares crowded out prayer and Bible reading for years, and though she would have resented being called an irreligious woman, she had undoubtedly become a most careless Christian. She went home and set herself conscientiously to try the physician's remedy.

In one month she went back to his office. "Well," he said, smiling as he looked at her, "I see you are an obedient patient. I have taken my prescription faithfully. You feel as if you needed any other medicine now?"

"No, doctor, I don't," she said honestly. "I feel like a different person—I hope I am a different person. But how did you know it was just what I needed?" For answer, the famous physician turned to his desk. The worn and marked, lay an open Bible.

"Madam," he said with deep earnestness, "if I were to omit my daily reading of the book, I should lose my greatest means of strength and skill. I never go to an operation without reading my Bible. I never attempt distressing case without finding help in its pages. Your case called not for medicine but for sources of peace and strength outside your own mind, and I showed you my own prescription, and I knew it would cure."

"Yet I confess, doctor," said his patient, "that I came very near not taking it."

"Very few are willing to try it, I find," said the physician, smiling again. "But there are many, many cases in my practice where would work wonders if they only would take it."

This is a true story. The doctor died on a little while ago, but his prescription remains. It will do no one any harm to try it.—*Lodge*.

DOING CHRISTIAN WORK.—Our Lord encourages us to utilize the most unpromising circumstances, the best account, and it is ours to go forward in dependence upon Divine guidance and strength, do our duty and leave results with God. If He gives us only limited means, we are not to despise them, but to use them to the utmost of our ability. It is fidelity in counts in his estimate of labor done in his name and for his glory and human benefit.—*Selected*.

FOR "THE FRIEND."
SONNETS.

I.

er, when on my soul the shadows fall,
the beauty of Thy common things
I feel I love, but slender comfort brings,
I know art hidden, who art all in all,
I feel dark, descending like a pall,
the dark train, about my spirit clings,
I feel unbid, rise hopeless questionings,
I feel heavy darkness holds my life in thrall.
I feel these clouds may never quite erase
the days that stand illumined from the whole,
I feel peace, too deep for words to sound, was mine,
I feel they brought the smile upon Thy face,
I feel days that live forever in my soul,
I feel I knew that all our ways are Thine.

II.

gh clouds and darkness Thou hast led my way,
the boundless valley of Thy Peace,
I feel, happily, my soul hath found release
I feel cares that grievously on her did prey,
I feel how the night has vanished, and the day,
I feel clearer vision, bringeth swift increase
I feel with that Love eternal doth not cease
I feel earth and heaven to hold almighty sway,
I feel pain and death and sin, yea, even such,
I feel past reaches of the endless years,
I feel prove to bear Love's teaching in the touch
I feel for a bitter moment, blinds and scars.
I feel rather, all that is, lo, Thou hast planned
I feel holdest in the hollow of Thy hand.

III.

oul lay tossing on a troubled sea,
I feel doubts and cares, desires unfulfilled,
I feel tears, whose icy breath my spirit chilled,
I feel barriers strong to hold me far from Thee,
I feel gently as the dawn, Thou sendest me
I feel blessed peace, and as the waves were stilled,
I feel that Thou alone thy strife hadst willed,
I feel break the chains that bound and set me free,
I feel before my spirit breathes no heedless prayer,
I feel his alone, that Thy dear love prevail,
I feel in all his all comfort to my soul,
I feel have seen Thy Truth that she is fair;
I feel forth shall solace me no idle tale,
I feel broken fragments turn me from the whole.

IV.

er, though child of earth, yet child of Thine,
I feel with little save a new-born trust,
I feel brings deep heaven itself to mortal dust,
I feel quickens death and life with breath divine,
I feel all of life hath changed from gall to wine,
I feel all of death, once dark with sad mistrust,
I feel loud upon the day forever thrust,
I feel as the very life supreme doth shine,
I feel all my spirit feels Thy Spirit near,
I feel sing such joyous life as doth fair Spring,
I feel on the barren earth she bends her smile,
I feel presence holds no fellowship with fear,
I feel or hath become a sacred thing,
I feel setting endureth but a little while.

a world where there is so much to ruffle
I feel spirit's plumes, how needful that entering
I feel the secret of his pavilion, which will alone
I feel it back to composure and peace. In a
I feel where there is so much to sadden and
I feel as, how blessed that communion with Him
I feel on is the one true source and fountain
I feel true gladness and abiding joy. In a
I feel where so much is ever seeking to un-
I feel woe our spirits, to render them common
I feel profane, how high the privilege of con-
I feel sowing them anew in prayer to holiness and to
I feel *Trench.*

The New Knowledge of Weeds.

USES OF THE SO-CALLED PESTS OF THE SOIL—
BY THEODORE DRESSER.

Vast sums of money (says "Ainslee's Magazine") are employed by the government to locate, understand and put to their proper uses the weeds of the country. From every town and hamlet and country wayside this great government gathers reports concerning these vegetable outlaws. The impudent dock that surreptitiously slips his seed on to the coast of a passerby in Nebraska is recorded in the annals of the Agricultural Department, and the line of the dock's progress is marked on the maps which show the areas of distribution in the United States. It is now known what and where the weeds are, and a constant surveillance is kept over them. Those that threaten to become pests are headed off by all the forces of government. It is a fact that an order to kill some lone specimen of a pernicious Canada thistle has been sent by telegraph from Washington.

There is, however, little need of encouraging the destruction of weeds. The thing important now is to utilize those that have been found indispensable. There are weeds that are soil renewers, weeds that are food for man and beast, and weeds without which thousands of acres of our most fertile lands would be wastes to-day. These weeds the government is endeavoring to preserve. It is surprising in the light of these discoveries to consider man's attitude toward weeds in general. That he should have sworn at them, sought measures of extermination, plowed them toilsomely under year after year, and yet himself remained really handicapped in the battle for subsistence because he lacked the aid which one or more of these would have readily given him seems incongruous. One kind if properly used, would have supplied deficient soil with potash, another would have brought it the needed lime, a third the nitrogen or phosphorus, taking it out of the atmosphere and depositing it where his crops of cereals and vegetables would readily draw upon it and wax strong. In one he could have found a better food for his cattle than he ever had before, in another a hardy worker capable of thriving with scarcely any rain and yet making returns in food or fertilizer far beyond the petty achievements of the most pampered and cultivated of domestic plants. The outlaws of husbandry have for ages held the secret of binding the sand of the sea so as to fix the shore; of digging deeper than any plow and searching for the minerals which make deficient land arable, and of drawing upon the atmosphere and taking from it the valuable chemicals which no farmer is rich enough to buy in sufficient quantities to make his poor holdings profitable. These bandits of the garden have turned out for the most part to be saviors and man's best friends, and so clear have their distinguished merits become that scientists are even apologizing for the need of calling any of the remaining, and as yet, little understood vegetation, weeds. So we have all unused plants now divided into poisonous and non-poisonous, with the reservation that all may be and probably are extremely useful. If poisonous, the new attitude is to find out why. Where the poison comes from—out of the air

or the earth? How is it distilled? What is its nature? Whether it is a known or unknown poison? What its effect may be on one and every other object, particularly upon life and growth? These and others are the questions scientists seek to answer by investigating the weeds.

The result is a new world of information of immediate or ultimate usefulness. So far the investigations have served to show that we are in our infancy as regards a proper knowledge of food. The available supply has already been increased a thousand-fold. The possibilities of increasing the strength of the soil have never been so numerous. The time is already in sight when the ability to examine a stretch of land and prescribe the proper weed to nourish and cure it will be realized. The time also is not far distant when the poisonous weed will have been mastered and applied, and the most useless weed put in its place and made to do serviceable work.

Already from the kingdom of weeds has come the host now recognized as serviceable grasses. We have sixty native species of clover, seventy blue grasses, twenty-five graminas and curly mesquite grasses, all wild and all abundant. They have flourished on the great plains, and though not understood have produced more beef and mutton than all the cultivated hay grasses put together. The cattle of the ranches have been wiser in their selection of them for food than men. Besides, there are ninety lupines, twenty wild beans, forty vetches, forty beggar weeds, twenty kinds of wild rye, thirty kinds of brome grasses, and meadow, pasture, woodland and swamp grasses without number. Each of these has always been considered a weed and a nuisance, and yet each is especially adapted to a soil or climate and to some particular use. There is a wild millet, common to the South Atlantic coast, which grows from six to ten feet high, and is a splendid cattle food. There is a wild brome grass now approved of which was never thought to have any value until one almost identically like it was imported from Russia as a cattle food. There are wild perennial beans in the southwestern mountains of the United States which grow luxuriantly with only twenty inches of rainfall annually, and yet many of them far surpass in productiveness and forage value those which have come to us from foreign lands and require good soil and a normal rainfall. There are free seeding weed grasses in the Northwest still generally looked upon as weeds, which equal the best of our hay grasses. In the mountain parks the government agents have found a wild green turf which rivals in fineness and beauty the best artificial lawns.

This order of grasses is in part claiming commercial attention. Already some are used as fibre in the manufacture of twine or paper. Some are used in making hats and many other articles of woven work. They are planted to subdue or bind the drifting sand of the sea shore, to hold the soil of railway embankments, and to prevent the washing out of dikes and levees. Others are used to aid in reclaiming fields denuded of their soil by rain. It has been shown by the government that through their growth and decay the fertile prairie loams have been formed. They were

and still are the forerunners which nature sends to cover the bare surfaces and to lessen the sterilizing effect of heat and drought. Not all have value as food for either man or beast, but it has been found that all of the number described serve some purpose in the economy of nature, and they are not yet completely understood.

The weeds of the cities and villages which are best known to us all have unquestionably the worst reputation and are looked upon as the most useless and harmful. There are some twenty-five in all—the good classed with the poisonous, and all misunderstood and considered evil. In New York, Philadelphia and Washington the residents see vacant lots growing with wild onion in winter, dandelion and bulbous buttercup in the spring, the wild carrot, prickly lettuce and sweet clover, and after them the horseweed, ragweed, cocklebur, Mexican tea, slender pigweed and jimsonweed of the late summer and autumn. Chickory, horse-nettle, burdock and gum-succory are abundant evidence throughout the season.

(To be continued.)

Cowper.

William Crotch, a minister among Friends, had a great desire to see the poet Cowper. For this purpose, accompanied by two Friends, he went twenty-five miles. The servant having announced to the poet the three Quaker gentlemen, was ordered to deny them; this denial was several times repeated. Fearful of not succeeding, W. C. sent a third message, requesting the servant to give his love to his master, and inform him a nervous man wished to see him.

This reached the melancholy bard, and he desired the Quaker gentlemen should be admitted.

They were mutually pleased with one another, and seemed to experience a fraternal sympathy in sorrows and baptism of spirit. William Crotch held Cowper by the hand, and felt his spirit to be as clean as any he had ever met with; he told him—"Blessed are the pure in heart, for they should see God," which was his condition, and he should see Him. Cowper wept. W. C. also told him, he had been designed to blow the trumpet, and sound forth to the people the gospel day, and that much sorrow had been his portion for having put by the call to this duty.

Cowper assured him that his belief then was, that the offer of salvation was given to every man, but that while he held a contrary sentiment [that of election and reprobation] which he unhappily embraced, it had been as a hell in his bosom.

A sweeter spirit, said W. C., I never saw by. He was a beautiful man, having a florid and most delicate complexion. During the interview they talked pleasantly, kissed each other twenty times, and Cowper seemed much exhilarated.

The visit was in the Fifth Month, 1800.—Related by W. C., to J. Munson Day.

It is a sorry day for majesty when an eagle forgets his mightiness and sets out to hunt flies, and take revenge upon gnats which he might soar away from and forget amid the clouds.

THE OLD-FASHIONED HOME.

Selected for THE FRIEND

Of all the tender and comfortable things
That now and then sweet memory brings,
There's nothing dearer that love recalls
Than the old-fashioned house with the whitewashed walls.

Not a mansion to-day, though a marvel of art,
Can ever usurp its place in my heart,
For in these my earliest prayers were said,
And I slept at night in a trundle bed.

'Neath coverlets reaching from feet to chin,
By a mother's hand tucked gently in,
And a good-night kiss upon my tired brow—
Oh, earth holds no such blessing now.

A garden was fragrant in flower beds
Where marigolds lifted their velvet heads,
And warmed by sunshine, refreshed by dew,
The bachelor-button and touch-me-not grew.

In a river that curved like a shepherd's crook,
We fished for minnows with bent pin-hook,
Or with little bare feet oft waded through,
And bravely "paddled our own canoe."

'Twas a home of welcome no one could doubt,
Whose latch-string hung invitingly out,
And many a stranger supped at its board,
While blazing logs in the chimney roared.

Oh, this is an age of reform and change!
And things aesthetic, modern and strange—
Improvements that savor of silver and gold
Are superseding the cherished and old.

But I turn from palaces built for show
With mansard roof and stories below
Of frescoes, kalsomined, daubed halls,
To the old-fashioned house with its whitewashed walls.

Snow of Several Colors.

Perfection of micro-photography is teaching the Weather Bureau many new and interesting facts about snow, says the Washington correspondent of the Boston Herald. It is now possible to determine, from photographic enlargements of snow crystals, the character of the cloud from which the containing flakes are falling, and, to some extent, the character of the storm producing them. It is also being learned that each crystal bears the earmarks, so to speak, of the particular part of the cloud whence it fell.

The laboratory for this fascinating study is a windowless room directly beneath a skylight the interior atmosphere being as cold as that outside. Directly beneath the skylight is placed a broad blackboard of ebony, and over the latter is mounted the photographic microscope.

Because of the coldness of the room the falling snow crystals retain their form sufficiently long for study. The sensitized plates are the fastest known. The microscope is sufficiently powerful to focus the merest pin point of a flake crystal to the size of a golf ball, and yet show its most delicate lace work and filigree.

Some of these beautiful stars, hexagons, triangles and what not, are perfect in symmetry. Some are disfigured and deformed. There never are two exactly alike.

It is discovered that their complexities of form are due to their falling through layer after layer of clouds, each stratum of floating vapor adding some embellishment. Other changes are due to pressure of the air bearing

upon all sides alike. While these changes developing air molecules enter all sides of tiny crystals simultaneously. Finally, water particles add material for new branches, ribs and spangles, all really minute capillary tubes filled with air. Thus are woven the est lace like designs.

Another interesting discovery is that during snowstorms spreading over large areas country the most beautiful variety of snow crystals will fall from the western or northern western edge of the disturbed sky.

These great, coarse grains of snow which sometimes cover the ground fall from clouds of middle height. Under the microscope these appear as huge, irregular crystals. The great raindrops of thunderstorms seem to form in the same cloud region. They probably are these same granular snowdrops melted. Hailstones appear, also, to come from the same middle stratum of the atmosphere. It is shown by their white cores and alternating outer rings of white snow and transparent ice. The colder the temperature in which snow crystals form, the smaller and more complex they become. Triangular crystals are the rare of all.

All of this fascinating snow lore has been contributed to the Weather Bureau fund knowledge by W. A. Bentley. He has made the largest and most elaborate series of snow crystal micro-photographs known to science. After making upward of one thousand prints he has failed to find duplicates. He has devoted twenty years to a study of his special subject.

Meteorologists have been lately prying into the phenomena of black, red, green, yellow and various other colored snowstorms, reported at various times from portions of this continent and of the old world.

They find that colored snow actually falls. Samples of black snow which fell some time since over Indiana and Kentucky were sent to the Weather Bureau for explanation. They were turned over to Plant Physiologist Wood of the Bureau of Plant Industry, who, upon analysis, discovered that the black matter was silt, corresponding to the fine sediment found in drained streams. It appeared to have been evaporated into the clouds from the bottom of some shallow lake or river which had dried.

The black snowflakes contained minute plants, such as grow in stagnant water, cells of decayed grasses, bristles of plants, hair of animals, pollen of flowers, butterfly scale particles of white lead paint, colored grass ashes and sand. Perhaps this mixture has been blown up by the wind into a snow cloud of goodly size.

Black snow fell over a considerable area of the West also in 1896. In 1868 a large extent of Ontario, Canada, was similarly covered by a storm of sable flakes. The territory thus blackened was fifty miles long by ten wide. It was estimated that about five hundred tons of black matter thus descended from the sky.

This matter, on analysis, was found to be composed mainly of vegetable substances which had lain some time in decay. It was thought to have been carried by the clouds either from Europe or from some distant part of the Southern United States. This speculation was based upon the fact that the entire area of Canada and of the northern United

had never been buried in white snow. snow fell to the depth of about six feet at Kaernten, Austria, in Third Month, 1898. It also covered the plateau of the stöhl, and blew over the Odenwald mts., Germany. The drifts on the latter beautiful tints, varying from rose to brown.

Analysis showed this red snow to be due to the presence of mineral dust, revealing chalk elements. Yet there were no chalk deposits at long distances from the places where the phenomenal storm was most severe.

The snow falling some years before in Switzerland was found on analysis to contain large quantities of lime, silica, aluminum, iron and magnesia. Under the microscope it revealed three distinct forms of animal and vegetable.

Arctic snow covers the summits of certain of the Arctic regions. The red coloring there extends to a depth of about a centimeter. Microscopic analysis by explorers has shown that this phenomenon is due to red minute insects thriving in the snow and these high points of dry land. Red snow is also seen by tourists in the Alps and elsewhere. It was described by Aristotle three centuries before Christ.

Red snow fell in the Engadine, Switzerland, in Third Month, 1898, the same day on which occurred the red snowstorm of Austria in 1897.

Red snow has several times been seen in Greenland, an island of the Arctic ocean. It is supposed to be due to the mature forms of insects from the red eggs, thought to be the crimson cliffs of the Arctic regions beautiful tints.

Red snow once fell upon Lake Awe, Sweden. The flakes continued to glow after being upon the clothing of passengers navigating the lake. When this snow was touched the ends of the passengers remained aglow, as if rubbed with phosphorus. Dr. Deville, who has also reported a shower of phosphorescent rain, whose drops gave off a bright and crackling noise on striking the ground. During these explosions a distinct phosphorus was perceptible.

Red snow is also covered with long hair, are reported to have fallen during a snowstorm in some years ago. Specimens confined in ice of snow built for themselves therein caves of curious architecture. They for years lived comfortably in a temperature degrees below zero, but died a few minutes after being exposed to warm air. They travel very rapidly through snow and ice, and could swim in icy water.

If you want to get your aches and your out of sight, bury them under your mer-

that we may know the renewings of the host upon us, in such a manner as to be for a place in the Lord's house, and to abide, as sanctified vessels, empty as his wisdom sees meet. My lot hath been among the empty vessels, in which I wish a wise resignation, to guard against impatience and insensibility.—*W. Fothergill.*

A Nature's Nobleman.

In the death of Sir William MacCormac England has lost one of her greatest surgeons.

His death was due indirectly to his constant devotion to duty. While in South Africa as Consulting Surgeon General he contracted dysentery, and Sir William insisted on continuing his labors, although the disease clung to him persistently.

It was largely due to Sir William MacCormac's efforts that any such adequate hospital facilities were provided for the wounded at the battle of Sedan. The Anglo-American Ambulance, of which he was Surgeon-in-Chief, had been stationed at Metz, and arrived at Sedan a few hours before the battle.

Sir William realized what the impending great contest meant, and he worked, without food or sleep, superintending the erection of emergency beds.

"It was like a shambles," said Sir William in describing the situation afterwards to a friend. "There were over seven hundred beds, and more than enough wounded to fill them."

An incident related by one of Sir William's friends regarding this experience at Sedan shows the tenderness which the great surgeon often unconsciously displayed.

He had been working for many hours among the wounded, and at last, almost exhausted, asked an attendant to bring him a glass of fresh water. Fresh water was a rarity just then, but the attendant, after some trouble, procured a small quantity in an old cup. Just as he handed it to Doctor MacCormac the latter was attracted by the groans of a franc-tireur who lay nearby, horribly wounded by a piece of shell. Suddenly he walked over and put the cup to the wounded soldier's lips.

"He cannot live an hour," protested an assistant surgeon; "it was foolish to do that."

"It is never foolish to help a dying man," responded Sir William brusquely, as he turned to the newest arrivals.

It is related that a few months ago a poor woman, whose son had been seriously wounded in South Africa and invalided home, wrote a pitiful letter to Sir William, asking him to cure her boy. The great surgeon drove several times to the little cottage in Chelsea, treated the unhealed wound and brushed aside the woman when she tearfully tried to thank him. Later, when the woman sent him £1, with a letter explaining that it was all she could afford, the surgeon sent it back with a £5 note.—*London Express.*

THE CURE OF LONELINESS.—Selfishness is one great cause of loneliness. If a man builds walls around himself, so that he may keep all that he has to himself, he soon finds that he has built walls around himself which shut out all that might come in to him from others. So the cure of loneliness may be the overcoming of selfishness. The medicines for this disease of loneliness are potions of generosity, of thoughtfulness for others, of self-sacrifice, taken in large doses. Even when the loneliness comes from the bitterness of loss and sorrow, forgetting self, going out of self and doing for others, is a wholesome cure that God has given on earth for his healing.

"Let not the stream of your life be a murmuring stream."

WHEN Mildred Radcliffe was seven years old her father, who was a Baptist minister, asked her what he should pray for, she replied, Father pray that I may not be a counterfeit!

MEN often take upon themselves needless burdens and anxieties. They act as if the whole world rested upon their shoulders. They may think that their concern for the trend of events evinces either a superior discernment or a larger spiritual comprehension; but more often it shows too little faith in God as the sovereign disposer of all occurrences to the advancement of his kingdom and to the accomplishment of his mighty purposes. An omnipotent king is upon the throne, and we can trust him to bring about the right results to ourselves and to his cause. We have enough of cares to carry, without assuming those which belong especially to the Lord of all.—*Selection.*

THE INDIVIDUAL OR SOCIETY.—The question whether the Gospel is intended mainly to save the individual or to reform society is much debated at the present day. Extreme views may be taken on both sides. Primarily, the Gospel is intended to regenerate and save the individual; but by doing this it purifies and rectifies society. It is only in this way that society, which is made up of individual moral units, can be made better. To try to regenerate society by means which are eternal to the individual is vain; but to regenerate the individual by the agencies of the Gospel which are internal in him is to provide the key for the remedy of moral evils and the solution of social problems. Heaven will be a state of perfect social order, because the units which make it up are as individuals in a state of personal moral perfection.—*The Christian Observer.*

EVERYTHING FOR EVERYTHING.—A clean church always means a clean world in proportion as it is a clean church; and if you are in harmony with God witnesses will know it. They know the white robes you wear; they know where they came from; they know they are the gift of God's grace to your faith; they know that the smile you carry is not a manufactured smile, made up for an occasion; but that it belongs to you as a part of your renewed nature; they know that your compassion is not the compassion of the "charity box," but that it is brotherly love which makes you help people, and that what makes the brotherly love is Christ within. Now, if you have got Him within, you will be able to show Him forth. The Saviour offers us full redemption, but He only does it on his own terms. You may have everything for everything—the exchange rules all.—*J. R. Harris.*

Items Concerning the Society.

The *Chatauquan Magazine* for Second Month says: "Quakers who met in Orthodox, Hicksite and Wilburite branches for the first time since their first separation of Friends in 1828, and drafted in December some peace resolutions, which they have just forwarded to President Roosevelt, now face the fact that they are losing in numbers, not alone in Pennsylvania, but in the West. It has long been known that there are more Friends in Ohio than in Pennsylvania, and more in Indiana than in Ohio and Pennsylvania combined, but it has, until

recently, been true that Friends in the West have been growing in numbers. In Indiana, Iowa and California they have abandoned the plain dress and speech, and almost all other distinctive features of Quakerism, and, having adopted the methods of other religious bodies, have kept up with the times. Now, however, there is shown a net loss in membership, during 1901, of two hundred and ninety-four. Even in Indiana, long the Quaker stronghold, there was a loss of three hundred and twenty-four, in Kansas one hundred and thirty-three, and losses in smaller numbers in Philadelphia, New York, Ohio and Iowa Yearly Meetings."

Visits to meetings in Philadelphia have lately been made by Henry Lloyd Wilson, an assistant Clerk of London Yearly Meeting, on his way going and returning, on account of business in Washington, St. Louis, etc.

The following is given as a list of periodicals at present published in the interest of bodies under the name of Friends: *The American Friend*, THE FRIEND, *Western Work*, *The Soul Winner*, *North Carolina Friend*, *The Interchange*, *Christian Workman*, *The Guide*, *The Messenger*, *The Witness*, *The British Friend*, *The [London] Friend*, *Waymarks*, *The Friends' Examiner*, *The Australian Friend*, *A Norwegian Friend*, published in Norway; and perhaps more than one (unknown to us) of the division represented by the *Friends' Intelligence*.

The following pathetic letter is expressive of one situation out of many such:

"I have been reading my valued FRIEND paper, wanting it so much, hoping to learn that our dear Friends are enjoying their meetings better than a few years ago when I lived in Indiana. I am now reading my old papers, and have been made so happy, I have decided I must take the paper the present year. I hope not to learn or experience what I did while on a visit in Indiana a few weeks ago.

"I thought I had their pastor, as they call them, and an organ, and their books for singing, a man to play on the organ. I was pretty sure old or nearly all sang. I did say in my feeble heart—it can it be those people call themselves Friends?"

"But they do!"
"Oh, I am anxious for our old, dear reading. I have no meeting here of my own—I am not able even to walk here to any meeting. My father took the FRIEND paper when I was quite young. I enjoyed them even then. Now I am in my eighty-second year. Oh, how very hard it has been, and is, for me to give up my dear old valued FRIENDS, and the enjoyment I had in going to meeting and being with the dear Friends!"

SUMMARY OF EVENTS.

UNITED STATES—In the recent treaty with Denmark respecting the cession of its West India islands to the United States, it is provided that any differences of opinion that may arise as to its interpretation or application are to be submitted for settlement to the Permanent Court of Arbitration at The Hague.

In the last session of the United States has spent \$257,000,000 upon its navy.

The United States Senate has passed a joint resolution submitting a constitutional amendment changing the time of Presidential inaugurations and the termination and commencement of Congress from the fourth of Third Month to the last Fifth-day in the Fourth Month. President Roosevelt has been in earnest consultation with members of Congress to induce them to enact legislation in favor of the Cubans, by reducing the tariff on sugar, and it is expected that action in that direction will soon be taken.

The condition of the Philippines and the enactment of legislation affecting them has continued to occupy the attention of the Senate.

The migration between sections of the United States is dealt with in the following official statement issued by the Census Bureau: "The migration northward of Southern whites, while increasing in absolute amount, has relatively declined. The migration northward of colored persons has increased rapidly. The northward migration of South-

ern whites, however, is still nearly three times as great in absolute amount, and nearly one and a half times as great relative to the population from which it comes, as the northward migration of the colored.

The figures of the Treasury Bureau of Statistics show the exports of each of the principal countries of the world at the latest available date, and clearly indicate that the exports of the United States were during the year larger than those of any other nation. On the import side the United States stands fourth in the list of nations.

Prince Henry, a brother of Emperor William of Germany, is expected to arrive in New York on the 22d inst., on his way to the United States.

Charles E. Borchgrevink, the Antarctic Explorer, has arrived in New York. In 1899, he and a party of scientists had reached the seventy-eighth degree fifty minutes, south latitude, about eight hundred miles from the South Pole, and the most extreme southern point ever reached by explorers.

A volume just issued by the Bureau of Statistics shows that the gross area of the United States, exclusive of Alaska and Hawaii, has grown from 827,844 square miles in 1800 to 3,025,600 in 1900, and the population from 5,308,438 to 75,693,724.

The imports of the United States in 1901 were nine times as great as in 1800, and exports were twenty-one times as great as in 1800.

A spouting oil well has been struck near Fossil, Wyoming. The oil was thrown twenty-five feet in the air.

The French Government has decided to establish schools in this country for the training of French youth. It is planning now to establish two of these schools; one in Pittsburgh, for the training of engineers, and one in New York, to teach political science; while others are in contemplation.

The Trustees of the University of Pennsylvania have in prospect the erection of a laboratory on a large scale for researches in physiology, pathology and pharmacodynamics.

A despatch from Butte, Mont., says: State Senator Hobson, who is largely interested in the sapphire diggings in Fergus County, says the stone is a white sapphire, very hard, but of comparatively little worth. In veins extending for miles along the creek beds the white stones can be found by the barrel.

The *Kroondad*, a new steamer for the International Navigation Co., is the largest vessel ever built in this country and is 560 feet long on the water line and 585 feet over all. She will carry eight thousand tons of cargo. It is expected she will make the passage from New York to Antwerp in about eight days.

Minnesota is called the "Bread and Butter State." Last year her miller turned out 25,620,500 barrels of flour and churned over 60,000,000 pounds of butter.

There were 602 deaths in this city last week, reported to the Board of Health. This is 21 more than the previous week and 80 more than the corresponding week of 1901. Of the foregoing, 280 were males and 322 females; 69 died of consumption of the lungs; 101 of inflammation of the lungs and surrounding membranes; 16 of diphtheria; 12 of cancer; 23 of apoplexy; 28 of typhoid fever; 4 of scarlet fever, and 19 of small pox.

COTTON closed on a basis of 8½¢ per pound for mid-land uplands.

FLOUR—Winter, super, \$2.65 to \$2.90; Pennsylvania roller, straight, \$3.50 to \$3.75; Western winter, straight, \$3.60 to \$3.85; spring, straight, \$3.75 to \$3.80.

GRAIN—No. 2 red wheat, 95 to 96¢.

No. 2 mixed corn, 65½ to 66¢.

No. 2 white oats, clipped, 50½¢.

BEEF CATTLE—Best, 6½ to 6½¢; good, 5½ to 5½¢; medium, 5½ to 5½¢.

SHEEP—Extra, 5½ to 5½¢; good, 5 to 5½¢; common, 2 to 3¢.

LAMBS—4½ to 6½¢.

HOGS—Western, 8½ to 9¢.

FOREIGN—A treaty has been entered into between England and Japan. This is said to be the first important alliance between a Western and an Asiatic race. The British secretary of State for foreign affairs, in explaining it, said, "We wish to see that the integrity and independence of the Chinese Empire should be preserved, and that there should be no disturbance of territorial status quo, either in China or the adjoining regions. The object of the alliance was threefold—the maintenance of the status quo, the policy of the open door, and the maintenance of peace in the Far East. No other Powers' interests in the Far East were comparable with those of Great Britain and Japan." This action has given great satisfaction in China and in Japan.

It is stated that the ransom of Ellen M. Stone has been paid. It is not known when her release will occur, but it is understood that the brigands have made a condition that they shall have a period of a week or ten days in

which to make sure their safe retreat before the press is delivered up.

The Egyptian postal administration has given it that postoffices for the receipt and despatch of registered mail have been established at Khartoum, Fashoda, twenty-five places in the Sudan.

Recent statistics show that the Church of England in England and Wales about 7,000,000 in places of worship, against over 8,000,000 provided the Non-conformists. The church communicants said to number 1,975,629, as against 1,945,382 in nonconformist congregations.

Some making of a beautiful silk from the thread by spiders has been carried on successfully in Madagascar where a large spider native in that country is used for this purpose. The price of the spider silk is still too low for its use by any except the rich, but it is said the pearls to be little reason to doubt that with good commercial management it can be made as cheaply as, more so, the silk that is obtained from the mulworms.

Subterranean lakes have recently been discovered in the Eucla district, Australia. They lie about thirty feet below the surface, and contain an abundant supply of potable water. This discovery is of great practical importance to this especially arid district. It is of some value also, as it affords an explanation of the appearance of certain rivers.

A despatch to the Exchange Telegraph Company, Lahore says that the plague is ravaging the Punjab and a thousand deaths are occurring daily.

It is reported from Baki, Russian Trans-Caucasia, that thousands of persons were killed by an earthquake in Shamakia district, and that the towns and villages twenty versts around Shamakia suffered severely.

A despatch of the 16th from Chilpancingo in Mexico states, "Great alarm prevails here, as well as in Cuernavaca and Tixtla, at the discovery of smoke issuing from the openings in the summit of Tencatimalcaltot. The smoke, coming about 150 yards from the great mountain, from which thick smoke pours, clearly of volcanic origin." An earthquake on the same day added to the terror of the inhabitants.

NOTICES.

WESTTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to Wm. P. WICKESHAM, Principal.

Applications for admission to board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

WESTTOWN BOARDING SCHOOL.—For convenience of some coming to Westtown School, the stage will have trains leaving Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met when required. Stage fares, fifteen cents; by train, 7.30 P. M., twenty cents each way. To reach the school by telegraph in West Chester, Phone 114x.

EDWARD G. SMEDLEY, St.

MARRIED, at Friends' Meeting-house, Celeray, Kent Co., Ohio, on Twelfth Month 27th, 1901, T. H. HAINES, of West Grove, Chester Co., Pa., and RACI RUSSELL, of the former place.

DIED, at her residence, Moorestown, N. J., the seventeenth of First Month, 1902, ANNA W. HUGHES, widow of Joseph Hooton, in the eighty-third year of age; a beloved member and elder of Chester Monthly Meeting. "The ornament of a meek and quiet spirit, which was the chief ornament of her life." She adorned the life of our dear Friend to a marked degree. Like her Master, she made herself "of no reputation," yet through the riches of his grace, she was made an example of the believers in grace, in conversation, in charity, in spirit, in faith, in purity. She bore the test of her physical powers with much patience and equity, and the quietness and peace which pervaded her religion, which she was mostly confined for some months, was like a blessed foretaste of the perfect rest into which we reverently believe she has entered. "Blessed art thou in heart, for they shall see God."

—, in Media, Pa., Second Month 19th, 1901, MRS. FOSTER, widow of Joseph Fost, in the eighty-fourth year of age; a member of Chester Monthly Meeting of Friends. She was an invalid for many years; yet bright and cheerful, her patient, trusting spirit, her love, rejoices in the fulfillment of the humble desire expressed in her last illness: "Through the mercies of Redeemer I hope to be saved," and she is safely going to her heavenly Father.

No. 140 N. SIXTEENTH STREET, PHILA.

and as second-class matter at Philadelphia P. O.

all my dear friends and brethren everywhere: He that hath the Son of God hath life; that have not the Son of God, have not the Son of God is He who makes free all sin, and is come to deface and destroy the image of the devil, and to renew us up to the image of God, and so to bring us to walk in righteousness. Praises be unto the glorious forever, who has sent his Son into the world to take away the sins of the world.

And all Friends walk worthy of your calling and holiness, for holiness becomes the man without holiness no man shall see the

And every one improve your talents, sing in the vineyard, dressing in the Lord's garment, that ye may be found faithful servants, all walking in love to God and to one another. Lo, God Almighty be with you all! Few of heaven is falling upon you to water the tender plants; and the blessing of God be amongst you, which showers down upon you! The heavenly joy fill your souls and comfort you in the inward man in tribulations. The glorious light is shining; immortality is springing forth out of death; prisoners have hope of their pardon, the being paid and they freely purchased by Christ's blood; and He is come into the prison; the prisoners begin to sing in hope of freedom, leaping for joy of heart; and the dumb tongue shall sing praises.—George

MIRAL PENN is remembered chiefly as the author of the Quaker legislation, and holds that connection a larger place in the history of posterity than from any other cause. The name of the father is merged in the countless mass of military characters who seldom mentioned or thought of, the name of the son stands conspicuous among the best benefactors of our race.

The history of the province which bears his name proves conclusively the superiority of the penal plan above the policy of the world. And the honor of proving that the tomahawk and scalping knife of the savage may be used for their terrors by the lenient spirit of gospel.

Which would the most eager aspirants after

fame prefer, if they could command it with a wish, to be Admiral Penn, with the scanty rags of military renown that now surround his memory, or to be William Penn, the Quaker founder of Pennsylvania? whose name is transmitted with reverence from generation to generation amongst the untutored inhabitants of the wilderness; whose character is most admired where it is best understood; and who, when the day arrives, in which "nation shall no longer lift up sword against nation," will be remembered as one who gave the influence of eminent abilities and a conspicuous station, to promote the advancement of the Messiah's peaceful reign.—Enoch Lewis.

As Dying, and Behold We Live.

We often hear it said that the way to die well is to live well, but it is not deeply enough considered that the way to live well is to die well. "I die daily," said the Apostle; and it is by the daily yielding of the body to the Spirit—the flesh to the claims of the higher life, that the Christian truly lives;—dying, indeed, unto sin and living unto God. This is the only true living—a daily ascension from our dead selves unto higher things, where Christ sitteth. If by the Spirit we mortify the deeds of the body which lust against the Spirit, we shall live a constantly triumphing life. But if we live after the flesh we must die. Dissolution from the flesh we call dying, but dissolution from the thralldom of the flesh is living, because it is the best kind of dying. When one dies, leaving his outward flesh behind, but carrying with him its thralldom—all the clamor of carnal appetites in his homeless soul without natural body to gratify them—what can the habitual sower to his own flesh realize but his harvest of corruption? "But he who sows to the Spirit shall of the Spirit reap everlasting life." He is reaping it as he goes on, and shall reap it unhampered when he goes out, and sees the sights of the pure in heart.

Last summer the writer, walking across a lawn, came past a roll of wire netting, and in the midst of it espied a bird. It was not yet dead, for its head could move, though every other limb was tangled fast in the meshes. Through the hole by which the bird had entered there was no retreat, for every struggle of his wings only drove him in deeper. There was no way to extricate him but to unroll the net-work along the ground, till after many a turning and overturning of the prisoner in

tribulation, the roll became a slender tube, and then altogether flat, when the bird, awakening to a sense of its liberty, flapped his wings in flight and soared towards the sky in the sunlight of glad deliverance! This occurrence was believed soon after, as it arose to view in the funeral of an aged, careworn daughter of faithful toil and of much entanglement in earthly tribulations, to have been of Divine leading as a parable furnished for our edification and comfort.*

When this mortal coil shall be unrolled—"the earthly house of this tabernacle dissolved"—it is the righteous ascending to be righteous still, and the holy to be holy still, who know that, delivered from this in which they have groaned, they have a home not made with hands, eternal in the heavens.

But as our Saviour's ascending on high was by the way of the cross, ours must be also, both by virtue of his cross wherein He tasted the wages of sin for every man, and by our own daily cross by which self is denied and He is followed. So, "bearing about in our body the dying of the Lord Jesus, the life also of Jesus is manifest in our mortal body," and we are living well by daily dying well. More abundantly thus we live, and yet not we, but Christ lives in us, "And the life which we

*The thought of wings broken or disabled in the meshes of worldliness, rendering impossible the mounting up on wings as eagles to those who do not wait upon the Lord, at this point sought but did not find expression. But since the above was sent to press, we observe that the *Soul Winner* of last week complains as follows of a song produced in "Cleveland meeting," after an impressive sermon: "The said song contains sentiments in accord with Scripture, but these are thrown into the background by the oft-repeated sentence, 'But the bird with a broken pinion never soared as high again.' The sinner goes away with that sentence ringing in his ears, and forgets the cross and its message and the power of the redeeming blood. The human race has had its pinions broken, and the only ones that are soaring to-day are they who have acknowledged their helpless condition and are being borne up on the eagle's wings that God supplies. The nice people who never did anything bad and are resting on their good deeds may sometimes praise themselves that they never broke a 'pinion' in the trap of sin, but the day will reveal it. Too many times is the searching effect of a sermon on sin dulled by some unscriptural song after it; too often is a sermon on the promises of the grace of God spoiled because a song on works is sung at the wrong time. If some of the critics would leave the inerrant Word [not leave Christ, surely!] alone a while and spend a season on some of the song-books they might do a good service."

live in the flesh, we live by the faith of the Son of God, who loved us and gave himself for us."

Pastoral Service Distinct from Preaching.

It is a reflection on the Christianity of a church, where its members do not, according to the apostle's word, have "the same care one of another," according to their several gifts. This co-operative shepherding, or watching over one another for good, which was the original provision, being neglected, and neglected usually for worldly reasons, a hired committee of one for that purpose at length becomes clamored for, and the mutual shepherding lapses into one by proxy. At the same time it is treated as good business economy to saddle this function upon a preacher, who then is placed under contract to be the preacher. This places him in the situation of preaching as well as of shepherding for hire. But the two gifts, though sometimes they may reside in the same person, are in themselves distinct, and what God hath put asunder, man may not rightly presume to join together.

The argument for paying the preacher because he has to do the shepherding, stands upon a reason which has no right to be—a guilty reason of unfaithful membership; and the argument for paying him because he has to study for stated sermons, is one which stamps him and his employers as gone from the foundation doctrine of the Society of Friends, as regards the ministry.

This distinction, which we have heretofore also drawn, we find similarly acknowledged in a recent number of *The Christian*:

The pastoral work which burdens and wears many ministers of the Gospel, could be done quite as well, and even better, by the men whom God appoints to do it, namely, the elders of the church, who are bidden, to "feed, or shepherd, the flock of God, taking the oversight thereof, not for filthy lucre but of a ready mind," and whose bounden duty it is to labor with their own hands, and "support the weak, and remember the words of our Lord Jesus Christ, that it is more blessed to give than to receive." If those who are called of God to preach kept [to their gift], "while pastoral work was given into the hands of those whom the Holy Ghost has made overseers to shepherd the flock, we should soon see a decided change in the state of affairs. Many a man who says that he is not called to be an evangelist but rather to be pastor, would doubtless be somewhat surprised to learn that the pastoral work is expressly required to be done "not for filthy lucre but of a ready mind; not as lords over God's heritage, but being examples to the flock" (1 Peter v). And if men who regard themselves as called to be pastors, were allowed to perform their proper share of pastoral work at their own expense, devoting the rest of their time to honest and useful employment, and di-

viding among them those duties which are crushing out the life of faithful ministers of the Gospel, they would then cease to be hinderers and become helpers.

FOR "THE FRIEND."

Remarkable Conversion of a Jew.

The following circumstance, though not of recent occurrence, should be none the less instructive on that account. It furnishes a striking proof of the inestimable value of the New Testament Scriptures, through the immediate effectual operation of the Holy Spirit, in thus awakening, reclaiming and bringing back to the fold one of the lost sheep of the house of Israel, who no doubt was brought sensibly to feel if not say "Blessed is He that cometh in the name of the Lord," and thus to realize exemption from the awful sentence pronounced against his people formerly, on account of their rejection of the Saviour of men in his outward coming in the flesh. Matt. xxiii: 37-39.

The Holy Scriptures are indeed a fruitful means in the hands of our Heavenly Father through the Holy Spirit for the conviction, enlightenment and conversion of sinners; in bringing them out of the broad way leading to destruction, into the straight and narrow way that alone leads to life eternal; and they should be highly esteemed and diligently read with the mind turned inward unto the Lord for instruction and guidance that we may be truly benefited thereby.

"For no prophecy of the Scripture is of any private interpretation" II. Peter i: 20. It is only as He who hath the key of David, "who openeth and no man shutteth, and shutteth and no man openeth," is pleased to open our understandings, that we shall through their means be made wise unto salvation through the faith that is in Jesus Christ. Dear Friends everywhere who may read these lines, it is a precious thing to hold the Truth in humility, and childlike simplicity, in the even balance,—avoiding all extremes of doctrines, for thus and thus only is it apparent that our desires shall be realized (in the Lord's good time) again to behold our Jerusalem a quiet habitation, a tent to dwell in, with its tabernacle not taken down, none of its stakes removed or any of its cords broken. Thus may we be brought as upon ancient ground, as before the intrigues of Satan within the last three-fourths of a century through his willing instruments, had served their purpose upon us, to divide in Jacob and scatter in Israel.

D. H.

COAL CREEK, IOWA, First Month 30, 1902.

A poor student at the University of Leipsic having occasion to undertake a journey to his distant friends, was in want of money for that purpose. He was therefore induced to go to a Jew, to pawn his Hebrew Bible, and Greek Testament. The latter contained the Greek and German text, in opposite columns. The Jew who was a learned man, little as he valued this book, was, however, prevailed upon to give the student a halfrix dollar for it. During the absence of the student, he undertook to read it through, with a view to confirm his mind in enmity against Jesus, to ridicule his person in the synagogue, and to be the better prepared to testify his zeal for the Jewish faith. His wife and children were not

permitted to see the book; he was determined to read it alone, as a sworn enemy of Jesus and to discover the falsehood of the Christian religion in all its parts. As the student was absent for about seven weeks, the Jew sufficient leisure to perform his task. As he proceeded to read, his surprise increased, as a sacred awe pervaded him. In reading so impressive passages, he could scarcely refrain from exclaiming "Oh, that Jesus were my viour!" Having completed the reading, he was astonished at himself, and exceeding perplexed that in spite of his earnest desire, fuel in the New Testament for the increase of his burning enmity against Jesus he had discovered nothing deserving of hatred, but on the contrary much that was sublime and heavenly. At length he charged himself with silly simplicity and blind rage and resolved to open the book no more. This resolution he persisted some days. The consolatory and heavenly instructions he had read and which had left an indelible impression upon his mind, and the glorious prospect of life eternal which had opened before him, did not suffer him to rest either day or night; and he resolved to read the New Testament a second time, fully determined to more carefully in ascertaining that Jesus and his apostles had justly deserved the hatred of all Jews in all ages.

Again, however, he was unable to discover any thing that was absurd, or which bore stamp of falsehood; but much wisdom, inexpressible comfort for an afflicted mind, and hope of immortality which seemed to rescue him from that dreadful anxiety with which the thoughts of futurity had often filled him. Still he could not divest himself of his prejudices, but read the New Testament the third time, with the following resolution: "If I discover nothing the third time, why Jesus and his apostles, and their doctrine, should be hated by the Jews, I will become a Christian, but if my wish in first opening the book is gratified, I will forever detest the Christian religion."

During the third reading of the history of Jesus, his doctrines and promises, he could not refrain from tears; his soul was affected in a manner which no pen can describe. He was quite overcome; the love of the Holy and the most lovely filled his very soul. Being fully determined to become a Christian, he went without delay and made his declaration to a Christian minister. The student returned from his journey and brought with him borrowed money with interest to redeem the two books. The Jew asked him if he would sell the Testament. The student was unwilling to part with it, but after some persuasion yielded. "What do you demand for it?" asked the Jew. "Arix dollar will satisfy me," was the reply. The Jew opened the Testament, and laid down one hundred louis-d'ors. "See that," said he, "and gladly will I pay you what you desire it; and if at any time I can be of use to you, only apply to me and I will use your friend to the utmost of my power." The student was surprised and supposed that the Jew made sport of him. But the latter intended to him what change of mind had wrought in him while reading the New Testament, upbraided him with setting so little value on that precious book, and said, "Never will

rt with this hook; and you will oblige me
accepting the money." From that time he
me a sincere Christian.—*Jewish Advocate.*

Trout's Memory for Fish Poles.

to the fact of memory in fishes, the late
Green, the father of American fish cul-
ture was able to give at least one striking
example of it, an example which, doubtless,
many people to-day have a pleasant recollection
of, for no one visited the State hatchery at
Aledonia, New York, in those days without
witnessing that interesting exhibition. In
of the enclosed pools at the hatchery
many other trout was one very large
which always came very promptly forward
when visitors appeared. It was S.
n's invariable custom, after calling the
or's attention to that trout in particular,
ise his cane quickly and hold it over the
r toward the trout, but as that perform-
had no effect on the trout, the visitor
d wonder what its object might be. He
not long kept wondering, for, requesting
visitor to note how impassive the fish was
r the walking stick, S. Green would pro-
a light trout rod, all equipped for cast-
and appear with it at the side of the

stantly that trout would turn and flee as
terror, hide itself at the far end of the
sure, and remain there so long as the
was in sight. The explanation of this
rising change in the trout's demeanor was
but amazing. One day early in the ca-
of the fish, S. Green, to try a barbless
he had devised, cast with one in that
and this trout seized it. The hook pen-
ed and passed through its upper jaw,
the nostril, and by the time it was lifted
the water released from the hook and
ned to its element, it had undergone an
ience that made a lasting impression
it, as the sequel properly proved.

Green discovered shortly after the hook-
f the trout, that whenever he approached
ool with his rod the trout would instantly
to a place of hiding, although it paid no
tion to a cane or other stick held over the
f. The trout lived for years in that pool,
never failed to show its fears of that
rod, or any other one, as long as it

Green's invariable remark was, after this
ite exhibition of his:
his shows in a striking manner that even
have memory, and a long and a strong
too. If the trout's actions were not
ent demonstrations of the fact, of what
vidence?—*New York Sun.*

o BOOKS.—Bad books are like ardent
s; they furnish neither aliment nor med-
they are poison. Both intoxicate—one
ind, the other the body. The thirst for
increases by being fed, and is never sat-

mind or body.—*Selected.*

not mistake a prejudice for a principle.

Our Ocean Population.

The population of the ocean is estimated at
three millions. That is to say, the number of
sailors and others whose business is on the high
seas equals the inhabitants of the thirteen original
colonies. Last year more than one-sixth of this
ocean population, or to be more exact,
five hundred and fifty thousand, officers and
men, of four thousand four hundred and forty-
three vessels, entered the port of New York.
These figures are significant of more than the
mere extent of our commerce. They tell the
story of neglect of the nation, the State,
the city and the Church to protect the seamen
while they are on land. Something in that
direction has indeed been done. There are
several admirable charities and societies which
labor in behalf of these men of the sea.
Among the best of these is the American Sea-
men's Aid Society, which was established sev-
enty-three years ago. Helen Gould has re-
cently erected a splendid club house for the
seamen of the navy. But for the most part
our attitude toward the sailors has been that
of neglect. There are good laws for their
protection, but they are not enforced. The
sailor, when he reaches New York, finds his
most cordial welcome from the harpies who
prey upon him, rather than from the men who
may pray for him. Charles E. Jefferson,
of the Broadway Tabernacle, has summed up
the situation as regards this matter in a few
strong, but truthful, sentences: "Outside of
a little company of their faithful friends, who
is interested in a sailor? The politician cares
nothing for him. The sailor has no vote.
Even the philanthropists are too busy with
other people to give but hasty thought to the
men who do business on great waters. They
are careful of the little children, of the aged
and of the blind, and of the deaf and the
dumb, and of the insane and of the criminal
and of the prisoners, and even of the horses
and cats and dogs, but the sailor they usually
pass by on the other side. Religious workers
in great armies are feeding the hungry and
clothing the naked and visiting the sick, and
showing hospitality to the stranger, but, ex-
cept in rare cases, their thought and affection
seem to stop when they come to the edge of
the sea. Indeed, the bulk of the Christian
work stops several blocks this side of the edge
of the water. Our neglect of the sailor on
land is more surprising and wicked than our
neglect of him when he is on the deep. He
reaches the city in the most desolate and de-
graded sections of it. Cities have a strange
way of deteriorating as they approach the sea.
There is usually a congestion of poverty and
vice in the neighborhood of the wharves.
Misery and dissipation build their homes near
the docks. Hunger and rags, drunkenness and
lust, profanity and filth, these, as a rule,
seize upon the sea border of a city, and the
sailor finds himself at once in the midst of
evil soundings on the land. What a danger-
ous company of men and women stand on the
shore to greet him on his arrival. The sa-
loon keeper, the harlot, the blackleg, the land-
shark, the gambler, the thief are all there to
take advantage of his credulity, and to fan
into flame his worst passions.—*Public Ledger.*

A FALSE witness may be given by a gesture or
a grimace.

Selected for "THE FRIEND."

On the New Life in the Image of Our Saviour.

We may mention as a trait somewhat closely
allied to what was specified in the last pre-
vious number of this extract, that the Saviour
was susceptible of and actually formed to
some extent, personal friendships and intima-
cies. It would be unreasonable to doubt, that
He had a sincere affection—analogous proba-
bly in its nature to the filial and paternal af-
fections in other cases, for his mother, his re-
puted father, his brethren and sisters after
the flesh. Certainly we have an evidence of
this declaration in part, not only in his
dwelling so long with them as He did, but in
the circumstance that when He was suspended
in the agony of the cross, He commended his
mother to the care of the Disciple John.

It would hardly be consistent with the doc-
trine of his humanity and would certainly be
at variance with the many developments of
his life as the "Son of Man" to suppose he
did not form strong personal attachment to
the little company of his disciples. It is said
expressly in reference to his disciples, "Hav-
ing loved his own which were in the world he
loved them unto the end." It is also explicitly
stated that he loved Mary and Martha and
Lazarus, the favored family of Bethany,
whom he often visited. The disciple John, in
particular, is characterized as the disciple
whom Jesus loved. As he was set before us
as an example, that we should follow him,
this interesting trait, which resulted in the
formation of friendly and affectionate intima-
cies, is what we should naturally expect to
find in him, and furthermore, as one who came
to suffer as well as act, as a "man of sorrow
and acquainted with grief" had he not some
need even of human sympathy? And if this
suggestion be well founded, where would we
be disposed to look for the consolations which
even the sympathy of men is capable of af-
fording, except in the bosoms of those he
loved peculiarly and confidently?

In connection with what has been said, we
may remark here that nature teaches us (or
rather the God of nature) that increased and
special love, other things being equal, may
properly flow in the channel of domestic affec-
tions; also that it is entirely consistent with
holiness—and not only consistent, but a duty
—to exercise special love towards those,
whether we are naturally related to them or
not, with whom we are intimately connected
in life and whose characters are truly lovely.
—*From the Inner Life*, by T. C. Upham.

"THE propagation and promotion of vital
Christianity are solemn and ponderous. Who
is sufficient for them? Not the wise and
learned in the wisdom of this world; not the
rich and great in earthly possessions and rank;
not the prudent and crafty in human policy;
but those whose sufficiency is of and from the
Lord Almighty; who have no confidence in
that which appertains to the flesh,—who are
as willing to be nothing as anything, and who
seek not their own honor, but the honor that
comes from God only. It is not in the power
of our nature to acquire the knowledge of the
Truth, neither can we possibly, of ourselves,
retain it in our experience. Let us then watch;
let us fear as well as love; let us be
sure to take heed to ourselves first, then to
the flock.—*Selected.*

A Pilot Needed.

One of our Friends' Tracts, "The Divine Pilot" (No. 160) contains an interesting recital of a ship guided through among dangerous rocks and currents on the Norway coast, by the Captain's obedience to a heavenly vision. The following remarks written for young people by Joseph W. Cochran, seem a not inappropriate comment on such experiences.

With the confidence of youth we are restless to hoist the sails, upheave anchor and be away over the dancing waves. What! Any of our set to go wrong? Look at our advantages, our family standing, our education. Do not preach to us of shipwreck.

Yes? it is true that much time and money has been spent on our launching from home and school. But when the last rivet has been driven and the last spar fitted and the last rope cast off we must move out under our own sail. Is the Pilot on board? We need him outward bound as well as at the end of the voyage. Is there any time we do not need him? The staunch ship "Blairmore" had weathered many a Pacific gale, but went to the bottom with six men while lying at her dock in San Francisco Bay, and I could point you to many a gallant life sinking in the inner harbor of the home and going to destruction while yet moored apparently to Church and Sunday School. It is so easy in these days to let machinery take the place of the personal Christ. So easy to substitute some form of activity for the presence of our Heavenly Guide. The only help and hope for everyone is the full surrender of his life to the Master of the vessel. We may not see the reason why he shapes our course through sickness and trouble, but we shall know some day when in the haven of his rest.

This is the point I wish to press home. Anything short of having Jesus Christ as helmsman of our lives is not prospective, but actual and present shipwreck. I hear one say "There is nothing the matter with me. Wait until I get into trouble." But look at the noble vessel, the "Paris." Everything intact, not a scratch upon her moving to her unconscious doom upon the rocks, eighteen miles out of her course. What difference if the captain made inspection of every corner of the vessel and pronounced her in first-class condition? That did not affect the position of the rock just ahead. What will you give for that fine vessel in perfect condition? Not a cent if she does not reverse her engines in a moment. What will you take for your life, my brother? You are worth exactly the time it takes to stop in your selfish course and take into your life the One who knows the channel and brings each trusting soul into his desired haven.

O, there are some so near the Kingdom! Some splendid lives in sight of the harbor. Some fine characters "almost persuaded," refusing to yield themselves. But there is a ledge of rock between themselves and safety. All they need is the heart to say, "My Lord and my God." Is the legend, "wrecked in port," to tell the story of their lives. "The Kilbrannan," from Callao to Port Townsend, encountered a gale at the entrance to Puget Sound. She had crossed the wide Pacific, but driving before the wind under bare masts

was within a hundred feet of anchorage beyond Point Wilson when she was caught in the tide-rip and went to her doom. Only a hundred feet more. And there was the old steamer "Beaver," the first steamer to plow the waters of the Pacific. Launched in the presence of King William and one hundred and twenty-five thousand of his subjects. For fifty years she ran for the Hudson Bay Company. She had an auspicious launching, a fortunate rounding of the Horn and a long and honorable career. But when in Vancouver I saw the old "Beaver" an ignominious wreck at the mouth of the Vancouver harbor, a prey to winds and waves and relic hunters.

"Thou art not far from the Kingdom," but far or near is not altogether within the Kingdom. Delay is shipwreck, indecision is disaster. "He that believeth not is condemned already." It is not a condition of the future, but of this present moment.

FOR "THE FRIEND."

Comments on "Business Ethics."

The essay on Business Ethics that appeared in THE FRIEND of Second Month 8th, 1901 introduces a subject of large scope and great importance to every right-minded person. I have long felt that the topic might properly claim the public consideration of Friends more than it does. It appeals so closely to the varied relations of our lives that, if forcefully presented, it can scarcely fail to elicit the interest and kindly comment of all. The younger or less experienced, are sure to follow with eagerness the discussion of ethical problems, which they must eventually meet, while others will mark with even closer attention the suggestions that may aid them in solving the intricate problem of how to be just.

I have said the "intricate" problem. Yet many will say it is a very simple matter. We have only to attend to the intimations of duty in our own hearts and we shall not fail of being true to all.

"To thine own self be true,
And it must follow as the night the day,
Thou canst not then be false to any man."

We shall not question the soundness of this theory. It is impossible that we should be true to God, and do wrong to men. Yet there are very few who accept this postulate, and so, to the mass of mankind, there is still the need of a "schoolmaster to bring us to Christ." The theory is simple, but the practical solution of the problem presents many difficulties.

"He that loveth not his brother, whom he hath seen, how can he love God whom he hath not seen?" These words of the Apostle suggest that our fidelity to men is a measure of our fidelity to God. The first commandment is, "Love God" but the second is like it, "Love thy neighbor," and nowhere do we find the one apart from the other, for "love is of God."

"Love," we are told, "worketh no ill to his neighbor;" yet it may happen that while we were "living in all good conscience," we were at the same time working hardship and injustice upon others.

The mutual dependence of men has become so far reaching and the organization of society so complex, that many a saintly man or

woman is a daily partaker of the fruits of oppression and ill unknowingly, and perhaps helping to ply the lash that drives men reluctantly in sin of every description.

"Such departures from rectitude," says the author of Business Ethics, "may be ascribed to hasty or superficial thinking." If this is true, as it certainly is, have we not a duty in acquainting ourselves with the condition of mutual relationship and inter-dependence among men as they exist to-day? The question of Business Ethics involves the whole subject of Sociology, and I would ask serious the question, whether we recognize as keen as we should the far-reaching mischief of "hasty or superficial thinking."

"Thinkers—earnest, conscientious thinkers"—says the article referred to, "are in need of the hour; and it is such that are advance from opinions to convictions, and from convictions to good works." And again "There can be no more imposing and potential figure than that of a man who by diligence, honesty and perseverance has reached the fruition of a commercial career full of honor, and in and through all, maintained his Christianity."

That there have been and are such men do not question; but when membership in the Stock Exchange costs many thousands of dollars because of the advantage it affords speculation, should we expect to find such men in that body of men? And when I contemplate the processes of "capitalizing in millions" without a dollar of intrinsic value of admitting favored investors on the "ground floor" of "watering stock," of corporations built upon "stolen franchises," of "monopolies," and corners in the market, and "criminating duties," I am puzzled to know how we may handle pitch and not be defiled thereby. But the "fruition of a commercial career full of honor," is rarely disassociated with these things.

Truth is relative. "Time makes ancient good uncouth." A keener apprehension of equity and justice may keep one man relatively pure while another, equally conscientious and true to his lesser light, may amass a great fortune.

Does every tender hearted man or woman who pities the poor and over-worked people consider how many are kept on the verge of starvation by the effort of himself or her to buy in the lowest market? Who rejoices not over a purchase made below the actual cost of production? So great is the popular demand for "bargains," that a gigantic system of deceit has crept into mercantile business almost everywhere. Read the advertisement of a man who has reached "the fruition of a commercial career." Is it literally true?

In what paper does it appear? In the paper that prints known facts only, and maintains a high moral standard? Or is it in a paper with the largest circulation—the paper made "popular" by catering to perverse tastes, and intoxicating sensationalism?

The business man who would "in all things all consistency maintain true Christianity," will hardly be unmindful of these things. And the patrons of business men likewise a responsibility. Recently, I heard a merchant say that he scarcely knew which was more censurable, the producer who cheats the consumer by false measure, or the consumer

who invited such dishonesty by refusing at any margin above the minimum cost of production.

These are times when upright men and women are greatly needed. We need, of all their example, next, their counsel and encouragement.

What shall I do to be just?
What shall I do for the gain
Of the world—for its sadness?
Teach me, O seers whom we trust!
Chart me the difficult main
Leading out of my sorrow and madness;
Preach me the purging of pain."

These Comments shall be the means of giving any one to consider more seriously individual responsibility, or, perhaps, duty as enlighteners of the public concern, they shall not have failed of their use.

BENJAMIN F. WHITSON.

A, Second Month 19th, 1902.

The New Knowledge of Weeds.

(continued from page 254.)

One of the most prominent weeds in Boston is burdock, rough pigweed, chicory and dandelion. In Chicago rough pigweed, ragweed and cocklebur are abundant, there are hundreds of acres within the limits covered almost completely with a thistle and Russian thistle. In Dense ragweed, squirrel-tail grass and Rusch-thistle are among the most noticeable and in San José, California, the vacant are chiefly occupied by wild licorice, spiny bur, wild heliotrope, milk thistle and weeds. In Atlanta, Augusta, Auburn, New Orleans, and most other cities of the United States, tarweed is looked upon as the weed of early summer and sneezeweed of the summer and autumn; the latter is a yellowed composite, which has been introduced during the past fifty years from west of Mississippi.

It is known now that the presence of these weeds, collectively and uncared for, is not all bad. When young and growing, besides giving more sightly appearance to utterly bare ground, they purify the air, and herein lies the chief benefit conferred by their presence in cities. Numerous fires in dwellings, in factories and locomotives, and the breathing of people continually rob the air of its oxygen and charge it with carbonic acid gas. The plants of whatsoever kind, and weeds included, reverse this condition by drawing into themselves the carbonic acid gas and then giving off the oxygen, thus purifying the air and returning it to the public health, and is certainly more beneficial to the eye than the bare ground.

Weeds have another effect not so good. When they stop growing they cease purifying the air, although it is not certain, as some say, that they rob it of its oxygen. They harbor injurious insects and fungus and bacterial diseases, which later they communicate to cultivated plants. When they become old and begin to decay they shade the soil, thus preventing the purifying and drying effects of the wind, and, it is thought, keep it damp and warm—a fit breeding place for malaria. Weeds produce a pollen which is ex-

ceedingly irritating to persons afflicted with asthma or hay fever. The mayweed, tarweed and stinkweed produce disagreeable odors. The wild garlic is eaten by the cows, which gives the city residents reason to complain of the bitter flavor of garlic in the milk delivered from them. Henbane or deadly nightshade, jimson weed and purple thorn are deadly poisons and give cause for more opposition to weeds in cities.

Notwithstanding all this, the charge is not against the individual weeds, but their collective neglect and misuse. They are not understood. Everyone knows that dandelion is an excellent pot-herb when taken by itself and cultivated. It is not so generally known that this is true of chicory, milkweed and pigweed although the government is now calling attention to their value as food. Prickly lettuce, while not generally understood, is known to be liked by sheep and is therefore thought to have some quality which will eventually make it useful. The same is exactly true of the wild carrot. The other weeds—wild onion, horseweed, ragweed, cocklebur, jimson weed, burdock, tarweed and sneezeweed—have done the service to humanity of exciting interest in the weed question. Their size and strength in the manner in which they multiply and the use which they make of what they find in the soil and atmosphere has stirred up investigation of a most profitable order. Part of the knowledge acquired has been how to kill them cheaply and effectively where they are a nuisance, but this knowledge is not now considered important. Later a study was made of their growth and distribution until the whole vast scientific knowledge of how so-called weeds grow, multiply and distribute themselves was gathered. The investigation as to what it is that these weeds take from the soil and the air is under way, and the investigation will not end until it is known what they do and what is their place in nature. In 1898 an interesting pamphlet covering the character of thirty poisonous plants and the cure for injury by them was issued by the government. Since then several poisonous plants have been especially investigated by individual scientists. One of these, the common poison ivy, has been thoroughly analyzed by Dr. Franc Pfaff of the Harvard University Medical School. He discovered that the poison in the ivy which does the damage is a non-volatile oil to which he has given the name of the plant. It is an oil that has not hitherto been known to science, and is found in all parts of the plant, even in the wood. Why it should poison the skin when touched is not yet known but the fact that it will poison only the spot which it touches and will not spread has been found out. Dr. Pfaff also discovered that it is readily removed by alcohol, and that all poisons by this plant are readily cured by two or three applications of a mixture of equal parts of alcohol and sugar of lead.

As much is now being done for cocklebur, jimson weed, sneezeweed and others, remedies for which are already known, although the character of the poison is not.

Out of this branch of weed study is certain to come remarkable information, for the poisonous plants are the most strangely constituted and given to astounding variations. For instance, the common poke berry presents a

spectacle of contradictory qualities. Birds eat the berries which to men are poisonous. Cattle may eat the leaves when green and fresh, but if, perchance, they should eat a wilted leaf it would poison them. The roots are deadly poison, yet the shoots which grow up six inches high in the spring are an excellent food for man—the rival of asparagus and equally healthful. Science has at last passed to inquire why this should be so, and some day the chemical action which can make a deadly poison by wilting a leaf when the fresh one is harmless will be discovered.

Similarly it has been observed of American false hellebore or itcheeweed, that the seeds are poisonous to chickens, and that the leaves and roots are poisonous to men and horses, but that sheep and elk, which chew the cud, seem to relish the plant. In all, the poison, when in the system, acts alike, paralyzing the heart and the spinal cord. The poisonous element of cocklebur has not yet been explained, but its curious action has already been observed. When extracted it mixes freely with water, froths like soap and, though odorless, will, when inhaled, produce violent sneezing. Capser spurge, the common gopher plant or spring wort, is curious in that the mere handling of it will poison to the extent of producing pimples and often gangrene. It is a thing that cattle can eat without harm, and goats eat freely, but the milk of the latter will then be deadly poison. In men a moderate dose will produce a general collapse and death in a few hours. The poison of the sneezeweed develops mostly in the showy yellow flowers, and is violent. The young plants are comparatively harmless, and even in the mature ones the poison varies greatly—some having scarcely any at all.

(To be concluded.)

For "THE FRIEND."

Four Pitiable Things.

Ian MacLaren believes that men and women must attend diligently to their own business if they are to do any good to others. There are four pitiable things he dislikes: A minister who runs up and down the country conducting evangelistic missions for the quickening of people's lives and the revival of his own brethren, and whose own church is unaffected; a woman who harangues masses of working people from the platform on domestic economy and the reform of the household, and whose household is so miserable that her husband can hardly live in it; a Sunday school teacher who is engaged in teaching other people's children the way of life everlasting, while you can not find a more ignorant and unruly household than his own in the whole district; or a man who is so devoted to the affairs of State in his city and country that he allows his own business to become bankrupt.

The above indicates a condition, the description of which might be still further extended. It is good sense as well as good religion—and the pictures as drawn by the author are not infrequent. "My own vineyard have I not kept"—"many pastors have destroyed my heritage, etc." The reason of it all is that so many well-intentioned people lack depth—they have not submitted themselves to the baptism that is needful for their qualification for service—hence superficiality, and a religion of their own with the daily cross eliminated.

For "THE FRIEND."

Regeneration and Signs Following.

It is to be feared that the doctrine of regeneration is losing its hold upon professing Christendom. Some of the exponents of "higher education" include religion among the sciences of the colleges and boldly assume that the heart has no proper concern about it—that it is simply work for the intellect. We may trust they are but a small proportion who have yielded to this delusion. But all should be aroused to the importance of this doctrine as fundamental to the welfare of the Church.

We know that our Saviour said "Except a man be born again he cannot see the Kingdom of God," but then we who desire to be his followers place a widely different construction upon what the words imply. We are told that "the natural man knoweth not the things of the Spirit of God" and that "if any man be in Christ he is a new creature," that "God requires the whole heart," that no man can serve two masters, that "whoso forsaketh not all that he hath he cannot be my disciple." And although the texts are not verbally gainsaid, it would appear that mankind at the present day have conspired to abridge their force.

It is assumed that we may give some attention to the soul's interests, yield some service to our Lord and Master, and at the same time give unrestrained attention to the pursuits we think needful and the pastimes we find enjoyable. Among familiar associates one encourages another in this half way measure of dedication until there are few even among Friends who give evidence that they daily realize the "renewings of the Holy Ghost." We have the accepted truth that the "grace of God which bringeth salvation hath appeared unto all men." Could we know the secret history of the human family we should find this assertion verified although a vast majority of them refuse to entertain the heavenly visitant.

In reading the history of early Friends and of good men and women not of our fold, there is continually brought to our notice this work of grace by which they were turned from darkness to light, and delivered from the power of Satan. It was by virtue of this change of heart that they were enabled to walk unspotted in an evil world to face its frowns and do their Master's work.

It was not only such as Huss and Luther and Guyon, who, clad in such armor, could stand firmly when brought before rulers, but also the multitude of humble followers of Jesus, who lived unknown till persecution dragged them into fame, and chased them up to heaven. No half-way measures of dedication could have sustained them in the face of torture and death.

George Fox was one whose heart from the first was set upon submission to the Divine Will. But it would appear that at that time the guidance of the Holy Spirit was so little known among men that it was by a long and painful experience that George Fox was assured that it was Christ within, the infallible preacher, that was calling him—and preparing him to be his messenger to the people. William Caton was a youth who had been noted for his homeless life. But when awakened to a greater depth of religious experience by the ministry of G. Fox, he found that some

practices hitherto destined innocent, must be set aside. Some of his literary pursuits, notably his classical studies, became burdensome, and he was permitted to drop them. However well it may have been that he had thus far pursued those studies, his Master knew that their intellectual progress was sufficient for his purposes. He was henceforth engaged in the ministry of the Gospel. In the case of John Churchman there was a visitation in childhood that was convincing and very encouraging. This was repeated at intervals for a few years, until he allowed the spirit of the world to stifle in some measure the voice of conscience. For years after this he was in a state barren of a sense of Divine Goodness. He went to meetings and had much respect for the Lord's messengers and others truly religious. He was in a state of formality where it is to be feared many pass the remnant of their lives. But he was made willing to undergo a further refinement, however painful, that his peace might be assured. The Lord knew the sincerity of his heart and meted out a fresh baptism, by which the unregenerate nature was subdued within him and the new birth brought into dominion.

A remarkable narrative of the gradual unfolding of duty in the spiritual life is that of John Barclay. His family was wealthy, and it appears they had allowed what we consider our important testimonies to be dropped in their habits of life. Notwithstanding such surroundings, he submitted from his early years to be led in the paths of simplicity and self-denial and as he freely yielded to Divine guidance, his narrative is free from those episodes of repentance and remorse, that so often beset our pathways. When he felt called upon to do so, he adopted the plain style of dates and address and the plain dress, that has distinguished Friends. Further as he felt restrained from entering into the engrossing business marked out for him, he withdrew and the peace that attends obedience was his experience throughout his life.

In this transformation from darkness to light which all the followers of Christ are called to experience, in each case there are commonly some points of difference. It is not a path of our own choosing. The experience of others may be of use to us, but it will be not as a pattern to be strictly followed, but as an evidence that we have the same object and that our unerring Leader is the same. In this great work it has seldom been required that every point of duty should be presented at once. "They are set before us, one by one, as the Master sees meet to do, and as we are enabled to accept them. If obedience is rendered, the disciple gains strength with every step of his advancement, until he is enabled to say 'I am not ashamed of the gospel of Christ,'—the power of God unto salvation."

If the Christian convert is to be led into communion with Friends, we find that after forsaking everything like wickedness, he is called upon to put into practice our several testimonies. They may be presented one at a time, but we will not find him fully equipped for the Master's use until all of them have been submitted to. In adopting these distinctions from men of the world, there are many who fall short. They stop to reason about

them. They see around them men and women of reputation who do not observe them. They perhaps take counsel with some of these: are set at rest with the idea that these singularities are no longer required of us. If here yield, allowing the opinion of men to outweigh the Divine requirement, our conscience becomes callous, and it may never again appear to us that there could have been duty about it.

If it were not that such delinquency is commonly followed by other marks of weakness there would be plausibility in the doctrine that some of our minor testimonies have outlived their usefulness. But yielding at one point has promoted associations with those of no religious scruples. The whole train of habits that makes up the enjoyment of the devotee of pleasure are pressed upon our acceptances and we are left without power to withstand them. We not only become recreant to our testimonies of Friends but are in danger of losing the characteristics essential to the Christian. L. E.

The New "Song of the Shirt."

New Zealand has been called the advanced continent of liberalists. In those islands of the sea, which were almost uninhabited two generations ago, save by seagulls, may be found some of the most interesting developments in the social and industrial world.

With fingers weary and worn,
With eyelids heavy and red,
A woman sat in unwomanly rags,
Plying her needle and thread.

So wrote Thomas Hood of the English seamstress, but it has not yet ceased in Africa to be a true picture. What happens in the sweat shop operator reduces the pay of the sewing woman? She moves from her little closet to one a little smaller and dirtier, eats less and works longer hours. It is possible in New Zealand. Around the sewing woman of that colony the law has drawn a protecting circle.

If the employer of the sewing woman reduces her wages unduly, the circle of which she is a member invokes the law. The man compelled to appear before an industrial court to justify his act, and, if required he must produce his books. Meanwhile, the sewing man sits in the factory well lighted, heated and ventilated, continuing her work and receiving full pay till the case is decided. On each side full justice is done.

Such is the new "Song of the Shirt." Experiments in the interest of labor in all industries, begun in New Zealand seven years ago, have proved so successful that since its adoption not a single violent labor dispute has occurred.

Indeed, the principal argument urged in New Zealand against the long proposed federation of that country with Australia is that the smaller island would thereby lose the marked benefits of its voluntarily adopted system of industrial arbitration.—*Youth's Companion*.

"MEN grumble because God puts thorns on roses. Would it not be better to thank God that He put roses on thorns?"

TO KEEP A TRUE LENT.

By ROBERT HERRICK.

Is this a fast—to keep
The larger lean,
And clean
From fat of veals and sheep?
Is it to quit the dish
Of flesh, yet still
To fill
The platter high with fish?
Is it to fast an hour—
Or ragged to go—
Or show
A downcast look, and sour?
No! 'tis a fast to dole
Thy sheaf of wheat,
And meat,
Unto the hungry soul.
It is to fast from strife,
From old debate
And hate—
To circumscribe thy life.
To show a heart grief-rent;
To starve thy sin,
Not bin;
And that's to keep thy Lent.

Her "Pleasure Book."

Great many school children keep a "media." Here are favors, sprigs of flow-grams of entertainments bits of written sometimes photographs, each one representing some happy hour that has been passed. It is to be feared that such a book is but the index of empty pleasures rather real happiness, and it may become a rather, than remain a satisfaction.
The better book was that kept to the end of life by a lovely old lady, whose serenely pure countenance was unmarred by the care or irritation. So placidly happy was that a woman given to fretfulness, most annoyed by the unassailable peace of the other's face, once asked a secret of her content.
"Dear," said the elder woman. I keep your book."

It is a pleasure book. Ever since I was a school I have kept a daily account of the pleasant things that have happened to me. I have put down only the pleasant things, the disagreeable ones I have forgotten as possible. In my whole experience I can recall a day so dark that it did not have a little ray of happiness.
The book is filled with little matters—a walk, a concert, a new gown, a new hat, a fine sentiment, a fresh sign of affection from my family—everything that gave me pleasure at the time. So if ever I am inclined to be despondent, I sit down and read a few lines in my book, and find out how much I have to be grateful for."

"I see your book?"
"Certainly."
The peevish friend turned the leaves. The significant the entries seemed! How they meant! "Saw a beautiful lily in the window." "Talked to a bright happy girl." "Received a kind letter from a dear friend." "Enjoyed a beautiful sunset." Husband brought some roses home to me." "M

boy out to-day for the first time after the coup."

"Have you ever found a pleasure for every day?" inquired the fretful woman, wistfully.
"Yes, for every day, even the sad ones."

The answer came in a low tone.
"I wish I were more like you," said the discontented woman, with a sigh. Then she looked up at her aged friend, and a beautiful "reverence" grew in her face. "I don't think, she said as her eyes filled, "that you need to write them down any more on paper. Your pleasure book is written on your face."

"WHAT does the straying, hungering, hunting soul ever get by its eagerness after earthly joy, but weakness and dissatisfaction?"

Items Concerning the Society.

Nothing seems to have transpired in the several Quarterly Meetings thus far held at this season, which has apparently been thought worthy by correspondents or others to report to THE FRIEND.

Wearing apparel of any kind is desired by a Friend's family in the far West. Donations would be forwarded from our office.

It is conceivable that the Quaker body might pass away and yet Quaker truth live amongst men, but in the present state of the world this would be a serious loss. For in the face of the present easy-going disregard of religion on the one hand, and the religious reaction of sacerdotalism on the other, there is still a vital need for the positive teaching of Quakerism.—A. W. Richardson.

SPRING RIVER ACADEMY, at Galena, Kansas, is one of those institutions which are doing a good work on meagre means. At much personal sacrifice the Principal has for the past year carried through its expenses (including salaries) on a sum of seven hundred dollars.

"We are undoubtedly," says a circular received, "doing a good work, not only educationally, but in the endeavor to instill into our children a correct understanding and true appreciation of Friends' principles. Now the question is, once more, Shall this work continue, or shall it in whole or in large part be discontinued for want of funds?"

"We appreciate that liberal minded Friends elsewhere are already overtaxed by appeals for their assistance in behalf of many worthy causes, such as the education of the Indians, the negroes, and the Doukhobors; and in the endeavor to keep the schools for their own membership up to a creditable standing. So that it is not surprising that but ten replies were received to the six hundred 'Appeals' for assistance that we sent out last year. But we thankfully acknowledge the contributions from these ten (total \$201), was enough to cover the shortage in our last year's account, and, together with an additional sum raised among our own membership, enough to pay off the small indebtedness from the previous year.

"But our crops this year, as is well known from newspaper reports, have been almost a total failure. Many of our Friends, patrons of the School, are compelled to borrow in order to meet the demands for the necessities of life until 'berry time,' as it is expressed in this fruit growing section, the coming summer. For these reasons our shortage on account of fuel, etc., will be greater this year than ever before. While in addition to this we are sadly in need of money for a new roof for the primary building, as it will be next to impossible to have school under the present roof another year. And many of our desks, a cheap grade at first, are, after twenty years' use, almost beyond the possibility of 'further repair.'

"But for these three we ask—donations to cover our shortage in running expenses for the year, for a new roof for the primary building, and for new desks. We cannot meet these expenses and continue the school. Please consider, and help us decide whether the end in view, and the results obtained are sufficient causes for continuing the work; for the future of our school is dependent upon the interest that Friends elsewhere take in the work that it is endeavoring to accomplish.

"Donations may be sent to

"ANSON B. HARVEY, Principal,

"or ALVIN LAWRENCE, Treas.

"GALENA, KANSAS, Second Month 15th, 1902."

Notes From Others.

At a recent equal-suffrage meeting the "question box" yielded up this poser: "How can women be prevailed upon to overcome petty jealousies?" But Anna H. Shaw was equal to the occasion, answering: "As long as the Schley matter is on the docket I wouldn't say anything about jealousies among women."

Booker T. Washington's autobiography, "Up from Slavery," has already become a book of world-wide renown. It appeared in French and German some time ago, and has recently been translated into Hindostanee. Arrangements have also been made through its publishers for publication in Finland in Finnish, and a special Spanish edition will be printed in Cuba. A leading article by Th. Benton in the *Revue des Deux Mondes* names it as a book of a quality of human interest that will bring it to the front wherever men aspire to know the greatest achievements of their fellows.

That the word of an investigator of the text of the Bible should be assumed as final, upon his own announcement of his conclusions, as against the faith in which the Scriptures have been handed down to us, requires of him some token of authority and an annotated evidence which has not yet appeared. Accordingly the following extracts quoted in the *Literary Digest* are still in point:

At the Baptist Congress in Detroit (1894), Howard Osgood—the greatest Hebrew scholar in America—in the presence of men who were well informed on the subject and who were quite favorable to the alleged 'results of the higher criticism,' stated what those results are, as told by their advocates. He asked to be corrected, if in any particular he erred; but no correction was offered. From slips of paper he read statements of these 'results,' and when all present had assented to the correctness of the presentation, Howard Osgood startled them by saying that all his quotations were from Thomas Morgan, a Deist of the early part of the eighteenth century, and from Tom Paine, the well-known infidel of the latter part of that century."

"Not long ago two leading ministers in the North united in writing an account of a great religious gathering, and they sent their combined article to a number of 'higher critics,' requesting that they separate it into the two documents, giving to each of the two authors his portion. Their failures were most egregious, and no two of them agreed, because they worked independently. And yet these men, utterly unable to resolve an article, avowedly written by two men, in plain English, and written in their own time and country, into its original documents; these men are sure they can correctly divide a book, written in Hebrew thousands of years ago, with no evidence of composite authorship, so as to give each supposed author his exact portion. And they claim to do this so accurately that they divide a single sentence among three authors, with perfect confidence!"

FOR "SHE IS THE MOTHER THEREOF."—Mary Carlyle of 102 Twenty-third place, is a washer-

woman and the mother of seven small children. There is material enough involved in this simple statement to supply a summer class in sociology with food for unlimited discussion.

Theoretically, of course, it is the height of folly for a washer-woman to be the mother of seven small children, and it is the acme of absurdity for the mother of seven small children to be a washer-woman, but this case is one that must be considered in the light of fact rather than in the light of theory.

Mary Carlyle is a washer-woman, and to feed her seven little ones means never-ending toil, but she goes about her work cheerfully, and her greatest concern is that each and every one of the seven shall exhibit daily, and the usual number of times daily, symptoms of a normal juvenile appetite. She must clothe them, too, and that she clothes them decently is evident from the fact that some of the older ones are regular attendants at a public school.

Now, there are sociologists who can see clearly that it would be to Mary Carlyle's advantage if she had fewer—several fewer—than seven small children, but this is mainly because they cannot see the matter as Mary Carlyle sees it. If they were themselves mothers of seven small children each, they would undoubtedly look at it differently. But, as a rule, they are not, and this is why they are prone to believe that a mother of seven children would not be averse to parting with one or more of them at any time for the general good of society.

That Mary Carlyle is not a mother likely to be influenced by such sociological theory, however, is evident from the manner in which she has received a philanthropic offer for the legal transfer of her seven year old Leo. Five thousand dollars must seem to this hard working mother of seven children a very large sum of money, but when a rich woman offered her this price for Leo—just one of her seven—she refused it point blank. She would not, she says, part with one of her brood for a million dollars.

Mary Carlyle's attitude in the matter is unscientific as well as unbusiness-like, but many a good father and many a good mother will nevertheless be thankful that she took it. —*Chicago Inter-Ocean.*

SUMMARY OF EVENTS.

UNITED STATES.—The treaty with Denmark for the cession of the islands of St. Thomas, St. John and St. Croix has been ratified by the Senate. These and the adjacent islets are called The Virgin Islands, and have an area of about 220 square miles and a population of about 37,000, largely of colored persons. The language chiefly spoken is St. Croix, the largest of the three, is the English. The treaty has not yet been ratified in Denmark.

The President has signed the bill, to forbid the sale of intoxicants, opium and firearms by American citizens in islands of the Pacific not under any civilized Power, of which the New Hebrides is the chief group. In order to make this protection permanent and extend it to all aboriginal races, Secretary Hay has asked the British Government to join in submitting to other commercial Powers a universal treaty to prohibit the selling of intoxicants and opium to such races everywhere.

Attorney General Knox, by direction of President Roosevelt, is about to file a bill in equity to test the legality of the great railroad "merger" known as the Northern Securities Company.

The bill will ask that the combination of Northern Pacific and Great Northern Railway systems be dissolved, and the stocks of those roads restored to their original holders, on the ground that the "merger" violates the Sherman Anti-Trust Act of 1890.

A dispatch from Washington, D. C., says the policy entered on by Secretary Hitchcock and Commissioner of Indian Affairs Jones to withhold rations from Indians, and compel them to earn their living as rapidly as such a radical change in their condition can be brought about, is bringing to Congress many complaints. There are delegations of Indians here from a dozen or more tribes to protest against the rigorous application of the non-ration rule to their people. Commissioner Jones has been striving to have the agents who have charge of the issuing of rations

discriminate between those who need them and those who should be classed as self-supporting. There are some families who are able in part to feed themselves and at times need help. The agents have been urged to deal with such cases carefully, and not to go by any hard and fast rule that will work injury to those who are helpless to protect themselves.

The Executive Committee recently appointed through the National Civil Federation to arbitrate labor troubles adopted a working plan by which it is hoped to settle strikes and lockouts. It provides for the appointment of a Conciliation Committee of three members, three from each of the three great interests represented, and that Arbitration Committees shall consist of four members, two from the capitalistic side and two from the labor side. In case the four failed to agree, a fifth member to act as umpire shall be selected from among the committees representing the general public. A snow storm, the heaviest in years, with members, three from the 17th, and a storm of rain and sleet on the 21st and 22nd ult., caused great damage in this city and its immediate neighborhood, to telegraphs, telephone and trolley lines, and to trees and shrubbery. Several persons and many horses have been killed by contact with wires carrying high voltages. The Board of Education that cut off the wires direct telephone communication with New York was cut off for many hours.

Prince Henry, of Germany, arrived in New York on the 23rd ult., and proceeded to Washington where elaborate preparations have been made to receive him.

Professor Ogg, Superintendent of the Kokomo Schools, Indiana, reported to the Board of Education that out of 1800 boys in the city schools 400 are addicted to the cigarette habit, and are in consequence two years behind the non-smokers in their studies.

The Library of Congress in Washington is said to contain 1,000,000 volumes.

The annual appropriations for books have been expended by the library with sedulous care in supplying deficiencies, particularly in the departments of American history and biography, in jurisprudence and in political science through public sales and by purchase from catalogues.

Governor Taft in his testimony before the Senate Committee on the Philippines recently said: "There are, he said, many men in the islands who are content to possess the domination of the United States. He thought there should be a declaration on the part of the United States of its intention to hold the islands indefinitely, with the understanding that when they are suitable for such a condition they may be given a quasi independence. He went on to state that the islands are so situated that an electrical current upon plant life is in a high degree conducive to luxuriant growth. The German method, consists in causing a feeble current to permeate the soil in which the plant is growing, and with this the results were sufficiently remarkable to challenge attention. Tests were made on wheat, oats, barley, carrots, beets and other common food vegetables grown in beds in which all the conditions were as nearly as possible identical except that half the beds were subjected to electro chemical action and the other half was not. Electrified and non-electrified plants of equal age show that the former are, generally speaking, at least twice as luxuriant as the latter, and that maturity is attained in about half the time. According to the census returns since 1890 the number of sheep decreased everywhere, except in the West. The increase there was more than sufficient to balance the loss elsewhere, and made the number of wool bearing sheep for the nation 11 per cent. greater in 1900 than in 1890.

A Negro Conference lately held at Tuskegee, Ala., adopted declarations in which it stated that the owners of land and proper cultivation of the soil, freedom from mortgage lands, crops and stock raising for food supplies at home, keeping out of the large cities, North and South, prompt and willing payment of all taxes, keeping out of the courts, avoiding all forms of extravagance, keeping away from the streets and the public places, lounging places, starting a bank account, holding farmers' institutes and agricultural fairs are the foundation and growth of the negro race. The strengthening of the public schools is also advocated, and the teaching of agriculture in the public schools.

There were 568 deaths in this city last week, reported to the Board of Health. This is 31 less than the previous week and 51 more than the corresponding week of 1901. Of the foregoing, 293 were males and 275 females; 67 died of consumption of the lungs; 115 of inflammation of the lungs and surrounding membranes; 9 of diphtheria; 21 of cancer; 11 of apoplexy; 19 of typhoid fever; 1 of scarlet fever, and 15 of small pox.

Corn was sold on a basis of 8½¢ per pound for mid-land

FLOUR.—Winter, super, \$2.65 to \$2.90; Pennsylv. all rail, \$3.65 to \$3.85; spring, straw, \$3.75, Western white, at \$3.80 to \$3.85; spring, straw, \$3.75, Western white, at \$3.80.

GRAIN.—No. 2 red wheat, 54½ to 55c; No. 2 mixed corn, 54 to 54½c; No. 2 white oats, clipped, 50c.

BEEF CATTLE.—Best, 64 to 65c; good, 54 to 55c; medium, 51 to 53c.

SHEEP.—Extra, 54 to 60c; good, 51 to 54c; common, 2 to 3c.

LUMBS.—\$3 to 9c.

HONES.—Western, 83 to 9c.

FOREIGN.—The official Law Journal in Berlin publishes a decree prohibiting the marketing or importation of meats in the course of the slaughter, preparation or evaporation of which chemicals injurious to health have been used. The decree names specifically boric acid, formaldehyde, hydrazides and carbonates of alkali, iron oxides, sulphuric acids and its salts, hydrocyanic acid, salicylic acid and chloric acid as prejudicial. The decree becomes effective Tenth Month 1, 1902.

A Sanitary Congress lately meeting in Havana adopted a resolution setting forth that the *stenografa* *fascia* *antituberculosa* is the only means of the transmission of the fever yet discovered, and that the prophylactic measures adopted should be directed toward the destruction of the mosquito, or, where this is not possible, toward the isolation of the people from it.

There were in Cuba in 1899, 60,711 farms, with an average size of 143 acres, and an average cultivation of 13 acres. Matanzas was the province with the most highly cultivated parts of the island. Of the cultivated area less than 50 per cent. was owned by the planters. Sugar cane occupies 47 per cent. of the cultivated lands.

A despatch from Seres, European Turkey, says that the dragoman of the American Legation at Constantinople, Mr. W. V. Post, treasurer of the American mission at Constantinople, met the brigands on the road to the Monastery, and paid them the ransom money for the release of Ellen M. Stone on the 6th ult. The bribe was \$65,000. She has been released and arrived at Izmit in Macedonia on the 23d ult.

With the additions made to the debt of Great Britain by the South African war, the indebtedness of the Kingdom now amounts to about \$75 per head of inhabitants—nearly five and a half times the per capita indebtedness of the United States.

Marconi has lately stated that his system was permanent use on board seventy vessels, and there are twenty-five land stations, and that his transmission of messages in two minutes did not compare badly with the work of the cables.

A conflict has taken place in Barcelona, Spain, between rioters and the authorities, in which about forty were killed. The causes which have led to it are stated, have grown out of the discontent of the laboring class and also to have been in part the work of anarchists. Similar disturbances have occurred in other neighborhoods.

NOTICES.

FRUITS OF SOLITUDE IN REFLECTIONS AND MAXIMS, LAYING THE FOUNDATION OF A NEW LIFE. By Wm. B. This book is now for sale at Friends' Book Store, 300 Arch Street, Phila. Price, silk cloth binding 25 cents; by mail, 30 cents; half, Morocco 15 cents; by mail 18 cents.

WESTWON BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to VILAS F. WYCKHAM, Principal.

Payments on account of board and tuition, on communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westwton P. O., Chester Co., Pa.

WESTWON BOARDING SCHOOL.—For convenience passengers coming to Westwton School, the stage wagon trains leaving Philadelphia 7.16 and 8.18 A. M., will leave at 1.32 P. M. Other trains are met when possible at Stage fare, fifteen cents; after 7.30 P. M., twenty-five cents each way. To reach the school by telegram, West Chester, Phone 114x.

EDWARD G. SMEDLEY, 1st.

DIED, First Month 27th, 1902, at the residence of Benajah H. Carter, AARON SHAW, aged ninety-two years, one month and eleven days; a member of Mill Creek Monthly Meeting of (Conservative) Friends, Indian Creek, Pa. He was a regular attending of meetings so long as he was permitted, and bore a faithful testimony to the doctrines and practices of early Friends.

Who have known and believed the love that God has to us. God is love, and he that dwelleth in the love dwelleth in God and God in him (1 John 1.6.)

And this my soul waits and cries after, even full springing up of eternal love in my heart in the swallowing of me wholly into it, the bringing of my soul wholly forth into that the life of God in its own perfect blessedness may fully run forth through this vessel and not be at all tintured by the vessel, but perfectly tincture and change the vessel into its own nature; and then shall no life be found in my soul before the Lord, but spotless life be fully enjoyed by me, and come a perfectly pleasant sacrifice unto my Father. Oh! how sweet is love! How pleasant is this nature! How taking doth it behave itself in every condition, upon every occasion, every person, and about everything! How readily, how readily doth it help and serve me! How patiently, how meekly doth it bear all things, either from God or man, how unexpectedly soever they come or how hard soever they seem! How doth it behave itself doth it hope, how doth it excuse, how doth it cover even that which seemeth to be excusable, and not fit to be covered! How kind is it even in its interpretations and charges concerning miscarriages! It never reproacheth, it never grates upon the spirit of him whom it reprehends, it never hardens, never provokes, but carrieth a meltingness of power of conversion with it. This is the love of God.—Isaac Penington.

The Heroism of Old Age.

As the riches that are in poverty may be found to be more genuine than the usual riches of wealth, so the heroism of weakness is longer than the heroism of strength.

This fortitude of spirit and those durable virtues no outward exploits of health or of strength are certain proofs of, and yet they may even proceed from such virtue. The Searcher of hearts alone knows what vigorous men are valiant, or what helpless ones are heroic;

and who among the destitute, or who among the wealthy men are rich.

"When thou wast young, thou girdedst thyself, and walkedst whither thou wouldest; but when thou shalt be old, thou shalt stretch forth thy hands and another shall gird thee, and carry thee whither thou wouldest not." There is a bravery of being in one's own hands, and walking on one's own feet, that is self-exultant and aggressive, and impatient of the fortitude of silent endurance and submissive waiting in hope. But the bravery of standing still under the fire and fight of afflictions, the bravery of the faith which stretches forth hands that are well-nigh palsied, the bravery of self renunciation in being girded for eternal life in forms of suffering or martyrdom, is a heroism transcending that of youthful powers, for it is the heroism of grace.

Amidst the infirmities of old age, heroism receives its strongest test; for then it is stripped of the animal spirits and the physical prowess which are apt to be mistaken for it. "In the day when the grasshopper is a burden," and the labor of keeping up at all is more strenuous than the hardest day's work of the prime of life, and mere existence is dragged on as a heavy load without a murmur, and the strength of declining years can be called "but labor and sorrow;" then the spiritual energy that is required to be put forth in conflict with infirmities makes many a daily battle with the buffetings of nature, in which there is exercised a heroism of spirit in our aged veterans for which they get too little credit. The valor of youth, which is often but self-indulgence in an overflow of strength and animal spirits, might well stand in reverence of the hourly conquest of self under tottering age, wherein an overcoming spirit surmounts every helplessness or cruel pain. And then in all this, to "tread the wine-press alone, because of the people there is none with me," is the loneliness of a suffering fortitude which seldom finds a companion for sympathy in like tribulation. Surrounding friends though kind are usually younger, and have not reached the state of the aged, to understand it.

Yet these valiant soldiers of the cross are not without sympathy; for who knows the bitterness of the very depth of loneliness better than their Saviour who could cry out "My God,

why hast thou forsaken me?" In a sense of his pouring out his soul unto death, who "himself took our infirmities and bare our sicknesses," what is our own exhaustion but an emptiness preparing for his own infilling? What has the declining of the outward man to take courage in, but the renewing of the inward man day by day? "Thou must increase, I must decrease!" is the triumphant surrender to Christ of a Christian soul, in a Christian death swallowed up in victory! And, behold, death is found abolished, and life and immortality brought to light!

Our Divine Sonship.

While the Author of creation is, in that natural sense, the Father of it, including man who thus is his offspring; yet we cannot regard God as the Father of the sinful spirit in any. Wherefore such as are, in spirit, of a contrary fatherhood, if ever they are to become spiritually sons of God, "must be born again." He has provided a way by which men can be truly redeemed, and be made "sons of God through faith in Christ Jesus" (Gal. iii: 26).

A Friend has desired to endorse the article in our last week's number, entitled "Regeneration and Signs Following," and to supplement it by the following extract from the *Christian Cynosure*, which has since appeared:

There are many passages in the Bible which teach that however much a man may be regarded as a creation of God, in the first man—Adam, yet there is a new and higher sense in which he may be a son of God and an heir of glory. After all that a man may receive by his natural birth, there is something more for the sons of God. We are creatures whom God has created but we need to be again "created anew in Christ Jesus unto good works" (Eph. 2: 10).

"In this the children of God are manifest and the children of the devil; whosoever doeth not righteousness is not of God, neither he that loveth not his brother" (1 John iii: 10). "Whosoever believeth that Jesus is the Christ is born of God" (1 John v: 1). "As many as received Him, to them gave He the right to become children of God even to them that believe on his name" (John i: 12). "For whatsoever is born of God overcometh the world" (1 John v: 4). "Ye are all the children of God by faith in Christ Jesus." (Gal. iii: 26). "That which is born of the flesh is flesh and that which is born of the Spirit is spirit" (John iii: 6). "He that believeth on the Son hath everlasting life; and he that believeth not on the Son shall not see life; but the

wrath of God abideth on him" (John iii: 36).

"The notion that all men, whatever their character are 'sons of God,' makes the divine sonship apparently a matter of small account. If a son of God can lie, and steal, and cheat, and get drunk, and plunge into all sorts of vices, debaucheries, and abominations, then why may not a son of God be executed in this world, and damned in the next, for his sins and crimes and villainies? A man who claims divine sonship, and blasphemes and disobeys the God who made him, needs to learn that he is of his father, the devil, and that the work of his father he is doing."

The divine sonship carries with it great privileges. "Now are we the sons of God, and it doth not yet appear what we shall be; but we know that when He shall appear we shall be like Him, for we shall see Him as He is" (1 John iii: 2). And if we are "brought nigh by the blood of Christ," we become not only children, but heirs; we have part with Him who is "the only begotten of the Father, full of grace and truth;" we are "heirs of God, and joint heirs with Christ;" and as He is appointed "heir of all things," so we who overcome shall inherit all things, and shall shine in his kingdom as the sons of God.

But those of us who share these great privileges must be "holy, harmless, undefiled, separate from sinners." We also must come out from among them and be separate and touch not the unclean thing, and, He declares, "I will receive you and will be a Father unto you and ye shall be my sons and daughters, saith the Lord Almighty" (2 Cor. vi: 17-18).

Labrador.

The further north one goes, the more appalling becomes the condition of the coast folk, and if Dante could have imagined an inferno of ice, the circumstances here existing would have afforded him all the requisite material for a thrilling picture of ever present misery. Pictured among the rocks in the little harbors were the rude homes of the "livyerers." In many places the fronts of the structures were upheld by posts, while the rear rested on a convenient ledge, and ingress and egress were by means of ladders. Timbers, securely stepped in heaps of great rocks, were tightly wedged against the houses to prevent their being overthrown by the gales, while anon the roofs would be lashed down with heavy ropes, which were to prevent some boisterous gust from uplifting the thatch. Troops of almost naked children gambled about and stared in amazement at the stranger who landed for a closer inspection of the place, and hordes of hungry dogs sniffed at his heels, ready to sample his calves at the slightest provocation. Dirt, filth, misery, poverty—these were stamped across the face of every settlement we visited.

The coast has no civil administration; there are no laws, no police, no officials whatever. During the summer months the customs collector who works along the shore in his revenue cruiser has powers as a magistrate, and decides the disputes which are always cropping up among the thousands of fishermen located there, but for the balance of the year there is no recognized authority. There is not a road on the whole coast, nor a bridge, nor a public work of any kind. For the eight

months of winter there is no mail, except a few letters which are forwarded by way of Quebec, along the north shore of the river St. Lawrence, couriers taking them from point to point, but rarely ever proceeding beyond Battle Harbor. During this period the livyerers travel about by means of dogs and sledges, but their only journeys are in quest of game, which is obtainable in the form of rabbits, bears and birds.

There is little or no dishonesty among them because they have so little to steal, and then they all become reduced to the same plane of misery, because if one has a pound of flour it is divided among his most needy neighbors. The pitiless severity of winter bears most harshly upon the young people, the children especially being susceptible to consumption and other diseases induced by their herding together and their wretched food. Until five years ago the condition of things in this respect was very much worse than it is now.

About that time the English people were aroused to a sense of the misery endured by the thousands of Newfoundland fisherfolk during their sojourn on Labrador, and a branch of the mission to deep sea fishermen was formed on this bleak coast. This mission was originally established to work among the North Sea fishermen and when its well organized philanthropy made itself evident on Labrador it was an incalculable benefit.—*Chicago Record.*

Science and Industry.

BINDING PAMPHLETS. Some one asked *Popular Science News* about a good way to bind pamphlets. A correspondent, who is probably a practical bookbinder himself, makes the following suggestions: Books on the subject may be had of publishing houses that deal in that line. If one is satisfied with flimsy work like that of English cloth binding he can bring the backs of the sheets together, evenly pressed, and use nothing but fragile cheese-cloth glued on to hold the sheets in place and to hold them on the covers. The good old way is to stretch two strings upright on a frame—for octavo size five or six inches apart—then run strong thread in the fold of each set of sheets through to and around the strings, tying each. The twines may be sunk in a cross groove on the back of the sheets, and are frayed or flattened out where they are glued to the interior of the cover, there hidden by lining paper.

THE three keepers of the lighthouse at Cape Griznez have been fined £2 for poaching, by spreading nets to catch the birds attracted by the reflectors of the lantern. It was stated during the hearing of the case that no fewer than five thousand nine hundred and fourteen birds were captured between Tenth Month 10 and 14, the majority being larks, thrushes and corncrakes.

THE new water works at Calcutta brought pious Hindus before the question whether they could drink from the same sources as the Christians. The religious leaders, on appeal, gave the diplomatic answer that they might drink this water, since they had to pay taxes for it and this constituted a penance for doing so.

LIGHTENING TEDIOUS TASKS.—I heard a man say the other evening: "When I reach there is one thing I will not do. I wash and do any kind of housework, but I not mend stockings!" I watched the poor for some time, and came to the conclusion that it is not exactly calculated to make a son happy to sit for an hour or two stooping tucking the thread of yarn in and out of vacant space in a stocking. It must be decidedly monotonous after one has had fortune to go the rounds of a family of five.

"But the stockings must be mended?" it would seem. Of all our wearing apparel stockings seem to be fated to swiftest destruction. This is especially true of those worn by boys and girls—and men folks, too—on a farm; so many steps to be taken every day and so much climbing of trees and rumbling about among the briars, bushes and the like on the part of the young folks. What wonder that it comes to be quite a tax upon a caretaker of the family to keep the stock all in repair.

What can be done to lighten the burden? Well, one good woman I know of has invented the plan of taking the stockings of her sons as soon as they are purchased or knit and forcing them by strong pieces of cloth, instead of bed ticking, sewed on the heels, where wear is most severe and holes are sure to come first. This prolongs the life of a stocking a long time and greatly lessens the labor of the mother. Some manufacturers something along this line by making the heel of double thickness. This is a help. Still other firm makes a business of manufacturing and furnishing for tired mothers the feed stockings in different sizes, to be sewed on the legs of the hose of the little ones, who might otherwise need to be discarded. It is a field which might be worked far more successfully than it now is.

After all, use as many devices as possible; there must still be more or less of this work, calling for the exercise of patience and skill on the part of someone. It seems to me perhaps because I am a man and know little about the matter from practical experience that if this task could be taken up earlier in the day, when one was not so weary from doing other kinds of work, it might not be quite so distasteful. I never have thought it the thing, any way, for the wife and mother to be compelled to spend her evenings at it. Her husband usually rests, and reads or sleeps in his chair. Why not the tired wife? Or if she must mend the stockings then, might not the husband make the time a little brighter by reading aloud or otherwise beguiling the hour? I know she would thank him for this little service, and be helped by it more ways than one.—*E. L. Vincent.*

WHEN David Sands was traveling, in 1871, in the then wilderness country of New England, he and his companion got lost in the woods on their way to a Friend's house, upon which David remarks, "We had little hope of getting through, but considering the mountains, hills, and woods, are all the workship of Him, in whom I trust, my mind was easy." They were favored, after much difficulty, to reach their Friends.

FOR "THE FRIEND."

Reminiscences.

(Continued from page 251.)

As a part of the history of the times, and wing the usefulness of Joseph Scattergood, Senior, in successfully interceding with Government, for the amelioration and final ease of such of our members as had been fettered during the "War of the Rebellion," it was called, the following has been preserved:

Eighth Month 13th, 1863.

Upon information being received that two members of Chester Monthly Meeting, Pennsylvania, who were drafted into the service of the United States, have been sent to this city for guard, as many members of the Meeting for Sufferings as could be got together met Thomas Evans's in the evening. It appeared that their names were William P. Smedley and Edward G. Smedley, his cousin, appearing before the Provost Marshal at Chester, he considered it his duty to remove their ordinary clothing removed, which was forcibly done and the uniform of the United States substituted. They were then taken to the city and delivered to the officer of the barracks.

The officer upon noticing they had no knapsacks, inquired the reason, and being informed that they had refused to carry them, became very angry, and told them they were obey orders and directed them to carry on. Upon their refusal to do so he ordered them handcuffed, but upon finding there were handcuffs about the building he then ordered them suspended by their thumbs, but while preparing to do this there was a new arrival of drafted men who claimed the attention of the officer, who directed their knapsacks buckled on their backs and ordered them into an upper room where they were released of their knapsacks by some of their companions, and were not particularly molested during the remainder of the night. Feeling easy to use the blankets furnished they lay on the bare floor.

In the morning, that is on the 13th, Joseph Scattergood and I having been requested to apply to the General in command and having failed to see him the night before at the hotel where he lived, waited upon him again and succeeded in obtaining an interview in which we presented their cases and informed him that their unwillingness to comply with the orders to have anything to do with the military service arose from a religious conviction of it being wrong for them to be engaged in any wars and fightings. The General said that they were sent to him as soldiers but he could only know them as such, and they must obey orders, and he thought in they had been a little in the service they would alter their minds, etc. We told him if they were faithful to their religious principles which the society were known to have held since its origin, they would not submit to perform any service of a military character but that they would suffer the penalties which might be inflicted. Some more conversation ensued which was terminated by a request to see the young men, which was readily granted.

We went from the General to the officer in command of the barracks, 2224 Callowhill

Street. We were received courteously by Colonel Kellogg, who, upon reading the General's note, sent at once for the young men. While waiting their arrival we had some conversation with the Colonel who appeared kindly disposed, but influenced by his sense of the duty required of him as an officer; he seemed to think they would have to submit, and it would be his duty to require them to submit, and like the General, thought they would alter their minds and make good fighters. Our remarks to him were similar to those made to the General. In our interview with the young men we endeavored to encourage them to faithfulness and the importance of looking to Him who alone could help them and sustain them in a Christian and proper spirit. It appearing that all that could be done at present would be to ask that they should not be sent away at once, which was threatened, Joseph and I returned to the General and made the request which he very readily consented to. Yesterday they were seen by their brothers, and furnished with underclothing and food.

To-day Joseph Elkinton and myself called upon General Hatch to inquire whether the drafted men could be allowed to leave the Barracks. He replied they could not, except under the care of a guard. We informed him that if it was admissible our friends would like to attend a place of worship to-morrow. After a little further conversation we left, agreeing to send him some books explanatory of our principles on the subject of war.

These friends were soon afterwards released. One of them has since remarked: "The interview with [the two Friends] was a memorable one to me, and, I think, to Colonel Kellogg also. He subsequently treated us very kindly."

The case of N. M. B., a member of Ohio Yearly Meeting, was one which particularly appealed to the sympathy of Friends. He had been drafted and notified to appear at New Brighton. Here he was forcibly stripped of his ordinary clothing, a military suit put on him and he was sent with others to Virginia. Under the persuasions and threats of the commanding officers he was induced to yield obedience to some of their commands, but again becoming convinced of his error, he afterward refused compliance and was tortured by punishments, and became sorely distressed. When these facts became known to friends in Philadelphia, Joseph Scattergood immediately wrote to the Secretary of War, as follows:

PHILADELPHIA, Ninth Month 19th, 1863.

Respected friend D. M. Stanton:—

"I received a letter to-day, dated on the 12th inst. from N. M. B., the young man, a member of our religious Society, on whose behalf I wrote to thee on the 4th inst. It appears from his letter that owing to the severity of the punishment inflicted he so far yielded to the requisitions made upon him as to perform some military service, for which he felt great compunctions of conscience. After alluding to this he says, 'I again attempted to regain my position by refusing to take any part in the performances, and one day they had me bucked and gagged, as they call it, the most of the day, and the next, was jerked round, knocked down and beat on the head,

kicked several times, then tied up by the thumbs for a while, then put on the ground on my back with a bayonet through my mouth with the ends tied down to two sticks, my hands tied and there left to lie in the sun for sometime, then tied up by the thumbs, so changed back and forward two or three times. Once, when lying on my back, my letters were taken from me and some, if not all, were read. It was reported that they were going to have some of the writers arrested. What could I do? to have others suffer for me seemed harder than all the punishment I had received. It seemed like I could do nothing but give up, so I have again yielded to their demands. The Colonel told me there was sufficient in some of the letters to have the writers arrested."

"I forbear to comment on such cruel treatment of an unoffending, peaceable and loyal citizen in this day when the rights of conscience are so universally conceded, for simply refusing to participate in what he conscientiously believed would be sinful to him. I am assured that thou and the President are familiar with the grounds of objections, which consistent members of our religious Society have to all wars and fightings. If so, you know they cannot participate in the military service. Wilt thou not be willing to interfere and relieve N—from the liability of a repetition of such outrage by discharging him from the service as thou kindly did the two young men by the name of Smedley, lately in the Barracks in this city? His situation is one demanding thy kind commiseration and prompt relief, which, if afforded, will much oblige his parents and wife, and will be greatly acknowledged by thy friend,

"JOSEPH SCATTERGOOD."

The following day J. S. wrote to N. M. B. a letter from which the following is taken:

"I feel very much for thee in thy tried situation. . .

"Thou need not feel any concern about any of thy correspondents being arrested. . .

"I know no better way than to endeavor to seek strength of Him who did not cast off Peter though he openly denied Him.

"If thou strive to act consistently with thy religious duty, I believe a way will ultimately be made for thee even by Him who preserved the three Israelites in the furnace, though it had been heated seven times hotter than it was wont to be heated, and who also preserved our early Friends in faithful obedience to Him under severe persecutions. I therefore can only commit thee to Him who is able to deliver all who truly trust in Him."

On the 19th of Tenth Month, N. M. B. was released, arrived safely at home and on the 28th of the same month wrote, expressing in grateful terms the favor he had received and remarking, "The more I think and reflect the more awful seems the condition from which I have been rescued, for which I hope to be truly thankful."

W. P. T.

It is no marvel if that day, in which you suffer drowsiness to interfere with prayer, be a day in which you shrink from duty. Moments of prayer intruded on by sloth cannot be made up. We may get experience, but we cannot get back the rich freshness and strength which were wrapped up in those moments.—Robertson.

FOR "THE FRIEND."

A Beautiful Scene.

WEST CHESTER, Pa., Second Month 24, 1902.

It seems proper to attempt to chronicle the unusual, or it may very truly be said, the unsurpassed scene of outward beauty that was presented to view on arising and looking at the outward world on the morning of the 23rd inst. The memory of the writer goes back some eighty-five years and there is no recollection of any such scene occurring in all that time to equal it.

Every pine and fir and hemlock
Wore ermine too dear for an earl,
And the poorest twig on the elm tree
Was ridged inch-deep with pearl.

Such was the appearance presented.

Trees with tops broken off, large limbs split down from the bodies, with their branches resting on the ground. When the sun arose and shone upon them, it presented a picture unsurpassed in beauty, such a one as no human hand could equal. If such marvelous beauties are presented to mortal eyes, what must be those scenes in the future world that are promised to those that fear God. "Eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for those that love Him."

W. P. T.

The same scene has reminded another contributor of the following poem in her collection:

WINTER'S TRIUMPH.

Earth had lost her verdant mantle,
Drear and bare stood bush and tree,
Through the long night
Waiting ghost-like
Their departed pageantry.

From the desolated forest,
From the sad earth, brown and dry;
Night winds borrow
Songs of sorrow
Waft them upward to the sky.

"Tis not for departed glory,
Wounded pride, we grieve alone;
When we render
All our splendor,
Then our lovers too are flown.

"All our green haunts are forsaken,
And in lighted halls they boast
Flowers fairer,
Jewels rarer,
Than the glory we have lost.

"All the gems of earth and ocean,
Art hath gained combined,
And bereft us,
Till it left us,
Not a votary behind."

Pitying the Heavens listened,
Tenderly the skies looked down,
Lowly bending
Earthward sending,
Tears of sympathy profound.

Then the clouds all linked together,
Each some friendly force employed,
And that frost-sprite,
Who by starlight
Works such wonders without noise.

"Earth, sweet mother, we will deck her,
We will make her cause our own
Regal splendor,
We will lend her,
Such as art hath never known."

Cheerily on the task they enter,
Noiselessly their soft strokes fell;

But by morning
Without warning,
Lo! a wondrous miracle.

Fields of forest, rock and river,
Purest diamonds displayed,
Frail and airy,
Work of fairy
Never more amazement made.

Emerald, amethyst and ruby,
Blent their hues with diamond sheen;
When the sun rose,
Rarest rainbows,
Were in each clear crystal seen.

Marble pavement, smoother, purer,
Than in Persian tales you meet,
Hall ne'er offered,
Palace proffered,
Fairer floor for monarchs' feet.

Gothic arch, with diamond columns,
Glittered through the spacious halls,
Sparkling fountains,
From the mountains,
Changed to crystals in their fall.

Art stood back, with awe and wonder,
And the most insensate felt,
At that hour,
Beauty's power,
And at Nature's altar knelt.

Many days their weight of splendor,
Shrub and tree in triumph wore,
Thousands gazing,
Thousands praising,
Could they wish or ask for more?

"Oh, take back this heartless glitter,
Riches are a weight of woe,
They will cost us
They have lost us,
Ease and freedom—let them go."

Then the warm and genial sunbeams,
Melted all that cold display,
Like all glory,
Transitory,
Fading into mist away.

PRAYER.—Prayer, which for thirty years had been discarded as an effort of ignorance to enlighten God as to one's need, has been found a soul faculty which irrepensible finds its own mode of motion. It occurred through a personal spiritual impression, "the expansiveness of agonized appeal had brought me into the realm of faith triumphant."

As I was unaware of any formalized request, the statement seemed void, but out of it grew this thought. Prayer is the individual soul unfolding after the manner of its being; it is not limited by mental capacity, nor is coherent speech essential; under stress it expresses itself by oh's and ah's, through groans or bodily contortion; while in supremest avement it leaves the body mute and motionless to flee to the Eternal Soul. It is evident that the intellect does not make individual soul action, however necessary it may be in a public gathering.

C. BRINTON

"The regulations of the heart will do more for us than the reasonings of the head."

CHRISTIANS must not, by their uncomfortable looks, give worldlings cause to think that they have been losers since they have become Christians.

FOR "THE FRIEND."

The Bible.

ITS PROPHECIES AND HISTORY AS CONFIRMED BY MODERN EXPLORATIONS AND DISCOVERIES IN BIBLE LANDS.

BY CHARLES RHODES.

The Old Testament stands almost alone in its record of many of the events of the ancient times of which it treats. Moses as the author of the Pentateuch had no known history as his contemporary until the inscriptions, tombs and rocks and on the brick tablets buried cities and temples in Asia and Egypt have been brought to light and deciphered by the researches of learned antiquarians with the past century, revealing historical record reaching backward three thousand seven hundred and fifty years before Christ. By the chronology of Archbishop Usher, affixed to many copies of our English Bible, Moses was born one thousand five hundred and seventy-three years before Christ. His account of the creation in the book of Genesis by the same authority dates those events about five thousand years before Christ. Hence, must have derived his data for that part of his narrative relating to the times antecedent to his own either from the writings of old historians now lost, from tradition handed down through successive generations orally, or through direct Divine revelation. It assumed and believed by most Christian writers that the latter was the origin of Moses' knowledge. Herodotus, the earliest Greek writer of history whose works are now extant wrote about 460 B. C. Xenophon wrote his histories in the third century before Christ and Diodorus Siculus and Strabo theirs in the first.

The Sanscrit, "the language spoken by the fair skinned Aryans who more than thirty centuries ago made the sunny plains of Hindost their own," is the oldest of all Indo-European tongues. The Veda (the Hindu bible) is the oldest work in this language, and of unknown chronology, but probably not anterior to the age of Moses. Confucius, the most notable writer of Chinese literature, was born 551 B. C. His "Spring and Autumn," an historical record of events in his native state, covered a period from 721 to 480 B. C. It is of interest to us to trace back briefly to the origin of the Hebrew race and language, which largely monopolize the contents of that Bible which has permeated and swayed the human mind and character more than any other literary composition.

In the dawn of ancient history, we discover that the region of Western Asia watered by the rivers Euphrates and Tigris was occupied by the forefathers of the Chaldeans, the Syrians, the Hebrews and Arabians who held to what is known as the Semitic race of people in contradistinction to the Aryan Race. The Semites, supposed to be so named because descended from Shem, have been traced to Armenia as their original habitat. The Semitic language is represented by three typical forms of speech and writing, viz: the Arabic, Hebrew, and Aramaic. Aramaic (from the Hebrew Aram—highlands) was spoken in Northern Syria, Mesopotamia, and Babylonia. Aramaic, somewhat modified by Greek, was the language spoken by our Lord and his disciples, while

race was retained as their sacred language the Jews after their return from the Babylonian captivity.* The Aramaic was also the language of the Semitic tongue used by the ancients of Abraham in Ur of the Chaldees, and that which the cuneiform letters of the inscribed tablets of brick found among the ruins of Babylon and Nineveh, record the story of their kings. These cuneiform letters are so named from their wedged shape, were inscribed with an ivory or bronze use on brick and tablets of clay when moist, and the surface thus written upon then hardened by baking. The oldest specimen of Chaldean writing is a set of bricks discovered near Erech in the Valley of the Euphrates below Babylon. They are thought to have been made about two thousand years B. C., some four hundred and thirty years before the birth of Moses. When by the victory of Alexander the Great at Arbela, in 331 B. C., the Persian Empire fell, cuneiform writing ceased to be practised, and cuneiform literature was buried in the mounds of Assyria and Babylonia for two thousand years. During the last century these records have been partially disinterred, resulting in the restoration of a forgotten history, and incidentally confirming the Biblical narrative in many particulars.

The early history of that portion of the ancient Semitic race which peopled the Valley of the Euphrates and Tigris and spread westward over Mesopotamia, Syria, and Palestine, once Abraham sprang from "Ur of the Chaldees," and became the progenitor of the Jewish race, has a peculiar interest for all believers in the God of Israel and his only begotten Son. To trace out this history antecedent to the earliest dates of the Bible through the monuments and records resuscitated from their burial places has been the work of James F. McCurdy, Professor of Oriental Languages in University College, Toronto, in a work entitled "History, Prophecy and the Monuments," published in 1894. From this treatise, and Doctor John P. Peters' "Nippur Explorations and Adventures on the Euphrates," issued from the press in 1898, most of the facts herein related have been derived. Three empires each of them lasting for hundreds of years had risen, flourished, and fallen in Babylonia, whilst as yet the rest of Western Asia was politically unorganized, and before the ancestor of the Israelites had left native Ur of the Chaldees. The Babylonians were thus the first of the Semites to enter the arena of history and they did so by virtue of the civilization to which they had attained and through their settlements on the lower Euphrates and Tigris. The southern two hundred miles of the valley through which these rivers flow southeastwardly to the Persian Gulf is of an average breadth of about one hundred miles. The streams in their lower course are often nearly parallel to each other at Bagdad are only twenty-two miles apart. The soil of the valley is of great fertility. It was roughly reckoned by Herodotus to be equal in productiveness half the rest of Asia. This region is that located by the Biblical narrative in Genesis 2 as the scene of the creation of man, and the Garden of Eden, and the River Euphrates is named as one of

the four streams which watered it, in verse 14th. In Chapter x, verse 10th, Nimrod, a son of Cush, "a mighty hunter before the Lord," is said to have had "within his kingdom Babel or (Babylon) and Erech and Acad, and Calneh in the land of Shinar." To prove the location and identity of the above named City of Acad with the district of the Euphrates, we have the testimony of Hormuzd Rassam, who was associated with Austen Layard's explorations in Assyria. In 1881 he was examining a mound on the Euphrates thirty miles southwest of Bagdad, when he found two terra cotta cylinders of the last native king of Babylon, Nabonidus, who reigned 555-538 B. C. In these Nabonidus relates his experience and success as an antiquarian and as a devotee of the national gods, in restoring their temples and in tracing their history from the earliest days. Knowing that the temple of the Sun in Sippar (a city near Babylon) had been originally founded by Naram-Sin, "King of Akkad," he sought long and diligently for the foundation stone which none of his predecessors, not even Nebuchadnezzar the Great had succeeded in discovering. It was found at last eighteen cubits below the level of the ground, bearing the inscription of the founder to whose genuineness, Nabonidus himself testifies. He affirms, on one of his cylinders that this stone and inscription had not been seen for thirty-two hundred years. Reckoning back from 550 B. C. the presumable year of the discovery, we get 3750 B. C. as the approximate date of the building of the temple of the Sun by Naram-Sin King of Akkad. Naram-Sin the devout founder of this temple, and thus immortalized by the last King of Babylon, is called by him "the Son of Sargon." This Sargon is thus brought before our notice as among the oldest of known monarchs. There is preserved a fragment of a lengthy narrative of his personal history given under his own name. It is as follows: "I am Sargon the mighty king, the King of Akkad. My mother was of noble birth, and my native city was Azupiranu, which lies on the banks of the Euphrates. She (his mother) put me into a basket of *Sur*, and closed up the opening with bitumen. She cast me into the River which did not overflow me. The River carried me along to Akki the irrigator. Akki the irrigator took me up. Akki the irrigator reared me up to boyhood. Akki the irrigator made me a gardener. Forty-five years I ruled over the dark-haired race" (the Semites).

(To be continued.)

Erech, above-named as one of the cities of Nimrod's kingdom in Genesis x, has been identified by Prof. Hilprecht in his excavations at a place on the Euphrates about one hundred miles southeast of Babylon, now called Warka, where a powerful monarch named Lagal-Zaggisi had established his capital, and had left inscriptions on tablets and vases discovered by Hilprecht and Haynes, and deciphered by the former, in which this king gives an account of his conquest of Babylonia, and occupying Erech as his capital.

In Europe four thousand two hundred species of plants are gathered and used for commercial purposes. Of these four hundred and twenty have a perfume that is pleasing, and enter largely into the manufacture of scents and soaps. There are more species of white flowers gathered than of any other color—one thousand one hundred and twenty-four in all.

For "THE FRIEND."

Counsels from True Witnesses.

In reading the brief accounts of the virtuous lives, and closing hours of the great number of consistent members of the religious Society of Friends, recorded in the volumes of "Piety Promoted," it appeared to the writer that some extracts would be interesting and instructive to the readers of THE FRIEND.

"That I may die the death of the righteous, and that my last end may be like unto theirs" should be the desire of all; but how can we expect such a happy conclusion, unless we are ever on the "watch," with earnest endeavor to live the life of the righteous.

MARY LAMLEY, wife of William Lamley, of Oxfordshire, England, was suddenly visited with illness the First day of Second Month, 1722. She said that her Redeemer lived, and because He lived she lived also. She desired Friends that came to see her not to sorrow for her, for if the Lord was pleased to take her from them, He could soon raise up one or another of them that might be of more service than she had been. She advised them to faithfulness and above all things in this world, to have an eye to the blessed truth, for she believed that the Lord had blessings in store for some of them; advising them to stand faithful in whatever the Lord should acquire at their hands. At another time she said, "The Lord deals with us as a tender father doth with his child, who when he first sets him to work, employeth him in small matters, and afterwards, when the child groweth in strength and understanding, he requireth greater service of him. So the Lord gently leads on his people in his work. . . . I do not speak these things because you are ignorant of them but because you have had experience in measure of the wonderful works of the Lord in the deep, that the pure mind may be stirred up in all, that you may follow the Lord fully, as his servants Joshua and Caleb, and may obtain an inheritance in the "heavenly Canaan." . . .

Speaking of divers states that Zion's travelers pass through, she said, "We ought to be concerned to be content in every state that the Lord is pleased to bring us into. When we are poor in spirit, we ought to keep the word of patience, and then the Lord will keep us in the hour of temptation, and in his own time he will abundantly bless the provision of Zion, and satisfy her poor with bread; and when he giveth us a full cup, and maketh it overflow, then let us remember our state of poverty, that we may keep humble before Him." . . . She was so resigned to the will of the Lord, that she said she desired to be passive, as clay in the hand of the potter . . .

To a young person she said, "I believe the Lord hath blessings in store for thee, if thou wilt be obedient in what He makes his will known to thee. He hath given thee a large share of understanding and thou canst not plead ignorance; thou knowest thy duty. Now he that knoweth his Master's will and doeth it not, shall be beaten with many stripes. . . . Let it be thy care to have due regard to that pure light that shines in thy heart, that will show thee thy duty towards God and also towards man. . . . Those that honor the Lord, He will honor, and beautify

them with his living presence; and that makes young people really beautiful in the sight of the Lord, and also in the sight of good men. . . .

"My friends, let us wait in faith and patience upon God, although He may be at times as a sealed fountain unto us, yet in his own time He will open and cause the living water to flow, which, blessed be his Name, my soul tastes of at this time, beyond what I did expect, and now my strength is once more renewed in Him. . . .

"The Lord hath made his strength to appear in my weakness. It was in a very acceptable time He did appear, and therefore let us always wait for his appearance, that He may be our guide, and may be known to go before us." . . .

She spoke thus at another time: "This evening we have enjoyed that which is beyond words. I desire that those I may leave behind me, may live in that, that is beyond words, and may be faithful. It is what I have been often concerned to call people unto, and the Lord will furnish his people with strength, although they may be but few in number, that one shall be able to chase a thousand; for every tongue that shall rise in judgment against the truth shall be condemned, and the Lamb and his followers shall have the victory. Let us not premeditate what we shall say in behalf of truth, for I believe it will be given us in the time that it may be required of any of us." . . . "We are advised to trust in the Lord with all our hearts, and not lean unto our own understandings; and I desire we may take this advice, for if we were to lean to our own understandings in these times of deep poverty, I think we should be very likely to fall into despair, when we see ourselves unable to think a good thought, or ask any petition as we ought. The invitation of the Lord was unto the weary and heavy laden to come unto Him, and learn of Him; and then as they were willing to take his yoke upon them, and learn of Him, He promised they should find rest unto their souls. . . . "My friends, I desire we may make sure of the Lord for our portion, in seeking Him whilst He is to be found, and calling upon Him while He is near; for there is no other that can support those afflictions that may come upon us; for if I had had a wounded conscience when these afflictions have been upon me, I believe it would have been more than I should have been able patiently to bear. But when the Lord is pleased to favor us with the smiles of his countenance, this sweetens the chastisements that he is pleased to bring upon us. Let it therefore be our great care to keep a conscience void of offence, toward God and towards men, and then I believe the Lord will be with us, and support us in the greatest of trials and we shall have cause in measure to say with the psalmist, "He maketh my bed in my sickness;" for he will make it so easy to us, that we shall be able to bear our afflictions with a quiet and easy mind." . . .

She spoke thus at another time:

"My friends, the Lord is once more giving his little ones encouragement to trust in Him; for surely in his own time He will arise for the help of his people, who are poor until He appears.

"This deep sense of weakness and poverty of spirit that the Lord brings us into, is good

for us; for it ought to be, and I hope it will be an obligation upon us, not to be high-minded but fear; and as we abide in the fear of the Lord, our hearts will be kept clean. Let us be willing to sink down deep in the nothingness of self, that the Lord in his own time may appear, and may be a double portion unto us. When He comes, his reward is with Him and his work before Him; when He arises he will scatter our enemies. Oh! let the sincere desires of your hearts be unto the Lord, that his hand may not spare, nor his eye pity any thing in you that is contrary unto his pure will; for although you may have parted with many things for the Truth's sake, yet there may something yet remain that is unclean. Therefore we have need to be very diligently concerned in searching yourselves, that you may see what it is that is growing in you, and which of the two seeds it springs from.

"We may observe, that it was while men slept that the enemy sowed the tares, and if ye sleep in carnal security, the enemy will sow that in your hearts, which if it be suffered to grow, will certainly oppress the pure seed. Therefore have due regard unto that great command of Christ, which He gave to his disciples, for that was to extend to all men, which command was, "To watch." . . . "I have been considering how it was with the disciples of Christ when they went fishing, and toiled all night, and caught nothing, until the Lord came, and directed them to cast the net on the right side of the ship, and then they obtained that which they labored for. Now when we are laboring for the Spiritual food, and for a season may find nothing, let us patiently wait the Lord's direction, and then we shall surely obtain what will be sufficient for us; for his wisdom is the same to direct his people now as ever it was in that day."

The 27th of the Fourth Month, 1722, she signified to some friends who came to visit her, that she had cause to choose a state of affliction, because of the sweet enjoyment of the love of God, which He was pleased to favor her with in a more plentiful manner than she had sometimes experienced, when she had more freedom from pain and affliction of body . . .

(To be continued.)

The New Knowledge of Weeds.

(Continued from page 261.)

In the case of this plant and the woolly and stemless loco weeds some effort has been made to find out where they get their deadly poisons. That of the loco weeds is a most subtle thing. The poison of the woolly loco produces strange hallucinations in its victims. It effects the eyesight and silently reaches one after another of the vital functions, killing the victim in two years' time.

Some animals after eating it refuse every other kind of food and seek only this. They endure a lingering period of emaciation, characterized by sunken eyeballs, lustreless hair and feeble movements, and eventually die of starvation. So mystic an element gathered from the earth and the air naturally causes wonder and the desire to know what such things may be and why they are.

Weed investigation has also resulted in a

great addition to the known foods for cattle, as the discovery of a number of plants that will fertilize the soil. During this century or within recent years a score or more of valuable leguminous plants have been discovered which were considered weeds, and hardly a year passes that new ones are not added to the list. They are plants which make food for cattle and which, when planted in poor soil improve it by taking from the atmosphere at the deep subsoil things which the surface soils needs.

The manner in which they are known to improve poor soil forms a remarkable scientific discovery. Their roots extend into the stiff, and more compact subsoil, where no ordinary plant can reach and after loosening and opening it up so that air and water can have action upon it, suck up from below great quantities of potash salts and phosphoric acid. When these weeds are plowed under or die, the salts and acids are left near the surface where they can be utilized by the cereals and root crops which live upon them. For instance wheat and potatoes flourish well where the weeds have gone before and done the work of getting the necessary food for them from the subsoil and the air.

Much land is of no value until these weeds come in and make it so. This is particularly true of sandy soils and reclaimed marshland which are deficient in potash, a thing necessary in all farming land. On these the deep rooted legumes, such as sorgho, broom, alfalfa, lupines, sulla and the perennial beans are great value. Their roots not only reach very deep and bring up potash from the subsoil in the manner described but their leaves take great quantities of nitrogen from the air.

Now, when a soil is rich in potash and nitrogen it is good soil, and as these plants die and leave their gathered potash and nitrogen on the surface, the sandy and marshy soils become good land. All the farmer has to do to plow these rotting weeds under and he has land on which he can raise cereals, root crops and tobacco—that hardiest, most wearisome plant upon soil.

The government has induced farmers to try the Florida beggar weed. One experiment reported that by planting it in his field a plowing under the annual crops for two successive years, the soil had been completely changed in texture and color. Another farmer discovered that a crop of beggar weed turned under, will, when decomposed, return the surface in ready reach of the roots of succeeding crops not only all the nitrogen that it took out of the atmosphere, but all whatever fertilizers were subsequently applied. A third reported that all his field produced more luxurious crops after having been given over one season to a rank growth of this weed.

To find out how much chemical value the weed really takes from the air and the substance the government planted a sandy field (bare of the qualities on which ordinary cereals and vegetables can thrive) with beggar weed and when the crop was at its height harvested it, root and all. The crop was then reduced to ashes and the result analyzed. It was found that every ton of beggar weed contained five hundred and eight pounds of lime, two hundred and thirty pounds of phos-

acid and four hundred and eighty-two lbs of potash. Twenty to twenty-five tons of beggar weed may be required to make one ton of ashes, but every acre yielded four of beggar weed. It was figured out that four ton yield per acre, which is an average acre of beggar weed would yield one red and fifty pounds of nitrogen, worth ten cents a pound, or \$22.50 worth of nitrogen, and potash and phosphoric acid worth \$5, making a total of \$27.75 worth of fertilizing chemicals taken from an acre of soil for nothing at all.

A good report can be made of red clover, fava, cowpeas, the soy bean, crimson clover, Dakota vetch, Texas pea, the Stollery, and others, though some, as, for instance, the Texas pea are being allowed to die.

Crimson clover, particularly, is an excellent soil feeder, but will not do well north of the line drawn through New Jersey, East Tennessee and Central Texas, for it cannot stand severe winters. It requires, also, a great deal of moisture, and so is better suited to the needs of the Southern farmers. It has been proved an excellent preparatory for Indian corn, being sowed in the corn in late summer and turned under in time for the spring planting. It may be used in the same way for cotton or tobacco.

Accidentally the habits of growth and distinction which characterize weeds have been thoroughly studied and a splendid picture of intricate working of nature in these things has been evolved. There are maps in the Agricultural Department showing the present distribution in the United States of the Canada thistle, Russian thistle, nut grass, wild carrot, wild lettuce and a score more, which show at a glance just where these weeds are to be found and the extent of their range. There are separate documents and papers for each of over three hundred weeds giving their history, merits, demerits, and present location and distribution.

What has been discovered about the migration of weeds shows how wonderfully life prevails even in the face of great hardship. It has been found that a weed no less than a man tries to live and to propagate its kind, that it will make thorough use of the slightest opportunity. Wind, water, the tides, the migration of birds, the moving of cattle furnish the average weed an opportunity to distribute its seed into new regions. Those common to the United States have for the most part migrated from Europe and Asia.

A list of two hundred so-called injurious weeds, published in 1895 it was found that one hundred and eight were of foreign origin, and ninety-two were native. Of the former, five or fifteen had migrated only a short distance from Central and South America. Now they migrate has been accurately shown in the case of every kind of weed existing in the United States. Some travel extremely slowly by means of runners or slender trailing branches, which reach out anywhere from ten inches to ten feet along the ground to produce plantlets at the ends, which then root and grow. Others progress by boring underground, working too deep to be disturbed either by grazing animals or by machines. Still others, finding the life for life difficult, develop strange quali-

ties. Professor A. N. Prentiss, of Cornell University, has demonstrated by experiment that a Canada thistle root, cut into pieces one-fourth of an inch long, can produce shoots from nearly every piece. So when the share of the plow digs down to cut and tear this inhabitant from its home it more often aids in its further distribution.

One of the most interesting yet least known methods by which plants travel short distances is by throwing their seeds. When the pods of the common tare are mature they dry in such a manner as to produce a strong oblique tension on the two sides of the pod. These finally split apart and curl spirally with such a sudden movement upward as to hurl the peas several feet. Many others progress in the same way, the common spurge and wood sorrel in particular.

Many weed seeds have special adaptives that enable them to take advantage of the wind or to float lightly on the water. Dandelion, prickly lettuce, Canada thistle, horseweed, milkweed and many others equip their seeds with some feathery or winglike apparatus that enables them to sail. Ordinarily the distance this equipment can carry is two miles but a high wind or hurricane would bear them ten or fifteen. Yet with two exceptions, the most rapidly migrating weeds have not traveled in this way. Frozen ground or snow is another great aid to the hardy migrating weed, because seeds are blown along for great distances. Buttonweed, giant ragweed and barnyard grass all progress in this way because their seeds are produced late in the season, and many of them are held with such tenacity that they are dislodged only by the strongest winds when the conditions are favorable for distant journeys. By that time the ground is usually frozen or covered with snow, and the seeds skip merrily along before every stray gust. This method of seed dispersal is now known to account in part for the general presence of ragweed, mayweed and others along our country roads. It also shows that weeds are distributed much more rapidly over fields left bare during the winter than over those covered with some crop that will catch the rolling seeds. Professor Bailey, of the Fargo (N. D.) Agricultural College, found by experiment that wheat grains drifted over snow on a level field at the rate of five hundred feet a minute, with the wind blowing twenty-five miles an hour. Lighter or angular grains were found to drift more rapidly.

Some weeds migrate by tumbling, the whole plant, seed and all, withering into a sort of ball and rolling before the wind. Such are best developed in the prairie region where there is little to impede their progress, and where there are strong winds to drive them, but they are also found in the Eastern States where they may be seen in ditches, gullies and fence corners swept bare of their seeds before the winter is out.

Some weeds depend for their widest distribution upon the hooked character of their seeds which stick to the hide of cattle or the clothing of men. They have been known to travel hundreds of miles this way and the ground about the great stock yards in Chicago and other cities is rich in weeds not common to that territory. Migrating birds sweep

seeds through space for thousands of miles, and it is thought that some of the weed importations from Central and South America have come this way.

Railways are highways no less for the progressive weed than for man. Seeds drop from cars and from the clothes of passengers all along the line. The most prolific weeds, particularly the Russian thistle, have been introduced at widely separated points throughout the United States almost simultaneously by these means. They come in straw used for packing, and on grain not perfectly cleaned. The country towns that receive the freight are breeding places and the men who handle it are carriers. The weeds get everywhere because the seeds survive long and are equipped to cling and travel. By centuries of struggle they have acquired the ability to adapt themselves to almost any quality of soil or to any kind of atmosphere. They earn their right to live by the most hardy efforts. No plant of culture could ever endure the knocks which they receive and survive. Heat, cold, drought, frost, soggy rains, unnatural soils, all afflict the traveling seed by turns. Yet it will face the situation, dig deep, reach high, even change its diet and its very nature before it will give up the struggle. That it should be of some use is a long-delayed but just conclusion of science. The outlaw of the fruitful fields is to-day most often the helper and savior of the arid way. Equipped with a powerful constitution and giant energy the worst of the weeds may readily become the best of the plants.

Convincement of James Wilson.

FROM JAMES GOUCH'S MEMOIRS.

At and about Kendal also, I had much of the company of that honorable minister and elder, James Wilson, who as a nursing father encouraged and strengthened me in the service I was engaged in.

His conversation was often pleasant, instructive and edifying; one remarkable passage he related, I think worthy of inserting, which was to the following purport: In his young years, having been educated in the established religion or church of England, so-called, he had conceived a very contemptible opinion of the people called Quakers, and their principles, and at a public house falling in company with some others of like sentiments, this people became the subject of their discourse; and as they were expressing their sentiments of contempt and dislike of them pretty freely, a person of some note, who had been an officer under Oliver Cromwell, came into the room, and overhearing their discourse, observed to them in substance, "That he apprehended their prejudice towards this people arose, from their want of knowing them; for my part," continued he, "I entertain very different sentiments of them," and perceiving them struck with admiration to hear him, whom they looked upon as a man of sense, as well as consequence, express himself after this manner, he proceeded to the following purpose: "You seem to wonder that I express a favorable opinion of the Quakers; I will inform you the reason. After the battle of Dunbar, as I was riding in Scotland, at the head of my troops, I observed at some distance from the road, a crowd of people, and one

higher than the rest; upon which I sent one of my men to see and bring me word what was the meaning of this gathering, and seeing him ride up and stay there, without returning according to my orders, I sent a second, who stayed in like manner; and then I determined to go myself. When I came thither I found it was James Naylor preaching to the people, and with such power and reaching energy, as I had not till then been witness of. I could not help staying a little, although I was afraid to stay; for I was made a Quaker, being forced to tremble at the sight of myself. I was struck with more terror by the preaching of James Naylor than I was at the battle of Dunbar, when we had nothing else to expect but to fall a prey to the swords of our enemies without being able to help ourselves. I clearly saw the cross to be submitted to, so I durst stay no longer, but got off, and carried condemnation for it in my own breast. The people there, in the clear and powerful opening of their states, cried out against themselves, imploring mercy, a thorough change and the whole work of salvation to be effected in them. Ever since I have thought myself obliged to acknowledge on their behalf as I have now done." This, James Wilson said, proved the first step toward his conviction of our principles, inclining him to go to our meetings, which before he had an aversion to the thoughts of, from the prejudice above hinted. In those days the meetings of Friends were more eminently favored with Divine power, as they lived more devoted to Christ, and consequently more abounding with his love flowing in their hearts.

Celebrated Little Men.

Facts show beyond a doubt that a necessary connection between the size or shape of the body and strength of the mind is purely imaginary, and yet many persist in thinking differently. Aristotle, the Greek philosopher, who for two thousand years held sway over the world of thought, was a slender man, with spindle shanks, small eyes and a shrill, stammering speech. Athanasius, who in the Council of Nice was the most potent spirit was a man of very small stature—a dwarf rather than a man, says Dean Stanley but of almost angelic beauty of face and expression. In his little body dwelt a mighty soul, combining subtlety of thought and power of eloquence with resolution of will, intensity of conviction and intrepidity of spirit. He fought single-handed and for half a century the great battle of orthodoxy, having no friend "but God and death," and to-day the creed of Athanasius is substantially the creed of Christendom. Gregory VII, the mightiest and haughtiest of the Roman pontiffs, who dethroned sovereigns at his will, was a diminutive man, and so was Canute the Great and the great Conde. Voltaire, the literary autocrat of the eighteenth century and the most brilliant wit of the ages, was one of the thinnest and most spectral of human beings. Robespierre and Marat, potent spirits of the French Revolution, were far below the average stature. The former the incarnation of will, the other by sheer force of intellect swayed the multitude. But Robespierre was only five feet two or three inches, the latter less than five feet. Montaigne, the father of the essay-

ist; Dr. Watts, the hymnist; the sickly Scaron, who, in reference to his ill health and insignificant stature, called himself an "abridgement of human miseries;" Alexander Pope, who wore three pairs of stockings to plump out his legs to a decent size, and also wore stays; Campbell the author of "Hohenlinden," a pretty little delicate, lady-like gentleman; Thomas de Quincey, the "opium eater," were all dwarfish men.—*Montreal Herald.*

SUMMARY OF EVENTS

UNITED STATES.—The Philippine Tariff bill for providing money by taxation for the support of the government in those islands passed the Senate on the 24th ult., after a tumultuous debate of eight hours, by a strict party vote of 46 to 26. In the course of the discussions, which have taken place for several weeks past, various phases of the Philippine question have been considered, with much animosity of feeling. A personal encounter between Senators Tillman and McLaurin, both of South Carolina, took place during the debate. A vote of censure has been passed by the Senate upon both individuals. The bill places a duty of 75 per cent. of the rates named in the Dingley law upon articles imported from the United States into the Philippines, less any export taxes paid upon importations from the islands as fixed by the Philippine Commission. Articles imported into the archipelago from the United States must pay the duties imposed upon them by the Philippine Commission and paid upon similar articles imported therein from foreign countries. The bill was referred to the House for further action, where the Democrats sought unsuccessfully to amend it by declaring that the United States should relinquish all claim to the archipelago.

A bill providing for a permanent census office has been agreed to by conferees of both Houses of Congress.

The negro population has increased 55 per cent. in Philadelphia in ten years. In 1870 the population of Chicago, 74 per cent. in Memphis and 68 per cent. in New York City proper. Another notable fact shown by the census is the very slight gains and in some instances actual losses in negro population in many of the Southern cities. The increases in Charleston, Chattanooga, Dallas, Nashville, Vicksburg, have been very small. Lynchburg lost 15 per cent. Petersburg 14.70 per cent. Richmond 100 of negro population. The negro seems to be seeking the localities where there is a demand for his labor at more remunerative prices and under more favorable and pleasant conditions.

A heavy rainfall of the 28th ult. has resulted in raising the rivers in many parts of the Eastern States far beyond their banks, causing great damage to property and loss of life. A dispatch from Atlanta, Ga., of the 28th, says: Not in many years have the Southern States experienced damage so widespread by a storm as that which on yesterday spread over a section of country embracing Georgia, Alabama, Tennessee, Virginia, North Carolina, South Carolina and Florida. The damage to property and loss of life was particularly heavy suffered. During the Second Month there have been but eight clear days in this vicinity.

It is said that Lancaster County, Pennsylvania, raises more tobacco than any other county in the United States. A message from Ellen M. Stone, dated the 25th ult., at Riatovatz, states that she and her companions were left the "household" and their abject condition on horseback a very short distance from Strumitza. For three hours we waited for dawn, then secured horses and came to this city. Kind-hearted Bulgarian friends rushed from their homes as soon as they caught a glimpse of the strange appearing travelers, took us in their arms from our horses, with tears and smiles and words of welcome, and led us into the "household." She and her party traversed on horseback from Strumitza to the nearest railroad station, a journey lasting five hours. Local missionaries and many of the inhabitants of Strumitza, accompanied the party for some distance. She reports that the brigands treated them well. She expects to remain several weeks in Turkey before returning to this country to visit her mother living near Boston, Mass.

A withdrawal of troops from the Philippines is taking place, and it is stated, about 32,000 United States soldiers are to remain in these islands.

There were 592 deaths in this city last week, reported to the Board of Health. This is 24 more than the previous week and 54 more than the corresponding week of 1901. Of the foregoing, 316 were males and 276 females; 60 died of consumption of the lungs; 72 of inflammation of the lungs and surrounding membranes; 8 of diphtheria; 16 of cancer; 16 of apoplexy; 7 of typhoid fever; 2 of scarlet fever, and 17 of small pox.

FOREIGN.—The United States Government has proposed to the Powers concerned in the Chinese treaty that it consent to a pro rata reduction of claims so as to retain the total within the sum of 450,000,000 taels, w. the Powers agreed to accept from China as full indemnity for the Boxer outrages.

Of 105,000 persons who emigrated from Russia Siberia during the first eight months of 1901, 36,000 have returned to Russia worse off than they went, but lost their means and in many cases members of the families through privations and hardships. These are attributed to bad management of the emigration movement, failure of crops and political disturbances and indicate that the colonization of Siberia on a large scale is premature.

Some interesting experiments have been made with a new fog signaling apparatus in the English Channel, which signals were heard at a distance of six miles. An inventor, a Belgian, believes it possible to be able to locate vessels by it during a fog, and the directors which they are going.

The population of the British Empire is stated to be 400,000,000, of which about 49,000,000 are British or British descent; nearly 4,000,000 are European or partly British, and about 344,000,000 Blacks, Asiatics, etc. Of the latter about 300,000,000 are in India and Ceylon.

The five Central American Republics have arranged terms of arbitration among themselves for the purpose of settling the controversy of the coast of Honduras. One of its provisions is that disputes arising a question of boundary are to be referred to "an arbitrator of American nationality"—that is, to some one American State. It may be a State of North, South Central America.

The Chubut colonists (Welsh), in Patagonia, struggling for thirty-five years against unfavorable conditions, it is said, desire to be moved to Canada, where large tracts of land in the Northwest territory has been offered them.

During a late voyage from Southampton to New York on the steamer *Philadelphia*, Marconi received messages by his wireless system of telegraphy, when the vessel was 1,500 miles from the coast of the United States, and ticks were recorded at a distance of 2,000 miles.

NOTICES.

FRIENDS' EDUCATIONAL ASSOCIATION.—A meeting will be held in the Lecture-room of Friends' Select St. 140 N. Sixteenth Street, Philadelphia, at 2.30 o'clock, Seventh-day, Third Month 8th, 1902. Mary V. G. President of the New Jersey Association of Friends, will address the Association on the "Co-operation of Teachers and Parents in School Life and Work." A free discussion of the subject, led by David H. Forsythe, David Brown, Mary M. Bell and others, will follow. All participants are invited to be present.

Persons wishing to have their own, or other names added to the mailing list of the Association will please address ANNA S. WOOD, Sec'y., Moorestown, N. J.

TRACT ASSOCIATION OF FRIENDS.—The annual meeting of the Association will be held in the Committee Room, Arch Street Meeting-house, on Fourth-day, 25th inst., at 8 o'clock. Reports of Auxiliary Associations and an interesting report of the Managers will be read. All are invited to attend.

HENRY B. ABBOTT, Clerk.

FRUITS OF SOLITUDE IN REFLECTIONS AND MAXIMS PRESENTING TO THE CONDUCT OF HUMAN LIFE. By Wm. P. This book is now for sale at Friends' Book Store, 1 Arch Street, Phila. Price, silk cloth binding 25 cts. by mail, 30 cts.; half morocco 75 cts. by mail 81 cts.

WESTWORTH BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to WILLIAM F. WICKHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent. Address, Westtown P. O., Chester Co., Pa.

WESTWORTH BOARDING SCHOOL.—For convenience of persons coming to Westtown School, the stage will start leaving Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met when requested. Stage fare, fifteen cents; after 7.30 P. M., twenty cents each way. To reach the school by telegraph, West Chester, Phone 1144.

sent as second-class matter at Philadelphia P. O.

The door is open, and I see an innumerable number of angels and the spirits of men which I long to be unbodied to be with; not my will but thine be done, Oh Lord! not utter, nor my tongue express, what I of that light, life and love that attends which the world can neither give nor take from me. My sins are washed away by blood of the Lamb that was slain from the foundation of the world! All rags and filth are taken away and in room thereof love good will for all mankind. Oh that we become more united in the church militant and nearer resemble the church triumphant! Oh, that we all might make such an I believe I have in prospect: for it is light, all life, all love, and all peace. The Lord that I see is more glorious than the sun, the firmament! Come, Lord Jesus Christ! when thou pleasest; thy servant is ready willing, into thy hands I commit my spirit, my will, but thine be done, Oh Lord! I year to enter that harmony with Moses and Aaron, where they cry "Holy! holy! holy!" cannot express the joy I feel. If any in after me, after my end, let them know well with me.—*Joseph White, 1777.*

ALL THE INHABITANTS OF ENGLAND, AND ALL THAT DWELL UPON THE FACE OF THE EARTH—God alone is the teacher of his people. He hath given to every one a measure of light, which is the light that comes from the Father. It checks and reproves for sin. All wait in that Light come to know the only God and Father of Light, in Christ Jesus, is the way to Him. This I witness to all sons of men:—that I came not to the knowledge of Eternal life by the letter of the law, nor by hearing men speak of the Father of God. I came to the true knowledge of the Scriptures, and to the eternal rest in it of which they testify, by the inspiration of the Spirit of Jesus, the Lion of the tribe of Judah, who alone is found worthy to open the door of the book.—*William Dewsbury.*

"Mind Your Stops."

Inattention to punctuation may sometimes prove costly, as is shown by one of the latest of the many anecdotes to that effect. During a wealthy man's absence from New York his wife is said to have desired to make a purchase of laces amounting in value to two thousand dollars. Having telegraphed to him for his permission she received the generous answer, "No price too high." Accordingly she proceeded to buy the laces and other goods to the value of eight thousand dollars. The husband on his return learning the result of his telegram, asked to see it, was surprised, and said nothing. What he had written was: "No.—Price too high."

Here the failure to observe a stop in the right place, cost some one over six thousand dollars. Little points are little things, but "faithfulness in a little thing is a great thing." The whole meaning of an important law is said to have turned on a comma, and all our language would be meaningless without intervals between the words. Some men have saved their accumulated wealth by knowing when to stop making money, and some have gone over precipices by not stopping one step earlier than they did. The intervals in a fever are as much a part of its cure as are the paroxysms to throw off the cause; and the halt which winter calls to agriculture are as essential to the productiveness of the farm, as a season of sleep for a man to do a good day's work. "While the earth remaineth, seed time and harvest, cold and heat, summer and winter, and day and night shall not cease." (Gen. viii: 8.)

In every work it is important to know our right stopping places. Happy are they who have so learned the reproofs of instruction, as to feel the inward check of spirit in every proceeding just where the monition says: "Thus far shalt thou go, and no farther." Of how many a ruin would they thus rest on the safe side! How many a disaster, sometimes very far-reaching, would have been prevented had the inward check to a single word been heeded! Let Him who is laying out for each one of us our divine biography to walk in, be trusted to put in his own punctuation marks, whether temporary rests or final periods, just when He pleases.

We hear it said that "the gospel is a gospel of go," and most people view a locomotive as

built for no other purpose than to go. The view lately arose, that if the service of the engine were occupied in just that one purpose of going, the first trip of its train would be its last, and perhaps other trains also be ruined on its trackway. No,—the usefulness of the engine consists in its stopping at the right stations. It is worse than useless if it runs for mere running, or halts at its own whim in the wilderness or on a bridge or marsh;—useless or ruined except as it is responsive to the touch of the conductor within, to stop at the appointed stations, there to discharge all that does not belong to its further going, and to take in fresh lives and goods for the next movement. The acceptable service of the locomotive will consist in waiting and going, according to signal from the conductor. Sometimes a train seems to wait unaccountably long, yet no sane passenger would dare to put forth a hand to start it a single foot.

So "what I do thou knowest not now, but thou shalt know hereafter," is the Master's word to many a hindered spirit, shut in from its coveted course by sickness or duties to others. George Fox's several years of imprisonment served not for nothing in spiritual progress, nor in their lading and unloading of values for us. We find ourselves often stopped and frustrated in our proposed career, only to get time to be enriched and to be saved from being shattered.

It is to be feared we miss many a duty by rushing past it, and lose many a communion with our Lord by over-haste to get on. Movement is always loss and wrong when stopping is called for, and standing still is equally wrong when it is sloth and lingering. For working or waiting devout watching is always called for, to learn when to stop and when to move. The church is sorely impoverished for much ministry that consents not to know when to start, and for much that knows not when to stop. "Mind your stops" that seem attended with authority. To be impatient of them is as dangerous as is lethargy to move when the cry comes "Go forward!"

The "Tract Repository" to be Replaced by
"The Select Miscellany."

For a long series of years our friend David Heston has published monthly a collection of valuable matter for general reading, which has upheld the highest standard of life and

conduct, and has been an encourager of moral virtue based on gospel good in all respects. We would not know where to find better selections of improving reading for the mass of the people than those contained in the volumes of the *Tract Repository*.

Although our friend, perhaps by reason of advancing years, feels now excused from this service, yet it is with satisfaction that we have received the announcement that another Friend, who has been a practical coadjutor in the publication, is concerned to continue the work, in a paper almost identical in size and character, which will be known as *The Select Miscellany*.

The object of the publisher being to furnish to those who desire it, a carefully selected miscellany of religious and moral reading, the circulation will necessarily depend somewhat on the co-operation of individuals who feel a similar concern.

This work is largely one of faith and benevolence on the part of the publisher, and our thoughtful attention is requested. Are there not within easy access of the reader those who would gladly read this *Miscellany*, yet who feel unable to subscribe for it; and to such as these, as well as many others, will not such an effort to supply them with good reading, be as bread cast upon the waters?

Subscriptions will be received by William C. Cowperthwaite at Friends' Bookstore, 304 Arch Street, Philadelphia, at 25 cents a year per copy, three to one address for 60 cents, or six to one address for one dollar.

A Newspaper's Ministry.

It is understood, according to the *London Friend*, that the *London Daily News* has come entirely into the hands of a prominent member of London Yearly Meeting, George Cadbury, together with T. P. Ritzema, who is proprietor of the *Northern Daily Telegraph*, and now also to be controlling manager of the *Daily News*. For some time the *Daily News* has given up inserting betting forecasts, but now all racing intelligence will be omitted. "As far as I am concerned," said George Cadbury to a reporter, "the policy which I desired to be adopted in the conduct of the *Daily News* is confined to the treatment of great social questions, the maintenance of a high journalistic tone, and an attitude of moderation in regard to those who hold other opinions. *I do not believe in the policy of denunciation as a means to changing the views of opponents*; we desire to show that we are right, and that is better accomplished by stating the case than by a process of denunciation."

This view of the worse than worthlessness of denunciation of opponents and the principle (for which Christ said He was born) of bearing witness for the Truth, deserve our commen-

dation. It is hoped that the partner, who in conducting the *Telegraph* has "fearlessly advocated national righteousness," will realize as great success in the *Daily News*. And we are glad to hope that such leaven of Quakerism is still in operation as will give to the English public a newspaper of the character outlined by Jonathan Dymond:

It is not easy to imagine the sum of advantages which would result if the periodical press not only excluded that which does harm, but preferred that which does good. Not that grave moralities, not especially that religious disquisitions are to be desired; but that every reader should see and feel that the editor maintained an allegiance to virtue and to truth. You may relate the common occurrences of the day in such a manner as to do either good or evil. . . . The great desideratum is enlargement of views and purity of principles. We want in editorial labors less of partisanship, less of petty squabbles about the worthless discussions of the day. We want more of the *philosophy of politics*, more of that grasping intelligence which can send a reader's intelligence from facts to principles.

Exit the Message, Enter the Essay.

On two successive days the following two protests came to hand, the first of which carries its own lesson to the second: "It is time," says Cora Wells Trow, in New York, "to inaugurate a crusade against the *benumbing, deadening paper reading habit* so universal in women's clubs. Since the first club was organized forty years ago clubwomen have papered their way down the corridors of time. They have read long, dull essays enough.

"Now clubs cannot stand that forever. The ideal woman's society would be one that imposed a fine on every member who read an essay, long winded or short winded, instead of standing up straight and saying what she had to say to her audience."

The second, as regards papering the walls of Zion, comes from a member of a distant Yearly Meeting and is as follows: "Our Yearly Meeting is so changed in the manner of holding it, in the standing and degree of conviction of those who rule it, in the almost entire absence of waiting for the Day-spring, and in the *popularizing essay-reading* character of its sittings, that it has less and less attraction for some of us; and this year there is to be a further attempt to weaken it by *autumn lessons* in provincial centres, these to consist mostly of essays and debates, after the Summer School style. . . . I [note] the extraordinary arrangement last week of having at their Quarterly Meeting at —, the Bishop of H. to read them a paper!"

A third extract now comes into view:—"Friends let all your *Men's* and *Women's* meetings be held in the power of God!"—George Fox.

The True Basis for Missions.

Some time ago a Friend was traveling to Bristol to London where he had for a fellow passenger a Roman Catholic priest. He talked about Quakerism when the priest said, "We read all your publications—your 'Clerical Examiner' and the rest (in Rome), are glad to see that after two hundred years of holding to it, you have given up your foundation principle. You have established Home and Foreign Missions on the same basis as the sects.

Any true Friend would go as far as to 'Establish missions, or any other thing, if it feel the clear leading of the Holy Spirit to do so.'

Isaac Penington said, "You may easily *too much without the Spirit*; you cannot act much in the Spirit."

The message to the Church everywhere, times to be (as it was to that of Thyatira), merely that each disciple must be faithful to his own call, not taking it upon him to change with others, or to act upon the given to others but not to him.

There is no deceit more dangerous than pointing to great and weighty works as justifying our acting without the leading of the Holy Spirit. Under the old law the Israelites were forbidden from sowing *mingled seed*.

Surely this was meant for a lesson, and surely, too, if any man will sow mingled seed, his being able to point to good grain springing up among tares or ought else will not excuse his act.

AMONG the occasional visitors at A. Peirce's was A. W., then a young Friend, who had recently been recommended as a minister.

Once, when there, and engaged in some conversation, he enlarged considerably on his own experience and attainments, the degree of favor bestowed upon him, etc. After listening patiently for some time, Jane Peirce said "A—; one feeling of 'I abhor myself as dust and ashes' is worth more than all he has spoken."

He paused a little, and replied, "I am now it."

He afterward fell away—lost his gift—sunk into insignificance, evidencing that there is no sure foothold for any disciple, but that which is found in the valley of humility; and the blessed Saviour always was, and when his servants must be, ever remembering the words of Paul, "As we were allowed of God to be put in trust with the gospel, even so shall we speak."

It seems to me, says a late writer, that no maxim for a noble life like this: "Be always your highest moments your truest moments. Believe that in the time when you were the greatest and most spiritual man, woman, then you were your truest self. Take of the noblest moment you ever passed, of the time, when, lifted up to the heights of glory, or bowed down to the depths of sorrow, if power that was in you was called forth to meet the exigency or to do the work. And believe that the highest you ever have been, you may be all the time, and vastly higher still, if only the power of the Christ can be put in you and fill your life all the time.

FOR "THE FRIEND."

Reminiscences.

(Continued from page 267.)

"Truth is not local, God alike pervades and he world of traffic, and the shades, and we feared amidst the busiest scenes, or amid where business never intervenes." "The hand of the diligent shall bear rule; he slothful shall be under tribute." "The truth of these maxims we have abounded in both ancient and modern times."

"Later we have practical examples in lives and conversation and successful business careers of such men as Samuel Bettie, and Samuel Bettie, Jr., Henry Cope, and Cope, William and Thomas Evans and other men who were in the world, but if the world; men who above all things were concerned "to have always a complete void of offence towards God and to men," and were favored to keep the and the things of the world under their

"That business can be followed in the of Truth there is no doubt; many times a course of an active business career, on the morning of a week day meeting ended by perplexities of an apparently unaccountable character, when the meeting arrived every thing was left behind as possible, and meeting attended. In a silence where every thought and desire in some measure at least, brought in to Him "who could make a world out in the lost depths of the wilderness not a flower unfinished;" the clouds be dispersed without any special effort of mind, and on returning to business it been found that the mind was clothed in peaceful serenity which sometimes continued throughout the day."

"In the ministry, although accompanied in authority, may be of a very different order. Riding once with our beloved

James Emlen, he said it seemed as if Richard Jordan might have his dwelling on seashore, he had to wade a long distance before he got into deep water; anergies then was he."

"Thomas Scattergood appeared to dwell, as we, upon a rock; he stepped right off into water."

"Samuel Bettie, Sr.'s gift was logical and tentative, proving every position he took. In a meeting in West Chester to which he invited the public invited, and he had before a large and intelligent audience, he spoke of doctrines of Friends, urged the importance of prayer and spoke particularly of bap-tizing clearly that it was of a spiritual and not of an outward nature. After presenting incontrovertible proofs of this truth, he made the inquiry in an impressive manner, "are not these things so?" After a pause he added, "I leave it, I leave On the street subsequently an observing who was met, made the inquiry, "Have any men like that in your society?"

"Thomas Evans was by his Heavenly Father endued with remarkable gifts of both tongue and pen."

"Friends' Library" of fourteen volumes by him and his brother William, his Account of Friends, and other valuable works of a similar character will go to posterity as standard authorities elucidating the peculiar views of Friends in a

clear and comprehensive manner. His gift in the ministry was clear, convincing and impressive; a well remembered instance of this was in a Yearly Meeting in 1869, and is clearly related in an account recently received from our valued friend, Joseph S. Elkinton.

In the course of this communication he used these words in an emphatic manner—"Friends, there is no such thing as going to heaven in velvet slippers."

"On Third-day morning of Yearly Meeting week, Thomas Evans delivered a powerful communication on the tendency there was to an outside religion in the world and in our Society; he bore particular stress upon individuals undertaking to teach others religion, before they became men and women of changed hearts themselves,—before their spiritual eyes had been anointed to see, their spiritual ears unstopped, their tongues loosened, and their mouths rightly opened."

"He said we were told Early Friends were aggressive, which he did not deny, but what baptisms and conflicts of spirit the first went through, before they went forth and told of those things which their own eyes had seen and their own hands had handled of the good Word of Life, and what was their secret spring to action?"

"The Lord moved me," said George Fox, "to go to this place or that place."

"The feeling that attended was such as one might be willing to sit under a long time. It might have been felt the speaker had lately come out of the furnace himself seven times refined, and with all his powers was opposing the busy active spirit of the day . . . Much solemnity overspread."

We are also indebted to the same Friend for the following account of the exercises of our late valued friend, Sarah Emlen in Concord Quarterly Meeting held Eighth Month 20, 1844.

"Sarah Emlen preached particularly to the young people; some of whom she believed were preparing to be testimony bearers; but others were doing despite to the Spirit of Grace and were determined to do as they listed; to which class the effect of this course was pointed out."

"In the Meeting for Discipline she returned the endorsement of the minute granted her, to visit England, etc., and stated that she had visited all the meetings in Ireland, including the Yearly Meeting, the General Meetings for Scotland and Wales and other of their subordinate branches; many meetings in England, etc."

"She produced certificates from London and Dublin Yearly Meetings, of Ministers and Elders, expressing unity with her religious labors, and commending her behavior among them, etc."

"After giving her account she proceeded to address the class she had spoken to in the first meeting; stating that when in a foreign land, and there seemed but a step between her and the grave, the young people of this Quarterly Meeting had been brought before her, with a view of the temptations to which some of them were peculiarly exposed, and she had interceded for them. She besought such to withstand the peculiar temptations that were now presented by the Grand Adversary of Souls, etc."

William Evans had a short communication on the power and manner of rightly holding a Quarterly Meeting.

"Seven ministers from Philadelphia were present, who were all silent in the first meeting."

The following lines were intended to follow the tribute to Thomas P. Cope in the THE FRIEND of Second Month 22nd last:

Of nature noble, yet humble too was he,

Free from all guile and vain philosophy.

Studios above all, his Master's work to do,

Safely he walked, this dark world through.

THE CHRISTIAN WATCH.—Hannah C. Backhouse attended London Yearly Meeting in 1800, being at that time a gay young woman of nineteen years, and but little associated with plain Friends.

After writing of her enjoyment in seeing such "and the happy state of mind they seemed to enjoy," she further states: "It made me earnestly desire to be like them, though it has not yet persuaded me to endeavor to be so. I saw the most eminently sweet, angelic woman I ever beheld—Mary Capper.* Her countenance expressed the beauty of the human mind when it is without weeds."

H. C. Backhouse had devoted herself to drawing and painting, and felt a great ambition to be an artist; but in her twenty-first year she wrote: "A mind kept on the Christian's watch, is, I think, but little capable of entering into the spirit of the 'Fine Arts.'" And shortly after, "I have felt during this day the difficulty of keeping free from the spirit of the world in the society of those who possessed all the charms of its accomplishments; and how almost impossible it would be for me to be preserved, without the manners and appearance of a Friend; which are, I do firmly believe, a strong bulwark; but like all bulwarks, if a constant watch is not kept, the place and the bulwark may easily be taken."

Communicated.

RIDICULE about serious things is a weapon that the devil at times puts into the hands of his servants when other means fail in the accomplishment of his seductive purposes. It is an acceptable weapon to men and women bent on overthrowing a truth they can't otherwise get out of the way in their quest for liberty. Aimed at the wicked it not only fails to win, but adds fresh fuel to the flame of selfishness that burns in unregenerate hearts. Aimed at the righteous it is a sin against heavenly processes chosen by God to bring about a "more excellent way." Though I may not see its value, the respect I feel for a good man's scruple, I find is of God and forbids ridicule. Another man's scruple may not be mine, but if it be part of a holy life and tends to pureness even incidentally, it may bring me to thoughtfulness of my own course, and I find it a goodly state when "the reproof of the righteous is unto me as an excellent oil."

The coarseness of a ribald caricature and the more refined ridicule of a book or magazine article, spring from the same source—these and the flippant joke all bespeak a prac-

*A memoir of this dedicated servant of the Lord is published and may be had at Friends' Book Store, No. 304 Arch Street, Philadelphia.

tical voidance of the many holy scriptural pleas for patience. "Let patience have its perfect work" falls still-born on the heart chilled with impatience. Indeed ridicule finely draped does more harm than the coarser sort—twere better for the thrower of it had he never been born, than to turn a timid child just entering a holy career, from an opening path of service for the Master.

TRUST.

(Psalm lxxii : 8.)

Communicated.

Oh, trust when dark clouds gather,
When billows round thee roll,
When the heart grows faint with fear and dread,
And anguish fills thy soul.
When thunders roar and lightnings flash,
And darkness hides the light,
Oh, trust, have faith, and still believe
God's ways are always right.

No stormy tempest e'er can mar
His loving care for thee,
Though now thou mayst not understand,
Or his blest purpose see.
Yet by and by, when time is o'er,
The wherefore thou shalt know,
Then see these trials all were sent
Because He loved thee so.

Doth not our Father feed the birds ?
Doth He not clothe the flowers ?
And looking down in tend'rest love
He notes thy saddened hours,
He sees the path is hedged around,
The future way is dim ;
But dear one, oh remember this,
'Tis dear and bright to Him.

Though human love may fail thee
And earthly ties be riven,
God's grace will in the needful hour
Abundantly be given.
His love is "everlasting,"
Take courage, lift thine eyes !
These trials our dear Father sends
Are blessings in disguise.

Although we may not comprehend
God's perfect, holy will,
Yet his part to save, sustain ;
Ours to trust Him and be still,
Under the heavenly Potter's hand,
Submissive let us rest,
Assured that whatsoever He does,
Is wisest, right and best.

Beyond the cloud shines forth the sun,
Daybreak succeeds the night,
And though the coming days seem dark,
Soon shall thy way be bright.
Soon shall the "shadows flee away,"
Thy heart with joy be filled,
When sorrow's surging sea of pain
Shall by God's word be stilled.

So trust when troubles round thee press,
Lean hard upon the word,
"Together all things work for good
To those who love the Lord."
Rest sweetly on the promise
Of thy never-failing Friend,
"Lo, I am with you always,"
Yea, "even to the end."

The Lord will ne'er forsake his own
Trust Him, He's ever near,
His strong and mighty arm will save,
What then hast thou to fear ?
Look not around or be dismayed,
Go forward in his might,
Trust Him till breaks the glorious morn,
"When faith is last in sight."

HELEN E. WOOD.

WEXFORD, Ireland, Second Month, 1894.

The Bible.

(Continued from page 269.)

The work of Professor McCurdy above alluded to and quoted from is a narrative of the ancient history of the Semitic peoples in its bearing upon the history of Israel which it includes and involves. In tracing this he reaches backward as we have seen far beyond the Mosaic epoch by means of records only fully brought to light within the past half century. He is able to trace a list of Kings of Babylon from Sargon above named down to Nebuchadnezzar who is mentioned in 2 Kings xxiv, and who reigned about 600 B. C.; thus comprising a period of more than three thousand years. The Bible account in 2nd Kings and that of 2 Chronicles xxxvi states that Nebuchadnezzar King of Babylon came with his armies and took Jerusalem and Judah, then reigning king Jehoiakim as a captive to Babylon; and finally after setting up Jehoiakim and Zedekiah successively as kings of Judah's and they revolting against him, the King of Babylon utterly overthrew the Jewish kingdom and carried away many thousands of their people as captives to his own land with the ornaments and treasures of the temple. Here they remained until seventy years were passed in fulfillment of the prophecies of Jeremiah as a punishment for their obstinate idolatry and wickedness, until the advent of Cyrus, king of Persia, who had conquered Babylon.

With regard to the correlative light thrown upon these events in Old Testament history by the late discoveries we may instance the allusions in so many of the inscriptions and tablets to Nebuchadnezzar (as his name is now mostly spelled). Dr. Peters states in his account of his visit to Babylon in the year 1889, that all the bricks dug up from the great mounds which mark the site of the buried city bear the name of Nebuchadnezzar. In the clay cylinders of Nebuchadnezzar found by Sir Henry Rawlinson in the corners of the ziggurat (or tower) of Birs Nimrud we read: "Nebuchadnezzar king of Babylon, the rightful ruler, . . . the beloved of Nebo, the wise prince, who devotes his care to the affairs of the great gods . . . the son and heir of Nabopolassar, king of Babylon, am I . . . Timi-nanki the ziggurat of Babylon I built and completed; of brick glazed with lapis-lazuli I erected its summit. At that time the house of the seven divisions of heaven and earth, the ziggurat of Borsippa which a former king had built and carried up to the height of forty-two ells but the summit of which he had not erected had long since fallen into decay . . . "The great lord Marduk moved my heart to rebuild it. Its place I changed not, and its foundation I altered not . . . I rebuilt the unbaked bricks of its terraces and its encasing bricks which were broken away and I raised up that which was fallen down. My inscriptions I put upon the *klirri* of its buildings."

Dr. Peters remarks respecting the above, "the striking similarities of this story to that of the Tower of Babel, (as recorded in Genesis xi) are the extremely ambitious nature of this ziggurat of Borsippa which Nebuchadnezzar found in ruins and the fact that after it had been raised to a great height the work was abandoned, leaving the building in such an incomplete condition that its ruin was in-

FOR "THE FRIEND."

evitable. He built it over entirely and it a seven staged ziggurat or tower. The ruins of Nebuchadnezzar's ziggurat constitute the present Birs Nimrud, and explorations which have been conducted there revealed the seven stages still existing. "long before the time of Nebuchadnezzar it fallen into such a condition it is impossible from our present information to say, whatever the date, Nebuchadnezzar's account of the ruins of this ziggurat correspond well with the story of the eleventh chapter of Genesis that one is inclined to attach story, at least tentatively, to this ruin. Its proximity of the site to Babylon led to its connection with that well known name, Babel, the Hebrew word." Dr. Peters took a photograph of the great mound and tower at which it is given in his first volume. Of his remarks, "the lowest stage of the tower shown by the excavations, consisted of a high terrace of *sundried* bricks on which similar terraces faced with *baked* bricks, the summit of the whole structure there now a curious mass of baked bricks look like a tower split in two. This is somewhat more than forty feet in height."

The Sargon above alluded to as king of Babylon in the earliest years of the history of the Chaldean nation was not the monarch that name mentioned in Isaiah xx in the words—"In the year that Tartan came to Ashdod (when Sargon the king of Assyria him) and fought against Ashdod and took it at the same time spake the Lord by Isaiah son of Amoz." This is the only place in Scripture where the name of "Sargon" is found; and not until the unearthing of the ruins of Babylon and Nineveh have the historians been able to discover his place and actions in Assyrian annals. Indeed, so obscure did he seem that some critics doubted the existence of such a character. Now, however, there is abundant evidence of it, and McCurdy in his second volume (book 8 Chap. 1st) details Sargon 2nd's enterprises and wars full. He remarks respecting the above reference to Tartan's attack on Ashdod: "In 1 B. C. we have to note the famous expedition to Ashdod, of which special account is taken not only by Hebrew prophecy, but also by King Sargon himself. Besides other names he has left an inscription devoted solely to that enterprise." He also states that the mother of Sargon with an inscription on it has been found in the Island of Cyprus which was now in the Berlin Museum. He founded a city a few miles north of Nineveh, now known as Khorsabad, where he created a magnificent palace, which has remained since its excavation and exploration by Botta in 1844. Place in 1852 the most complete representation of Assyrian architecture which has been preserved to us. This palace was occupied by Sargon 2nd, whom McCurdy speaks of as "the most powerful ruler and greatest benefactor whom Assyria had yet known." In the year 706 B. C., and in the summer of the next year he died by the hand of an assassin.

Sargon's successor on the throne of Assyria was Sennacherib, famous in Bible history as recorded in Isaiah 36th and 37th Chapters and Kings Chapters 18th and 19th for his invasion of Judah and Jerusalem when Hezekiah was king in the year 710 B. C. King Hezekiah

stress, when Rabshakeh, the general of Assyrian army, summoned him to surrender the City of Jerusalem to Sinacherib, sent Prophet Isaiah for his advice and intercession with Jehovah for their relief, and assured by the word of the Lord that the City of Assyria should not come into the city out an arrow there. "Then the Angel of the Lord went forth and smote in the camp of the Assyrians one hundred and eighty-five thousand; and when they arose early in the morning, behold they were all dead corpses. Sinacherib king of Assyria departed and did not return and dwelt at Nineveh." This expedition a very explicit account is found inscribed on what is known as "Taylor Cylinder," a clay tube found by the Assyrian ruins, and described in Benson's Cuneiform Inscriptions, Vol. 1. In this narrative Sinacherib speaks of his conquests in Assyria and in Palestine and which he conquered whose names are familiar to Bible readers. He alludes to "Heliak the Judeite who had not submitted to the king; forty-six of his fenced cities and villages and small towns in their vicinity at number, I besieged and took. As myself, like a caged bird in Jerusalem I am up." He also tells of a tribute of gold and silver, and other treasures that he had of Hezekiah, prior to the above events set in 2nd Kings xviii: 13 to 16. He has no reference to the remarkable pestilence that destroyed his immense army as in the Bible record. We must bear in mind, however, that these chronicles of their deeds and conquests left by the Assyrians are intended to glorify their memory and estimation of posterity, and naturally would not record events that might reflect to such a reputation.

(To be continued.)

THE CROCUS'S SOLILOQUY.

BY HANNAH F. GOULD.

In my solitude under the snow,
No cheering can reach me,
Without light to see how to grow,
Trust to Nature to teach me.

Not despair, nor be idle, nor frown,
Nor in gloomy a dwelling;
I shall run up and my roots shall run
Down, while the bud in my bosom is swelling.

As the frost will get out of my bed,
And the cold dungeon to free me,
I'll peer with my bright little head;
I will be joyful to see me.

From my heart will young petals diverge,
And rays of the sun from their focus;
The darkness of earth will emerge,
Happy and beautiful Crocus.

Arrayed in my yellow and green,
In their view I have risen,
They need wonder how one so serene
Can come from so dismal a prison?

Perhaps, from so simple a flower
A little lesson may borrow—
Not to-day, through its gloomiest hour,
Come out the brighter to-morrow.

Judge thyself with the judgment of sin,
And thou wilt judge others with a judgment
Of charity."

Counsels from True Witnesses.

(Continued from page 270.)

"It is the inward Comforter who leadeth into all truth that we shall one day stand in need of. As there ought to be no careless delays in the great concern of working out our own salvation, so we had need to be very diligently engaged in waiting to be endowed with power from on high, because we are not able to do anything of ourselves, that will tend to our soul's eternal welfare; but as we are diligently waiting upon God, He will give us strength, according to the service He shall require of us. His people have cause to say, He is not a hard master, for He will gather his lambs in his arms, and carry them in his bosom. Let us be willing to part with all the Lord requires us to part with, although it be as near as a right hand or a right eye. My friends, we have no continuing city here; let us therefore seek one that is to come, whose builder and maker is the Lord. Let not those who are discouraged that are truly concerned to labor in the Lord's work. Although they may be but few in number, the time may come when more may be rightly engaged in it. Let us give up freely to serve the Lord in whatever He requireth of us, for He requireth obedience to the manifestations of his will, both in male and female. I desire that those that are truly sensible of the want of laborers, may be concerned to pray the Lord of the harvest to send forth more laborers into his harvest and that we all may be truly concerned for the honor of God and for the promoting his truth, than for any outward enjoyment, and then the Lord will be with us in our exercises. We know not what any of us may have to go through, before our time in this world may come to an end, and when we come to lie on a bed of sickness, and expect our end to be nigh, nothing that this world can afford is worthy to be compared to peace of conscience. Let it be our great care to be so prepared for the coming of the Lord, that whether our days be few or many in this world whenever the Lord shall be pleased to call us we may be ready."

The 14th of the Fifth Month.—"Although the Lord may be pleased to lead us through the valley of the shadow of death, yet we have cause to fear no ill as the eye of our minds is truly unto Him who is invisible; for He is near to his little ones, supports them in the deepest exercises that they are brought into; and therefore if the Lord be pleased to bring us down into Jordan, let us be willing to follow Him as often as He shall see meet. . . . As the gold that is often tried, is made the purer from dross, so as we are rightly bowed under the great Refiner's hand, we shall be made the more fit for his service. Let us patiently wait to see the work carried on that is upon the wheel, that we may not be like the vessel that was marred in the hands of the potter, but may be formed according to the will of God, and purged from everything He hath a controversy against.

And now the Lord is pleased once more to lift up the light of his countenance upon my poor soul; and in a sense thereof, I desire the praise, the glory and honor may be given to Him, to whom alone it belongs forever. . . . Such is the goodness of God to those that

wait upon Him, that He causes the dew to fall upon them that see themselves in a thirsty land, until He is pleased to open the fountain for their refreshment. I believe it is our great duty to centre often to the fountain from whence our supplies come. In what state soever we are, the truth is the same in a time of sickness as it is in a time of health. I desire we may not be like the man that falls, being alone, but may know the everlasting arm to be underneath when we see ourselves in danger of falling. And as we have seen the good effects of it many a time I desire we may be diligent in waiting for this holy arm. Let us wait to know our duty. We have often heard that they that wait upon the Lord shall renew their strength. These come to see their duty and they also receive ability to perform the same, although at times they may be so encompassed about that they see no way of deliverance until the Lord opens an eye in them to see it; yet the Lord will make way in his own time, for the deliverance of his people who trust in Him."

The 19th of the Fifth Month.—"There is one thing in particular that I have observed in this time of weakness of body which I esteem as a privilege among many others that I am made partaker of, and that is this: Those days when my affliction is greatest upon me, the Lord hath been pleased to favor me with the most plentiful visitation of his love, whether I have had company, or have been alone; so that thereby I have been encouraged willingly and patiently to bear these afflictions, being made sensible that the inward enjoyment of the goodness of God abundantly exceeds health of body, and those outward enjoyments that I am deprived of. . . . It is the Lord alone that knows the wants of the poor in spirit, and is able to administer a suitable supply according thereto. He can make a little sufficient, until He is pleased to give more, as He made the little the widow had sufficient in the prophet's time. Such was his goodness to her, that the barrel of meal did not waste nor the cruise of oil fail, until the time that the Lord sent rain upon the earth although it was such a time of scarcity, that she expected death was near. . . . Therefore let us not murmur in a time of scarcity, nor yet be exalted above measure in a time of plenty; but let us remember, the hand that feeds us can withhold from us if He sees meet."

(To be continued.)

THE SURE RELIANCE.—"The branch must abide in the vine, the oak in the soil, the child in its parents, the President in the laws of his nation, the Believer in Christ. To abide in Christ is to rest one's hope in infinite strength, and to draw one's life out of infinite goodness and love. Christ is the perfection, the Teacher, and the example of all goodness, the Source and Giver of eternal life, the power of God unto salvation."

"How the fallen creature man needs the interior light of God to strengthen his soul, and the promises of God to inspire his hope in every step of his pilgrimage!"

PRESERVED fruits, in a state fit to be eaten, have been taken from the ruins of Herculaneum.

For "THE FRIEND."
Dokkhor Notes.

A letter received from Frank Pedley, Superintendent of Immigration, dated Ottawa, February 28th, 1902, contains the following: Referring to your letter of inquiry in regard to the live stock in the Doukhobor colonies I beg to send for your information the enclosed copy of a report dated the 19th inst. from the Commissioner of Immigration, which I am sure you will consider satisfactory:

OFFICE OF THE COMMISSIONER OF IMMIGRATION,
WINNIPEG, Manitoba, 19th February, 1902.

Sir:—With reference to your letter of 29th ultimo No. 65101 Im'n, to Mr. Joseph Elkinton, I beg to report that I have had communication with the various Doukhobor colonies and have met some of the leaders of those colonies within the past six or seven days, and I am now able to say that the live stock in the several Doukhobor colonies is in a thriving condition; the sheep are standing the winter well, and they have already sold some of their young stock. In the Thunder Hill colony they have a good many lambs, and are selling some to the butcher at Swan River. The cattle in the colony are better looking than the cattle of other settlers, and the neighbors have been placing their young stock with the Doukhobors for the winter's keep.

The live stock at the Yorkton colonies are in first class condition and look well. Each village has quite a large herd, as well as a lot of horses, and towards the end of the year they will have a quantity of stock to sell.

The Saskatchewan villages have also taken a number of other settlers' cattle to winter. They will have some young stock for sale next year, but not this, and in this they are wise, as they are now in a position to hold their stock until they mature.

From the above it is evident that the Doukhobors have done well with their live stock, and their live stock is thriving and in splendid condition.

Your obedient servant,
(Sd.) J. ORED SMITH, Commissioner.

FRANK PEDLEY, Esq., Sup't of Immigration, Department of the Interior, Ottawa, Ont.

From a letter previously received from J. Obed Smith I take the following: The reports from our agents lead me to believe the crops raised by the Doukhobors this year (1901) will be nearly, if not quite sufficient, for their own sustenance; in fact in the Rosthern district they have, I understand, marketed at least ten thousand bushels of grain this fall and they are not, as a rule, people who sell what they require for their own maintenance. Their condition is steadily improving, and I do not believe one-half the number of those who sought work outside the colonies in the year 1901 will be looking forward to similar work next year. They have realized that there is money in farming in Canada, and being of a home-like peaceful disposition, they naturally would prefer to remain at home on their farms to seeking work elsewhere. There is plenty of work for all their men on railway construction if they choose to go, but the fact that the most of them have gone home with their summer's earnings and do not desire any further work will be an indication of how well they have prospered.

JOSEPH S. ELKINTON.

The following, extracted from a letter from Commissioner Smith has been received, in response to inquiries made by the Philadelphia Committee; and it and the accompanying letter from the Minister of the Interior of Canada both convey full assurance of the patience and kindness existing toward the Russian exiles, and of a desire for their best welfare:—

OFFICE OF THE COMMISSIONER OF IMMIGRATION,
WINNIPEG, MANITOBA.

WILLIAM EVANS,

Dear Sir:—I beg to acknowledge the receipt of your letter of the 27th ult, and appreciate to the full the desires of the Friends that the Doukhobors should be dealt with as leniently as possible, and this policy, which has been the aim of the Department in the past, will continue to be their aim in the future. Circumstances have arisen, however, which not only compel us to render it advisable for the sake of the Doukhobors as well as others, that some definite effort should be made in order to compel them to conform to the regulations, but I am pleased to say our efforts have been, to a certain extent, successful.

You will be pleased to hear that within the last two or three weeks one or two hundred entries have been made by the Doukhobors on the Saskatchewan, and we have made a start, —although at the present time, only five have responded,—in the Swan River Colony. The matter is being very seriously discussed there, and, at their request, I arranged an interview with the Minister of the Interior and two of their specially appointed delegates, and I now enclose to you a copy of a letter, containing the views and the decision of the Minister, which letter was eminently satisfactory to the delegates, and should enable them to overcome what feelings they may have against taking up the entry in the usual way. I have received delegates from the Swan River Colony, and also from the Saskatchewan Colony, and they have returned home perfectly satisfied with the assurances of the Department, and prepared to recommend all their fellows to take entries in the regular way. The most recalcitrant portion of this community live around Yorkton, and it has been my desire to fortify our position towards them by having the Swan River Colony and the Saskatchewan Colony take up their homesteads first, believing that my judgment is correct that, when these people see that their fellows in other colonies have done as they are requested to do, they will do likewise. With these few remarks I think the enclosed letter will lay bare to you the true position of affairs at the present time.

We find it quite impossible to successfully conclude all these various difficulties in a concrete form, but must take each one separately, and the all important one is to secure the Doukhobors, in the land which the people of Canada are willing they should obtain free.

I am not in a position to state definitely the results of Mr. Sherbinin's work at Rosthern; but it would appear from his connection with the delegations that have come here, and the resulting entries of hundreds thereafter, that he has already some influence with these people.

It is quite true that some of them look upon him still with distrust but I have not

changed my opinion that I believe he prove to be the right man in the right place. The rumor is correct that a very large body of Molokans are desiring to immigrate to Canada; in fact, we have at the present time of their delegates; we have shown them which they desire to occupy, in close proximity to that of the Doukhobors on the Saskatchewan River; but the difficulty appears to obtain the consent of the Russian Government to their departure.

It appears that they have obtained the consent of the Government at St. Petersburg but that the Governor of Tiflis has no made up his mind that he could allow the go. From what I can gather, they have ready sold their buildings and are practicing with their personal belongings, awaiting orders to move; but as it appears the responsiveness of some of these people with Canada has got into the hands of the Government last above mentioned, they fear that he not give his consent to their removal, and has become necessary on my part to every one on this side of the Atlantic to no communication by correspondence or otherwise with any of the Molokans. We means of communicating with them which hope will ultimately succeed in securing, any rate, a very large portion of these and the matter is being prosecuted vigorously and we hope to succeed.

The general health of the Doukhobors very good. Very few have had to seek treatment during the winter, and I think health is infinitely better than at any since they have been in the country.

You will be pleased to hear that Mr. J. S. Crerar, our agent at Yorkton, who was seriously ill in the hospital here for several weeks, suffering from typhoid fever, has far recovered from his illness as to be able to walk about. Mentally he has been fit some time; physically he has been unable to assist to his work; so that we have given Mrs. Almonesky's services, at Yorkton, for the last two or three months.

Again assuring the Friends of the good will of the Department towards the Doukhobors and hoping that the enclosed correspondence may throw some light upon your enquiries, have the honor to be,

Yours truly,

(Signed) J. ORED SMITH, Commissioner.

DEPARTMENT OF THE INTERIOR,
WINNIPEG, MANITOBA, 15th February, 1902.

TO IVAN IVAN AND FEDOR SUCHORUKOFF, delegates from the Doukhobors of the Thunder Hill Colony:

Gentlemen.—It is with much pleasure that I have had an opportunity of speaking with you to-day and I would like to convey through you to the Doukhobors my high appreciation of the successful efforts you have made since coming to Canada. Some people on your rival spoke against you; but my faith in your ability as farmers and as good honest people was such, that I gave instructions to the officers of the Department to afford you every possible assistance in order to become successful farmers in Canada, and I am pleased to know from you that your villages are at the present time shipping such a large quantity of wheat to the market at Swan River. I sincerely trust that you will continue to

ful; that you and your people may be happy; and you may assure them continued good-will of myself and the Government of Canada towards the Doukhobors.

There are several points in connection with the homesteading of lands which you have asked me to-day, and at your request, I will write this letter regarding the same. My Government gives to every male over eighteen years of age a piece of land (160 acres) of freehold, except the entry fee of \$10; these entries can only be recorded in the Land Office, that is the place to which all persons go when seeking freehold in your locality, and when they go to Mr. [Name] and they find no Doukhobor names entered for homesteads on these lands, Mr. [Name] has no power to prevent these strangers, or any other person, from taking the land. Therefore, absolutely necessary for your protection against outsiders, that you make individual entry for the land; and at the expiration of the three years you can you like with the same, either conveying the same person as trustee of the village, or conveying it to any community of persons, as trustees for the villages or the Doukhobor community. Once the entry is made by an individual Doukhobor, and by cultivating a portion of the land in the Reserve, he is entitled to the land, he can give the same to any person or any trustees that he may choose. I understand that there are amongst you a number of people who object to making an individual entry for homestead. I do not understand these people refuse the free gift of land from the Canadian Government, as my Government promised your people before they left you, that this would be done; and when I have said to you free of charge, it is by the gift of some of them. I am pleased to see, however, that a large number are not ungrateful or unmindful of the interests of their community, and that most of the Doukhobors make their entry for homesteads, even when they afterwards give the land to trustees. And I have decided that those who will not have their homesteads and accept of free land from the Government, may live together in one village; and, instead of being compelled to cultivate each quarter section held by a Doukhobor, that the land around the village itself may be cultivated, and the work otherwise would be required on each individual homestead may be done altogether by the village. But it would not be fair to those who take up their homesteads and live in their village should be troubled with those who will not do so; and as those who do not take up a homestead will not be protected by the Government after the first of May of next year, they will simply have to leave the land to those who take up the homesteads in any land elsewhere from some other person. If for instance, a village wants fifty homesteads around the village, I will be satisfied the amount of improvements required in each quarter-section is done around the village only for the whole fifty. This would enable all those in the village to live together and work together in and around the village without being compelled to go a long distance to their individual homesteads.

The most important part about making a

homestead entry is to have each Doukhobor put his name down for his homestead so that no stranger may take it from him; and, as it may be inconvenient for some of you to pay the ten dollar fee required from each at present, I will agree that if the entries are made at once, that payment of the ten dollar fee in each case on the first of December, 1902, will be satisfactory to the Department.

You have asked me about the taxes on the land, and so far as I know there is not at present any other tax on your lands than two dollars and fifty cents for each homestead, which is imposed by the Local Government of the Territories for the purpose of helping to make roads in your own districts, and, when this money is used for that purpose, I do not think any reasonable Doukhobor can object. As the law stands at present, and it has been the same for years, a school district can only be formed when the people who will live in the proposed school district ask that such a school district shall be formed; and a Municipality is only formed when the lands within the limits of the proposed Municipality have grown to be of such value and have so many people living thereon, that a Municipality is required, to furnish more roads and bridges; but in the case of a Municipality, and in the case of a school district in your Reserve, all the officers of the school district and of the Municipality would be Doukhobors, and they would only place such taxes upon you as you would allow them to impose. If there is no need for the formation of a Municipality, then, under the law as it stands, a certain portion of your land may be especially formed into a local improvement district, but in this case also, the overseer or master of the local improvement district would be elected by your people, so you see, should municipalities, school districts or local improvement districts be formed in your Reserve, that, as the law now stands, your own people would be the officers, and have control of them all.

I believe there is no land under the sun where there is more liberty and tolerance in regard to religious and material matters than in Canada. I would like the Doukhobors to feel that there is no undue restraint upon them regarding these matters, although there are certain laws which have been found beneficial in every country of the world, and to every class of people in Canada, and will no doubt be beneficial to the Doukhobors also; and the strong hand of the law which protects you and your families from danger, is the same strong hand which requires that the law shall be carried out in every case without fear or favor. I think your people have only to look around Canada and see the contented, prosperous condition of her people, to realize that you are welcome here; and that our laws are such that any person loving liberty and equality can cheerfully conform to.

I regret that there should have been at any time amongst you two or three people who misunderstood the character of Canadian laws, or have misrepresented the Government and its officials to you; and I believe that you may safely trust the officials of my Department in any and all matters, and rely upon them that they will willingly do no injury to your conscience or your principles.

I fear there is some misconception in your

minds as to what it means to take up a homestead entry for land in Canada. Of what use is land, anywhere in the world, unless it is occupied and cultivated? Be the Doukhobor community, or any other community, ever so strong, they could not remove a single acre of the land itself, as they might dispose of a cow, or a wagon load of wheat. All any person in Canada can obtain, is the right to occupy and cultivate the land, and the right to keep any other person from interfering with that privilege. Taking a homestead entry means that you have the right to occupy and cultivate the homestead; to grow and remove the crop therefrom; and no one has any right to interfere with the fruits of your labors.

I trust I have made these matters quite clear to you, and so far as homesteads are concerned the people of Canada give you the land free, and all that I now ask is that you will protect yourselves against strangers taking the land from you, by making the entry in the Land Office, as at least one hundred and fifty Doukhobors have already done, in the colonies on the Saskatchewan River.

Assuring you of my continued respect for the Doukhobors, I am your obedient servant.

(Sd.)

CLIFFORD SIFTON,
Minister of the Interior.

LONG RUN BY A MOUSE.—A very strange accident that befell a mouse is thus reported by the *Albany Express*: A wheelman hung his bicycle from the ceiling of his cellar, not far from a swinging shelf on which food was kept. A mouse jumped from the wall to the tire of the front wheel, evidently hoping thereby to reach the shelf. The wheel started, and the mouse naturally ran toward the highest part of it. It was able to stay on the top of the tire, but couldn't get enough of a foothold to jump to the wall. When found next morning it was very much exhausted, though still running. The cyclometer showed that it had traveled over twenty-eight miles.

Items Concerning the Society.

As Yearly Meeting Procedure is a current topic, some reference to methods adopted in bygone years may be of interest. The following is extracted from a small manuscript book lent to the Devonshire House Library by the late C. Stanfield Wilson, which describes the opening of the Yearly Meeting of 1753:

"Gmo. 11. In ye afternoon at 4 begun the first Meeting for business, wch. proceeded as follows: first, the Yearly Meeting begun by reading ye preamble: then ye Meeting was acquainted, that it fell to the northern district to choose a clerk, which counties was called over and their representatives Names put down: then those County Representatives were ordered into ye chamber to pitch upon a clerk: which while ye were doing the old clerk went on calling ye remainder of ye counties over: we returned William Dilworth for clerk, who was acceptable. Then the committee of appeals was appointed . . . the committee for auditing ye Yearly Meeting Accts was appointed: then the Sufferings were called for, and it was proposed to print . . . A. Pearson's great case of Tythes. . . a committee was appointed to draw ye Yearly Meeting Epistle and consider the state of ye Sufferings and inspect them. The Meeting adjourned till to-morrow at three and broke up at half-past seven."—*London Friend*.

Francis C. Brading, Secretary of the London

central committee of the Lebanon Hospital for the Insane of Syria, is expected to reach this country next week, to address Friends and others on the needs of that hospital, mention of which has lately been made in our columns.

F. C. Brading is thoroughly conversant with the workings of this Institution, and has recently made addresses in Switzerland and in England which have elicited much interest in this remarkable movement.

SUMMARY OF EVENTS.

UNITED STATES.—The Phillips Trill bill was passed by the House as it came from the Senate with but little change, and has been signed by the President.

The President has signed the permanent census bill, and has issued directions in regard to carrying it out, so as to conflict as little as possible with the civil service regulations.

The steamer *Wesland*, of the American Line, was sunk off the coast of Wales on the 5th inst., during a fog, by a collision with the steamer *Harmonides*. All the passengers were saved but one man and a child.

The Cunard steamer *Etruria* had her propeller broken in mid-ocean, and has been towed to the island of Fayal, in the Azores.

A company has been incorporated in Trenton, N. J., with a capital of \$1,000,000, to construct a tunnel underneath the Delaware River to connect Philadelphia and Camden. It is proposed to have four passageways in it, two for electric passenger cars and two for freight.

The discussion of reciprocity with Cuba has been continued, but without definite results, mainly on account of the opposition of those interested in the beet root sugar industry.

A snowstorm on the 5th inst. was general throughout Pennsylvania, the fall in some sections reaching two feet. It extended into the Ohio Valley, Maryland, Virginia and New York State.

A recent meeting of the Commercial Cable Co. in New York, it was stated that "messages are now transmitted across the Atlantic and answers received in two and three minutes. Ninety-five per cent. of the Atlantic messages are expressed in code or cipher language, the words or ciphers having no connected meaning." The words or cipher groups frequently only differ from each other in single letters, yet they have widely different meanings, and an error in transmission of one of their letters might have important consequences.

The District of Columbia Court of Appeals has dismissed the injunction proceedings instituted by Delos K. Lone Wolf, chief, and others of the Kiowa, Comanche and Apache tribes, against Secretary Hitchcock, to prevent the sale and allotment of their lands in Indian Territory.

Two Boer representatives have lately had an interview with Secretary Hay, who received them as citizens and not in their official capacity. They afterwards saw President Roosevelt, and remained with him about fifteen minutes. The President listened attentively to what they had to say, and then informed them that this Government cannot, and will not, interfere with the struggle. Secretary Hay pointed out that the Government's attitude in reference to the shipment of horses, etc., to the British in South Africa, as in other matters connected with the South African war, had been strictly neutral, and that the Government had taken steps to prevent shipments of commodities to the Boer forces.

The cost of the Spanish War has been upwards of \$500,000,000. The cost of maintaining the regular army before the Spanish War was \$30,000,000, the cost of maintaining the army now is about \$115,000,000 a year, or an increase of \$85,000,000, of which the trilling increase of Philippine trade, largely military supplies, gives even a little recompense.

A ruling has recently been announced by the Supreme Court of Pennsylvania respecting the Pure Food Act of 1895, in which the selling of articles of food containing a substance injurious to health, even if that substance be as simple as a preservative, is affirmed to be an infringement of the law. The Court held that if the foreign substance added to an article of food is poisonous or injurious in any quantity the statute declares it to be an adulteration.

By the recent storms many of the collieries in Pennsylvania were flooded, by which, it is expected, some will be idle for a year or more.

Recently a train crew, four hundred miles from Chicago, talked over the telegraph wires to Chief Operator Parsons, in Chicago, by means of a recently invented railroad telephone. The inventor asserts it makes no difference whether or not telegraphic messages are being

flushed over the wires simultaneously with the telephone messages.

The Secretary of the Interior has received for submission to Congress an agreement reached with the Kansas tribe of Indians in Oklahoma, looking to abolition of tribal existence. The agreement gives each member of the tribe a homestead, which shall be inalienable and non-taxable for twenty-five years, and provides equitable distribution of the remainder of the lands among the tribe, with special reservations for school, town site and cemetery purposes. There are 100,137 acres in the Kaw Reservation, and each of the 220 members of the tribe would get approximately 445 acres and \$860 of the tribal funds.

Governor Taft has recently stated before a Committee of the House in Washington, that slavery in the Philippines was confined to the Southernmost island, where, out of a population of from 1,000,000 to 1,500,000, he estimated there were 250,000 to 300,000 slaves. Governor Taft stated that the slaves were punished by their masters, and whipping was not unknown to them, although there was little severity. The slaves were subject to sale, but he did not know of any separating of mothers from their children. He also stated that the number of slaves who had been manumitted was comparatively small.

Bills have been introduced into Congress to provide for irrigation over a large area in the West. The territory to be affected by one of the proposed bills is nearly one-half the area of the United States, and it is said that in the sixteen arid land States there are over 535,000,000 acres, or more than one-sixth of the area of the country, of public land subject to entry. Of this vast tract, only 10,000,000 acres will produce crops without irrigation.

An association has been formed in New York with a capital of \$1,000,000 to promote public education in the Southern States.

There were 508 deaths in this city last week, reported to the Board of Health. This is 84 less than the previous week and 13 more than the corresponding week of 1901. Of the foregoing, 274 were males and 234 females: 67 died of consumption of the lungs; 108 of inflammation of the lungs and of circulating meninges; 8 of diphtheria; 1 of scarlet fever; 10 of apoplexy; 12 of typhoid fever; 1 of scarlet fever, and 11 of small pox.

FOREIGN.—The British War Secretary lately stated in Parliament that the Government was feeding 300,000 men and 243,000 horses in South Africa. It is estimated that the cost of the war will amount by the 31st instant to \$80,000,000.

Assurances have been given by Russia and Germany that the trade rights of other nations in China will be assured.

Harriet A. Boyd, with a classmate from Smith College, acting in the interests of the American Exploration Society, has conducted important archaeological excavations in the ruins of a city of the Aztecs, with the help of unearthed ancient city. Large quantities of carious pottery, some iron objects, native copper, obsidian knives, implements of trade, industry and warfare also were found. It is probably one of the best examples yet discovered of the type of Mycenaean civilization of 3400 years ago.

Under the government of U. S. officials in Havana it is stated that the death rate has decreased to one-fourth of that obtaining before intervention. The deaths from yellow fever for the last eleven months were only five, and there was not a single case of smallpox, against 1,400 deaths in 1897. The sanitary officers are taking increased precautions against malaria, and hope to reduce greatly the present mortality from that disease.

Joseph Parker, a preacher in the City Temple in London, on the 6th instant alluded to the recent brewing of beer by King Edward, and to his attendance of a concert on the First-day of the week, with strong disapprobation. Continuing, he said: "If the King, who is the head of the Church and Defender of the Faith, can attend the English Sunday, what can the people do but follow in his steps?"

The general manager of the Dominion Coal Company has stated that borings made by the company near Butler's Lake in Canada, has revealed the presence of a coal deposit estimated to contain at least one billion tons of bituminous coal.

A telegram from Constantinople says: "United States Minister Leishman has presented a note to the Porte regarding the capture of Ellen M. Stone by brigands, demanding the punishment of the guilty parties. The Porte, in replying, repudiates responsibility and denies all liability." A second note has been presented to the Porte by the American Legation.

The Canadian Government has decided to build two new steamers for Atlantic passenger trade. According to information received, these vessels will be over 700 feet long, with engines of 48,000 horse power, and have a speed of 25 knots. This will be a great advance on any-

thing hitherto attempted in the British mercantile fleet. The traveling savings bank has been inaugurated by authorities in the French province of Alsace. It is a bank with seats for driver, two clerks and a cashier, and is arranged so that persons on the road can place money on it without entering the vehicle, and the table is a safe, into which the money drops through slot. A proper receipt is given and an entry made in the book. This is encouraged by making deposits.

The population of Australia has increased by 10 per cent. during the last decade.

Under the auspices of the German government, monuments are being carried out on the road running from Berlin and Zossen, with the object of running trains at the high speed of 125 miles an hour.

Two-thirds of the letters which pass through the post-offices are written by and sent to people who speak the ten or twelve principal languages spoken in the British Empire.

The official report of the committee which has been investigating the recent earthquake at Shamaka, in Caucasasia, shows that 126 villages, with a total population of 100,000, were included in the disaster. 3,946 houses were destroyed and 3,943 damaged, the dwellings, 1,463 farm buildings, 41 mosques, 1,000 stores and 3 school houses were seriously damaged.

NOTICES.

WANTED.—A young woman Friend, a graduate Westtown Boarding School, with one year's experience double entry bookkeeping, desires a position.

Address "H," office of THE FRIEND, Philadelphia.

WANTED.—A Friend and wife desire, for a reasonable compensation, to care for an elderly, feeble Friend in their homes. Address, "K. G., office of THE FRIEND, Philadelphia.

TRACT ASSOCIATION OF FRIENDS.—The annual meeting of the Association will be held in the Committee Room of the Arch Street Meeting-house, on Fourth-day evening 26th inst., at 8 o'clock. Reports of Auxiliary Associations and an interesting report of the Managers will be read. All are invited to attend.

HENRY B. ABBOTT, Secy.

WESTTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to restriction and discipline should be addressed to W. F. WICKESMAN, Principal.

Payments on account of board and tuition, and munificences in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

WESTTOWN BOARDING SCHOOL.—For convenience of persons coming to Westtown School, the stage will train leaving Philadelphia 7:16 and 8:18 A. M., and at 4:32 P. M. Other trains are met when requested. Stage fare, fifteen cents; after 7:30 P. M., two cents each way. To reach the school by telegraph, West Chester, Phone 114x.

EDWARD G. SMEDLEY, Secy.

Friends' Library, 142 N. 16th St., Philadelphia. Open on week-days from 11:30 A. M. to 2 P. M., and 3 P. M. to 6 P. M., also on evenings in which Friends' Meetings are held, from 7:45 P. M. to 9 P. M. At the books added Third Month 5th, 1902, are:

BALFOUR, Graham.—Life of Robert Louis Stevenson.

BARTON, G. A.—Sketch of Semitic Origins.

BROOKS, Geraldine.—Dames and Daughters of the Republic.

HAGGARD, H. R.—Winter Pilgrimage.

HARWOOD, Norman.—Life of George Washington.

MASTELINK, Maurice.—Life of the Bee.

MARSHALL, Beatrice.—Emma Marshall.

MUR, John.—Our National Parks.

POWELL, L. P. (ed.).—Historic Towns of the Western States.

TWEEDIE, E. B.—Mexico as I Saw it.

WHITE, Mary.—How to Make Baskets.

WILLIAM H. PILE'S SONS, PRINTERS, No. 422 Walnut Street.

DIED, at Salem, N. J., on the fourth of Second Month 1902, RICHARD WESTAR, in the eighty-first year of his age, a member of Salem Monthly Meeting of Friends. His decline was gradual, during which he was favored to experience the work of grace so going on in his heart to fit him, we humbly trust, for an entrance into one of the mansions prepared by our Saviour for those that love Him; and to exclaim from the depths of his heart, "O Lord, Oh, my soul!"

from the rising of the sun, even unto the
town of the same, my name shall be great
the Gentiles; and in every place incense
offered unto my name, and a pure offer-
ing my name shall be great among the
people, saith the Lord of hosts" (Mal. i: 11).

My friends, who are gone or are going over to
and make outward plantations in America,
bar own plantations in your hearts, with
the Spirit and Power of God, that your own
and all things be not hurt. And in all places
you do outwardly live and settle, invite
Indians, and their kings, and have meet-
ings with them or they with you; so that you
take inward plantations with the light and
of God (the gospel) and the grace and
and spirit of Christ; and with it you
answer the Light, and Truth and Spirit of
the Indians, their kings and people;
and by it you may make heavenly planta-
tions in their hearts for the Lord, and beget
to God, that they may serve and worship
and spread his truth abroad; and so that
they may all be kept warm in God's love,
and zeal for the honor of his name,
his name may be great among the
people, or gentiles; and ye may see over,
overseers with the Holy Ghost, which
fore the unclean Ghost got into man and
the world. So with this Holy Ghost you may
not oversee, that the unclean ghost and
works may be kept out of the camp of
—George Fox, 1682.

REVISION.—Our books of con-
fession are those that need revision. We need
our criticism of ourselves than we are
going to undergo. "Examine yourselves
and ye shall be in the faith." Incited by
the promise of being sons and daughters of the
Almighty, "let us cleanse ourselves from
defilement of flesh and spirit perfecting
ourselves in the fear of the Lord."
The best study also for getting the Scrip-

tures into their right place and relation to us
is to "study to show thyself approved unto
God." The closer we rise to the Fountain the
juster will be our appreciation of every stream
from the Fountain. "Ye do err," said Jesus,
"not knowing the Scriptures, neither the
power of God." But it is that same power
by which the Scriptures are made known to
any.

Let us be satisfied with naught short of the
highest criticism of ourselves and our reading,
even "the spirit of wisdom and revelation in
the knowledge of Him."

PAGANISM'S PERSISTENCE.—Recently in Ger-
many a clergyman preached on the theme
"Woden and Christ," after which the so-called
"Lord's Supper" was distributed. A German
paper comments on the rationalism which
preaches mythology, as just as unevangelical
as that which preaches skepticism.

But what of the unchristliness of practicing
mythology as well as preaching it? The Ger-
mans may not, indeed, join us in naming their
mid-week day Woden's-day, but they have,
with professing Christians generally, endorsed
heathen mythology in their names for other
week-days as well as for months. Whence this
fascination in those bearing the Christian
name to hold fast the form of unsound words?

Still, we suppose that such exposure of
Christendom as in part Pagan, is true to fact.
So long as it holds Christ in the name and not
in the Spirit, we may quite understand its
dual profession of "Woden and Christ," and
especially of Tuisco, honored in "Tuesday,"
and in militarism daily, as the war-god, by na-
tions professing Christ, the Prince of Peace.
But it is as impossible to serve God and Mam-
mon, as Christ and Mars.

Though Christendom honestly stigmatize
itself as it may in its idol names for days and
times until wars shall cease unto the ends of
the earth, yet let the handful of people who
profess the doctrine of Christ in its Spirit
and purity, be a people of a correspondingly
pure speech and pure language.

Common Sense and War.

It is something for the cause of Peace on
earth when special wars are serving to bring
into disrepute War itself. We are not dis-
pleased that war is getting robbed of its glam-
or by the very spectacle of wars now drag-

ging their ghastly and weary length along, or
by the disrobing of its essential infernalism
by congressional investigation.

We cannot commend personal ridicule for
the promotion of any good cause. But ridi-
cule, not of persons but of a wrong principle,
may, in a proper spirit sometimes be justifi-
able. It serves as one sign in popular senti-
ment that war has, by its essential sin, made
itself ridiculous, when a considerable book is
published consisting of a scathing satire and
caricature of militarism. But we fear that
such treatment will stir up not so much the
pure mind as bad blood, by its irritating finger
of scorn pointed at special wars and half-dis-
guised personalities appearing in them.

Christianity is still too superficially under-
stood in any so-called Christian country, to be
recognized as the paramount reason against
war, but still its spirit is at work in unrecog-
nized ways. If only war becomes evident as
contrary to common sense, Christianity has
gained a point. To this purport the Philadel-
phia Times says in an editorial:

It has been often said of the time in which
we live that it is pre-eminently the age of
common sense. If this were so, would en-
lightened nations continue to go to war?

It may be admitted that enlightenment in
the general sense has increased almost be-
yond measure since the days of Plato; that
men know vastly more of practical philosophy
than they did when Jesus preached the Sermon
on the Mount. If this be so, the useful ap-
plication of knowledge in the moral and even
in the political field, has not kept pace with
its development . . .

What is the use of this waste of substance
and energy, to say nothing of the never-to-be-
measured human anguish caused by the war?
It is indeed a disgrace to mankind, a strange
commentary upon the best teachings of religion,
morality and utilitarian philosophy.

Selected for THE FRIEND.

OUR MASTER.

JOHN G. WHITTIER.

Who hates, hates Thee, who loves, becomes
Therein to Thee allied.
All sweet accords of hearts and homes
In thee are multiplied.

Deep strike thy roots, O heavenly vine,
Within our earthly sod,
Most human and yet most Divine,
The flower of man and God.

O Love! O Life! Our faith and sight,
Thy presence maketh one,
As through transfigured clouds of white
We trace the noonday sun.

The Bible.

(Continued from page 27.)

The prophecies by Isaiah, Jeremiah, Ezekiel, Nahum, Habakkuk, Zephaniah and Amos respecting the destruction of both Babylon and Nineveh and the subjection of Israel and Judah in Palestine, are wonderfully confirmed by the light shed on the condition of these cities and countries through the reports of travelers in these regions for centuries past. It may be well to rehearse some of these prophetic utterances and the circumstances of their fulfillment.

THE DOOM OF JUDAH AND JERUSALEM.

Jeremiah, Chapter 20th, 4th and 5th verses: "For thus saith the Lord, Behold I will make thee (Jerusalem) a terror to thyself and to all thy friends; and they shall fall by the sword of their enemies, and thine eyes shall behold it, and I will give all Judah into the hand of the king of Babylon, and he shall carry them captive into Babylon, and shall slay them with the sword.

"Moreover I will deliver all the strength of this city, and all the labors thereof, and all the precious things thereof, and all the treasures of the kings of Judah will I give into the hand of their enemies, which shall spoil them, and take them, and carry them to Babylon."

Jeremiah, Chapter 25th, verses 1 to 12 inclusive:

"1. The word that came to Jeremiah concerning all the people of Judah in the fourth year of Jehoiakim the son of Josiah king of Judah, that was the first year of Nebuchadnezzar king of Babylon;

2. The which Jeremiah the prophet spake unto all the people of Judah and to all the inhabitants of Jerusalem, saying,

3. From the thirteenth year of Josiah the king of Ammon king of Judah even unto this day (that is the three and twentieth year), the word of the Lord hath come unto me, and I have spoken unto you, rising early and speaking; but ye have not hearkened.

4. And the Lord hath sent unto you all his servants the prophets, rising early and sending them; but ye have not hearkened, nor inclined your ear to hear.

5. They said, Turn ye again now every one from his civil way and from the evil of your doings, and dwell in the land that the Lord hath given unto you and to your fathers forever and ever;

6. And go not after other Gods to serve them and to worship them and provoke me not to anger with the works of your hands; and I will do you no hurt.

7. Yet ye have not hearkened unto me, saith the Lord; that ye might provoke to anger with the works of your hands to your own hurt.

8. Therefore thus saith the Lord of hosts; Because ye have not heard my words,

9. Behold, I will send and take all the families of the north, saith the Lord, and Nebuchadnezzar the king of Babylon, my servant, and will bring them against this land, and against the inhabitants thereof and against all these nations round about, and will utterly destroy them, and make them an astonishment, and an hissing, and perpetual desolations.

11. And this whole land shall be a desolation and an astonishment; and these nations

shall serve the king of Babylon seventy years. 12. And it shall come to pass when seventy years are accomplished that I will punish the king of Babylon and that nation, saith the Lord, for their iniquity, and the land of the Chaldeans, and will make it perpetual desolations."

THE FULFILMENT OF THE ABOVE PROPHECIES AGAINST JERUSALEM.

Jeremiah Chapter 39th, verses 1 to 14 inclusive:

"1. In the ninth year of Zedekiah king of Judah, in the tenth month, came Nebuchadnezzar king of Babylon and all his army against Jerusalem, and they besieged it. [590 B. C.]

2. And in the eleventh year of Zedekiah, in the fourth month, the ninth day of the month, this city was broken up.

3. And all the princes of the king of Babylon came in, and sat in the middle gate, even Nergal-sharezer, Samgar-nebo, Sarsechim, Rabarisai, Nergal-sharezer, Rab-mag, with all the residue of the princes of the king of Babylon.

4. And it came to pass, that when Zedekiah the king of Judah saw them, and all the men of war, then they fled and went forth out of the city by night, by the way of the king's garden, by the gate betwixt the two walls; and he went out the way of the plain.

5. But the Chaldeans' army pursued after them, and overtook Zedekiah in the plains of Jericho; and when they had taken him, they brought him up to Nebuchadnezzar king of Babylon to Riblah in the land of Hamath, where he gave judgment upon him.

6. Then the king of Babylon slew the sons of Zedekiah in Riblah before his eyes; also the king of Babylon slew all the nobles of Judah.

7. Moreover he put out Zedekiah's eyes, and bound him with chains, to carry him to Babylon.

8. And the Chaldeans burned the king's house, and the houses of the people with fire, and brake down the walls of Jerusalem.

9. Then Nebuzar-adan, the captain of the guard carried away captive into Babylon the remnant of the people that remained in the city, and those that fell away that fell to him, with the rest of the people that remained."

The foregoing prophecies respecting the invasion of Judea by Nebuchadnezzar, and the siege and capture of Jerusalem and their fulfillment, as narrated by Jeremiah, are further supplemented by the return of those captive Jews from Babylon after seventy years, who came by the decree of Cyrus king of Persia, so circumstantially recorded in the books of Ezra and Nehemiah.

King Cyrus here mentioned is predicted by the prophet Isaiah in Chapter 44th and 45th, [712 B. C.] one hundred and seventy-six years before his birth, [536 B. C.] in the following words:

Isaiah Chapter 44th.

"24. Thus saith the Lord, thy redeemer, and he that formed thee, I am the Lord that maketh all things; that stretcheth forth the heavens alone; that spreadeth abroad the earth by myself;

25. That frustrated the tokens of the liars, and maketh diviners mad; that turneth wise men backward, and maketh their knowledge foolish;

26. That confirmeth the words of his vantage, and performeth the counsel of his sengers; that saith to Jerusalem Thou shalt be inhabited; and to the cities of Judah, shall be built, and I will raise up the decayed places thereof;

27. That saith to the deep, Be dry, and I will dry up thy rivers.

28. That saith of Cyrus, He is my shepherd and shall perform all my pleasure; saying to Jerusalem, Thou shalt be built; to the temple Thy foundation shall be laid. Chapter 45th, verses 1, 2, 3:

1. "Thus saith the Lord to his anointed Cyrus, whose right hand I have holden, to due nations before him; and I will loose loins of kings, to open before him the closed gates; and the gates shall not be shut.

2. I will go before thee, and make crooked places straight; I will break in pieces the gates of brass, and cut in sunder the door of iron;

3. And I will give thee the treasures of darkness, and hidden riches of secret place, that thou mayest know that I, the Lord, which call thee by thy name, am the God of Israel."

"13. I have raised him up in righteousness, and I will direct all his ways: he shall build my city, and he shall let go my captives, not for price nor reward, saith the Lord of hosts."

D. G. Hogarth in his work entitled "Authority and Archaeology." London, 1896, 122, mentions the discovery by T. G. Pinnington among the inscribed tablets found at the ruins of Sippar in the valley of the Euphrates deposited in the British Museum, of tablets which relate to the conquest of Babylon by Cyrus and his benevolent disposition. He stated by these records to be "King of Persia" in Elam in the year 549 B. C. In year 546 B. C. he is styled "King of Persia." It is reasonable to suppose that he had an interval since 549 effected the conquest of Persia. In 538 B. C. his attack upon Babylon begins. The inscription reads: "On the 16th (of the month Tammuz, corresponding to the Sixth month) Gubarn governor of the city of Gut, and the soldiers of Cyrus, with fighting entered Babylon. In consequence of delaying, Nabonaid (the king) was taken prisoner in Babylon. On the third day of the month (tenth month) Cyrus entered Babylon. Peace for the city he established. Peace to Babylon did Cyrus proclaim."

Babylon was not destroyed at this time, as proved by the humane treatment displayed by Cyrus towards the inhabitants of the city, which had offered no resistance to his government. The final downfall seems to have been rather gradual than sudden, and began at 529 B. C., culminating in the abandonment of the City, as their capital, by the Kings of Persia and building Seleucia B. C. 322. Ctesiphon in its vicinity which drew away the inhabitants and caused it to be deserted.

Layard gives a synopsis of its history, quoted below.

"It may not be out of place to add a few remarks upon the history of Babylon. The time of the foundation of this celebrated city is still a question which does not admit of satisfactory determination, and into which will not enter. Some believe it to have been

at a comparatively recent date; but if, as Christian scholars assert, the name of Babylon is found on monuments of the eighteenth century dynasty, we have positive evidence of its existence at least in the fifteenth century before Christ.* After the rise of the Assyrian empire, it appears to have been at the very end of the direct rule of the kings of Assyria, and at another to have been governed by its own independent chiefs. Expeditions against Babylonia are recorded in the Assyrian inscriptions yet discovered in Assyria; and it has been seen, even in the time of Sennacherib and his immediate predecessors, that the Assyrians were still frequently sent against rebellious inhabitants. The Babylonian empire was, however, almost absorbed in the Assyrian empire, the then dominant power of the East. When this great empire (Assyria) began to decline, Babylon rose for the last time. Media and Persia were equally ready to overthrow the Assyrian yoke, and at length the armies of Cyaxares and the father of Darius captured and destroyed the city of the Eastern world. (Nineveh) 607

(To be continued.)

For "THE FRIEND."

Prelacy Upholding Wordliness.

A Roman Catholic priest of this locality, in stating the fact that the highest local ecclesiastical dignitary of his denomination, together with many priests, have lent their prestige to euchre parties for professedly good uses, comments as follows in a private letter concerning the so general prevalence of such parties, halls, bazars, euchres, etc. "It is sad to think that churchmen are engaging themselves of these demoralizing means for raising funds to promote the worship of God. Certain it is in our day that church people employ whatever means Satan can make profitable for raising money. . . . They are raising up through their progressive work a nation of gamblers. Even the little children are growing nervous in their eagerness to win in games of chance, and their parents as well as their moral nature is fast being destroyed. Looking as you do from a distance at these things, you cannot form any adequate notion of their viciousness. I know of a priest who has sternly his face against these demoralizing means, who has raised his voice against them and who has threatened to invoke the ban of the courts in suppressing euchres and gambling. He is not only avoided as a crank, as if he had the small pox, he is not only to struggle with poverty, a martyr to his convictions, but it was seriously thought of moving him from his charge and thereby punishing him. It was alleged that his church could be prosperous, that its treasury could be made equal to all demands upon it, if it did not stand so much aloof from his people, if he mingled with them in their amuse-

ments, if he had euchres and fairs like other priests and was thereby brought more in touch with his people. In fine, it was said that all that was wanted to make religion flourish in the parish was a young, energetic pastor up in modern ways of raising money. "I really do not see where the reformation in these matters can begin, but that it will begin I am not without hope. There are too many good people in the world to-day for God to give it up entirely to the *hostis humani generis* who is at the bottom of the movement to bring the followers of Christ into a coalition with those who favor the stage, the dance, the game of chance, and the secret society. It is, perhaps, when the human has failed against these that the Divine will destroy them. Let us pray that the Lord may arise and that his enemies may either be converted or put to flight."

Occupying our allotted places in the Lord's vineyard and being faithful therein, seems to be the divinely appointed way of overcoming "the mystery of iniquity that doth already work," and that without the interposition of the carnal arm or weapon; for "the Lord shall consume," says the Apostle Paul, in writing to the Thessalonians, "with the spirit of his mouth, and shall destroy with the brightness of his coming." So, while the priest just quoted may seem like the "speckled bird" in upholding the testimony for Truth so far as he sees it, yet whether others "will hear, or whether they will forbear," the light of his candle, we may believe, will not be without its illuminating service. And here, in considering the condition (it is not a restricted one) which his letter unfolds, the sentences of Jeremiah, twelfth chapter, appear applicable:

"Mine heritage is unto me as a speckled bird, the birds round about are against her; come ye, assemble all the beasts of the field, come to devour. Many pastors have destroyed my vineyard, they have trodden my portion under foot, they have made my pleasant portion a desolate wilderness. They have made it desolate, and being desolate, it mourneth unto me; the whole land is made desolate, because no man layeth it to heart." Yet it is only at the end of his parable, in contemplating a condition of general unfaithfulness and spiritual alienation, that the prophet is moved to declare—"But if they will not obey, I will utterly pluck up and destroy that nation, saith the Lord." Are not these warnings, by many "pastors" as well as others, kept too much out of view? The message of love need not be retired, but rather emphasized, because of them.

J. W. L.

THE DIVINE MOMENT.—One great sign of the practical recognition of the "divine moment" and of God's habitation in it, is constant calmness and peace of mind. Events and things come with the moment; but God comes with them too. And He comes, written all over with the divinity of wisdom and the glory of the promises. So that if He comes in the sunshine, we find rest and joy; and if He comes in the storm, we know He is King of the storms, and our hearts are not troubled. He is an everlasting tranquility; and when we enter his holy tabernacle our souls necessarily enter into the tabernacle of rest.—Times.

Selected.

PUT-OFF TOWN.

Did you ever go to Put-off town,
Where the houses are old and tumble-down,
And everything tarries and everything drags,
With dirty streets and people in rags?

On the street of Slow lives Old Man Wait,
And his two little boys named Linger and Late
With unclean hands and touselled hair,
And a naughty little sister named Don't Care.

Grandmother Growl lives in this town,
With her two little daughters called Fret and Frown;
And Old Man Lazy lives all alone
Around the corner on Street Postpone.

Did you ever go to Put-off town
To play with the little girls, Fret and Frown,
Or go to the home of Old Man Wait,
And whistle for his boys to come to the gate?

To play all day in Tarry street,
Leaving your errands for other feet?
To stop, or shirk, or linger, or frown,
Is the nearest way to this old town.

Nature's Seed Planting.

"Nature," says the Autocrat of the Breakfast Table, "always has her pockets full of seeds and holes in all her pockets." Certain it is that nature spares no pains in providing for the perpetuation of plant-organisms. Every wild plant furnishes myriads of seeds, full allowance being made for waste and loss, and so effective are the means used in their distribution and planting that a very few years are sufficient to spread a new variety over wide areas.

During the glacial period the ice masses which ploughed the continents bore with them seeds and roots. The rivers and ocean currents took up the work, bearing abroad the seeds of different latitudes. In Louisiana and Mississippi the flora peculiar to the Rocky Mountain heights where the Missouri has its source, four thousand miles away, find lodgment on the shores of the Mississippi River and flourish under the beams of the glowing semi-tropical sun. On the western coasts of Ireland and England are found the plants of the plains of the Amazon and the Orinoco, the West Indies, and Florida, borne across the Atlantic by the current of the Gulf Stream.

The volcanic eruptions in the Island of Java in 1883 furnished a remarkable illustration of the facility with which nature is able to replant with vegetable life a desolated region. The centre of the disturbance was the island volcano of Krakatoa, which sent forth floods of molten lava and burning ashes, so that every living thing, whether animal or vegetable, was destroyed. The island, in the words of an observer, was "red hot." Only four years after this event, a naturalist, visiting this spot, found that nature, massisted by man, had stocked the island with two hundred and forty-six varieties of plants. The winds, the waves, and the birds had been the only agents.

The birds do a great share in this work. Darwin found by examination that particles of earth adhering to the feet of migrating birds generally contain seeds. From a ball of earth carefully removed from the leg of a wounded partridge he raised eighty-two plants of five different species. From six and three-quarters

ters ounces of earth gathered from the feet of birds which frequent the shores of lakes and ponds, he raised, under glass, no less than five hundred and thirty-seven plants. The plumage of migrating birds also contain, many kinds of seed which adheres to them as they stop to feed or to sleep on their way to distant lands. Many seeds are carried in the stomachs of herbivorous animals, and thus make long journeys.

Some years ago, after an unusual prevalence of high winds from the north, the Canada thistle made its appearance in localities from the Dakotas to the Gulf of Mexico. The wheat fields of the Northwest and the cotton and sugar plantations of the South were all planted by the winds with this most unwelcome immigrant.

There are many seeds, which like the thistle, depend almost entirely upon the winds for transmission and distribution. Some of them, as the maple and the ash, have wings, and literally fly on the wind. The seed of the maple tree has an elaborate arrangement for aerial transportation. It has wings like those of a locust or large grasshopper. When the seed is detached from the tree, even if there is no breeze, it does not fall directly to the ground, but, by its peculiar construction, it acquires a spiral motion which carries it at least some yards from beneath its starting-point. When a wind is blowing, these seeds often twirl through the air for miles before they finally sink to the earth to find a new home and to found a new maple grove.

Some time ago appeared an account of maple trees growing to the height of twenty-three feet upon the summit of a tower one hundred and ninety-seven feet high in Greensburg, Decatur County, Indiana. A grove of maple trees surrounds the Court-house, of which this tower forms a part, and the winged seeds, borne aloft by the winds, have taken root and flourish upon the roof of the tower.

All varieties of asters have seed furnished with soft feathery pinions. The gentlest zephyr is sufficient to waft them over field and meadow, and plant them by every stream and pathway, but the storm wind lifts them to the clouds, and they fly to far-off regions. Millions fall into the waters, which do their share in planting them on distant shores; other millions perish, but nature's pockets never become empty.

The dandelion shows an almost human intelligence in the sudden growth of the flower stem when the seeds begin to ripen, to exactly the height which enables it to rear its crown of feathered arrows above the surrounding growths, so that the breeze may bear the seed away and plant it. Borne high upon the wind, it sails point first, arrow-like, and falls into the earth in the most favorable position for taking root. The country children blow the seeds from the stalk to see whether "mother wants me." If the seed all fly away at one breath, the child must hurry home.

The jewel-weed, or wild touch-me-not, growing luxuriantly by every stream and pond, has at this season the ripened seeds in little round pods, which, when the breeze shakes the branches, explode like tiny pop-guns, scattering the seed to a considerable distance around.

The Spanish-needle, all the burr-tribe, and the "Beggars'-lice" have hooks or claws which

catch on every passer-by, whether man or beast and so find means to distribute themselves. We bring these hangers-on, clinging to our clothing from every autumn walk through woods and fields. Sometimes we pause on our way to free ourselves from these incumbrances; sometimes we bring them home with us; in any event, some of them find lodging in the earth, and next spring there is a new group in a new place. Animals and birds do their share in planting these varieties in the same manner. It is strange that these are all troublesome weeds which one would gladly see perish. Nature seems more persistent in her efforts to plant them than many more favorite plants.

It seems, indeed, that only those plants which do not serve to nourish either man or beast are supplied with these ingenious devices for transmission and self-planting. In the case of plants used for food, there is security that the seed will be planted and cared for.

A writer on this subject speaks of the "Rose of Jericho," which is an Eastern variety of our common "tumble-weed," belonging to the botanical family of "cruciferae." When the seeds ripen the plant bends to its branches, forming a ball with the seed inside. When quite dry, the lightest breeze suffices to break it from the parent stalk and away it goes, rolling and tumbling over the ground, scattering its seed in its progress.

In the great valley of the Amazon, when the winds break off the massive plumes of the tall pampas grass, they roll up in great white spheres several feet in circumference and go bounding over the vast level plains, distributing the seed in the same manner. It was in allusion to this device that David wished that his enemies might be made "like unto a wheel, as the stubble before the wind."

The flora of the Azores Islands is said to be exclusively such as is adapted to be planted by these agencies of nature. The only trees and shrubs of these islands are such as bear small berries and are indigenous to the southwest of Europe, while the oak, chestnut, apple, and others growing in the same latitudes, but not adapted to conveyance by such means, are entirely absent. The flora of these islands comprises four hundred and thirty-nine species; forty-five have winged seed, sixty-five very minute, hard-shelled seed, thirty-five have such seed as are eaten by birds, and eighty-four others are well adapted to conveyance by wind or water. There is probably no better example of nature's seed-planting than in the Azores, which are nine hundred miles distant from the nearest land.

When one considers the subtle, silent ways in which the clothing of the earth in robes of verdure is accomplished, the mind is filled with wonder and admiration of the ceaseless forces which conserve the life and care for the continuance of those creations which are entirely independent of the care and notice of mankind.

"O Nature, gracious mother of us all,
Within thy bosom many myriad secrets lie
Which thou surrenderest to the patient eye
That seeks and waits."

—Francis M. Butler in *Evening Post*.

If religion has done nothing for thy temper,
It has done nothing for thy soul.

For "THE FRIEND."

MY STRENGTH.

I sat in the deepening twilight
With faith that was weak and dim;
The dear Lord stood beside me,
But I had no thought of Him.

My spirit was weary of sinning;
But my blind faith could not see
The love of the pitying Saviour,
E'en then so near to me.

And looking upon all the failures,
The wrong and sin of the day,
The many times I had left my Lord
For the broad and sinful way,

"How can I be called his disciple,
His child?" I wailed criedly;
And unto my sorrow and weakness
My Saviour gently replied:

"Child, is it thy strength that shall conquer
This daily temptation and sin?
Thy righteousness that shall help thee
Life's victories to win?

"Trust not in thyself; but when weary,
And longing from sin to be free,
Look upward for help through the trial;
"My grace is sufficient for thee."

Then I turned away in the twilight,
With faith growing strong and clear;
I had not known through the weary day
That the Lord had been so near.

And now when my spirit is weary,
And my way I cannot see,
I think of the loving, helpful words
That the dear Lord said to me,

Till, with faith that no longer is troubled,
His face I can almost see,
While I know, though my strength is weak,
His grace is sufficient for me.

MILLIE COLCORD

THE SECRET.

HARRIET BEECHER STOWE.

"Thou shalt keep them in the secret of Thy presence
from the strife of tongues."

When winds are raging o'er the upper ocean,
And billows wild contend with angry roar,
'Tis said, far down beneath the wild commotion
That peaceful stillness reigneth evermore.

Far, far beneath, the noise of tempests dieth,
And silver waves glide, ever peacefully,
And no rude storm, how fierce so'er it fieth,
Disturbs the Sabbath of that deeper sea.

So to the soul that knows Thy love, O Purest!
There is a temple, sacred evermore!
And all the babble of life's angry voices
Dies in hushed stillness at its peaceful door.

Far, far away, the noise of passion dieth,
And loving thoughts rise ever peacefully,
And no rude storm, how fierce so'er it fieth,
Disturbs that deeper rest, O Lord, in Thee.

O Rest of rests! O Peace serene, eternal!
Thou ever livest, and thou changest never;
And in the secret of Thy presence dwelleth
Fullness of joy, forever and forever.

THE "Era of the Maccabees" began B. C. 166, when Judas Maccabaeus assumed the leadership of the Jews, who had determined to throw off the yoke of Antiochus Epiphanes. The revolt was successful, and the Asmonean kings ruled Judea until its conquest by the Romans. The Jews styled the Maccabees the "Era of Kings."

For "THE FRIEND."

Reminiscences.

(Continued from page 275.)

paragraph at the head of "Reminiscences" our last number was not understood in verse, till too late to change its title.]

There is to be felt a perceptible comforting atmosphere surrounding some that is usually absent when in the company of

of those whose dwelling place is in the of Truth, that the former experience is ad-joined.

It was manifestly the case in the company late highly and justly esteemed friend JOSEPH HEALY, of Ducks Co., Pa. His presence seemed to bring with it a ray of al sunshine. In his matter and manner is altogether original, both in his religious communication and in conversation, making company very enjoyable to both old and young. Sometimes his conversation would naturally like a stream of water into an arid religious communication, when his words would mellow down into a cadency that is stillness, and a holy and a precious unity over the company by which he was aided. Comparatively poor as to this world's goods, he was yet possessed of those more precious gifts recommended by apostle, Faith, Hope and Love, that make rich, not only in this world, but in that which is of far more importance, in the world to come.

It was at one time on a religious visit to the neighborhood of Westtown Boarding School and felt it right to appoint a meeting at the Baptist meeting-house in the vicinity. The afternoon proved to be wet and out few came, perhaps about six women, usual in religious meetings, about half as many men. The thought passed through the mind of the writer, "Surely Christopher will preach here to-day to this small company." But he did. Years after, when Joseph Scattergood, Jr., was residing on a farm, he had occasion to employ a carpenter, who related to him the fact that he had attended that meeting and that Christopher's visit was the means of changing him from a state of nature to a state of grace. He became a consistent member of the Baptist society.

It is related that during the sitting of a Yearly Meeting he felt his mind drawn to pay tribute to the Women's Meeting. His concern has been united with by both meetings, he has his companion went in and took their part and after sometime remaining entirely withdrawn. It was understood that just at this time of his visit there was in the women's meeting considerable unsettlement and disturbance. Christopher's visit had the effect of silencing and soothing the meeting, although he said nothing. He expressed himself afterwards as having been well paid for that service.

A memoir has been published of him, a small volume of two hundred and forty-six pages, for sale at Friend's Book Store, containing interesting incidents.

The following letter written by Joseph Scattergood, Sr., to a member of the Monthly Meeting living at a considerable distance, is in-

structive, and may be helpful to others similarly situated.

PHILADELPHIA, Twelfth Month 30, 1863.

Respected Friend:

The overseers of the Monthly Meeting of Friends of Philadelphia for the Southern District, have recently been examining the list of the members of that meeting. In doing so they have had their attention called to thy remote situation and the circumstances of not having had direct communication from thee since thy removal from this city. We have heard occasionally through thy wife's family of your health, etc., but none of us have received a letter from thee giving us any account of thy situation, or how far thou hast been concerned to maintain the principles and practices of our religious Society. I was requested to write to express the interest we feel in thee as a member of our meeting, and the desire we have that thou may not be led into any practices inconsistent with our religious principles. We hope thou continues to have an attachment to those principles, though so far and so long separated from others who entertain them. But a mere attachment or admiration of them thou must be aware will be of very little avail to us, unless our conduct and conversation is regulated and made conformable to them day by day. Deprived as thou art from associating with Friends whose consistent religious deportment would be strengthening and encouraging to thee, and thrown into the society of those who may not even feel the restraints of religious or moral principles, thou must be subject to peculiar temptations, and liable to yield to them, unless thou art careful to keep on the watch. How many there are who have been led, perhaps almost imperceptibly to themselves, from the good they once knew, through association with persons of corrupt principles and wrong and sinful habits, and by unwatchfulness been induced to adopt sentiments and practices which at one period of their lives they had a clear conviction were wrong.

We shall be glad to be informed that thou hast altogether escaped this snare, and that the principles of thy early education are still dear to thee, and thou art increasingly desirous of becoming conformed to them in thy life and conversation.

We believe our religious Society was raised up to show forth the spirituality of the Christian religion and the necessity of an entire change of heart through submission to the sanctifying operations of the Holy Spirit, and outward forms and observances, however regularly performed, or more moral rectitude of conduct, are insufficient to gain acceptance in the Divine sight.

We also believe that the influences of the Holy Spirit are not confined to any particular place or time, but that the Lord is graciously pleased to visit us even when employed in our lawful business, drawing us to love and fear Him, and enabling us to offer to Him even in solitary places that worship which is in spirit and in truth. I hope thou hast secretly been convinced of this and shown the importance of yielding to his heavenly teaching and guidance.

Be assured the more we become acquainted with and obedient to Him the more we shall be drawn into inward retirement of spirit in

order to wait upon and commune with Him. And as this becomes our daily engagement, our whole conduct and conversation, as well as all our pursuits, would be regulated thereby. The desire for company would be lessened and that only sought after which would be congenial to our religious sentiments and feelings. We should be brought under concern and anxiety for our families, which would lead us to desire that they might be trained up and preserved in the way they should go, and in order for this we should embrace every opportunity for influencing them for their good. We should value the Holy Scriptures ourselves, and be often engaged in meditating upon their valuable contents, and would encourage the frequent serious perusals of them by our children, and where there was no public meeting for Divine worship within reach, we should not, I apprehend, be satisfied without sitting with our families at stated periods, and endeavoring to wait upon the Lord for spiritual refreshment and help. As this was done in sincerity and with a single eye to Him, and in his holy fear, though it might be in great weakness, He who regardeth his lonely and solitary children would, I believe, openly reward the secret exercise of those who engage therein. So that, without wishing to extend this evidence of our affectionate interest in thee, as well as thy wife, to too great a length, I desire to encourage you to attend to all your religious duties and make the performance of them your primary concern. Seek for ability to take up your daily cross, watch unto prayer, and then you will grow in grace and in the knowledge of the Divine will respecting yourselves, and be made by your humble, consistent, self-denying lives, preachers of righteousness to those by whom you are surrounded. That this may be your individual engagement and concern is the desire of your friend, JOSEPH SCATTERGOOD.

LEAD US GENTLY.

Dear Lord, thou knowest all our strivings,
The anxious thoughts and fears,
The restlessness that's nigh o'erwhelming
And thought for coming years.

Thou seest how our faith is tried and tempted,
And sore perplexed by doubt.
Come near, and in thy loving pity,
Drive all these questionings out.

We do not ask for fame or world's applaudings,
But rather what is best;
A home among thy many mansions
Where weary ones may rest.

Dear Lord, we crave thy benediction,
On sick and sad, and worn,
If Thou dost bless, earth's heaviest affliction
May patiently be borne.

In humbleness we bow before Thee,
And ask Thy guiding hand
May lead us gently, when life's day is closing,
Toward that sunset land.

F. B.

NEER not at old clothes. They are often made holy by long sacrifices, by careful foldings away, that they may last until the dear ones are provided for. If many an old coat could speak, what tales it would tell of noble heart beating underneath.—Ex.

For "THE FRIEND."

Counsels from True Witnesses.

(Continued from page 272.)

The 23rd of the Fifth Month.—"Blessed is the man that trusteth in the Lord, whose hope the Lord is, and whose heart departeth not from the living God." He shall be like a tree planted by the rivers of waters, whose leaves are green. Although these may know winter seasons, yet as their hearts do not depart from the living God, they shall be like the branches that are grafted into the true vine and the living sap abide in the root. . . . Let us be willing to yield up that that is for the fire unto the fire, and that that is for the sword, unto the sword; that we may know the will of God to be done in us and we may have a right to make use of that prayer which our Lord taught his disciples, after this manner: 'Our Father who art in heaven, hallowed be thy name, thy kingdom come, thy will be done in earth as it is in heaven.' Surely this is a great attainment, and it is nothing but the power of God that is sufficient to bring us into this estate, although many in the world are making use of these weighty words who are not truly sensible of them. It is a great thing to know the great God to be our Father by regeneration. Those that are his children by regeneration, do desire that the praise may be returned to his holy name; and that his will may be done in them as it is in heaven; and these are passive as clay in the hands of the potter. And they are concerned to ask daily bread of Him, who feedeth his people with the bread of life. They desire of Him that He will be pleased to forgive their trespasses, as they desire to forgive those that trespass against them; which the Lord giveth them power to do. And desire in their hearts that they may not be led into temptation, but may be delivered from evil, when they are beset on every hand. . . .

"The Lord may see meet to hide his face at some time from us, as He did from his servant of old, who said, 'Thou hidest thy face, and I am troubled.' Although but a little before he was so favored with the Divine presence that he thought thereby his mountain was made to stand strong; yet there was soon an alteration in his state. When the Lord hid his face, he was troubled; and so it may be with us. And when the Lord doth withdraw from us, let us examine ourselves, that we may come, by that which shows unto men what their states are, to discern whether there is any thing amiss in us, that might give the Lord just cause to withdraw from us. I believe this inquiry will not hurt any of us, any more than it did the disciples, when the Lord had told them, that one of them should betray him; and one said, 'Lord, is it I?' and another said, 'Is it I?' He that was the guilty person, was the last as we find, that asked this question; and so those now that are guilty of betraying the innocent (life) in themselves, may be the most backward in this work of examination. . . . Let us be willing to search ourselves that by the spirit of truth we may see whether we are of that number that betray the innocent or not. If, upon diligent search, we do not find that there is any willful disobedience in us to cause the Lord to withdraw from us, but it is for the trial of our faith, this I believe, will be for our good, as our

minds are stayed in patience. But if our minds are not staid in patience we may slight our own mercy, for the Lord many times may be nearer than we are aware of. . . . The Lord had regard to his servant who waited patiently for Him, and heard his cry, and brought him up out of the horrible pit and miry clay, and put a new song into his mouth, even praises to the Lord. . . . Afterwards the same evening she said, "It is well to be concerned to lay up for ourselves this true riches, which the moth or rust cannot corrupt, nor the thieves steal. Whatever it may cost us of scoffings or reproaches for it, it is worth a hundred times more than we have undergone of losses or sufferings. 'For the sufferings of this present time are not worthy to be compared with the glory that shall be revealed.' " . . .

"The promises of God are all Yea and Amen. Let us abide in it, that we may know what we have to express one to another to spring from the pure Seed, and may know it to bear rule in our hearts, and then we shall be guided thereby to take straight steps in the narrow way, which the Lord hath cast up for us. Let us be willing to wade through those exercises that it may be our lot to meet with, for the trial of faith will work patience, and patience experience and experience hope; and this will not make ashamed. Then we shall not be ashamed to bear our testimony for the Lord, neither shall we think that because our measures are but small therefore we can do Him no service, but we shall be willing to cast in our mites as the poor widow did. If we cast in all, the Lord will take notice of it.

"This I speak, that those may be encouraged in the work of the Lord, who look upon themselves as the hindermost of the flock. Let us not be discouraged, although at some times the work may not seem so prosperous as we may desire: 'Cast thy bread upon the waters,' and there is a promise that it shall be found after many days. Sow plentifully, therefore, that that you may reap plentifully; for those that sow sparingly shall reap sparingly. If sometimes we may have but a few words to speak in a meeting, then let it be our concern to sow to the Spirit, that by the light of it, we may discern what the Lord is pleased to give us for our own comfort and nourishment; and what He giveth us, to distribute to others. For we read, there is a time to be silent, and a time to speak; and at sometimes there may be more service in sitting silently in a meeting, than there would be in speaking words; and as our eyes are single unto the Lord, and our wills resigned to his pure will, this waiting in silence will be easy to us. And as in the pure light we shall come to see what and when to speak, and when to end, having a clear sight of our duty herein we shall go safely on." . . .

The 27th of the Fifth Month.—"Our natural lives are very uncertain. The time past is irrecoverable, and the time to come is very uncertain; therefore let us be concerned to make good use of this present time, and be willing to put our shoulders to the work, that the stone may be rolled from the well's mouth that we may partake together of the goodness of God. Those that gathered little manna had no lack; and those that gathered much had nothing over. My friends, there is abundance

in it; those whose gifts may be but small that they cannot gather so large a share of the heavenly manna as some may, yet if labor faithfully, according to the ability God is pleased to give them, and make an improvement of what he hath committed them, they will know that little to be content. And those that are enabled to gather more, will come to see that they have not over; and what they enjoyed yesterday will be sufficient for to-day, but they will be daily in need of a fresh supply from the of the Lord."

"There is no other name by which any can be saved but Jesus Christ. Let us all get into his name, for He hath promised that where two or three are gathered together in his name He will be in the midst of them. And He will make his promise good unto them that are truly concerned to labor to through all the opposition that stands in the way that so they may get into the name, and power of Christ, and witness Him to place of broad rivers unto them.

"We have need to be concerned for treasure that will go with us beyond the grave; this is worth suffering the loss of things for. For those that are willing to their lives for Christ's sake the same shall life eternal. But those that retain a life sin, according to the lusts of the flesh, are in danger of losing that eternal life which they come. Therefore let us not love our life unto the death, nor count anything too dear to part with, that we may win Christ. I desire that the longer we live in the world, the more our zeal for the Lord and his truth, increase. Many are the troubles of the righteous, but the Lord will deliver them out of them all. . . . It hath many times been the sincere desire of my heart to the Lord, that every secret thing might be revealed; and the Lord is just in all his ways. As we are truly willing to bring our deeds to the light in our hearing the Lord thereby will discover everything that is contrary to his will in us. The Lord is able to do all things for his people.

"Testimonies will fail, and words come an end as to us, but the word of the Lord abides forever. I desire that those who have more days in this word, may diligently attend to this engraven Word that is able to save the soul. Let us choose this for our portion.

"My desire for the sons and daughters men is, that they may not give way so much to the many cumbering things, but may choose this one thing needful, which will be able to support them in the most needful time. If we are taken with any thing short of the eternal Word, and trust in visible things, they will utterly fail."

The 31st of the Fifth Month.—"The goodness of the Lord is such to his people, that I am a present helper in the needful time, although at some times we may be ready to think that we shall fall by the hands of the enemy; y as we trust in the Lord, He that deliver David out of the hand of Saul, will deliver out of the hand of the spiritual enemy.

"Let us stay our minds in patience, in the times of poverty of spirit, and I believe we shall see the good effects of it; the Lord will teach him subjection to himself thereby. . . . It is an easy thing to believe in Him when

shines upon us and we enjoy the light of countenance; but when He withdraws it, and we see ourselves in a thirsty land, no water is, this I believe, is a trial of faith. That arm of the Lord which hath been the guide of our youth will be the stay and our guide who trust in it. When we are brought to a true sense of a spiritual thirst, and will open the fountain as in the desert. A few words at this time may suffice of the weakness I am under; but, how- ever, I once more witness the Lord to be in weakness; in a sense thereof, I praise may be returned to Him, who is the author of it forever."

2nd of the Sixth Month.—"The Lord make his people sensible of the time to be the end of the time to speak, as they are to wait for instruction from Him, to hearken to his voice, and to the voice of the servant the prophet, who said, 'Keep ye O Islands, before me; let the people be the strength.' They were to come and then they were to speak; and so it is, when we are enabled to come near the Lord we are sometimes in a capacity to do the honor of his name. . . . The Lord is more giving me cause to speak well of him, in a renewed sense of his love. This encouragement to trust in his mercy and in a state of poverty, the enemy may assuage, and may endeavor to cause us to that we shall never come to partake the sweet enjoyments any more, as we in time past; let us not believe him, he was a liar from the beginning. . . . Though the Lord's people may have sorrow for a night, yet joy will come in the morning in the dawning and breaking forth of eternal day, when the sun shall arise that shall no more down; which is for the light of Jerusalem, which hath no need of the light of the moon for the Lord God. Light thereof, and sorrow and sighing come to an end and the tears shall be wiped from all faces. Surely this is a desirability to the weary travelers, but we patiently to wait the Lord's time. Let us be willing to bear our share of sufferings, remembering what our Lord suffered for us we were enemies and aliens, and the might justly have cut us off in that, but He was pleased to show mercy to us. Let us be willing to follow Him through many tribulations, though the assistance of his Spirit, that we may be found worthy to obtain an inheritance in the kingdom which is prepared for the followers of the Lord. When we have done all, we are but as faithful servants; we have done no more than our duty to do; there is nothing to be tributed to us, nor is there any praise as unto such but to God only."

4th of the Sixth Month.—"It is the Comforter that our Lord promised He will pray the Father to send to his followers, and by his measure I am a witness of, and toward enjoyment sweetens every exercise. I desire we may all wait for it in a way of our wants, that we may receive a supply from it. There is something of it to be met with every day, and therefore we need of a supply from the Lord to enable us to go forward in the way of our duty. The goodness of God is very great,

and in a feeling sense of it, I have, at this time, renewed occasion to return the praises to his holy name." . . .

The 17th of the Sixth Month—Several friends being there to visit her, they found her very weak, but after they had spent some time in waiting upon the Lord with her, He was graciously pleased to renew the visitation of his love to her, by which she was wonderfully revived, and was publicly concerned in thankful acknowledgments of the goodness of God in supplication to Him for the continuance thereof. . . . She departed this life the twentieth day of the Sixth Month, 1722, being in the forty-first year of her age.

Items Concerning the Society.

If we could really endure we must school ourselves in the grace of repose. I think the reason the dear Friends of Philadelphia are so calm in their way of speaking and in their faces often, is because they have learned to wait in silence for God to speak.—*Phila. Ledger.*

RECENT LETTER.—"Esteemed Friend: The letter in the issue of THE FRIEND of the 22nd instant from one who evidently is deprived of the privileges of association with members of our Society, stirred my heart with sympathy. It also called to my mind an incident which occurred in an adjoining community last year.

"A young man left home several years ago and went to seek his fortune in the far West. The business in which he was engaged took him over a considerable part of the world. He crossed the Pacific several times; also, I think, visited South America several times. But all through his wanderings the memory of his Quaker home and meeting went with him. After an absence of perhaps twenty-five years he returned for a visit, and he could hardly wait for meeting day to come around, to again enjoy a quiet Friends' meeting."

"But imagine his surprise on meeting-day to find, instead of the quiet Friends' meeting of his memory, with its reverential worship and soul-inspiring communion, an 'up-to-date' meeting with a hired pastor in charge, a regular program, a trained choir, with an organ to lead, and the 'service' practically the same that he would find in an ordinary church of the world."

"I often wonder what is to be the outcome of all this. Very few meetings of Friends in this part of the country are essentially different from those of Methodists or others. And this continuous cry for change is not confined to our denomination. I understood recently that the choir in a Methodist meeting near here requested the privilege of supplying themselves with horns and violins in addition to their organ, that they might be better able to supply the demands of the times."

"We very much appreciate THE FRIEND, and desire the encouragement [of its caretakers] and that their hands may be upheld and strengthened in the work."

Western District Monthly Meeting of Philadelphia has recently adopted a letter of sympathy and counsel to each of its absent members. Such a letter to be found in both hemispheres. The Quarterly Meeting also seemed touched with a similar concern for the welfare of its outlying meetings and distant members. We have deemed it at least a coincidence that the excellent letter of Joseph Scattergood, Sr., to a member at a distance appears now among the "Reminiscences," to which we invite attention for its sound counsel.

More distant than they whom other climes contain or seas can separate, may be some of our members who are near our doors, or perhaps attending our meetings, but spiritually distant from true fellowship in Christ. Through living epistles exercises of

spirit may reach these also, but with chief benefit, it may be, to the living church so exercised.

The Tract Association of Friends of Philadelphia has during the year past circulated 72,336 copies of its publications by distribution, and has printed 631,100 copies. An interesting narrative on "Card Playing," has lately been issued as a Tract.

It is hoped that Friends will respond to the call to attend the Annual Meeting of the Association, to be held at eight o'clock on the evening of the 26th instant, and also that it may be in the hearts of some to relieve its diminishing treasury.

The Quinquennial Conference and Five Years' Meeting of those Yearly Meetings which generally have adopted the Uniform Discipline, is set to meet in Indianapolis in next Tenth Month.

Notes From Others.

"THE KILLING OF MEN."—"The killing of men under the name of war," wrote Andrew Carnegie in a letter read at the P. H. Collier dinner at the Metropolitan club, "is the foulest blot upon humanity to-day. We see much discussion as to what is or is not permissible under civilized warfare. My view is that this is a contradiction of terms. There can be no such thing as civilized warfare. We have made little progress in the path of genuine civilization, as long as we can find no better substitute for the settling of international disputes than the brutal murder of one another. As a general proposition it may be stated that the nation who refuses peaceful arbitration is responsible for the war which ensues. Sad that both branches of the so-called most highly civilized race should be guilty of the most uncivilized crimes. Let us all pray that this disgrace is soon to pass away."

My Dear Friend:—I clip and send you the above expression from Andrew Carnegie because of his noble stand on this very important question. I agree with him that there can be no such thing as civilized warfare. Men who are truly civilized do not settle their differences by fighting. There is always a better way. Hate and destruction are always detestable. There can be nothing but savagery in fighting. Love should govern men in their intercourse with each other. When intellect rules and calm reason and common sense reigns men do not fight.

Your friend,
CHARLES ALEXANDER.

WILBERFORCE, Ohio.

In the United States Senate recently the chaplain prayed for "the newspaper men." We know of no body of men for whom prayer can be more opportunely offered. They preach to vast audiences no less actual than they are unseen, and none needs more wisdom that comes from above than they.

The Greenland Eskimos may now read the Bible in their own tongue. The work of translation was started by the first missionary to Greenland in modern times, Hans Egede in 1721, and book after book has been since.

In spite of praiseworthy efforts on the part of many prison authorities, we have yet to learn how to protect society without brutalizing those who injure it; how to make penal discipline reformatory without rendering prison life attractive.—*Howard Association.*

Theodore Cuyler thinks it is not strange that conversions are so few, and that evangelical religion makes no greater headway, when multitudes have no other reading on the First-day of the week than "the godless Sunday newspapers, and but little reading during the week except the novels that pour in such an increasing deluge from the press. If parents give house-room to trashy

There is a spirit which I feel, that delights to do evil, not to revenge any wrong, but to endure all things, in hope to enjoy life in the end. Its hope is to outlive all pain and contention, and to weary out all pain and cruelty, or whatever is of a contrary to itself. It sees to the end of temptations; as it bears no evil in itself it conceives none in thoughts to any if it be betrayed it bears it; for its life and spring is the mercies and forgiveness of God. Its crown is meekness, its life lasting love unfeigned, and takes its strength with entreaty and not with contention and keeps it by lowliness of mind. In its own life it can rejoice though none else rejoice, or can own its life. It is conceived in pain, and brought forth without any to it nor doth it murmur at grief and oppression; it never rejoiceth but through suffering with the world's joy it is murdered. It alone being forsaken; I have fellowed herein with them who lived in dens and in the places in earth, who through death and this resurrection and eternal holy life James Naylor, 1660. (Said to be his testimony delivered before his departure from this life; several Friends being present.)

are favored with liberty in this day to be together for worship unmolested; a hearty desire is, that we may properly receive this mercy, for the time to some of us come before our day in this life is wherein this privilege may be in some of us be taken from us. Something in me is ready to say, The Lord forbid that it be the case; but by reason of the great affliction which has overspread the church, I dare to expect any other.—John Naylor.

are then to be risen with Christ, seek those which are above, where Christ is.—1.

Christening Without Christianity.

We have often regretted the perpetuation of that heathen superstition by which a libation of wine was poured out into the waters, by one standing on the deck of a ship, as an offering to the gods of the sea, to propitiate their favor on the future voyages of the vessel. At the launching of a ship at the present day a young maiden is usually induced to perform the same practice, by means of a bottle or goblet of wine; and to this perpetuation of the old heathen offering is now added the sacrilege of calling it a "christening."

At length we are, to our relief, enabled to note in another column, that at least one clergyman objects to the use of the term "christening" when applied to the naming of a ship, a word which really means christianizing the ship, or making it christian. Did such ceremony have the blessed effect, we should heartily commend the "christening" of all war vessels in their infancy, from this time forth.

But seeing that the so-called christening of infants is not found to have that effect, as our houses of refuge and penitentiaries abundantly evidence,—even though the clergyman was compelled by his prayer-book to call the christened, or "baptized" child as "now regenerate,"—we despair of any christianization of ships, save as those who man them are under the baptizing grace of the Holy Spirit; or any christening of men, infant or adult, save of the same Spirit. For "if any man have not the spirit of Christ, he is none of his"—any "sacrament" to the contrary notwithstanding.

How is it, asks a recent inquirer, that a line of non-ritualists extending from earliest Christian history down to our day,—like Massalians, Paulicians, Catharists, Albigenses,—"appear to have lived better, purer, more Christian lives without the sacraments than their enemies did with them? Are those beatitudes which Jesus pronounced in his sermon on the Mount better observed by those who have seven sacraments, than they are by the protestants who have only two; and are they better observed under two sacraments than they are by the Quakers, the Doukholders and other Christians who have none?"

It is a question of emphasis. The greater the emphasis that men are taught to lay on the letter and form, the more these are made a substitute for the true life and Spirit. "The

letter killeth, the Spirit giveth life." "It is the Spirit that maketh alive; the flesh profiteth nothing." They put on Christlikeness who are baptized into Christ.—No outward element was prescribed by Him.

Friend, Come Up Higher.

Besides the information lately quoted from the *Chatauquan* of a decline in membership in some Yearly Meetings which have been developing the pastorate system, local information here and there is brought to us to the same purport, that the tide begins to set away from such meetings under the name of Friends, to other churches in the same neighborhood.

Where there is nothing in point of principle to choose between the mode of worship practised in our meetings and that of others, the tide will naturally turn towards those churches which, offering every thing which we have to present, have learned to do it in better style, and are not novices in the procedure for which we, as borrowers, are indebted to them. Once admit, by adoption of them, that other churches' modes have always been the right ones and that of Friends a mistake, and we naturally become purveyors to those churches. We advertise them to our young people as right, and supply no distinctive principle of worship among ourselves to be preferred. The result appears that whenever we would gain others through compromise with their modes, we have, by stepping down from our more spiritual plane, so weakened our standing, that they have gained us, rather than we them; some they have gained bodily as their own members, others of us they have leavened into their nature even though we abide under our former name. This came from the cry, "we must conform to them in order to compete with them." And then when we got any of them, could we give them that standard which we had renounced? But let it be lifted up, if it is to draw men.

It ought to have been understood from the first, that the Society cannot expect to compete with others on any other ground than their one distinctive foundation principle, that of waiting on the immediate and manifest moving of the divine Spirit. Whatever ministry genuinely springs from this must be its own demonstration of its right to prevail. What we want is not argument that the ministry of the

Spirit is the authorized ministry, but more clear examples of it. The anointed worship of a congregation, when divinely silent, is its own impressive testimony that it is the worship that is in the beauty of holiness. By just being what we ought individually to be in the Spirit we shall make our way by the Spirit, and no argument can be stronger. "Be ye filled with the Spirit," by obedience; and "be not drunk with wine" of these artificial stimulants of an exhilaration which is mistaken for inspiration.

For "THE FRIEND."

Why We Need to Rest.

S. W. E.

When I was a little girl, more than forty years ago, this age of great industrial progress in which we now live had only just begun. Upon my first visit to Philadelphia I went in a carriage. The drive was long, but my father had time to walk back a quarter of a mile to pick up a shawl which I had thrown out; nor were we alarmed lest we should be late upon arriving at our destination.

I am glad I was born in a very funny old house, more than one hundred and fifty years old. Its quaintness seems a fitting one, for the quiet old-time ways which belong with my old-fashioned childhood, and which have now altogether passed away.

The house was built in the latter part of the 17th century. Across the ceiling of the sitting-room ran a great beam, to go under which tall men were obliged to stoop. The chimney was both wide and deep and occupied much space in both stories; in our bed-room it left a recess into which the high post bedstead and my little bed just fitted. The chimney was just even with the foot of our beds. On the other side of the chimney was a big closet with a little window in it, through which stray cats sometimes visited us to my alarm.

The windows in the house were all small, some of them wider than high. In one room was a single window perhaps two feet square, far up in one corner of the room. Another room had its single low wide window, a few inches above the floor. In one bed-room a step ran quite across the room. The parlor was a step down from the sitting-room, with no sufficient allowance for head room in the entering doorway. The pantry was one corner of the parlor with a broad partition around it. This held our precious jellies, jams and cakes.

It was in these early years that my mother essayed to can some peaches by putting paper, dipped in the white of eggs, over the jar tops to make them air tight. When she was away on a visit an ordinarily intelligent relative, opened every jar, to see if the great experiment had proved to be a success.

The first evening lamp which I remember was a lard lamp. A tin tray was its base to catch the drippings and wick trimmings. The lard was in a churn-shaped receptacle with a wick perhaps an inch wide at one end, and, if I remember rightly, a needle at the other end, with which to pick and scrape the wick very often. No chimney and no shade were needed, and it may well be thought the light was not

a brilliant one. Small were the attractions to sit up after dark, or to entertain guests around the evening lamp. Our friends came about two o'clock for an afternoon visit, and after an early tea, went home before dark. Some years later four o'clock became the arriving hour, and when in Philadelphia a courageous country woman did not reach her sister-in-law's house till six o'clock, her efforts at being stylish, I heard emphatically denounced.

Vacations were never claimed nor relaxation needed, but every few weeks, our steady old horses, jogged us around on a visit to the old homes of our parents, an expedition which usually lasted two days, but perhaps once a year those trips were lengthened to a week, and included various other visits, to other friends.

There was plenty of work the year round, with which everybody helped. Most of our food was raised and prepared for us on the farm. "Early to bed and early to rise," was to us a familiar quotation.

What I want to show very closely is the complete change which has come to children in their environment, during the past forty years and the need there is to protect our children from the evils which may result from the strain under which they live; and if possible to return, at least for a part of the year, to those conditions which are natural and therefore healthful.

Most modern children waken each morning with the feeling that it is almost time for breakfast, which has to be ready at a regular time so that father may catch his train. Once at the table, there is no time to loiter. School time will come very soon, and sometimes, it is timid little girls or lazy little boys who go unwillingly to sit or wriggle upon their seats, through the allotted hours at school. Some of them could dine leisurely if the desire to exercise their legs were not so much greater than the desire for food. Consequently dinner is eaten in haste followed by more school discipline.

Father comes home to tea with marvelous tales of what has happened through the day, and a bundle of *Scientific Americans* to be looked over. The children must have a little time to enjoy the papers before going to bed. Finally, perhaps, mother will read as they get into bed, some graphic stories of wild animals which will stimulate their brains till long after they have gone to sleep. Day after day the modern child has to work up to time, a thing entirely foreign to his instincts. Night after night he goes too late to bed, his mind overcharged with facts which interest him.

When he goes on a visit, even if it is designed for a rest, he has to be on time for the train, and watch at nearly every turn, lest a trolley car or bicycle should run over him.

There is no quiet old-fashioned composure in the lives of modern children. We see the effects on every hand. Men are shorter in stature, and women more nervous, than ever before. Adults are not equal to the constant demands upon them. Teachers and scholars declare themselves utterly worn out with thirty-nine weeks of work during the year. The most grasping employer in order to keep up the desired efficiency, is obliged to grant a two weeks' vacation to his employees. Old

timers, who ignore the need for vacation themselves broken down men much as they should be, and unable to keep modern speed.

Better hygienic care of infants, improved sanitation and greater medical skill, has increased the average longevity of the crinity, but the alarming prevalence of diseases from which people do not usually should warn us of the pressing need of spots in our lives. What can be done, that the world is going at this tremendous speed? *Stop and rest.* It is not possible while in the stream to stem the current; it is possible to reach the bank, and awhile. Get out of the old rushing stream and rest. There is no place where this is better done than when camping out in woods.

For "THE FRIEND."

What Hinders Thee?

In reading the article in No. 27 page 26 on "Spreading Religious Books," I was much impressed with the great necessity Friends keeping, or I should rather say, turning to, first principles; that we may only read and send abroad the doctrine, tenets of our early Friends, but be faithful being at heart what we want to appeal so covers my mind that we speak with our heart but our heart is far from Him in living; serving; our minds so engaged with the duties of life, as though we were drunker with wine. Wine is a mocker. It seems as though the comparison might be made thus to the Society. We stand as on the banks of a waterfall and see souls passing over into fathomless abyss. Had we been individually faithful we might not only have known salvation of our own soul, but be made instruments also in stirring others to knowledge of theirs. The only remedy for this knowledge of things, to possess what we profess, to cease from activity of self and call upon Creator as did Daniel. It is but little that is required of us; that little is in obedience to the Light within, which will either increase or yield to it, or decrease as we disregard it. We many times hinder the Spirit's progress by the outward, in not being obedient to what is made known to us. It may be we feel necessity to make a change in our address, changing the world's language makes those who profess with Friends appear fickle in the eyes of the world. Or should it be in laying down the ornaments for a meek and quiet soul, and to appear in the garb of a Friend? These things will present themselves in due season and happy for us if we choose the way plainly shown to us. We can give all that stands in the way of our peace without Saviour, when we fully realize what He does for us, that we might enjoy a life hid with Christ in God. Then shall we be able to adopt the language of the apostle, "am not ashamed of the gospel of Christ, for it is the power of God unto salvation to everyone that believeth." Yea and who will give to his blessed voice within?

Oh reader, stop and think! Is it well with thee? Is it well with thy house?

"You cannot hang your hope on this world at once. Nothing on myself; everything on Christ."

The Bible.

(Continued from page 283.)

ylon now rapidly succeeded to that position so long held by Nineveh. Unluchadnessar she acquired the power and by her rival. The bounds of the city extended; buildings of extraordinary magnitude were erected; her victorious armies conquered Syria and Palestine, penetrated into Egypt. Her commerce, now spread far and wide, from the east and the west, and she became "a land of a city of merchants."*

Her greatness as an independent nation short-lived. The neighboring kingdoms of Media and Persia, united under one monarch, profited, no less than Babylon, by the decline of the Assyrian empire, and were to dispute with her the dominion of the East. Scarcely half a century had elapsed since the fall of Nineveh, when "Belshazzar, king of the Chaldeans, was slain, and Dabbel Median, took the kingdom."† From time Babylonian sank into a mere province.

After the defeat of Darius and the overthrow of the Persian supremacy, Alexander opened its gates to Alexander, who made the city not unworthy to become the capital of his mighty empire. On his return to Media he wished to rebuild the temple of Bel which had fallen into ruins, and in that work he had intended to employ his army no longer needed for war. The Persians, however, who had appropriated the treasures of this sacred shrine, and feared lest they would have again to apply them to their military purposes, appear to have prevented him from carrying out his design.‡

The last blow to the prosperity and evenness of Babylon was given by Seleucus when he laid the foundation of his new capital on the banks of the Tigris (B. C. 322). Seleucus, already Patrocles, his general, had commanded a large number of the inhabitants to leave their homes, and to take refuge in Media, and in the province of Susiana. The city, exhausted by the neighborhood of the Persians, returned to its ancient solitude. According to some authors, neither the walls nor the temple of Belus existed any longer, and a few Chaldeans continued to dwell in the ruins of their sacred edifices.

Later, however, a part of the population appear to have returned to their former seats, the early part of the second century of the Christian era we find the Parthian king Artabanus, sending numerous families from Media into Media to be sold as slaves, and among many great and beautiful edifices still remaining in the city.

In the time of Augustus, the city is said to have been entirely deserted except by a few who still lingered amongst the ruins. Ptolemy of Alexandria declares, that in his

time (xvii: 4.

Josephus (Ant. xiii: 15). This event took place B. C. 538. The Darius of the book of Daniel he Cyrus him a Median who commanded the armies of that time, and afterwards appointed viceroys of Babylon, of the many disputed points of ancient history, see, *Expositio*, l. vii, c. 17. See Jeremy's Epistle Apocryphal book of Baruch, vi: 10, 11 and 28 for us of the captivity of the Babylonian priests. They are stripped the idols of their robes and ornaments to their wives and children. This epistle contains a curious account of the idol worship of the Baby-

lon, about the beginning of the fifth century, in consequence of the choking up of the great canals derived from the Euphrates, Babylon had become a vast marsh; and fifty years later the river is described as having changed its course, leaving only a small channel to mark its ancient bed. Then were verified the prophecies of Isaiah and Jeremiah, that the mighty Babylon should be but "pools of water," "that the sea should come upon her, and that she should be covered with the multitude of the waves thereof."**

In the beginning of the seventh century, at the time of the Arab invasion the ancient cities of Babylonia were "a desolation, a dry land and a wilderness." Amidst the heaps that marked the site of Babylon herself there rose the small town of Hillah.††

(To be continued.)

A Peacemaker.

Fred Gould had been bound out to one Hartwell, for two years, and in all that time, there had been nothing like a doll anywhere on the farm. But about a week before a little granddaughter had appeared from the city, with her arms full of them, and since then they were always cropping up first in one place and then another. With his lack of experience it was hardly to be wondered that Fred, when he came in for dinner one day should have hung his strap of books on the sofa and snapped off the entire foot of Melissa Eugenia, who lay there, smiling in her sleep.

Alice, the granddaughter, snatched her baby to her heart and grieved sadly, while Fred stood looking on, feeling like a murderer.

Late in the afternoon, as he was creeping back to the house he came upon Alice sitting on the side porch.

"Don't make any noise please, Fred," she whispered, lifting up a warning finger. "Melissa Eugenia has just got to sleep at last."

"I say," blurted out Fred, determined to be over with the speech he had been diligently preparing during the day, "I'm awfully sorry I broke your doll, I didn't mean to do it."

"Oh, well, never mind. It was just accidental. She's been in the hospital ever since, and taken all kinds of different medicines, and now she feels easier."

Fred felt easier, too. He ventured to sit down on the edge of the porch. "I thought you'd be mad," he said. "I thought girls always got mad every chance they had."

"They do not," said Alice, with dignity. Then, her round face flushing, she confessed: "I guess maybe I was a little mad just at first, but I didn't stay so."

"Why?"

"Because I knew it wasn't your fault; you didn't mean to do it. Crossness is a horrid feeling, I think, don't you? Anyway, it's generally silly."

"Silly?"

"Yes; grandmother says it is, because there's generally a mistake about it. She says that the real things to be cross with are only a few, and she thinks everybody ought

* Isaiah xiv: 23. Jeremiah li: 42.

† See an interesting Memoir on Babylon by M. de St. Croix, in the 48th volume of the Transactions of the Académie des Inscriptions et Belles Lettres, in which all the authorities on the subject of the gradual decay of the city are collected.

to be patient even with those. Grandmother believes in a lot of patience."

When supper was over and the chores were done, and Alice had gone to bed, Fred came back to the side porch and sat there by himself. He looked doubtfully across the tree tops to the chimneys of the next farmhouse.

"Of course," he said to himself, "grandmothers believe in patience, but boys don't, very much. Perhaps if they did, they wouldn't be in so many scrapes," he acknowledged with a sigh.

For some minutes longer Fred sat with his chin propped in his hands, staring at the chimneys. Then he jumped up and started through the garden gate and along the narrow path to the Hartwell farmhouse. In the yard was a boy of about Fred's age. When this boy saw Fred he lifted his head, straightened himself, and began to whistle carelessly, as though to prove to all the world that he had nothing on his mind.

Fred opened the gate and went straight in as though afraid to stop. "I say Jack," he began—making his second speech of the day—"I guess perhaps you didn't mean to tip up my boat that time, did you?"

Jack's face changed. "No, I didn't—honest," he said eagerly. "I was just in fun, and somebody pushed me or something, and she went all the way over. It—it was too bad!"

"Oh, that's all right! I say let's go nutting, next play-day."

It was starlight when Fred went back through the meadow. "I'll know enough not to look for mistakes sooner, another time," he was thinking. "It saves trouble. Even if he had upset the old boat on purpose it wasn't worth making a fuss about. I guess grandmothers know more about such things than boys do."—*Morning Star*.

DON'T FRET.—Men fret at being tied to a clerk's desk. Surely they say, any one can direct these envelopes, copy these letters, cast up these terminable columns; and, in their contempt for their life-work, they fail to see its very unimportance is giving them a better opportunity of cultivating punctuality, patience, fidelity and similar passive virtues, than they would have if they played a more conspicuous part in the world's life, or in spheres where certain other considerations nerve to supreme efforts, which in their case can only be called forth by lofty principle.

At the end of life's brief day we shall be rewarded, not according to the work we have done, but to the faithfulness with which we have endeavored to do our duty, in whatever sphere.

The servant who prepares my food or saves me the necessity of doing the many duties of my home, thus setting me free to write or minister to men, will, in God's reckoning, be credited with no inconsiderable share of the results of anything which may have been achieved through my endeavors. The great deed that blesses the race seems to be wrought by one, but it is really the result of the contributed quotas of scores and hundreds of unnamed and unnoticed workers, and these, in so far as they entered into the spirit of his labors, shall share the reward.—*F. B. Meyer*.

FOR "THE FRIEND."

Henry Zuphten, the Gospeller, Martyred in the Dittmarschen.

Lying along the easterly side of the North Sea, between the lower waters of the Elbe and the Eider, with an area rather less than one-half that of the State of Rhode Island, is the ancient district of the Dittmarschen. It is a low land of peat bogs and heather, protected by dykes from the inroads of the sea, which indeed had swept over it—a memorable flood—in 1634, when great reaches of sand overcovered what was formerly fertile soil. Possessing its own code of laws, known as the Dittmarsh Land Book, which had originated with forty-eight judges as far back as 1321, and located as their land is quite out of the ordinary routes of travel, the inhabitants have preserved to the present day the peculiarities of antiquity. For long they used the language of their Frisian ancestors. Coming under the rule of Denmark in 1559, the Dittmarschen were incorporated into the duchy of Holstein. The latter, including the territory just described, was annexed to Prussia in 1866. The ship canal from Kiel Bay of the Baltic to the estuary of the Elbe, opened by the present Emperor of Germany in 1895, passes in part along the eastern boundary of this so long secluded district.

A memorable incident of the Reformation happened there, the following recital of it being gathered from the interesting pages of D'Aubigné.

At Antwerp, at the period of the opening of the Lutheran Reformation, there was a convent of the Augustines, some of whom having been at Wittenberg, the then home of Luther and Melancthon, had hailed with joy the truths of the gospel, being emboldened to declare that salvation which is by the grace of God, in lieu of the so commonly promulgated doctrine of the sufficiency of meritorious works. The pope's legate in Germany and the local prelates, angered at this outbreak in the Low Countries of what they deemed to be heresy, caused two of the offending monks to be arrested and taken to Brussels. These recanted or otherwise satisfied the dignitaries. Meanwhile, their companions in Antwerp, in no wise overawed, preached with boldness Christ and Him crucified, multitudes of the people flocking to hear. Again the storm gathered, the convent was closed, the monks were imprisoned and sentenced to death, and an order was given out that not one stone should be left upon another of that heretical monastery. This occurred in the autumn of 1522.

Notwithstanding the above searching edict several of the monks effected their escape, one of them, named Henry Zuphten, owing his release to the sympathetic efforts of a number of women who had been reached by the Truth. Arriving at Bremen, a certain pastor of Mehlendorf in the country of the Dittmarsches, and several devout persons of the neighboring districts, having invited him to come over and declare Jesus Christ, he complied. Immediately the priestly enemy confronted him. "If he is allowed to preach, and the people give ear," said the prior of the Dominicans and the vicar from Hamburg, "we are undone." The prior passed a disturbed night, and, rising early in the morning, repaired to the wild and barren heath on which the forty-eight regents

of the country were accustomed to hold their meetings. "The monk from Bremen is come amongst us," said he, addressing them, "and will bring ruin on the Dittmarsches." The simple-minded regents, ready to believe that they would do a meritorious act by ridding the world of a heretical monk, consented to put him to death forthwith without the formality of a hearing. It was the seventh day of the week. The prior, bent on preventing Henry from preaching to the people on the following day, knocked at the door of the parsonage where the new-comer was harbored, and acquainted him with the mandate of the regents. "If it be the will of God that I should die among the Dittmarsches," said Henry Zuphten, "Heaven is as easily reached from thence as from anywhere else. I will preach." The narrative then continues.

"He ascended the pulpit, and spoke with earnestness. His hearers, moved and roused by his Christian eloquence, had scarcely quitted the church, when the prior delivered to them the mandate of the forty-eight regents forbidding the monk to preach. They immediately sent a deputation to the heath, and the Dittmarsches, after long discussion, agreed that, considering their total ignorance, further measures should be deferred till Easter. But the prior, irritated at this, approached certain of the regents and stirred up their zeal afresh. 'We will write to him,' said they. 'Have nothing to do with him,' replied the prior; 'if he begins to speak, we shall not be able to withstand him. We must seize him during the night, and burn him without giving him time to open his lips.'

"Everything was arranged accordingly. The day after Conception Day a nightfall, *ave Maria* was sung. At the signal, all the peasants of the adjacent villages assembled, to the number of five hundred, and their leaders having broached three butts of Hamburg beer, by this means stimulated their resolution. The hour of midnight struck as the party entered Mehlendorf; the peasants were under arms; the monks carried torches; all went forward in disorder, exchanging shouts of fury. Arrived at the village there was a deep silence lest Henry receiving intimation of danger, should effect his escape.

"Of a sudden, the gates of the parsonage were burst open, the drunken peasantry rushed within, striking everything in their way—tossing pell-mell, dishes, kettles, cups, and articles of apparel. They seized any money that they could find, and then rushing on the poor pastor, they struck him down, shouting, 'Kill him! kill him!' and then threw him into the mud. But Henry was their chief object in the attack. They pulled him out of bed, tied his hands behind him, and dragged him after them, naked as he was in the piercing cold. 'What are you come here for?' cried they? and as Henry answered meekly, they exclaimed, 'Down with him! down with him! if we listen to him we shall become heretics like himself!' They had dragged him naked over ice and snow, his feet were bleeding profusely, and he begged to be set on horseback. 'A fine thing truly,' said they, 'for us to furnish horses for heretics! On, on!'—and they continued dragging him behind them till they arrived at the heath. A woman, who stood at the door of the house just as the servant of

God was passing, burst into tears. 'My woman,' said Henry, 'weep not for me.'

"The bailiff pronounced his sentence. One of his ferocious escort, with a sword smote the preacher of Jesus Christ on the head. Another struck him with a staff. A monk was ordered to approach, and receive his confession. 'My brother,' said Henry, 'have I done you any wrong?' 'None, replied the monk. 'Then,' returned Henry, 'I nothing to confess to you, and you have nothing to forgive! The monk retired in confusion. Many attempts were made to set him on the pile; but the wood would not catch. Two hours the martyr stood thus in the presence of the infuriated peasantry—calm, lifting his eyes to heaven. While they were binding him that they might cast him into the flame, he began to confess his faith. 'I am a burn,' said a countryman, dealing him a blow with his fist on the mouth; 'burn; and then that, speak.' They threw him on the ground, but he rolled down on one side. John Ho, seizing a club, struck him upon the back, and laid him dead upon the burning cross. Such is the true story of the suffering of a martyr, Henry Zuphten." J. W.

THE nearness of heaven is suggested by the epithet "veil." There is only a veil between us and heaven! A veil is the thinnest and fraillest of all conceivable partitions. It is a fine tissue, a delicate fabric of embroidery. It waves in the wind; the touch of a child may stir it, and accident may rend it; the least action of time will molder it away. The veil that conceals heaven is only our embodied existence; and, though fearfully and wonderfully made, it is only wrought out of our all mortality. So light is it, that the puncture of a thorn, the touch of an insect's sting, the breath of an infected atmosphere, may rend it shake and fall. In a bound, in a moment the twinkling of an eye, in the throbbing pulse in the flash of a thought, we may rush into disembodied spirits. . . . There is but a step between you and death; between you and heaven there is but a veil!—C. Stanford.

INTEGRITY.—A man of integrity is a man, a bold man, and a steady man; he is to be trusted and relied upon. No bribe can corrupt him, no fear daunt him; his word is slow in coming, but sure. He shines brightest in the fire, and his friend hears of him most when he most needs him. His course grows with danger, and conquers opposition by constancy. As he cannot be flatterer, he is frightened into that he dislikes, so he is not flattery and temporizing in others. He is with truth and not with the times,—with right and not with might.—Wm. Penn.

In the early days of Illinois some men were traveling through the country with saddlebags of specie which was required for settlement of land claims. Stopping one night at the only available place, a log house, they found it difficult to keep up alternate watches during the night. But before going to bed the rough man, whose cabin they were in, took down his well-worn Bible and read and prayed; and one whispered to the other, "We must both go to bed; there will be no need of either of us watching to-night."

A Siberian Doukhobor Letter.

Peter Verigin has already been alluded to, in these columns, as a leading Doukhobor, who is very account, was banished years ago, by his countrymen. The Russian Government apparently selected the men of the best merit, who were fitted by intelligence and ability to guide others, as ringleaders in opposition to its measures, and put them in Siberia for years in sorrowful separation from what was dear to them on earth. His reunion with his mother and friends, this autumn, is permitted to go to Canada, will be a cause of rejoicing, which one would feel glad to witness. His endorsement of the value of education, which was not permitted to Doukhobors in Russia, and which some of the Doukhobors have been too slow to recognize the importance of, will likely have more weight with them favorably towards M. Sherbinin's efforts, than any other motive which could be brought to bear. W. E.

ROSTERN, Sask., 9 March, 1902.

EVANS;

My dear and Esteemed Friend:—I beg to hand the enclosed English translation of Peter Verigin's letter, a leading man of the Doukhobors living in the U.S.A. He is told to get released by the end of this year when the term of his banishment will have run out. Thou wilt see how man speaks wisely in favor of school instruction. Some phrases might sound queer in English, but I tried to keep as close to his meaning as possible. With hearty respectful regards, I am thy friend,

MICHAEL SHERBININ.

Copy of Peter Verigin's letter, date unknown. (Received by the Doukhobors in February, 1902.)

Grace be unto you, beloved brethren and friends! I send you a cordial brotherly greeting and wish you all good from the Lord God. We received your letter of 16th. Septemb. Thank you all heartily for your remembrance and for your good wishes. May God save and with his eternal salvation. I have received the \$16 which were enclosed in your letter for which I also thank you. The postal authorities of Canada are not known to me. These are allowed to send money in simple letters. In Russia, it is necessary to write on the envelope "Money letter," and to specify the amount, because if the postal authorities discover that a letter not specified as a money letter, includes money, that money is being smuggled and entered as a revenue of the Government. Now referring to the fact that letters are being offered to have an elementary school started among you, I could not give you advice; but I think that to be able to read intelligently useful, and I should desire that all rising generation should know to read and write, the girls not excluded. It would be a blessing if you could teach your children school knowledge in your own circle, and as much as possible, in different languages: English, French, and German, and that you should not neglect Russian as well. The knowledge of reading and writing only develops the understanding of man by giving him education, but cannot alter the fundamental conviction of man. The knowledge of writing can be used with the gift of speech in man. There is a time when men talked with each other,

but instead of uttering the name of a thing they simply pointed to the thing which they wanted, until the faculty was developed in men to express their thoughts through the organ of speech. Now, when I am staying in another room, behind a wall, I cannot point to some object with my hand that my brother or sister might hand it to me, or that I might perform something which they want. But, with the medium of speech, this becomes quite possible, the sound of speech being heard at a long distance. Those powerful people have worked out the art of communicating our thoughts, through the art of writing. The teaching ought only to take place in the circle of your own people without the interference of the government, not because this would be sinful (i. e. schools introduced by government), but in order not to take advantage of other men's services, because you would then be much depending from them.

Thank God I am in good health and doing well. Perhaps the Lord will grant me soon to see you again. Your loving brother,

PETER VERIGIN.

True translation—Michael Sherbinin.

1 PETER i: 25.

Last eve I paused beside a blacksmith's door, And heard the anvil ring the vesper chime, Then looking in, I saw upon the floor Old hammers worn with beating years of time. "How many anvils have you had," said I, "To wear and batter all these hammers so?" "Just one," said he; and then, with twinkling eye, "The anvil wears the hammers out, you know." And so, thought I, the anvil of God's word For ages skeptic blows have beat upon; Yet, though the voice of falling blows was heard, The anvil is unharmed, the hammers gone.

—Anon.

Science and Industry.

FIRST PHOTOGRAPH OF A HUMAN BEING.—Mention is made in the *Presbyterian* of Anna Catherine Draper, who died at her home in Hastings, N. Y., in Twelfth Month, last, in her ninety-fifth year. She came from an old English family, and had lived at Hastings for forty years. She is said to have been the first woman in the world to have her photograph taken. Her brother, Dr. John W. Draper, invented a process by which a daguerreotype could be made in six minutes. Under previous methods it took an hour, and no one could pose that long. Anna C. Draper's picture was a success, and it created great interest. The original is now in the possession of Lord Herschel's heirs in England. In 1893 the American Ambassador to England tried to get the original to exhibit at the World's Fair in Chicago. Lord Herschel's heirs denied that they had it, and there was considerable contention, but finally the original daguerreotype was found. Copies were made, and the original was placed on exhibition. After the fair it was taken back to England.

In regard to this daguerreotype, Carr Moore, a clergyman of Bridgewater, Virginia, writes a private letter, saying:

Dr. John W. Draper was Professor of Physics at Hampden, Sidney College, Prince Edward county, Virginia, at the time Daguerre was experimenting with the daguerreotype. As is well known Daguerre could only get heliographic returns from inanimate nature, due to the slowness of his process. Dr. Draper,

somewhere between 1835 and 1845 (I write wholly from memory of reported facts when I was a student at Hampden Sidney College) is said to have succeeded in getting by Daguerre's methods the first picture of a person, and that person was doubtless the sister whose death you record. The camera obscura, with which this picture of the first living being was secured was the most valued possession of the museum of Hampden Sidney College when I left Union Theological Seminary, in 1885. The encyclopædists give credit to Dr. Draper, of New York, for this first picture of a human being. If credit to whom credit is due still obtains, it seems that it should be Dr. Draper, of Hampden Sidney College.

FOR "THE FRIEND."

The Changed Inheritance.

BY PETER N. DYHR.

"Mine heritage is unto me as a speckled bird, the birds round about are against her. Many pastors have destroyed my vineyard, they have trodden my portion under foot, they have made my pleasant portion a desolate wilderness. They have made it desolate, and being desolate, it mourneth unto me the whole land is made desolate, because no man layeth it to heart (Jer. xii: 9-11.)

How true is this lamentation in its application unto us who, under the new dispensation have been no less called to be a peculiar people zealous of good works than were the Jews under the old dispensation. In the record of the experiences of holy men of old that wrote as they were moved by the Holy Ghost, they penned what they experimentally knew of God's work by his Spirit in their heart. Now as God changeth not, so man by nature is unchanged. The same susceptibility to sin as in Adam, when God pronounced all very good; the same possibility to fall into temptation. And as we have all sinned and fallen short of the glory of God, so where sin abounds grace does much more abound. So that whatever our individual present attitude to God is, we are left without excuse. "For as in Adam all die, even so in Christ shall all be made alive." It is this equal, free and open attitude, we must "keep in memory" (1 Cor. xv). "Not as it was by one that sinned, so is the gift; for the judgment was by one to condemnation, but the free gift is of many offenses unto justification" (Rom. li: 6). Therefore we may know that they which are the children of the flesh these are not the children of God, if to the Jews circumcision availeth nothing, but a new creature in Christ. This was abundantly confirmed by George Fox and his co-laborers in that gospel day. That they knew by passing through long and painful inward conflicts and exercises, "Christ, the hope of glory, to fulfill the law in them." It remaineth yet to be true, "Not one jot or tittle of the law shall pass away until it be fulfilled," all that is written in the law and the prophets. Some of them by experimental knowledge, with faithful Abraham, "Saw Christ's day afar off, and rejoiced in it." Yet "of those born of women not a greater than John has risen, but the least in the kingdom of heaven is greater than he. And from the days of John the Baptist until now, the kingdom of heaven suffereth violence and the violent take it by force. "This is the clear demonstration, harmonious with

the experience of all who in spirit have entered into the kingdom of heaven, or the new gospel dispensation, which stands in unquestionable obedience to the pure manifestation of the true light, with which we are enlightened. It is in this true light in all men, that our whole responsibility rests. It is in that light we do see light, and that is universal. "The Gentiles which have not the law, do by nature (the true light) the things contained in the law,"—so in the light. We know that "to whom we yield ourselves servants to obey his servants we are, to whom we obey, whether of sin unto death, or of obedience unto righteousness." So that "all manner of sin and blasphemy," "and whosoever speaketh a word against the Son of man (the true light is here spoken of, as the Son of man), it shall be forgiven him, but whosoever speaketh against the Holy Ghost, it shall not be forgiven him, neither in this world, neither in the world to come." Read Heb. vi: 4-6.

The way cast up is plain: that a wayfaring man though a fool shall not err therein. "God worketh until now, and I work," said Christ. And where the clay by its own free will is passive in the potter's hands, He working in us both to will and to do of his own good pleasure, "breaks down the middle wall of partition, for to make in himself of twain one new man, so making peace." And yet the great conflict and warfare, of mortifying all our members in the earth, continues. "Ye have not yet resisted unto blood, striving against sin" (Heb. xii: 5, 26 & 27). The light is in man, the Spirit is God, and disobedience is the middle wall of partition, the producing cause of sin and blindness. "I would not brethren, that ye should be ignorant of this mystery lest ye be wise in your own conceit, that blindness in part is happened to Israel."

And is that not also our state? Let us be exhorted, whilst it is called to-day, "If by any means we might provoke to emulation, them which are our flesh," to whom like Israel of old has been committed the most distinct, spiritual dispensation since the first decline of primitive Christianity. Each dispensation has its own absolute preparation to make to fill such a place, the gifts differing, "but the self-same Spirit worketh, dividing to each severally as he will." As the life is unchangeable, so its dispensations have in all ages been of the fullest measure which the individual capacity has been prepared to receive. Our intellect is filled with knowledge and trained as a matter of course to believe and claim that certainly "we are the people, and the Most High dwelleth amongst us." But the Lord "will enter into judgment with the ancients of his people, and the princes thereof, for ye have eaten up my vineyard, the spoil of the poor is in your houses. What mean ye that ye beat my people to pieces and grind the faces of the poor, saith the Lord God of hosts." A high profession, without the experimental knowledge of daily witness in Christ's law fulfilled in us, but the state of the speckled bird, and like "the salt that has lost his savor, it is henceforth good for nothing but is trodden under foot of men." We often hear in substance the self-confident utterance, "We be the children of Abraham and were never in bondage to any man" (John viii: 33), and yet a

lamentation over our "low estate," and decrease in number in nearly all our meetings. Remember the positive reproof to Israel by the prophet Ezekiel (xiv: 14), "Though these three men, Noah, Daniel and Job, were in it, they should deliver but their own souls by their righteousness, saith the Lord. If I cause noisome beasts to pass through the land and they spoil it so that it be desolate; though these three men were in it, as I live, saith the Lord God, they shall deliver neither sons nor daughters, they only shall be delivered, but the land shall be desolate." Understanding this, Paul says, "We are the circumcision which worship God in the spirit and have no confidence in the flesh." "It is better to trust in the Lord than to put confidence in princes. Surely men of low degree are vanity and men of high degree are a lie to be laid in the balance, they are altogether lighter than vanity, but power belongeth unto God. Also unto thee, O Lord, belongeth mercy, for thou renderest to every man according to his works."

Many of the first gospel ministers were zealous preachers amongst the various sects and high professors of their day, and had a good report among their brethren. Isaac Penington's wife (Mary Springet, before she married him) speaks of him as a piously disposed young man, "and in her pure love and pity, seeing he was a stranger in the world, she took him for a companion. Yet when he first met the Quakers, although he says a love sprang up in his heart toward them, yet he despised them, as men of "high notions," knowing himself to be in possession of some of the reality even beyond most professors. Where were the high notions found? It concerns us to seek them out to-day. Are we not by nature exposed to the same danger? Even (after having some true travail of soul and having the serpent's head bruised) that of taking up our rest in the outward security of maintaining in the letter our high profession? But Isaac bowed his neck to the yoke, and came out from under the yoke of high notions, which he found in himself. Here the work of the new covenant has its beginning. And true Quakerism can never be grafted on any other root than this "immediate revelation." Nor can the experiences of those fathers and mothers be read or understood but by the revelation of the same spirit, through the gradual development of experimental knowledge. What do we know but historical facts? But "the hour is coming, and now is, when the dead shall hear the voice of the Son of God; in the which all that are in the graves shall hear his voice, and they that hear shall live." Have they not all heard? For "his voice has gone out to the ends of the earth."

A word to the wise is sufficient, human nature is unchanged in its love for ease, saying "Good is the word of the Lord, if there be only peace in my day." "The heart is yet above every thing else deceitful and desperately wicked. Who can know it?" Therefore let us examine ourselves and see "whether, or how far I am implicated" in the state spoken to by Jesus, we being in an increased degree responsible by additional witnesses. "John came unto you in the way of righteousness and ye believed him not; but the publicans and the harlots believed him and ye, when ye had seen it, repented not afterward that ye might be-

lieve him." "Behold here is a greater John." "The least in the kingdom of he is greater than he." Other religious souls are gathering in from the highways and compelling them to go in to the marriage per, that the tables may be filled; and with the paid ministry and fixed forms veil yet remains over their eyes when the is read, being in spirit under the old dispensation of the letter, contending and separating, because of the difference about the measure of words to no profit. Life is often not out a form, and so even our silent meetings together to perform divine worship. But comparable to John's dispensation as it affords free opportunity to each worshipper to hold the Lamb of God that taketh away sins of the world." In giving this testimony John was a burning and shining light, and were willing for a season to rejoice in light." This strikes at the evil root and growth, content and at ease in the support the sound form; but therein men do not to the "greater witness" than that of John. "Ye will not come to me that ye might have life; and to give life is the work which the father hath given me to finish" (John 35-40). The five foolish virgins lacked nothing in outward appearance. Christ calls them virgins. They were in company with the wise and they had even their lamps—a conscience that led them to the door, but it was shut, and "I know you not," was the answer. "The solemn our investigation should be. We lacked but one thing, oil. To bring forth the ripe fruit of immediate revelation, is to execute true judgment and shew mercy and compassion every man to his brother." Weigh the query, can any man "shew mercy, &c." without executing true judgment against it? For all judgment is committed to Jesus, in his first and second appearance. And we are my witnesses." But who can avoid that self-confident state of the foolish virgins? At the last call, "The bridegroom comes, she still resorts to them" that sell, instead of immediate application to Him who said, "that cometh to me I will in no wise cast out." Friends, are we the speckled bird? Or are the lighted candle giving light to all that are around us?

WEST BRANCH, IOWA.

The Recent Crisis in Greece.

Years ago the Bible was translated into modern Greek with the greatest care by the ablest scholars of the country. This version, which is called the "Romain," is in the dialect which is the language of the universities and schools and of all the educated Greeks of the present day. It adopts the grammatical form of the "Romain," or modern language, but at the same time preserves as far as possible the root form and inflections of the old language and it can be understood with ease by anyone who understands either the modern speech of Greece or the popular language of the Greek world of the first and second centuries, in which the new Testament has come down to us. The population of Greece however has a large admixture of Slavonic elements which came into the country during the Middle Ages, and in the dialects of the uneducated there is such a mixture of Slavonic root words that, if the Bible in common use as the stan-

the languages should adopt these words, of those with Greek roots, the Greek ones of the country would be lost in the old or Russian. But now comes the influence demanding that the gospels in the New Testament at least shall be rendered into the dialect of the uneducated, in order to make them more readily understandable by the common people. Queen who is a Russian by birth and education, the eldest daughter of the Grand Duke, undertook to champion the cause of the innovators style "Modern Greek." The Holy Synod of Greece protested against translation and the same side was immediately taken up by the professors and students of the universities, with the sympathy of the true Greek element throughout the country. Recently the students indulged in demonstrations against the advocates of the translations and in the disturbance which followed there were conflicts between them and the troops resulting in the death of seven persons and the wounding of a number.

entire trouble seems to be political or rather than religious, religion indeed is very little to do with it.

Greeks wish to preserve their language free from corruption as possible, while the Russians seek to make the Russian element the cause of the increase of influence would thus result.—*Christian Safeguard.*

Items Concerning the Society.

At the Square Monthly Meeting, N. C., held on the 14th instant, Abram Fisher was liberated to Philadelphia Yearly Meeting, some of its members, and some while going and returning; Henry T. Outland to accompany him. Also, a young man, Baughm to pay a visit to the prisoners on the State farms, with Marie Nolan as companion.

At the Charles Roberts's large and perhaps the largest collection of autographs of distinguished persons of the world's history, including many of those noted in the Society of Friends from its beginning to the whole valued at fifty thousand dollars is being presented by his widow to Haverford College. She gives also fifty thousand dollars to an assembly building, to be named Roberts which may contain the President's and other members, and an apartment in which these autographs writings shall be preserved.

The Book department of London Yearly Meeting is proposing to prepare an annual volume of George Fox's Journal for wide distribution. The names of some who have been selected to compile the book gives us confidence that the records of truth are likely to be conserved. We have been having Thomas P. Cope's passages from his journals as a model upon which to

write. The Spring Meeting, Hendricks County, Indiana, whose memory reaches back through many of the last century, has penned some reminiscences of the settlement of that country by Friends, from which the following extracts have been made:

The Creek Monthly Meeting is located in the north part of Hendricks Co., and was organized in the autumn of 1831.

The soil is well watered section of the country, with small streams, well supplied by fine

springs of water that generally flow the whole year. The land is more or less undulating, but not hilly, and very productive of a variety of crops, so that the early settlers were well repaid for their toil and privations incident to life in a new country.

"A considerable number of Friends in North Carolina who were sorely tried with the institution of slavery moved to this region about the year 1829, forming a settlement. Others had come a few years earlier, and some from Ohio. As nearly as the writer can ascertain the pioneers came in the years 1822 and 1823, others following in 1829, '31 and '32.

"Among their names the Hales, Hadleys, Johnsons, Hodsons, Hunts, Kerseys and Bales, were prominent. Several of them were in middle life or past it, and brought with them their children, and in some instances their grandchildren.

"The first meeting house was built of logs in 1831, and meetings were regularly kept up for seventy years. A Monthly Meeting was established about 1834 or 1835, and was held alternately at Mill Creek and a place four or five miles southwest called Spring. Through the 'forties and 'fifties there were very large and interesting meetings at both places, and large First-day Scripture schools, with a membership of hundreds at each place. And it might be mentioned that a number of worthy ministers were raised up to proclaim the Gospel message.

"Some time in the early 'sixties a spirit of discord made its appearance, which disturbed the unity and influence of the Society, so that by the year 1864 the meeting at Spring was discontinued for about two years, and the Monthly Meeting was laid down. Afterwards both meetings were restored. Yet the innovations which had been showing a growth for so many years, resulted in causing a separation in 1877, and instead of two meetings, four were held. Soon a new house was built at Mill Creek by the conservative Friends, and in 1901 the other or liberal division laid down the meeting at the old site, and no meeting is held there at this date. At Spring the liberal party built a new house at Amo, less than a mile from the old meeting place, while the conservative Friends continue to hold a meeting at the original spot."

The following is the Report which was adopted by the Quarterly Meeting held in Philadelphia last month, and was directed to be sent to its subordinate meetings:

"The committee appointed at our last meeting report that in the prosecution of the concern of the Quarterly Meeting, three meetings for Divine worship have been held in the evenings of week-days, to which the members generally, and the attenders of our meetings in the city, were invited; two of these were held in the house on Twelfth Street, and one in the meeting-house at Fourth and Arch Streets. These meetings, we believe, were seasons of favor, in which a degree of the cementing power of Truth was felt, and by which, we trust, an increase of strength was experienced by individuals in their heavenward way.

"We may acknowledge with gratitude that we have been refreshed and strengthened from time to time while thus associated in these exercises.

"In looking towards the completion of this service we have remembered with affectionate concern parts of our membership who have not been met with on these occasions and those also who live remote from the city, with desires that they also may be animated and encouraged to walk worthy of the vocation whereunto we are called. The visitations of the love of God are not limited by outward conditions, and the precious experience of the performance of Divine worship in spirit and in truth is not dependent upon the number of those who may be collected, nor upon the presence of any individual. We have desired that our members generally may be favored to feel the arising of spiritual life, and, by opening their hearts to his heavenly influence, become more and more sensible

of their spiritual needs, and the source whence only they can be supplied, and thus become fellow travelers for the welfare of Zion.

"If we walk in the light as Christ is in the light," we shall know the true union and fellowship inseparable from a growth in the Truth, be made partakers in the blessed benefits of the atoning sacrifice, experience the flowings of Heavenly life, and become fruit-bearing branches to the praise and glory of our Holy Head."

Albert J. Crossfield, of Reigate, Eng., with his wife, was in attendance at some of our meetings of Philadelphia on First-day last, on their return from a year's absence in California and elsewhere, on account of his health.

Notes From Others.

In a Louisville court recently, in the case of an accused murderer, the jury reached a sentence of eighteen years imprisonment only "after fervent prayer."

Men of many of the older forms of faith participated in the welcome to Prince Henry of Prussia, but, says the New York Mail and Express, "it was left for a Massachusetts Unitarian, to wit, Secretary John D. Long, to strike the religious keynote." In his welcome of the Prince to Boston he spoke of Christianity as "the most enlightened and comprehensive, the noblest and tenderest and heavenliest religion of all time."

"To christen a yacht," says a Brooklyn pastor, A. W. Fismen, in the New York Times, "is, if not sacrilegious, at least genuine nonsense. There certainly can be no greater misnomer than to call the naming of a ship a christening. 'Christen' simply means to christianize or make a christian."

"When Alice Roosevelt solemnly and reverently said, 'In the name of the German Emperor I christen this yacht Meteor,' did she really mean what she actually did say? Did she make a christian of the Meteor?"

"Why, then, was a sacred name for a wholly secular performance? Our savage forefathers poured innocent human blood over the stern of the boat, believing as they did that the good spirit of the innocent sacrifice would enter the craft and propitiate the evil spirits of the waters. This barbarous superstition is now no longer indulged in—a fluid less objectionable, but not quite so innocent, is now used; nothing remains but the sentimental form deprived of its content and purpose. To save its reputation it is given a christian name, which it does not deserve."

We might add that heathen religion has also bequeathed to us not a few practices, functions, days and times to which was given a christian name to save their reputation. But what will the pastor say of "christening" a babe, or adult, at the baptismal font—does that make one a Christian?

An appeal concerning the Indian Opium traffic with China has been forwarded by the Archbishop of Canterbury to Lord Salisbury. It was signed by fourteen bishops, and many leading Free Church ministers, including members of the Society of Friends. In reply the Marquis of Salisbury promises to lay this brief but weighty memorial before his colleagues in the Government. The petitioners say:

"We are convinced, by manifold and weighty evidence, of the correctness of the following positions:

"1. That British action in respect to the importation of opium into China has had disastrous results—(a) in injury to other branches of British commerce in China; (b) in generating profound feelings of hostility to British subjects and interests in the mind of the Chinese people.

"2. That the use of opium in China (to speak of China only), is a vast national curse, and that as-

sertions to the contrary can be met decisively by the public testimony of disinterested Chinese statesmen to-day.

"3. That accordingly it is unworthy of a great Christian Power to be commercially interested, in any degree, in the supply of opium to China.

"As a fact, while the cultivation of opium in India is on a larger scale than ever, with the exception of two years in the past, the revenue accruing from its export has sunk to two and a quarter millions.

"This, however, is in our position only an incident of the position. Our affirmation is that it is the grave duty of the nation, as before the Supreme King and Governor, to purge itself anywhere of connection with a great and public wrong."

Henry Van Dyke, of Princeton, has agreed temporarily to accept the pastorate of the Brick Presbyterian congregation of New York, which was left vacant by the death of Maltbie D. Babcock, on one condition—the office must be without salary.

Without doubt many people have entered the ministry whom God has never called to do his work, and who would never have undertaken to do it, if they had been assured of a salary of forty stripes instead of forty dollars! If some of these men were under the necessity of preaching the gospel freely, and laboring with their hands to minister to their own necessities, they would then be quite likely to do all the preaching that the Lord has called them to do, and perhaps not much more.—*The Armory.*

WEAK-MINDED WOMEN.—In all normal populations the sexes are about equal. But in Christian countries more than two-thirds of the membership of the various branches of the church are women; but of the sixty thousand convicts in the penitentiaries of the United States fifty-five thousand are men. The congregations who attend the various churches are by a large majority composed of females; but the congregations who attend the asylums, the billiard tables and gambling are by a overwhelming majority males. The people who pray and remember their Creator are for the most part women; but the vast majority of those who profanely swear and take God's name in vain are men. Has church attendance and non-attendance anything to do with these widely different results? These facts are vastly significant and eminently worthy of serious consideration.—*N. O. C. Advocate.*

HEROISM.—C. Parkhurst made a recent declaration as follows: "The heroism of battle is not to be mentioned the same day with the heroism of suffering. The supreme hero of history was Jesus Christ, who was greatest not in what he could achieve, but in what he could bear, and who conquers the world not by what he is able to do, but by what he is able to suffer." He declared that in nine cases out of ten it takes more heroism not to fight than it does to fight. "In our colleges and universities," he said, "there is no event in the entire academic year that so grips upon the interest of the entire institution, from President down to professor of dust and ashes, as the struggle on the campus that illustrates the students' terrific self-sacrifice. In comparison with intellectual feats and philosophic, classic or scientific competition are not even a barren circumstance."

SUMMARY OF EVENTS

UNITED STATES.—The Ship Subsidy bill has passed the Senate by a vote of 42 to 31. This bill provides a subsidy for carrying the mails and a subsidy for freight carried on American vessels.

The Senate has also passed a bill for the protection of the President, affixing the punishment of death to anyone who shall attempt his life.

Resolutions have lately been adopted by a caucus of Democratic members of the House of Representatives in Washington in favor of using the influence of the United States Government with that of Great Britain to stop the war in South Africa. Similar resolutions from the Leg-

islature of Colorado have been presented to Congress and referred to the Committee on Foreign Relations.

Treasury statistics show that the consumption of sugar in the United States which, in 1850, was only 22 pounds per capita, was, in 1901, over 88 pounds per capita; also that beets which supplied in 1850 less than 5 per cent. of the world's sugar, in 1900 supplied 67 per cent. of the greatly increased consumption; while cane, which then supplied 95 per cent. of the world's sugar consumption, now supplies but 33 per cent.

The arbitration proceedings to which the United States is a party are in progress, more at one time than ever known in the history of this country. With one exception the questions which have been put in the way of amicable settlement are with Mexico and countries in Central and South America.

A despatch of the 20th from Pittsburgh, says: "The first transmission of a cable system equipped with electric lights, the power of which is furnished by storage batteries, one battery being attached under each car, left the city to-day. It has been decided to equip the entire system as soon as generators can be installed.

It is said that the number of oleomargarine factories in the United States is only 100, but their annual output equals for more than \$30,000,000. There go into it 23,000,000 pounds of milk and cream, 33,000,000 pounds of beef fat oleo, 37,000,000 pounds of neutral lard and 11,000,000 pounds of cotton-seed oil. The amount of oleomargarine made in the Netherlands is greater, and that made in Germany double that produced in the United States.

The foreign born element in New York City numbers 1,270,069, of whom Great Britain has contributed 365,452; Scandinavia, 49,061; the Teutonic countries, 397,642; the Latin races, 161,596; the Slavonic countries, 245,144, and Asiatic countries, 8964.

There were 197 controversies between different nations settled by arbitration during the 19th century, in 67 of which the United States Government was a party.

According to the annual report of the United States Geological Survey, the Rocky Mountain coal fields extend along the eastern base of the main range from the Canadian boundary fully 1000 miles through Montana, Wyoming, Colorado and New Mexico. Another less extensive belt occurs along the western base of the range in Wyoming, Utah, Colorado and New Mexico, and there are also basins underlaid with coal between these two belts.

A report recently made by experts of the Treasury Department at Washington states that an application of the mercuric and magnesium made to a steel plate of the highest temper and five-eighths of an inch in thickness will secure a material as strong as the strongest steel during that time. The material was found to be stronger during that time. The roads were ruined and great floods formed in some parts of the district. Cattle were carried away in the tremendous torrents which swept from the upper lands.

The place where the best sugar industry has been expected to thrive, are certain parts of California, Colorado, Idaho, Michigan, Nebraska, New York, Oregon and Utah, with, of course, smaller areas in other States.

Attorney-General Knox has lately given an opinion that Honolulu is a Pacific port of the United States within the meaning of the Tariff act of 1897.

An oil well producing 300 barrels daily has lately been drilled near Barneveld, Ohio. When first opened a column of oil rose 50 feet above the surface.

A decision by Attorney-General Knox holds that the public lands in Porto Rico, which formerly belonged to Spain, by virtue of the treaty of Paris now belong to the United States.

There were 476 deaths in this city last week, reported under the name of Hoeth. This is 52 less than the previous week and 11 less than the corresponding week of 1901. Of the foregoing, 251 were males and 225 females; 59 died of consumption of the lungs; 79 of inflammation of the lungs and surrounding membranes; 10 of diphtheria; 11 of cancer; 21 of apoplexy; 11 of typhoid fever; 4 of scarlet fever, and 3 of small pox.

At the meeting of the Russian-French alliance to the Orient, as indicated by recent joint declaration of

these Powers, is exciting special interest at European capitals.

A rebellion in Southern China has progressed in a number of provinces, notwithstanding the efforts of the imperial troops, and is regarded with apprehension by the pean powers as leading to a possible intervention and re-opening of the Chinese question.

A despatch from Berlin says: Five hundred ret emigrants, disappointed with life in the United States, have passed through Berlin on their way to their homes in Posen, and the provinces of East and West Prussia and in Russia and Austria.

A despatch from London says: The select committee of the House of Lords appointed to investigate the merits of betting and the remedies therefor, heard some talk lately from J. W. Horsley, who as former champion of Clerkenwell Prison, had been in contact with 1000 gamblers in Posen, and the provinces of East and West Prussia, who had investigated to betting, which he declared due to the example of the aristocracy. "If," he said, "the King would say to-morrow: 'I will never again go to a race course where betting is practised,' the world entirely disappear."

Emperor William, of Germany, is said to be at the present time endeavoring to have a practical knowledge of various industries.

Vaccination is now obligatory in France within the first year from birth, and must be followed by revaccination at the ages of 11 and 21.

Butter is now packed in a manner that permits it to be taken from the cask without losing its freshness. A box is formed of six sheets of ordinary window glass, and edges are sealed with gummed putty. This box is then enclosed in plaster of paris one-quarter of an inch thick, this being again covered with wallpaper. The plaster is a bad conductor of heat, and the temperature inside the box remains the same. It is now made to hold 200 pounds of butter, and the cost of packing is 2 cents a pound.

A station for the wireless telegraphy system which Marconi Company proposes to establish between the continent and England is about to be located at St. Breton. It is expected that messages will be exchanged between Canada and Great Britain from this station. The Canadian Government has expressed the expectation that the Canadian Government the company will undertake to transmit general messages to and from between Canada and the United Kingdom at a rate per cent. lower than that charged for cablegrams.

French has been made the official language of the Congress Legislature, the Council and the Board of the French Republic. It will be allowed to be used in its own language, but all the records are to be kept in French. The change is due to the growth of the French element in the three bodies named.

Kangaroo farming is an important industry in Australia. The hides are valuable, and the tendons extremely fine and strong.

NOTICES.

WESTTOWN BOARDING SCHOOL.—For convenience of persons coming to Westtown School, the stage will call at trains leaving Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met when they reach Stage fare, fifteen cents; after 7.30 P. M., twenty cents each way. To reach the school by telegraph, call West Chester, Phone 114x.

EDWARD G. SMEDLEY, Secy.

WESTTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to WILLIAM F. WICKESHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

DIED, at San Jose, California, on the 28th of TWENTY MO., 1901, CHRISTY DAVIS, aged eighty-seven years and 4 months, formerly of New England and New York. He was a lifelong Friend of strong convictions. When illness drew him to San Francisco years ago, he was met by friends and disciples in the city of the Living Friend, that city, and sat at the head of the table while he remained there. The last few years he has resided at Comstock Park and been a faithful attendant of the meeting at that place. A lingering illness of many months was his with patience and cheerfulness.

Attractions that Distract.

The uplifting power of a soul heavenward is opposite of his natural gravitation earthly. It is of a supernatural force which comes from the world. Men could not by world-attractions be drawn to Christ, but Omnipotence itself supersedes, and with an attraction of his own Spirit draws those who yield to influence unto his own Son as their Saviour; said "No man can come unto me, except the Father, who hath sent me, draw him." Only-begotten Son who, dwelling in the bosom of the Father, is in a situation to draw Him, thus being his Word and representative love to man, co-operates with the Father-drawing as one so "lifted up from the earth" in his dying the death for our sakes, to draw all men unto Him. And thus is seen another aspect of the Divine drawing, that "that God was in Christ, reconciling the world unto Himself." Likewise his Holy Spirit, the Comforter or Paraclete (one called to us as helper), is thus the drawing power of God to Him who is the only "name under heaven among men whereby we must be saved."

Christ crucified, lifted up from the earth drawing all men unto Him, is declared to be "the wisdom of God and the power of God." His is the one power that should be depended on for our uplifting into Divine worship,—the attracting power to draw worshipers to the Source of Life.

Outside of his Spirit all attractions are carnal, toward or fleshward. Attractions to the world of the flesh are industriously devised to draw people to places of worship, and as industriously applied within their walls, as if enter-

tainments were worship. Yet that which is born of the flesh continues to be flesh; and the audiences may often be much impressed, but impressed in those sensibilities which are of the flesh and mind. They go their way from religious diversions, as men kept strangers to the worship which is in spirit and in Truth.

Within the dominion that is "not in word but in power," within the power that is contrary to the world-power, if servants co-operate with his immediate anointing and pointing, their services and exercises, silent or vocal, have a drawing and gathering effect unto Him to whom the gathering of the people is to be. But expedients to attract the natural senses are but diversions that divert from the true inwardness of worship, and as, a periodical of the past week has said, "all the attention paid to them in the house of God is a distraction." That leading Methodist paper, the *Christian Advocate*, which said this, informs us that "the mingling of birds with the Easter service is one of the means (of which there are others) of diverting attention from the sublime ideas and the fundamental truths" which should make an occasion impressive. Not only the canary birds kept the edifice filled with the music but the mocking birds with their stronger voices did "particularly well." "The introduction of mocking birds" remarks the editor "was truly symbolic; the whole was a mockery of what the service of God should be." Flowers he regards as symbolic of the resurrection; also having the merit of being noiseless. "Whereas the noise of birds singing through the service is entirely incompatible with the Divine command to worship the Lord without distraction. Even flowers can be so overdressed as to defeat the entire object of the service."

Thus sight is caught of a true principle, when an unusual sensation is introduced; but what of the evokers of natural sensations in the accepted programme of services? In proportion as anything attracts to the senses, it distracts from the spirit where alone "the Father seeketh" to find worship, and seeketh so often in vain. In vain does He look for worship where He finds but refined sensation as its counterfeit. And the principle of sensuous attractions being once adopted whether for the eye, the ear, the smell of a sweet savor, or other nerves of sensation,—addressed by objects

usual or unusual,—it simply remains the principle that "that which is born of the flesh is flesh." The whole emotional impressiveness of prevailing systems of public worship throughout Christendom is too blindly, if not carnally, based on this misleading principle of diversion as if for conversion, of distraction in lieu of Christ's attraction,—a basis, however finely physiological, certainly not spiritual.

As between the artificial and the inspired services, the birds shall be our witnesses. Their nerves thrilled responsive to the pipes of an organ,—those of singers or hearers without wings did the same. Was not one as much inspiration of the Holy Spirit as the other? "Why should the nerve-elation by sound-waves pass for the inward impartation of Divine life?" asks the Friend; "why should they not? ask the others. For genuineness, bird-praise cannot suffer by comparison with organ-praise. But then,—its unmanageableness. It cannot be controlled to run as per schedule. Its objectionableness, as worship-customs go, is not a question of principle but of convenience. Brass bands are, indeed, controllable, and they have lately been playing the part of presumed worship. Imitative churches still professing our name are not apt to be far behind "the times." A fiddle, within recent years, was the instrument employed in a meeting-house marriage-service under a committee of an ancient Monthly Meeting. Though time-serving serve "up to date" as it may, as for Quakerism and its house, its only business is to serve up to Christ, the Head over all things to his church and service.

These "attractions" are now turning with many into repellants. On the one part they are, indeed, habituating their devotees to more and more pronounced superstitions claiming a materialistic worship,—birds may be one episode therein, but added spectacular performances of some sort, claimed by many to be "a richer service," are consistently moving churches on into paraphernalia of the densest ritualism; while yet, on the other part, many, faint and famished with the emptiness of these husks, lose confidence in the churches as feeders of the true bread and are of late increasingly abandoning them for parts unknown. Were Friends' meetings undoubtedly such as to prove a worthy refuge for those that are disappointed elsewhere of the

true worship, these might be found gathering as doves to their windows. But while so much of the professing Society is pressing on to supply itself with the observances which these are receding from, they are thus aiding in the dispersion of the spiritually hungry. The preserved remnant in our Religious Society have a grave responsibility left upon their faithfulness,—to demonstrate a true and living public worship, through the true and living personal surrender of the members to the Holy Spirit in all his manifestations. There is time yet for the situation to be saved, there is a remnant yet large enough for the Lord to bless Zion with the few, there are meetings enough yet to demonstrate what a meeting surrendered wholly to the Spirit of Christ can be, there are standard-bearers yet steadfast, and more coming forward, to display the banner given them because of the Truth, that there may be a rallying unto it of those who would “worship God in the spirit and rejoice in Christ Jesus, and have no confidence in the flesh.”

REPENTANCE is more than a human resolve, more than a turning from sin; it is a response to God, the climax of a state of mind in which God seeks us ere we seek Him. . . . Never hast thou reflected over a discredited past, an unsatisfactory present, or a disquieted future, but God has been present in the pensiveness. Every feeblest wish within for better things, for nobler life, was, and is, the work of that Spirit who helpeth our infirmities. . . . We are not alone in the struggle, and never were; we may have a distrust for our own state of mind; there is no need to fear, for God made it; let the climax of our inward striving be, “I will arise, and go to my Father.” Or if faith and will be feeble, then rest upon the beautiful words of Him who spake as never man spake: “I am the good Shepherd; the good Shepherd giveth his life for the sheep.”

THE PERMANENT FACTOR OF LIFE.—The passing of the world is a matter of every man's experience. Friends have died, conditions of living have changed, bodily powers have waxed or waned. The world to-day is not the world we knew ten years ago. There are buried hopes and aspirations. There are new fashions, new thoughts and purposes, which meet us as a man meets travelers face to face upon his journey and then passes by.

The world goes by in ceaseless, picturesque procession; but so also goes the lust of it. Desire shall fail. At last we weary of the show. We tire of the excitements of our life. The zest of pleasure dies. It seemed incredible that we should change, except to grow in strength, but we awake to find that we are growing old, which is the shadow of death upon all merely worldly pleasures. There is no permanence in any condition or relation of our advancing or declining life. It comes up like a flower, but unless it takes hold on some enduring force not itself it dies like a flower, to make room for other lives as fleeting as itself.—*Selected.*

Friends in Tortola.

BY GEORGE VAUX.

During the middle of the eighteenth century a development of Quakerism took place in Tortola, one of the Virgin group of islands in the West Indies, which resulted in the establishment of two small meetings for worship and a meeting for discipline, which continued in existence a number of years.

Some account of the circumstances connected with this development were given by the writer in a brief article entitled “Friends in Tortola” which appeared in THE FRIEND in the Second Month, 1889, derived mainly from minute books of Tortola Monthly Meeting and a few loose papers, which found their way into the possession of Philadelphia Friends, having been brought to America by Daniel Offley about 1787 on his return from a religious visit to the West Indies in company with Samuel Emlen.

Recently there have been found among the papers of our Society in England, a considerable number of documents bearing on the subject of the conviction and establishment of the meetings in Tortola, affording much additional information, copies of which have been kindly furnished the writer by Norman Penney, Librarian of the Library of the Meeting for Sufferings in London.

It appears that James Birket, a young English Friend, visited Tortola in 1739 and after his return to England when at the house of John Dilworth, of Lancaster, he met with Samuel Bownas. The conversation turned upon what he had seen of Tortola Friends, and the last named Friend requested him to leave some account of them in writing. In accordance with this request he wrote to John Dilworth under date of Dublin 12 Mo. (Feb.) 10, 1740.

“The First that Professed our Principles [in Tortola] was the present Governour's Father, his name was Pickering. He came from Anguilla” where formerly a Small Meeting was held, and he at times frequented the Same; After his Settling in Tortola, he was Instrumental in Convincing his Overseer or Steward, Who is now a very Conscientious honest friend, and an Example worthy of Imitation by those who Enjoy far greater Privileges. When I was first there they had not held any Meetings though Several were pretty fully Convinced of our principles; But last year as their Number Increased, they were concerned to meet together in Silence On First Days and Some time after on Week Days also; which they still keep up and attend very well, Considering how Remote from One another: One Woman friend whose name is Dorothy Thomas has a Publick Testimony to bear amongst them, and appears pretty frequently. Their Meetings are very Broken and much Tenderness appears amongst them, not only during the Testimony of our said Friend, but also in Silence. There is also abundance of Love, Regard and Condescension amongst them One towards another; which

Anguilla should probably be Antigua. I have been unable to find that there ever was a meeting on Anguilla at any time, but a settlement of Friends was made in Antigua as early as 1660, and meetings for discipline existed there as late as 1709 and probably much later. The views expressed in my article of 1889 that the conviction in Tortola was spontaneous, ought perhaps to be somewhat modified if Antigua was really the island that John Pickering's father came from.

For “THE FRIEND.”

with the many Renewed Visitations I have nessed in their Meetings Confirms me in Belief of their being upon the right Foundation; For saith our Lord, by this shall all know that you are my Disciples, if ye Love One towards another.

“The Friends hold their Meetings at the Governour's house, whose name is John Pickering. One First Day, and the Other First Day, Townsend Bishop's, and the Week Day Meetings at Each place Separate on fifth Day. The Governour is a very Loving honest Man. But does not give up to the Rules of Friends. Yet has a Tender Regard for them, and diligent attender of Meetings, not only when they are kept at his Own house, but also when they are held at Townsend Bishop's, which is seven Miles asunder and bad Road; and is not ashamed to Vindicate our Principles against any that doth Oppose them; and frequently Expressed the Satisfaction he has in reading Friends Books, and is Come to thro' many things which he formerly seemed to blame us for, as being of little Moment. But since would often say after Meeting; this would have been a Joyful Day to my Father if he had been yet alive.”

Whilst in Tortola James Birket received the following letter from John Pickering:

“TORTOLA, Jan'y 27, 1739—4.

“Esteemed friend:

“I have wished you had come down with me Saturday night,—I found all the friends from the Road at my house, and was in great haste to have seen you, I believe you would have said you never Expected to have heard I was in Poor Tortola. We had a most Pleasant and Comfortable Meeting to the Astonishment of many who were not of the Profession, and I think to the Convincement of some, We being near Thirty in number, etc.”

After James Birket's return to England John Pickering again wrote to him as follows:

“TORTOLA, July 12, 1740.

“Dear friend:

“Things are pretty much the same as when you left us, only my wife is bravely Recovered and also Dolly Thomas. We had a Latter Meeting and a Comfortable one at my house the last first Day, to the astonishment of Several that reckon themselves men of the best Sense with us, and that were not of our Persuasion. My wife Joyns me in hearty love, and

JOHN PICKERING.”

Some time in 1740 David Barclay (grandson of the Apologist) addressed a letter to John Pickering, and in the Fifth Month, 1741 the Meeting for Sufferings in London wrote an Epistle to Tortola Friends. The receipt of these communications was followed by the organization of a Monthly Meeting for Discipline, the first sitting of which was held in the Seventh Month, 1741.

The replies to these documents are now given.

John Pickering to David Barclay:

“TORTOLA, 10 April, 1741.

“Esteemed friend:

“I received the favour of yours by Dr. Turnbull, and wrote you four Days ago in much haste by Capt. Purcell who goes directly to London, this goes by way of Lancaster to be forwarded by my good friend, Miles Burke. The Character the Doctor gives of you answers to the Opinion I have always had

Profession, ever since I have had the sort of being acquainted with any of their ways; which is now about fourteen years ago. One Joshua Fielding a friend visited us, as did all the English West India Islands, which here was but about a week or ten days, which time he Preached several Times, and came at my house. After he got home he was but three Books, namely Barclay's Catechism, The Mite in the Treasury and No Crown, in which I found great Satisfaction. At that time I don't Remember one of his Islands that was any way leaving that but Father who Lived here as Lot did in London; for my Part, I owned the Way, but I lived any way answerable to it; but had always a great Love & Tenderness for them, I believe above all Others, and believe then could I have lost my life for them, as my Father's he was, was often drove from my teeth: He died about five years ago, there was but one I lived anything in the Way, a Tender-hearted Young Man who had served my Father before his Death as an Overseer, and whose Conversation he was in some measure Convinced; and He after my Father's death, lived a very sober exemplary life, by which and his good Conversation, with the help of some good Books he had, Several of his neighbors began to copy after him, and heeded much in that Way, about which time I was about three years ago, one James Birney, a friend, a young man from Lancaster, came to this Island with a Cargo of Dry Goods to sell with us; and finding about half a dozen more owned and allowed that to be the best Way of Worship which the People called Quakers hold with, He Persuaded us to appoint Meetings, which we readily concurred in; and I offered my House, and ever since have constantly strictly kept our Meetings twice a Week; and I think it was the first time we met, that the Lord was Pleased to show forth his Power amongst us, and opened the Mouth of One to Speak of his Glory and great Comfort; and Since two others, which I am convinced that God is a God at hand and that he is the same God to Day as he was, to Raise up Poor Fishermen and Tradesmen to speak with the same Power, as when he first presented them.

The thing Soon made a great noise, that I turned Quaker and was Soon Buzzed in the ears of the Ears On which he wrote me he heard that I had turned Quaker, and if so, he thought I was not a Proper Person to Govern an Island. I answered to what I wrote Him, That it was Religion or Society I owned and Loved above all others, and that I was Endeavoring with God's Assistance to Live up to: tho' I had not yet Got over or Seen beyond the use of Self Preservation or Defending my Country, or Interest in a Just Cause, with Some Reasons for holding with their Principles, and that He did not like my holding the Commission on those Terms. He might give it to me or be Pleased for I should not alter my opinion or Religion for all the Honours he could Confer on me, or all he could take away. I answered to which he wrote me, very contrary to what I Expected, That He was very well Satisfied with the Reasons I had given for holding with their Principles, and that he should forever Esteem me, [and that he believed a good Quaker bid fairer for

Heaven than a wicked Protestant of his own Religion] and ever since has continued to write very friendly to me.

"I thought from a Letter I Received from the Doctr' whilst in Ireland that we Sho'd have had a Discreet friend out with him to Instruct us in Church Discipline, he wrote me to that Effect. We are very Ignorant of true Order, that I believe is kept in the friends Meetings, Especially the Manner of Marriages, and the Intent or what is meant by Mens or Womens Meetings, as I find, no Book we have Clears up fully, tho' we have a great number of the most noted Books

"The Little flock began with, has increased to near Thirty in number; The Reason of my Enlarging on this Subject is to let friends know the present State we are in, and the first Rise of them Sort of People in this Island which if you think proper you may Communicate to them.

"Excuse the Stile being never accustomed to write in the friends

"I am with Great Esteem thy

"Real Friend,

"JOHN PICKERING."

(To be concluded.)

A Factor in the Industrial Competition of Nations.

The following article, which has appeared in papers in Belgium, France and England, was sent from this country for publication in Europe by Rudolph Meyhoffer who came from Brussels. He stayed long enough to study industrial and educational conditions in our leading states including the burning question of American trade supremacy. A recent number of the English edition of the *Review of Reviews* says:

"*Cassier's Magazine* (an English periodical) contains an interesting series of short articles by some of the most prominent engineers and business men in the United States upon the question of American competition.

"Most of the writers agree in saying that the American workman is the chief agent in enabling American manufacturers to take first place in the world. Walter MacFarland, of Pittsburg gives one important reason for this. He says:

"It appears that the American workmen are much better timekeepers and far less given to dissipation than those in Great Britain. One of the best firms of British shipbuilders, who has not to trouble with its men for years, recently stated that there is a loss of time amounting to nearly twenty per cent., due largely to drunkenness. If anything approaching these figures is true generally there can be no surprise that (English) firms open to competition from well-managed American works should have a hard time."

In inquiring as to the cause of this greater sobriety of the American, the fact appears that twenty years ago business interests in the United States paid no attention to the effect of the beverage use of alcohol or of tobacco on working ability. About that time, the now almost universal study of physiology which includes with other laws of health those which relate to the nature and effects of alcoholic drinks and other narcotics, began to be a legal requirement for all pupils in the public schools of this country.

During the past ten or fifteen years the children have been carrying from the schools to the homes of the seventy-five million people of the United States the story of the evil nature and bad effects of alcoholic drinks and other narcotics.

As a result of the diffusion of this knowledge the railroads of the United States now almost universally refuse employment to men who drink, whether on or off duty.

Carroll D. Wright's Labor Bureau investigations show that more than seventy-five per cent. of the employers of skilled labor in the United States require total abstinence of their employees, and fifty per cent. of the employers of unskilled labor demand the same. These requirements, the cordial acquiescence in them by the employed, and the commercial supremacy which this knowledge helped to secure to the United States, have been promoted by the truth taught by the school that alcoholic drinks injure working ability.

The different reception given by workmen to the employer's demand for abstinence where scientific temperance is not taught in the public schools, is well illustrated by the following incident:

The manager of the Borsig factory in Germany recently posted an order forbidding the workmen to bring into the factory beer or other spirituous liquors or to drink the same during working hours. The workmen, numbering over a thousand, held a meeting and objected to the order. The next day they conspicuously carried in their beer.

During the excitement caused by the order a pamphlet appeared by an old factory official who affirmed that the use of alcoholic drinks was detrimental to the laborer's own interest. He referred to the cleverness and sobriety of the American workmen which makes them able to do very exact and precise work, which he says is not possible in German industry, because of the drinking habits of the laboring classes.

The American workman does not resent the employers' demand for abstinence because he has learned, often from his childhood in the public schools, that alcohol not only dulls the brain but weakens that nerve control of muscle that is necessary to the precision essential for fine work.

The nomination for knighthood of Sir Hiram Maxim, the American born inventor, for his work in England was one of the last official acts of Queen Victoria. In an article in *The World's Work*, Sir Hiram furnishes indirect testimony to the same point. While describing the result of the English trade unions, he adds:

"The English workman spends a great part of his earnings in beer, tobacco, and betting; he has no ambition." Of course not, for beer is dulling the brain dulls ambition. The "American workman," he says, "wishes to get on; he accomplishes a great deal more work in a day than any other workman in the world." "He does not drink," says another English writer.

England is beginning to see the difference in results between occasional talks by temperance advocates to school children and the systematic graded public school study of this topic required by law in the United States.

At a recent meeting in Birmingham, ad-

ressed by the Archbishop of Canterbury, the presiding officer, Edwin Smith, said:

"We are being beaten in skill . . . by America. She has been lavish in spending money in educating the brains of her people, while we have been lavish in poisoning them. If we spent per head on alcohol the same as America, our drink bill would be about sixty-six million (pounds) less than it now is. We cannot succeed commercially while we are handicapped in this way to the extent of forty-eight per cent. The great mass of the working people in this country are totally ignorant of the effect of drink." He said that England ought not to leave the education on this subject merely to the temperance societies but that it "should be undertaken by the state. Surely if the state must encourage the traffic for revenue it should in fairness educate every child in Government schools as to the nature and danger of alcohol, and the benefits of total abstinence."

He added in closing:

"If the state will only educate the children against strong drink . . . England commercially may even yet be saved."

It has been wisely said that "Industrial supremacy belongs to that country which enjoys the cheapest materials, the most improved machinery and the most efficient labor."

As clear brains and steady nerves are needed for the preparation of both material and machinery as well as for their use in production, that nation, other things being equal, whose brains are not dulled by alcohol and other narcotics will win in the world's competitions.

THE HOUSE AND THE VINE.

S. W. GILLMAN.

The house is old—its windows racked;

Its doors are falling down;

Where once the dainty tintings were

Is now a faded brown.

The steps are rotting; in the porch

Great gaping holes are seen;

The roof-tree's broken; with thick mold

The boards are fairly green.

The yard is filled with weeds and trash;

The walk is crumbling fast;

The trees and shrubs are broken—all

Their beauty-days are past.

The sagging rails lag at their posts

As though they fain would drop,

Aye, all is drear and desolate

From floor to chimney top.

And yet about the crazy door

And round the tottering stoop

Clambers and clings a tendrilled vine

In many a verdant loop;

And on that vine bright blossoms glow

And smile through all the day;

From every dainty flow'r the bees

Sweet burdens bear away.

The broken house—a ruined man

With blighted life and fame;

Soul-windows dimmed, a tarnished coat—

A more than tarnished name.

The clinging vine, a woman's love—

Perchance a merrily dear

Whose fragrant blossoms bless the world

Through all the changing year.

"MAN can destroy himself, but life and holiness can come only from another and a higher than himself. While it takes only one to do evil, it takes two to do good."

How We May Rest. (II.)

S. W. E.

FOR "THE FRIEND."

There are many people who feel the utter weariness which we felt a year ago. The unending grind of washing, ironing, sweeping, dusting and cooking, forever repeating itself, becomes unbearable. The question was—how can we get away from all these complexities of modern life? Some people can not go to the woods and live in a tent as we did, but for those who can, there is nothing more restful nor economical—if a place, a few hours distant, from home, is chosen.

We said we must have altitude so as to be cool. We must be as near Philadelphia as possible, so that the father of the family can be with us over the week's end. A third must, was, there must not be mosquitoes. This desirable must had to be abandoned for last season, at Naomi Pines. But as everything else was, to us, perfect, we took the mosquitoes philosophically.

The day before the first hot wave reached Philadelphia in 1901, we left Broad street station for Pocono Summit, via Trenton, Manunka Chunk and Delaware Water Gap. Three miles west of the summit we reached Pocono Pines lake. The next morning we pitched our tent among the beautiful pines on its south shore.

For seven short weeks we played, worked and rested under the "whispering pines" as we had never learned to live before.

We must share with others the benefits of "Camp Experiment."

Pocono Pines lake is an ice lake. That is it is a made lake, from which to gather ice in winter. It is three miles from the ripples at one end to the dam breast at the other, and has three islands in it, of which "Comfort Island" is the prettiest. The altitude, it is claimed, is two thousand feet, and during last summer it was always cool among the pines.

We took with us a house tent 16x22½, an open, sleeping tent, one cot, two chairs, and a cross cut saw, besides our trunks and two boxes filled with pillows, comfortable, an oil stove and a few other cooking utensils. The mosquitoes obliged us to cover our sleeping places with netting, but in a few days we were comfortably settled for the summer.

Excellent bread, butter, milk, eggs, meat, pies, and other things to eat we could get at the hotel, groceries and other needfuls at the village store which was at the far end of the lake. Frank C. Miller, the proprietor of both these establishments, was most kind in his attentions to us. The hotel was about half a mile from us. Near enough for convenience, yet far enough to allow us perfect seclusion.

Our nights were long and undisturbed. The simplest household duties employed us for a few hours each day. Getting wood for our camp-fire kept the boys out of mischief. Each day we went for a swim. Almost every evening we anchored our boats in the middle of the lake and ate our simple supper under the beautiful sunset sky, whose reflections in the lake were often simply enchanting.

During the time we were there we had two half days of rain and one whole day, which latter was thoroughly cold and unpleasant. Several nights it rained hard, but our tent did

not leak in a single spot, and when sun broke out we soon dried up again. The soil was a white sand, with flat rocks in a dance, tipped at every angle, into the cracks and chinks of which the water soon disappeared.

One or two extracts from home letters will give a glimpse into our doings and feelings.

Eight Month Ist.—"This morning was simply perfect. The temperature was six to four degrees at 8 o'clock. The little boy up and went for the milk. I started a which burned with a fine blaze. The bread people slept on. I did not like to wake them, but at 9.20 it seemed a necessity. I tell thee what a great pile of logs J. got yesterday?"

"We were afraid to take the bed apart before leaving camp. J. built the evening. M. washed the dishes and I did some mending. By 10.30 A. M. we were bound for the store below the lake. On our way we stopped at the store, and got ham and biscuits. The all waded till time for dinner. J. built a picturesque fire-place on a big flat rock in the middle of the stream. M. and he cooked the ham. We had bread, butter and ham for course, huckleberries and cake for second, and a good huckleberry pie for the last course."

"We picked a lot of browse and brought it home to add to our bed on the ground. J. and I concluded to pick huckleberries for dessert to-morrow, so we went to huckleberry island and found quantities of great big ones. The boys are out on their raft and M. is now at sunset is after them."

"It promises to be so beautiful this evening we have concluded to stay out for the night. It is cold tho'—too cold for mosquitoes. The glow is lovely. J. has brought two coats of ice, and three comfortable for the party to wrap in; so we hope to enjoy warm. I shall have three blankets and two hot water bags to-night."

There was not much to tell about, and those seven weeks were ideal. The restlessness of the woods, the pleasures of the lake, gave us renewed health and strength.

We got on with perfect ease, never had what we needed; met with no accidents; were never frightened and have with us to-day a memory of peace and rest which has comforted us thro' the winter and beckons us on to another summer in a world not known to us before.

Go thou, weary one, and do likewise.

THERE is not a sadder place on earth as the death chamber of a successful man of the world, who has secured all that the world can ever give, and in dying must leave all his good things behind him and go into eternity to be poor forever.

WHEN the Spirit of Christ becomes ours we gain his Divine Mastery over the world, we shall be ready to bear any suffering to welcome any sorrow which will make us rich in heart and give us the vision of God; we shall be ready to tread the lowest paths to carry the heaviest burdens, to be accounted nothing in the world's esteem, if by so doing we can bring one of our Father's wandering children home to happiness and heaven. March.

WORK AND REST.

Contributed.

I am sitting, still and quiet,
Sunlight fading, day's work done,
Weary brain, but happy hearted,
Counting all the mercies gone.

If, with every bright new morning
We begin, with willing mind,
Ever looking up and onward,
A fresh blessing we shall find.

Faithful over little duties—
Striving to perform our best—
Patient with the overburdened,
Adds a happiness to rest.

Quiet hour, what peace it gathers,
For the weary, restless brain,
With the sunlight cares all vanish,
And lost strength revives again.

So the Christian's warfare closes,
Bright with sunny memories, too,
As the rest and peace approaches
Of his long loved home in view.

Busy day, and evening hour,
Faded alike as setting sun;
May they shed a benediction
On all faithful life work done.

May they leave no weary burden,
To rob conscience of its rest,
If, among life's earnest workers,
We best strive to do our best!

For "THE FRIEND."

Hidden Things.

There are richer stores of wealth by man
und; thoughts deeper than line of man
fathom; there are stores of knowledge to
h no Newton can attain; of wisdom of
the wisest of men fail to perceive. Yet
we are known to God, who hides them from
prying ken of man in Christ the keeper of
treasures. He hath the key, and when
will, He opens the door of his treasure-
house; the light of his countenance illumines
things. He takes therefrom fitting orna-
ments of grace wherewith to deck his beloved
one. He removes the veil from their eyes
they may perceive his glory, for his pres-
ences bring joy, comfort and cheer.

Jewels are there, sparkling and clear, have-
been tried in the furnace of affliction, so
gent with glory, that earth's rarest dia-
monds compared thereto are but as the small
pebbles. Robes, too, spotless, white, washed as
snow on earth, can glistening in beauty.
Jewels are there of purest gold, wherewith
to encircle the brow of the lowly, meek and
humble ones. Heaven's own treasures are
these, which none on earth can see except
they enter there, and ere this they do,
must needs die to this world's vanities
to be born again.

For these are not for earth's richest sons,
are content to grovel amid their earthly
things, and who themselves are dwelling places
of pride, vanity and earthly lusts; but, will
die to these, and live to Him who by his
precious blood bought for them a life of heav-
enly joy, these will then be theirs. The life
they desire will be hid with Christ in God.
The life of grace and glory like to those which
the Lord of glory wore, when He humbly
descended from his throne of glory and walked
his footstool as though but man, such as
these shall then be theirs. Angels unseen by

man shall admire and bless the donor. And
life's journey through, well do they know the
uniform of these citizens of heaven, and with
joy will they attend them to the courts of the
heavenly King, who will account these his
workmanship as added beauty to his kingly
crown.

W. W. B.

Thomas Raylton.

Some account of the birth, education and
conviction of that faithful minister of the
everlasting gospel THOMAS RAYLTON, found
after his decease in his own handwriting.
[“From Piety Promoted.”]

I was born the 30th day of the Sixth
Month, 1671, in Bowes, in the north part of
Yorkshire, and educated in the way of the
Church of England. But in the year 1685,
being about fourteen years of age, and then a
scholar with one Richard Wharton, priest of
the parish, and teacher of a free school in
Bowes aforesaid, it providentially happened
that by the invitation of Francis Wrightson,
one called a Quaker, at whose house a meeting
was kept, about two miles from the place of
my abode, my mother went to a meeting there,
and took me to ride before her.

At this meeting were two ministers, namely,
John Bowron and George Rook, by whose pow-
erful ministry and lively prayer, it pleased
God to open my heart, and let me see the van-
ity of this present world, of which I had had
some share, for which I had been often se-
cretly smitten by the just witness of God in
my own heart. Yet, for all that, I was pretty
much a stranger to it, and so was not sensible
from whence it came, until I came to be af-
fected with the gospel which I may say, was
glad tidings of salvation to me. From that
day I was joined in heart with those people,
that directed to Christ within, the hope of
their glory. And although I have had many
instructions in Christ since, yet I have not
many fathers. For the said George Rook,
who preached the word by the gospel of Jesus
Christ, was the instrument under the Lord for
my conviction; for which I bow my knees,
and worship and thank the Lord for his good-
ness hitherto.

After I was joined with those people, the
word of God more powerfully wrought in me,
and showed me that I was to alter the course
of my conversation; that was to leave the cor-
rupt life, and shun evil company. And foras-
much as I was bowed before the Lord, and
had given up my name to serve Him, I then
saw I must walk in the narrow way and leave
the vain compliments, the putting off the hat
and bowing the knee to man, etc., I was taken
notice of and complaint made to my mother
of my neglecting to conform to those things,
by the priest, my then master, who was moved
at my behavior, and I suppose intended at that
time to have used the rod and having made
preparation called me to him. He said, I
heard to-day that thou wast by Mr. Bouns-
kell, and didst not put off thy hat, and bid
good morrow; adding, what is thy reason
for so doing? Whether is it pride or religion?
Upon which I told him it was not pride.
Then said he, it must be religion; and if so
thou must not be whipped; and so laid down
the rod. But, said he, if for religion, let me
know why thou refusedst, and give me some
precedent. So I told him I had been reading

in the Revelations, and there I found that an
angel showed John many things, and that John
said, “When I had heard and seen, I fell down
to worship the angel that showed me these
things; but the angel said, “See thou do it
not, for I am of thy fellow servants, and of
thy brethren the prophets, and of them which
keep the sayings of this book; worship God.”
And from this I refused to do it unto men.
But he endeavored to persuade me, that what
he requested of me was no more than a civil
respect between man and man; and from
thence he thought I might the better conform
to it. To make me the more willing to believe
it was no worship but respect, as he had said
before, he turned me to the place of Heth and
Abraham's bowing to each other, and also
proceeded to show me something of the like
kind among the children of Israel in the time
of Moses and Joshua. But all these were of
no purpose to me; for my eye was open to see
a more glorious dispensation than that of Moses,
yea; or the prophets. For though they were
good men, and by the Spirit of Christ in them
they did foretell the coming of Christ, and of
his sufferings; yet they did not live to see
those things come to pass which they had
spoken of. So that he had no force in his ar-
gument to make me use those things which
might be used among the fathers, and also
after the law. And since the New Testament
is silent and gives no account of either Christ
or his apostles being in the practice of bow-
ing, I did not see why either knee or hat
should be expected of me. As for the latter,
I have no account at all, therefore I stood to
my principle, and kept to the light and under-
standing the Lord hath given me through Je-
sus Christ my Saviour, who then was come to
my house in spirit, and had brought salvation
with him.

That day I told one of my school fellows
that what my master had shown me was but
out of the law and not of the gospel, which he
told my master, and I had a quiet day . . .
This was but the beginning of further exer-
cise, for as it was in some measure begun
(though I had at that time met with favorable
treatment from my examiner, whose modera-
tion, as I have said then appeared), yet after
this, whether it was grief which he was then
in, being in all probability likely to part with
one from his flock or which he might look
upon himself to be pastor, or from the per-
suasion of my parents, he began to be more
severe, and told me that unless I would make
congress to him, as he called them, he would
teach me no longer.

Although I must confess I would gladly have
learned a little more, being then a Bible schol-
ar, yet rather than to have it in the way I
saw I must deny and bear testimony against,
I forsook the school at that time and went
home to my father's house, and told my mother
the occasion of my coming. Although she
took me to the first meeting but a few weeks
before, yet she then repented it, and would
not hear of my suffering by my master, so as
to give me any relief; upon which I left the
house for a while.

But I think I may say, the arm of the Lord
wrought for me, for my master presently sent
word to my mother that he had done what
was in his power to persuade me to be com-
formable, but he saw it would not do, there-

fore desired her to send me to school again, and said he would leave me to my liberty about religion. The tidings were brought to me, as I was alone under an hedge where I was retired not then knowing what would become of me, who had both left the school and knew not with whom to lodge. These tidings I received gladly, and went to school again and found it pretty much as had been told me; and thus the Lord pleaded my innocent cause, to whom he glory ascribed forever.

Thus far I was got on my way, and was still to go farther. My parents had taught us from their childhood to ask of them to pray to God to bless us; and though it is true there is not an evil in the thing itself, yet the bringing of it into such a form as to use it every night and morning, this also I found was my place to leave off, at which they were very much offended, and began to beat me into a compliance with them. But that would not do, for I had read that saying of our Lord, "Whosoever loves father or mother more than me, is not worthy of me." So that in an holy resolution I went on, not much doubting but the Lord would help me over that, as He had over other things before, which, in time, He did. The course I took, after much threatening and several beatings upon the above subject, was this. I left my father's house and was kept privately for about fifteen days, but as Moses, by the good providence of God and care of his sister, who watched to see what would become of him, was ordered to his mother again to be his nurse, a providence to be commemorated, so was I watched over by some of those people to whom I was joined in fellowship, and by them sent for to come to one of their meetings. I being then remote from it, yet at their request I went; for meetings were precious to me. I had been but at about two meetings from the first, and that was about three quarters of a year before, and a good meeting this also was to me. After the meeting was over, some of the Friends undertook to go and offer me to my father again. I went along with them, and coming there, they told my father, it was their desire that he would take me home again as I was his son; and if he would not accept me as a son, then as a servant into his house; but if he would not as either, then, said they, he must become our care, forasmuch as he is become one of us. This proposition took such place with my parents, that the Friends were thanked for the care they had over me. Thus I was brought home again and had free access to their presence morning and evening, without insisting upon the aforementioned ceremony, which was the cause of my leaving their house, because they were wroth that one of their children should leave their religion, and decline going to church, as they called it. For about seven weeks more I lived with them at peace and went to meetings with their knowledge, and at the end of that time, being the 30th day of the Fourth Month 1686, I went apprentice to a Friend in the county of Durham, by the approbation of my parents, being conducted thither by my father. Thus my freedom was brought about, so that I might well, with some of old, sing unto the Lord, and say, He hath delivered me from the noise of the archers, in the place of drawing water.

In the time of my seven years' apprentice-

ship to a laborious trade, being a blacksmith, at leisure times I often read the Scriptures of the Old and New Testament in which I found great benefit, being often broken into many tears when I read, and especially when I met with places that mentioned the call of God to sinners and their return to his call, in order for their conversion and salvation.

(To be continued.)

A PRAYER FOR GUIDANCE.

Show me the way, O Lord,
And make it plain;
I would obey Thy Word;
Speak yet again.
I would not take one step until I know
Which way it is that Thou would'st have me go.
O, Lord, I cannot see;
Vouchsafe to me light;
Thou most bewilderer me,
Impedes my sight;
Hold Thou my hand, and lead me by Thy side;
I dare not go alone; be Thou my guide.

I cannot see Thy face,
Though Thou art near;
When will the morning chase
Away my fear?
When shall I see the place where day and night
Exist not, for Thy glory is its light?

I will be patient, Lord,
Trustful and still;
I will not doubt Thy word;
My hopes fulfill.
How can I perish, clinging to Thy side,
My Comforter, my Father, and my Guide?
(The author of these verses is not known. They are said to have been formerly published in a book entitled "The Dove on the Cross.")

Birds Have Hospitals.

In one New York bird hospital there are frequently as many as five hundred patients at a time. Their complaints vary from slight indigestion and chronic diseases to fractures demanding immediate attention. The medical and surgical work is performed by an experienced, intelligent and sympathetic hand. The death rate is low.

The bird hospital with its five hundred patients comprises several wards; large, light rooms for the convalescents and small, darkened apartments for the contagious cases and the patients requiring rest and quiet. All about the main wards are ranged the private wards in great variety.

There are large, airy cages, with lofty perches and dark boxes with hot water bottles, mattresses, cotton pillows and warm blanket coverings. Ordinary boarders are accommodated here for twenty-five cents a week. In cases in which delicate surgical operations are performed or a stubborn disease is treated the doctor's bill is larger. Surgical operations frequently cost five or ten dollars.

The list of ailments as recorded on the blotter at the bird hospital is naturally long and varied. Probably nowhere else in the entire animal kingdom is sickness so common as among the feathered household pets.

The pet canary, for instance, is often tenderly, but seldom intelligently, cared for at home. The commonest complaint is a cold. The bird hospital cures a very large percentage of colds. In ninety-nine cases in a hundred the owner of a bird allows the cold to develop into some complication far more serious.

The delicate throats are readily attacked by asthma and inflammation. Enteric disease is also very common, and is exceedingly contagious. Phthisis is especially like to attack parrots, and is very contagious. It is said that fully ninety per cent. of parrots suffer from phthisis more or less seriously.

There was a time when the only prescription for a sick bird was to wring its neck. This heroic measure is still a matter of common practice. But there are many who take a feathered pet to the bird doctor when disease appears.

The nature of bird's complaints has been a good deal investigated of late, and with great success. The medical attention given to a sick patient in the bird hospital is surprisingly like that given to human patients.

A bird's cold is diagnosed in the conventional way. First its tongue is examined. The conditions of the digestive apparatus and any indiscretion in eating is quickly observed. The eye also tells its own story of the general vitality.

The drooping of the feathers is, of course, a familiar symptom. The bird's temperature is taken as a matter of course. So carefully are all the symptoms of these pets observed that the bird doctor is not content to observe fever by the touch of the hand. A medical thermometer is used in this diagnosis. The temperature is always taken under the wing.

And the treatment itself goes on much the same as in any other hospital though with reduced doses. The medicine is given by syrups or liquids. The bird doctor has much the same trouble in giving a pill to a bird as a refractory child.

Pills are usually given in a grape or nut with some food. In extreme cases the medicine is forced down the bird's throat. Liquid medicines are dropped into the bird's mouth or the bird, if it will, drinks, drop by drop, on the end of the finger.

Hot baths, bandages and warm applications are usually prescribed along with the medicines. A very common practice is to immerse a bird very securely in a hot water bag and cover it with flannel to bring on perspiration. Most birds respond very quickly to such treatment.

By far the most interesting part of the bird hospital work is on the surgical side. An emergency ward equipped for urgent cases is open day and night. In appearance the operating room is not likely to frighten the most timid of its patients. The operating table is nothing more formidable than a dressing table covered with glistening seals, splints and bandages, chloroform masks, disinfectants and medicines.

The birds are commonly operated on without using chloroform. It is only in serious cases or when the patient is particularly restless that it is first rendered unconscious. The operations are gone about in the most approved surgical way.

The bird is first washed with some antiseptic, and the instruments and needles used are carefully sterilized. The birds are usually held in the hand during the operation, though the larger and more powerful ones are sometimes bound to the table.

The commonest surgical operation is the removal of fractured legs and wings. In nine cases

ten, according to the bird specialists, a wing or leg can be saved. Broken leg is pulled until the two ends come home together, when it is covered with plints and tightly bandaged. In dressary birds' legs an ordinary quill tooth is often used for a splint. Several birds which have had their legs in as many as three places have been at the bird hospital, scarcely retaining a toe to show the point of fracture. The legs so soft that they heal very quickly. Ten or at most two weeks of treatment will make them as good as new for all cal purposes. One of the first things to catch the eye in surgical ward is the peculiar hanging leg used in all cases of bruises or fractures. The bird rests in a loop of soft cloth, its feet extended through two slits in the net. When wings are treated in a variety of ways. It is frequently possible to mend even a broken wing so that the bird may afford fly about as well as ever. The broken wings are spliced, or set, as in the case of geese. In very serious fractures the wings are sometimes mended with fine silver wire, and allowed to remain and be covered with a few cases missing legs and parts of wings have been replaced with wooden or sticks. The wooden legged bird is like become a common sight with the aid of bird surgery. A bird surgeon also removes the horny horn from the beaks of birds, especially of geese; the scale from pigeons' legs and similar growths.—*New York Sun.*

From the "LONDON FRIEND," The Death and Funeral of George Fox.

ROBERT BARROW'S ACCOUNT.*

LONDON, 16th Eleventh-month, 1690. Henry Coward, Thomas Green, Thomas Grey, Richard Burrow, William Higginson, Thomas Withders:— dear Friends and well-beloved brethren, whome my life is bound up in the Cove- nant of God's gracious glorious Gospel light, in consisteth our life and peace, as we our habitations and dwelling places in, we shall be preserved near unto the end of all love and life, to know the foun- tained, and the springings of it to bub- ble in our own particular bosoms; wherein we drink together into the one Spirit, by which we are sealed in the enjoyment of the only Power that sanctifies; which recon- cileth Barrow, who was a farmer, and also followed the trade of a mason, was born in Lancaster, but was bred in infancy to the neighbourhood of Kendal. He witnessed of Friends' principles in 1652, was arrested in Month, 1663, for being present at a religious meeting, committed to prison and confined more than two months. He suffered much during his life for his Friends' testimonies, having been seven times imprisoned and frequently fined. He became a minister in 1688, was a zealous preacher for twenty-six years, and much in England, Ireland and Scotland. His religious visit to America in company with Robert Ingham near the close of 1694, and the West Indies in the year of 1695-96. When voyaging between Jamaica and Philadelphia he was shipwrecked and fell among the waves. (See his narration of this in "God's Protecting Providence.") It was during this journey, owing to the hardships he endured, that he contracted the sickness which resulted in his death, soon after arrival at Philadelphia, in 1697.

ciles us unto God and one another; in the living the sense and consoling virtue of which, according to my measure I do dearly salute you all. Well, dear Friends, before this comes to your hands, I know you have an account of the departure of our ancient Friend, and honorable elder, in the Church of God, George Fox, who was this day buried in the presence of a large and living assembly of God's chosen people, who did accompany him to the ground, was supposed to be above four thousand Friends; the meeting-house at Gratchurch Street could not contain them nor the court before the door, many that could not get to within hearing of the testimonies. And many living powerful testimonies were published in the meeting-house and many in the graveyard among many tender hearts, watry eyes, and contrite spirits. The London Friends were very discreet to order all passages and concerns relating thereto with great wisdom every way, there being five Monthly Meetings to this city and six chosen Friends nominated and appointed out of every Monthly Meeting who were to carry the corpse and none else, and that his relations should all go next the corpse, and that all Friends should go on one side of the street three and three in a rank as close together as they could go that the other side might be left clear for the citizens and coaches that were going about their business. And though the graveyard is a large plat of ground, yet it was quite full, and some of the people of the world were in there. The last week G. Fox was at a Quarterly Meeting, Second-day Meeting, Meeting for Sufferings, and two meetings for worship, besides the First-day meeting, which was at Gratchurch Street meeting-house, and on the Seventh-day he came to lodge at Henry Joldney's to be near on the First-day where he kept the meeting and said he was well in that meeting as he had been for a long time before; yet he began to be ill in the evening, about the fifth hour, that First-day, and departed before the tenth hour in the evening of the Third-day following. I was with him most of the time, wherein he spoke many living powerful sentences to the tendering of the company present. There was no sign of any great pain upon him, neither did he ever complain. Robert Withders' manner of departure and his were much alike for I saw them both only George shut up his eyes himself, and his chin never fell nor needed any binding up, but lay as if he had been fallen asleep, one would have thought he had smiled. He was the most pleasant corpse that ever I looked upon, and many hundreds of Friends came to see his face, having the most part of three days' time to behold him, before the coffin was nailed up. Friends carried the coffin on their shoulders without any bier cloth or loose cover; but the natural wood, yet the coffin was very smooth and comely. Well, Friends, about two hours or less before he died he took me by the hand and bid me remember his love to Friends where I travelled. I had intended to go out of the city on the morrow, after he began to be sick, but seeing him so ill it was Friends' minds I should stay and see how it might be with him and I had more freedom to stay than, to go, and I

was glad to see such an heavenly and harmonious conclusion as dear George Fox made, the sense and sweetness of which will, I believe, never depart from me, in the heavenly virtue of which I desire to rest and remain your brother, ROBERT BARROW. P. S. —I go towards Oxfordshire to-morrow. I shall give you an account of the Friends that declared, and as they spoke one after another, James Parke, Robert Barrow, Ambrose Rigg, Jasper Batts, William Penn, Francis Camfield, Charles Marshall, John Taylor of York, Francis Stamper, George Whitehead, Stephen Crisp, and Thos. Green ended. The Friends who spoke at the grave being as follows:—William Penn, Jasper Batts, Geo. Whitehead, John Vaughton, William Bingley. I would have a copy of this go to Yellands and another to Kendal. Items Concerning the Society. We should do well to avoid saying that Friends are not baptized, and do not take the Supper. The fact that we do not perform the outward ceremony ought to make us the more earnestly concerned to know the real baptism and the true communion with Christ.—A. N. Brayshaw. The number of publications of Friends' Tract Association of Philadelphia printed last year was intended to be given in our last number as 63,100; but the figure one became doubled. Our friend Joseph S. Elkinton has again gone to spend a few weeks among the Doukchobors of Manitoba and Assiniboia, under a sense of duty at this critical time for the enlightenment of those colonies on their true relations to the government. Notes From Others. GOLDWIN SMITH ON THE CIVIL WAR.—What have been the fruits of a war which cost the North alone, in different ways, probably five thousand millions, besides a pension list which amounted to a hundred and forty millions thirty-three years after the war; this in addition to all the havoc, waste and suspension of industry; while on the Northern side alone two hundred and seventy-five thousand men either fell in battle or died in hospital? Slavery has been legally abolished. The sentence of humanity on it has been executed. Its hideous slave codes have been swept from the statute book of man. But the Fifteenth Amendment is trampled under foot, and no one is found to uphold it, while the relation between the races is in some respects worse than ever. The one clear gain is that the extension of slavery has been prevented. The well known tract, "Come to Jesus," by Dr. Newman Hall, who died at the age of eighty-six recently has had the astonishing circulation of something like four million copies in more than forty languages. A brother of his, the late Captain John Vine Hall, commanded the *Great Eastern* on her first voyage across the Atlantic. OUR MOST HISTORIC CITY.—Senator Tillman was not very extravagant when he declared the other day that Charleston had made more history than any other city in the United States. But Charleston has figured in one sort of history which the Senator probably did not have in mind, and which is known to comparatively few persons in or out of that city to-day. Charleston, the fifth city of the United States in 1800, being led by only New York, Philadelphia, Baltimore and Boston, and the sixth city as recently as 1830, was a rival of New York, Boston, Baltimore and Philadelphia at that time for railroad communication with the West, and had, in fact, in 1833, the longest railroad—135

miles—then in the world, the one from Charleston to Hamburg, or the Savannah river. At that time the future for the South Carolina metropolis seemed especially promising. The first locomotive, the "Best Friend," ever built in the United States, was built for the Charleston Railroad and used on that line. Charleston is nearer than any other Atlantic coast city to St. Louis, the centre of the Mississippi Valley, and nearly the centre of the contiguous part of the United States. In 1857 a continuous rail line was established from Charleston to the Mississippi at Memphis.

Before 1857, however, Charleston's chances for supremacy among the Atlantic coast cities had ended. DeWitt Clinton's Erie Canal, completed in 1819, gave New York an assured ascendancy over all the other cities of the continent. — *Leslie's Weekly.*

SUMMARY OF EVENTS.

UNITED STATES.—The President has lately sent a message to Congress stating that the people of Cuba have complied with all requirements and suggestions made by the United States in regard to preparing for establishing a stable government, gives notice that the island government will be inaugurated 5th Mo. 20, when the occupation by the United States will cease, and recommends the executive enactment of laws providing for establishing diplomatic and consular relations, and to stimulate commerce between the two countries.

General Miles has lately addressed a letter to the Secretary of War in which he says :

"It is now three years since the opening of hostilities between the United States forces and those in the Philippine Islands, and this warfare has been conducted with marked severity. More than 120,000 United States troops have been, at different times, sent, or are now under orders to go, to the Philippines, and more than 40,000 still remain on duty there, which service, with the assistance of the naval forces, involves an enormous expenditure of public money as well as the loss of many valuable lives."

He then refers to the fact that Indians have often been called to Washington for consultation in the interest of peace, as also natives of Cuba and Porto Rico, and adds : "I have never found any people, whether savage, semi-civilized or civilized, who were not benefited by candid, frank and honest consultation."

"In view of the above considerations, I make the request that I be authorized to proceed to the Philippine Islands, taking with me ten men whom I may select from Cuba and Porto Rico, whose assistance has been found useful in promoting friendly relations between the people of those islands and the United States, and who can properly explain to the Filipinos the benefits their people have derived through friendly relations with this country," "and that on returning I be authorized to bring to the capital such number of representative Filipinos as I may think advisable, in order that they may see and know the advantages of our civilization and realize the disposition of our Government toward them, and at the same time, being fully conversant with the full consultation, whereby intelligent and definite action may be taken concerning their future destiny. It is confidently believed that such measures could then be taken as would be satisfactory and beneficial to the ten millions of inhabitants of the Philippine Islands and highly creditable to our Government."

The recommendations contained in this letter have been disapproved of both by the Secretary and the President, and the former has stated that he considers them as reflecting upon the conduct of the troops now in the Philippines.

The *American Grocer* gives the following statement of 1903 cost of beverages used in the United States during 1900 :

Alcoholic drinks, \$1,094,644,155. Non-alcoholic stimulants : Coffee, \$132,137,245 ; Tea, \$39,430,986 ; Cocoa, \$7,000,000 ; Total, \$1,273,212,386.

Restaurants have lately been opened in New York City where an attempt will be made to show the cheapness, wholesomeness, and variety of simple foods. The bill of fare includes several dishes for which 1 cent only is charged, consisting mainly of cereals and vegetables. It is claimed that two or three of these 1 cent portions per day, if varied according to appetite, "should maintain the weight, strength and health of an ordinary individual for an indefinite time, if such extreme economy is necessary."

Is a public statement signed by T. S. Morgan, of the American Baptist Mission Society, and the Secretaries of

else other evangelical missionary bodies, attention is directed to the growing power and extraordinary missionary activities of the Mormon Church. It is alleged that the "aid of Mormonism, which comes by the canal," is to secure control of State after State, until by means of balance of power they may make national legislation against Mormonism impossible. By means of colonization it has so affected the States of Idaho, Wyoming, Montana and Nevada and the Territories of New Mexico and Arizona as will soon secure for it the practical and practical political control in all that region. Its missionary activity through the Union is almost incredible. It claims to have now 2000 missionaries on the field, 1400 of them in Southern States, and to have made last year 20,000 converts."

Eleven inches of rain lately fell in Mississippi within 24 hours, causing great floods and damage. In Tennessee the damage to the flooded districts, it is estimated, will amount to \$4,000,000.

Steps have been taken at Chicago in the formation of a gigantic Millers' Federation, representing a capital of \$400,000,000 and a yearly output of 100,000,000 barrels of flour.

The Carnegie Institution in Washington proposes to carry out its purposes by rendering assistance to individuals who may be developing a special line of work towards the welfare or improvement of mankind, whether he be a mechanic, student or inventor—if, after examination, he is considered a proper object for such assistance, and it is decided to secure success. It is not proposed to erect great buildings, but as administration centres of modest dimensions. It is intended rather to assist in promoting research than in promulgating knowledge as in colleges, &c.

A recent report to the authorities in Washington states that there are 278 cases of leprosy in the United States, more than half of whom are in Louisiana.

The Secretary of Agriculture of Pennsylvania, in order to prevent "the alarming flow of population from the country to the city," recommends better schools, better roads, the reduction of taxation upon real estate by a more equitable tax on occupations, professions and trades ; the dissemination of scientific information among agricultural people by means of bulletins and farmers' institutes ; the introduction of study of natural things into the rural schools, and the extension of free rural mail delivery, telephone and trolley roads throughout the country.

A recent dispatch says Baltimore to be lighted by electricity generated at the Susquehanna river, thirty-five miles away, by means of the trolley cars of the city are to be operated by the same means. This is a greater distance than electricity has heretofore been carried in this country for similar purposes, the Niagara current that is used in Buffalo only being brought a distance of twenty-five miles.

The Pennsylvania Railroad Company's new stone bridge across the Susquehanna river at Rockville cost \$1,000,000, and is said to be the longest and most substantial stone bridge in the world. It is covered with four tracks.

There were 500 deaths in this city last week, reported to the Board of Health. This is 24 more than the previous week and 32 less than the corresponding week of 1901. Of the foregoing, 272 were males and 228 females ; 101 died of consumption ; the lungs, 66 of inflammation of the lungs and surrounding membranes ; 13 of diphtheria ; 11 of cancer ; 16 of apoplexy ; 20 of typhoid fever ; 1 of scarlet fever, and 3 of small pox.

FOREIGN.—Many persons have been killed in the Chinese province of Chi Li during riots occasioned by the efforts of the British to collect indemnities for Roman Catholics who are arranged for between the officials and priests. Missionaries are warned to keep out of the disturbed districts.

The death of Cecil Rhodes occurred on the 26th ult. near Cape Town in South Africa. He was born in England in 1853, and went to South Africa in 1883, where he rapidly acquired wealth and influence. He was finally become the uncrowned, but almost autocratic king of a country many times larger than the British Isles, and by far the most powerful man in Africa. The total area of the tract embraces nearly 1,000,000 square miles, and includes Rhodesia—formed from Mashoonaland and Matabeleland—Bechuanaland and Basutoland. He was a great and able statesman, and was responsible for the Jameson raid, which had much to do with causing the Boer war, and has been regarded as one of the boldest and most unscrupulous of adventurers.

The Canadian Minister for Trade and Commerce estimates that Canada has lost 1,400,000 people by emigration to the United States between 1880 and 1900.

The value of the X-rays in the treatment of cancer has again been shown by a cure of a bad case in London, and by the statements of another physician that the X-rays

have been the means of alleviating pain in cancer to a very large extent, and also by concurrent tests in this country.

It is announced that in Norway, women will henceforth be permitted to serve on juries.

There have lately been as many as 240 deaths of cholera in Mecca daily, and Mohammedan pilgrims fleeing from the city, probably carrying the disease along with them. It is said that 240,000 pilgrims have lately there.

The railroad has recently been opened in British Africa from Mombasa on the sea coast to the shore of the Victoria Nyanza (a word meaning lake). The route is about 572 miles long and opens up to commerce country clothed in many places with luxuriant vegetation of very varied character. Victoria Lake is said to be the largest, deepest, and most magnificent of the open spaces, a chain of large lakes in the highlands of Central Africa.

The agricultural department of Queensland has offered a reward of £5,000 for the discovery of a means of eradicating the "prickly pear" pest, which is a cactus imported from America. The remedy must not cost more than a certain sum per acre.

Last winter wheat and other crops were so much injured by the famine stricken districts of Siberia.

The acting President of the Transvaal Republic, accompanied by other officers, has lately had an interview with General Kitchener in Pretoria under a flag of truce. This conference is believed to have been in the interests of peace.

An editorial in the *London Daily News* states : "While we are wasting our wealth, energy and money in the South African desert, the Americans are securing control of our industries."

In preparing for certain religious observances in England lately, the Bishops of London, Rochester and Albans issued special appeals to their dioceses to join in prayer that both British and Boers be granted the aid of peacemakers, pointing out that similar prayers are offered in the Dutch churches of Pretoria.

NOTICES.

WESTTOWN BOARDING SCHOOL.—For convenience of persons coming to Westtown School, the stage will train leaving Philadelphia 7.16 and 8.18 A. M., on 22nd and 4.32 P. M. Other trains are met when required at Stage fare, fifteen cents ; after 7.30 P. M., twenty cents each way. To reach the school by telegraph, call West Chester, Phone 114x.

EDWARD G. SMEDLEY, Secy.

WESTTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to Wm. A. F. WICKHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

DIED, on the fourteenth of First Month, 1902, MARY HALL, a beloved member and elder of Sadsbury Unitarian Meeting, in the seventy-third year of his age. This friend was, in early life, enabled to submit to the exertions of Divine Grace in his heart, and accepting of Jesus Christ as his Redeemer, and God as his Father, he realized the fulfillment of the added promise "all things needful shall be added unto you." His years of his early manhood were devoted to teaching at Westtown School ; and many who came under his immediate care and others intimately associated with him remember with thankfulness the influence exerted upon Christian life, and faithfulness in the discharge of his duties. The illness which terminated his mortal life was of several months' duration, and at times attended with much bodily suffering, which was borne with Christian patience and resignation. "Blessed are they that do his commandments, that they may have the life of the tree of life, and may enter in through the gates into the city."

At his residence in West Grove, Chester Co., Pa., on the sixteenth of Second Month, 1902, HARMON M. RAY in the eighty-seventh year of his age ; a firm believer in the religious principles of the First Mo., 1902.

—, on the twenty-first of First Mo., 1902, S. S. W. KESTER, member of Elijah Kester, in the eighty-fourth year of his age, of New Garden Monthly Meeting, Friends, Pa.

as second-class matter at Philadelphia P. O.

to you, it is given in the behalf of Christ, that ye believe Him, but also to suffer for His name.—Phil. i: 29.

aided by any alliance with the great or small, ridiculed and hated by the world, everywhere pursued with contempt and scorn, the principles of Friends silently and though the kingdom, winning the souls of men who were inferior to none in education, talents and respectability. Amid the fiercest persecution, when deprived of every natural good, torn from home and all its endowments with every probability that they would lose the truth of their principles with the loss of their lives, they faltered not. Though all around them looked dark and threatening, yet there was light and peace within; not only met their sufferings with patience and fortitude, in the unresisting spirit of their Heavenly Master, but through the goodness of God were so filled with heavenly consolation, that they sang for joy even in the extremity of their suffering.

The calamities in which Friends bore so large a share had no other good effect. They not only tended to convince the nation of the error of persecuting men for differences of opinion. More than thirty years of suffering passed over and not a single Quaker had induced by it to abandon his profession. They were as prompt and diligent as ever in the performance of their religious duties, and ready patiently to submit to the penalties of unrighteous laws.—Thomas Evans.

WARD prayer is that secret turning of the heart towards God whereby, being secretly awakened and awakened by the light of Christ's conscience, and so bowed down under the sense of its iniquities, unworthiness and unworthiness, it looks up to God, and, joining with the secret shavings of the seed of God, it turns towards Him. It is in this sense that we are so frequently in the Scripture bidden to pray continually.—Barclay.

Looking Towards a Yearly Meeting.

They who desire an approaching Yearly Meeting to be blessed of the Lord, will now be preparing the way of the Lord, and making his paths straight. As individual hearts are letting his word have free course in them, to be glorified by their daily obedience, they are opening out avenues through which, in their collective body, his grace and good Spirit will move in triumph, and Truth will come into dominion.

What relation our present baptisms and exercises are having to the approaching Yearly Meeting we know not now, but we shall know what we have been preparing for when each question or service answerable to the training comes up. Then we shall be puzzled, if we have in advance been unfaithful in little things, or secret faults have not been cleansed, or if we have not been reconciled to a brother who hath aught against us. A clearing of the heart clears the vision and all spiritual discernment. The preparations of the heart for Yearly Meeting, and the answer of the tongue in Yearly Meeting, must begin to be of the Lord now if they have not long since been going on in our life and conversation. A little temper checked now at home, may save the Yearly Meeting a flaw, or a wound. A little openness to the inspeaking Word now may become a large opening then. A faithful setting a watch at the door of our mouth now, may be a learning to control an otherwise prolific speech into a concise and pungent message. But above all, an abiding surrender of many to the baptism of the Holy Spirit now in its relation to all particulars will give Christ free scope as Head over all things to his Church. Prove Him now herewith, and see if He will not pour out abundant blessing.

Free course for the Spirit means his free intercourse, all barriers of personal prejudice brought under and a mutual sympathy raised up. There are spots in our feast of charity when we let matters of personality prejudice the truth of a message,—when no portion of the goods will be regarded on account of the package. A neighbor of our late valued friend, Joseph Walton, used to represent it as one of his merits, that he could always enter into an opponent's meaning and state his case fairly, as if from the standpoint of the opponent himself. Thus was exercised in his ed-

itorial, his personal, and his public relations, a gift of sympathy, a putting one's self in the other's place in order to appreciate his point of view, and rightly to judge him or his deliverance. Such an attitude becomes possible only in the humility of self, and a willingness to enter as into a brother's heart and travel with him, to get at the prime clue to the truth concerning his meaning or intent. Such an attitude makes no abatement of the truth, or compromise with error, but is of the charity which rejoices in the truth, while it can speak to one's condition under a feeling sense of it; "doing nothing through faction or through vain glory, but in lowliness of mind each counting other better than himself, not looking each of you to his own things but each of you also to the things of others. Have this mind in you which was also in Christ Jesus." (Phil. ii: 3-5).

Likewise a political philosopher, of honored standing in this city, has recently said: "A Christian must think of a Christian as better than himself before his religion becomes a social force. He then refuses to impute to the church the weaknesses and motives that he finds in himself or in other individuals."

These suggestions are not one-sided merely. The young may apply them to the old, and forget themselves. But it has been painful at times to hear the young spoken at, or the old spoken at, (for how hardly can they be thus spoken to? when they were addressed as distinct classes, almost as if in opposite array. We ought not usually to feel so. What brings a large body of our young people to Yearly Meeting so constantly, so orderly, so intently? They are pressing in spirit toward the Head of the Church, sharing a spiritual interest with those in front. To Him the gathering of the people is, and we will acknowledge in each other the credit of it. And there is need of patience as regards occasional vocal appearances in one part of the room as in the other. But this is not a strain upon the unity of the spirit in the bond of peace. The heart of the fathers is turned to the children, and the heart of the children to their fathers. Never, in an observation of thirty-five years has the unity seemed greater than it does now.

But lest these suggestions to put one's self in another's place, in order to judge righteous judgment from within him and as feeling how

he feels,—should be applied to one set of seats rather than another; let us reflect that every seat in the room is used as a judgment seat, and it is as blessed a thing for the young to enter into feeling with the old as for the old to feel with the young. So shall they see eye to eye, through feeling of heart with heart in a time when God is upbuilding Zion.

One Spirit must be our reliance to make the Men's and Women's meeting interesting. The Spirit of Christ can bless a little business, or blast a large outfit if it unauthorized by Him. If we are going up to a Yearly Meeting as parasites on an assembly, and not depending singly on the one Fountain of life, we may go away disappointed. But as it is to Christ and not to the meeting that the meeting is gathered, each attender for himself, none will be disappointed in Him, life will arise, the crown and diadem of all rightly gathered assemblies will be witnessed, the business will seem covered with a holy savor of interest, and the response of the heart will be: How excellent is thy name into which we are gathered!—a strong tower into which the faithful flee, and are safe, and are built up in the word of thy grace!

In order for the blessing, men and women, young men and maidens, cannot begin too soon in preparing the way of the Lord, and making his paths straight in their hearts, for an annual assembly raised above complaint in the life of that Presence which is to be waited on and practised beforehand in our private life. In proportion as these bring grace to their meeting, weekly or Yearly, will they and the church carry more away. Their aspiration for Zion will now be, "For my brethren and companions' sakes, and because of the house of the Lord our God, I will seek thy good." "For their sakes I sanctify myself."

"SAYING" AND "PRAYING."—D. W. Moody once related this pretty incident concerning his own little son: "My wife came down one evening and said she had had some trouble with one of the children. He was not willing to obey, and he had gone off to bed without asking her forgiveness. I went up and sat down by the side of the little child, and said: 'Did you pray to-night?' 'I said my prayers.' 'Did you pray?' 'I said my prayers.' 'Did you pray?' 'Well, papa, I told you that I said my prayers.' 'Yes I heard you; but did you pray?'"

"The little fellow was struck; he knew that he hadn't prayed. How was he going to pray when there was something wrong in his heart? He could not do it."

"Well, now," said I, "are you going to go off to sleep without praying?" After a struggle he said: "I wish you would call mamma." She came up and was glad to forgive him, and then he wanted to get out of bed and pray. He had said "his prayers," but now he wanted to "pray." Lots of people say their

prayers, just as a salve to their conscience and go out and do some mean, contemptible thing after they have said their prayers.

"But they hadn't prayed, and that's the difference."—*United Presbyterian.*

FOR "THE FRIEND."

Charity.

The Apostle Paul says, "Though I speak with the tongues of men and angels and have not charity I profiteth me nothing, and though I give my body to be burned and though I have all power, even to remove mountains, and have not charity, I am become as sounding brass and a tinkling cymbal." Then he goes on to tell what charity is, "Charity suffers long and is kind, charity vaunteth not itself, is not puffed up, doth not behave itself unseemly, seeketh not her own, rejoiceth not in iniquity, but rejoiceth in the Truth. Charity beareth all things, hopeth all things, endureth all things." The apostle further says, "Whether there be tongues, they shall cease; whether there be knowledge, it shall vanish away. But Charity never faileth. And now abideth faith, hope and charity; but the greatest of these is charity." What a beautiful illustration of the character of our dear Saviour when He was in this lower world and what a beautiful illustration of all lives who are led by that love which has no bounds,—even love unfeigned, which is charity. When the soul is filled with this fervent love and is governed thereby, that soul is then enabled to realize the mercy of God, and the weakness of itself and is also enabled to look upon its brothers and sisters as having a part in best things, whether they are weak or strong, encouraging the weak to more faithfulness in these things, and the strong to be steadfast and immovable. Yes, this charity would encourage the little good in any and is not puffed up. There would not be a feeling in the heart that "I am more favored or more faithful than others," (as I fear there is with some), but a feeling and craving even in the language of the Psalmist, "Search me, Oh God, and know my heart; try me and know my thoughts and see if there be any wicked way in me and lead me in the way everlasting."

The humble child of God is one of those who (not as the Scribes and Pharisees thought themselves better than those around them) are, as ability is afforded, seeking in self abasement to dwell low, even at the Master's feet not taking any of the praise or glory to themselves, but feeling that it is only of mercy that they are so favored. Surely we have nothing to boast of, and if God has favored us to see farther than some, it may be, let us remember that of such more is required.

We may be very strict in the outward observance of all our forms and outward testimonies, and yet lack the one thing needful. If we do not have fervent charity one for another and, as it were, be clothed with that meek and quiet spirit, even the Spirit of Christ the Head, we fail. If this was our individual experience we would be brought more and more to see our own condition as it is in the Divine eye-sight; contending for the light which has enlightened our dark hearts, even that light which enlighteneth every man that cometh into the world. Let us obey the light while we have it. It was this light which

George Fox contended for. If this light obeyed in our hearts we will be willing tohort one another, pray for each other, prefer others to ourselves, not so much tending or saying,—"What shall this do?" or what that one should do,—but

"Oh, Father, what wilt thou have me to do?" The religion of our Lord Jesus Christ out all contention and strife,—all that is exalted nature, all back-biting, all jealousy and in their stead fills the soul with unfeigned love to God, and unfeigned love to the brethren and sisters. While we are able to adhere to the outward forms, Oh, let us lose sight of the inward and essential things!

I have often been grieved in realizing a tendency in some to judge from outward appearance, which is not righteous judgment. God judges from the heart. If we merely from outward appearance, it is the natural man judging. The Scriptures—"Be not forgetful to entertain strangers: thereby we may entertain angels unaware," also, "man judges from outward, but God from the heart."

Let us examine our own hearts, and ourselves workmen approved of God, plain shoulder to shoulder, endeavoring to maintain the unity of the spirit which is the blessed peace. If there is a contentious spirit or a spirit to discourage or underestimate the good in others, or to talk about any one's hurt or disadvantage, it shows we are yet carnal. For "the fruit of the Spirit is love, gentleness, meekness, kindness, charity."

WILLIAM T.

Third Month 30, 1902.

THE ART OF TALKING.—If we notice carefully we shall find that the people who are most esteemed in social life are those who understand not only how to talk themselves but how to make others talk. This is a very valuable gift. To be able so to direct conversation as to draw out the opinions and quicken the thoughts of those with whom you talk is an accomplishment indeed. It makes a contributor to the enjoyment of all, and leaves with each a pleasant sense of having said something which others were glad to hear. There is a good deal of this sort of conventional missionary work waiting to be done the time which we spend in chattering on the weather might be very profitably devoted to it. It should be borne in mind that we are scarcely any one of average intelligence who cannot, if he is drawn out, talk interestingly and instructively about at least one thing with which he is practically most familiar, or which is connected with his regular labor. Whoever talks much thus with specialists upon their chosen department of fact or thought, will get together a fund of valuable information not to be learned from books.—*Boston Journal.*

PROMOTION.—All men are liable to some luxury dreams of self promotion. But we have lived long enough to prove that the solid of an almost unseen growth is best. And there is a wide difference between dignity pursued and dignity attained.

LEEDS, Eng.

Reminiscences.

FOR "THE FRIEND."

(Continued from page 285.)

following interesting remarks on the stained by our Society in the death of Evans, were addressed by Joseph Scatford to his sister E. S. Frye:—

PHILADELPHIA, Sixth Month 2, 1861.

Th hast doubtless heard of Cousin Wm. in decease. Although the event has been delayed for some time, the actual departure of so valiant for the Truth, and whose life had been marked with such faithful testimony to his Master's cause, cannot but be sad feelings. We may truly say, "A man and a great man has fallen in Israel." Removal of the fathers and mothers in the increases the weight and responsibility of those who survive. Some of these, who the importance of maintaining the doctrine and testimonies which obedience to the led our forefathers into, feel the weight of duty to be very great, and at times are to cry out in dismay, "who is sufficient?" The work that will be necessary to rebuild and restore the waste places? How could rejoice the hearts of many, if those have been conniving at the innovations the principles and practices of the Society and giving their strength to those who to modify and change the beautiful structure of forefathers were instrumental in raising, would only rally to first principles, and to check the inroads of the flood of inconsistency which is sweeping over our Society.

Many of those who are withholding disapprobation of the innovations alluded to have charity to believe are not desirous to change either in the principles or the practices which the Truth led into, but do not their testimony against the new things, from a want of not perceiving the inconsistency of them or from an amiable tendency to appear willing to differ from their S. How will such, especially if they are watchmen and watchwomen, answer if their unfaithfulness any should be beguiled of our unwearied adversary?

following is contributed by our friend J.

among those who frequented my father's in my boyhood was Robert Scotton, with my father had been associated for per- years at Tunesassa, New York, and the intimacy was formed, for they were as brothers, and as evidence of love for his father gave me the name of Scotton middle name, and Robert took much in me, as well as in others of our fam-

Robert was a deep, experienced minister; a man of spirits. He had considerable serene visiting families, as well as in meetings. The openings he had, particularly on the pages of the Old Testament, were very in- vasive.

frequently came to the city and made me at my father's and the latter part of he would spend a good deal of his time

First-day before his death he delivered remarkable testimony at Frankford. Anna an elder of that meeting speaking of it, she followed him all through, saying to

herself, surely this is Robert's last communication; feeling he was eminently favored.

He had a poor night after that day, but was about house next day; but soon after was taken down.

His last illness was short in one sense, although for a considerable time he had felt un- well. He had, however, been at Yearly Meeting a few weeks previous.

The last night he was on earth he had great sufferings, and was heard to pray that if consistent with the Divine will, the work might be cut short in righteousness; and he was taken from works to rewards in the early morning of the Fifth Month 20th, 1860.

When about sixteen years of age, when my father was absent in the service of Truth, my mother had me to drive her to the funeral of George Martin, an elder of Gwynedd Monthly Meeting who had been at our house to make his home Yearly Meeting time. After the burial at Plymouth the funeral company went into the meeting house, and filled it pretty full, so that some of the women sat on the men's side. Ezra Comfort preached, beginning with, "Be still, and know that I am God;" following with the words of our Saviour, "This is Life eternal, that they might know Thee the only true God and Jesus Christ whom Thou hast sent."

These words of our Saviour were, I think, the most impressive that ever fell on my ear, and the meeting was baptized and melted into tears.

Robert Scotton followed Ezra, on the im- portance of being concerned that, when thus tendered we should not let it be as the morning dew which passeth away.

The picture of this meeting baptized into tears, and the impression made on my mind, have been with me at times ever since.

Perhaps twenty-five years after, I was again at that meeting, when a daughter of Ezra Comfort commenced with the words "This is Life eternal, etc.," which was very affecting and convincing to me, for it seemed as if I had indeed gone back, or was taken back to Bethel.

ROLL THE STONE YOU CANNOT DRAG.—I saw some men building a stone wall the other day, and they were putting into it some enormous stones that they wanted to get out of the driveway to the house. Some of them were so large that a pair of strong horses were unable to drag them. When they found that this was the case, the man in charge, without being in the least sense defeated, hitched the chain around the rock in such a way that, instead of dragging it, it would roll it over. While the horses were not strong enough to drag the stone, they could roll it over very easily; and so they rolled it over and over again until they got it into its place.

There is a good lesson in that. Some people do all the work of life in the hardest way. If they can't drag their stones of difficulty, then they leave them and give them up as defeated. But that is not wise, for among our daily trials and burdens of life, as well as among the rocks on the New England side hills, there is many a stone too big to drag that can be rolled into a place of service.

C. E. World.

Robert Sandham.

Robert Sandham, a faithful elder, was born at Woodcut in Sussex, in the year 1620. Being of a pious disposition, he joined in Society with the strictest Baptists, who at that time were a tender and persecuted people, amongst whom he underwent mockings and stonings in the streets. He was very zealous in his profession, traveling on foot with the ministers; but in process of time, finding that whilst this people adhered to forms they had too much lost the power of religion which he first felt amongst them his anxious soul panted after a further manifestation of Truth and a closer communion with his Maker. He came to Ireland a Lieutenant of a regiment of foot, and arrived at Youghalin in the year 1652; where he married a woman who afterwards became a faithful Friend. He was convinced of the Truth by the ministry of Elizabeth Fletcher, who preached in the streets of that town in 1655, and a few years afterwards he was imprisoned in Cork for refusing to swear as a juror, and fined £5, for which they took from him a horse worth more than double the amount. In 1662 he was introduced into much serious thoughtfulness whether Cork or Youghal should be the place of his residence. The former presented a prospect of the greatest advantage as regarded the acquisition of riches, but Youghal appeared to be the place where he would be most useful as a Christian. The meeting there had become reduced in numbers and strength, whereas that at Cork was larger and embraced many substantial members. Under these considerations he gave up in faith to settle at Youghal, trusting to Divine Providence for a blessing on his efforts to provide a subsistence for his family. The meeting was held at his house, but persecution soon assailed the little company, a sentinel was placed at the door to keep them from assembling for the reasonable service of Divine worship, and he with his family was commanded by the governor to leave the town. Being a freeman he asserted his right and refused to obey the unjust command. The governor, however, forcibly sent him away with a guard of soldiers on foot, to Charleville, twenty-four miles distant, not permitting him to ride his own horse, though his bodily infirmities required it. He was brought before Roger Boyle, Lord President of Munster, who when he read the accusation and found that it charged him with nothing but what related to his religious duty, immediately set him at liberty, and he returned to Youghal, undergoing with patience and courage the reproaches and sufferings which attended him in the conscientious observance of the Law of his God. He was an example of uprightness in his dealings, of a benevolent spirit, ready to do good to all, especially to those of the household of faith—zealous and firm in his testimony for Truth against apostates, backsliders and false brethren, and particularly against the blasphemous opinions of Muggleton which deluded some of their utter loss as to their place in the Truth. He was a sharp reprover of disorderly and unfaithful walkers but a help and strength to his brethren and the newly convinced, by administering counsel suited to their conditions. He died in 1675, in the fifty-fifth year of his age being sensible of his approaching end or close and favored with a resigned frame of mind.

Friends in Tortola.

For "THE FRIEND."

BY GEORGE VAUX.

(Concluded from page 299.)

The Epistle from Friends in Tortola to London Friends is as follows:—

To Our Friends and Brethren of the Yearly Meeting in London.

Dear & Well Beloved Friends:—

In the Love & Fellowship of our Lord & Saviour Jesus Christ we tenderly Salute you; and Joyfully Embrace this Opportunity to Inform you that we have Received your kind and Brotherly Epistle signed by the Meeting for Sufferings in London the 17th of the 5th Month, 1741, which has been read in this Meeting to the universal Satisfaction of all Present; and we hope the same Hand and Arm that Raised us up to be a People in this Remote Part of the World, will still Enlighten our understanding more and more by His holy Spirit, to the enabling of us, in the discharge of our Duty to him, and One to another; as we are diligently Concerned to wait upon him in the Silence of all Flesh; and We can say by blessed Experience that he hath been found of us, and has broke in upon our hearts, to our great Comfort, Edification, and to the glory of his great name; and as a mark of his great Love to us sent amongst us our dear friend Thomas Chalkley from Philadelphia, who arrived here the 12th of the 8th month Last, to our great joy and comfort; and he Laboured Faithfully amongst us having Meetings almost every Day, and We believe his Labour of Love was Instrumental in bringing many to the true Shepherd and Bishop of their Souls and at Divers times Expressed his great Satisfaction in this his Visit; But as the Lives of all Men are in the Hand of the Lord, and He knows best what is best for us, He was pleased to take this our Dear Friend to himself the Third Day of the Ninth Month last, after about six Days' illness, and Interred the same Evening in a Decent Manner in a Plat of Ground given by John Pickering for a Burying Place, and upon which he is now building a Meeting House for the Use of Friends; as is Townsend Bishop another in the Division called the Road: This being the third Monthly Meeting that has been held here for Discipline.

And We have near One hundred Friends that attend the Meetings for Worship, at these Meetings besides several that frequently comes in; Our Monthly Meeting is divided into three particular Meetings, One at Fathog Bay, One at the Road, and One at a Small Island called Joes Vandike; We also may Inform you that within this Monthly Meeting there is three Men and four Women have had their Months opened in the Work of the Ministry and great Convincement appears. Our greatest Enemies becomes more Loving and Moderate as they See Friends Innocent Behaviour, and also their Life and Conversation agreeing with their Doctrine.

We think it will be agreeable to you, and therefore send you the Minutes of our dear Friend Thomas Chalkley kept whilst with us, which Seems to have been to his great Satisfaction.

He also brought us an Epistle from the Meeting at Philadelphia with an Account of friends' Discipline as Practised amongst them,

for all which Favours that the Lord our God is pleased to vouchsafe unto us both Immediately and Instrumentally we are humbly thankful and give him the Glory who is Eternally worthy both now and forever. Amen.

Signed in and on behalf of our Monthly Meeting held at Fathog Bay in Tortola this 27th of the 10th Month, 1741,

By John Pickering and many more.

Thomas Chalkley's account of his visit to Tortola mentioned in the Epistle has been mostly printed in his Journal published in Philadelphia in 1749 but the closing portion was omitted. The whole was found by John Pickering after Thomas Chalkley's death in his coat pocket. The omitted part is here given:

"After this Meeting [a large and favored one] we went by Water from the Road, an Harbour so called, to Fathog Bay where the Governour lives. There were three Cobles [boats used in herring fishery] in Company, in this Meeting. Dorcas the Wife of the Governour spoke to the People, they behaved soberly and gave good attention to what she said. So we came home to Friend Pickering's, I call it home because I was like to make it my home chiefly for this Winter where I meet with an hearty welcome, as I did also at divers other places; having a little overrun the Time, I must go Back to the Seventh Night at friend Bishop's. There were divers friends from another Island, in so much that some were obliged to Lay on Forms and some on Chests, as for my Part I chose an Hammock as I mostly did and do in the Caribbees; here with this People in the evening I had a most comfortable, tender, broken meeting. We offer'd up an Evening Sacrifice of high and holy Praises and Thanksgiving To the Name of the Living Eternal God and his Dear Son our holy Lord Jesus Christ, Through the Influence of the holy Spirit One ever living everlasting God over all blessed for ever—These two weeks time I spent in this Island of Tortola to my great Satisfaction."

As has been seen in the intimations in the letter to David Barclay from Governor Pickering, the adoption of Friend's Principles involved him at once in difficulty as respects his official position. The General Governor of the lesser West India Islands whose appointee as Governor of Tortola John Pickering was, respected his religious principles and continued him in office for a time, but it is manifest that the authorities could not long be satisfied and that sooner or later he must be removed. In the summer of 1742 his resignation was asked for and a new Governor commissioned.

In taking this step the General Governor acted with singular appreciation for John Pickering's character and consideration for his feelings, as will well be seen from the following letter:

"William Mathews Governor of Antigua and General Governor of Tortola and lesser islands

to

the Honorable John Pickering Esq.

"ANTIQUA, 7th of June, 1742.

"Sir

"The Repeated Accounts we have of the danger Tortola may suddenly be in, of an attempt from the Spaniards, makes me very Uneasy: I

know your Personal Worth and long have you in great Esteem. Tho' I do not like Religion, as well as I do my Own, Still I the same Regard for You as heretofore; as I know, the dictates of it Render you capable of Engaging an Enemy, Or using offensive Weapons, I should be without excuse to his Majesty, if I should let his Subjects in Tortola Suffer from your tender Regard to the Principles of your Religion.— I am my Only Motives, I have Seen Nothing in your Government that deserves Reproach and should be glad this Letter may be Sent the whole Island as my Testimony of it.

"But I think for my Own Justification the Safety of the Inhabitants, which can only depend on a vigorous Defence, And to remove all Conscientious Scruples from You, I had better resign that Military Trust, as we now are in Actual War and Danger, and that reason only, Mr. Hunt being recommended to me, as a Gentleman of Worth and Reputation, and Acceptable to your Self and the Inhabitants, I have Granted to him a Commission, to Succeed you in this Troublesome Island, as well as of no Salary or Advantage. I remain with all Regard always,

"Sr Your most affectionate Humble Servant

WILLIAM MATHEWS

"To the Hon'ble John Pickering Esq'r

Signs of God in the Flowers.

A pleasant writer tells of a Texas gentleman who became convinced of the existence of God in the following manner: One day he was walking in the woods, reading the writings of Plato. He came to the place where that great writer uses the phrase, "God metrizes." He thought to himself, "I could only see plan and order in God's world, I could be a believer." Just then he saw a little "Texas star" at his feet. He picked it up, and thoughtlessly began to count its stamens, finding that there were five.

Counting the stamens and the division at the base of the flower, he found five of each respectively. He then set about multiplying these three fives to see how many chances there were of a flower being brought into existence without the aid of mind, and having it these three fives; the chances again it were one hundred and twenty-five to one. He thought that was very strange. He examined another flower, and found it to be the same. He multiplied one hundred and twenty-five by itself to see how many chances there were against there being two flowers each having these exact relations of numbers; he found that the chances against it were thirteen thousand six hundred and twenty-five to one. But all around him were multitudes of these little flowers. They had been growing and blooming there for years. He thought it showed the order of intelligence, and that the mind that ordained it was God. And so he shut up his book, picked up the little flower, kissed it and exclaimed: "Bloom on, little flower! Sing on, little birds! You have made me and I have a God. The God that made these little flowers made me."

If we are little in our own eyes we still know Divine strength in our weakness; but when any apprehension of our strength or wisdom possesses the mind, weakness and sin in every respect ensue.—S. Fothergill.

OLD YEAR MEMORIES.

SUSAN E. GAMMONS.

forget the things that vexed and tried us,
worrying things that caused our souls to fret;
things that, cherished long, were still denied us,
Let us forget.

forget the little slights that pained us,
greater wrongs that rankle sometimes yet;
things with which some lofty one disdains us,
Let us forget.

forget our brother's fault and failing,
yielding to temptation that beset,
the perchance, though grief be unavailing,
Cannot forget.

things manifold, past all deserving,
words and helpful deeds, a countless throng,
all overcome, the rectitude unswerving,
Let us remember long.

things of love, the generous giving,
when friends were few, the hand-clasp warm
and strong,
the fragrance of each life of holy living,
Let us remember long.

things were good and true and gracious,
whereof right has triumphed over wrong,
the love of God or man has rendered precious,
Let us remember long.

understanding well the lessons it has taught us,
tenderly may bid the year "Good-bye,"
and in memory the good it brought us,
Letting the evil die.

FOR "THE FRIEND,"

Bible Prophecies Confirmed.

(Continued from page 28.)

Nineveh is chiefly known to Bible readers
from the book of Jonah. The tomb of this
city is supposed by some to have been on
the banks of the River Tigris near the modern
city of Mosul, and a Mosque has been built on
the reputed site by the native Mohammedans.
It is nothing known, however, to confirm
the traditions of Jonah being buried at this
city, but it is an interesting fact that Austen
discovered on excavating beneath the great
minaret on which this Mosque is erected found
the walls of an ancient chamber on which were
inscribed the name, titles, and genealogy of
Sennacherib, mentioned in 2nd Kings
19:37 as succeeding Sennacherib the King of
Assyria, who "dwelt at Nineveh." This
discovery is now well proved to be within a dis-
trict that included the suburbs of the re-
mains of the City of Nineveh.

The prophecies concerning Nineveh are
fewer than those relating to Babylon,
Jerusalem, and Nahum speak in strong
language of her doom. They are recited be-
fore Nahum Chapter 2nd.

3. And he will stretch out his hand
against the north, and destroy Assyria;
and he will make Nineveh a desolation, and dry
like a wilderness.

4. And flocks shall lie down in the midst
of it, all the beasts of the nation: both the
lion and the lioness shall lodge in the upper
parts of it; their voice shall sing in the win-
dow; desolation shall be in the thresholds:
they shall uncover the cedar-work.

5. This is the rejoicing city that dwelt
confidently, that said in her heart, I am, and
I am none beside me: how is she become a
desolation, a place for beasts to lie down in!

every one that passeth by her shall hiss, and
wag his hand."

Nahum, Chapter 1st.

"1. The burden of Nineveh. The book of
the vision of Nahum the Elkoshite.

2. God is jealous, and the Lord revengeth;
the Lord revengeth, and is furious; the Lord
will take vengeance on his adversaries, and he
reserveth wrath for his enemies."

"8. But with an over-running flood he will
make an utter end of the place thereof, and
darkness shall pursue his enemies."

"14. And the Lord hath given a command-
ment concerning thee, that no more of thy
name be sown: out of the house of thy gods
will I cut off the graven image and the molten
image: I will make thy grave; for thou art
vile."

Chapter 2nd.

"6. The gates of the rivers shall be opened,
and the palace shall be dissolved."

"8. But Nineveh is of old like a pool of
water; yet they shall flee away. Stand,
stand, shall they cry; but none shall look
back."

"13. Behold, I am against thee, saith the
Lord of hosts, and I will burn her chariots in
the smoke and the sword shall devour thy
young lions: and I will cut off thy prey from
the earth, and the voice of thy messengers
shall no more be heard."

Nahum Chapter 3rd.

"1. Wo to the bloody city! It is all full of
lies and robbery; the prey departeth not."

"5. Behold I am against thee, saith the
Lord of hosts; and I will discover thy skirts
under thy face, and I will show the nations thy
nakedness, and the kingdoms thy shame.

6. And I will cast abominable filth upon
thee, and make thee vile, and will set thee as
a gazing-stock.

7. And it shall come to pass, that all they
that look upon thee shall flee from thee, and
say *Nineveh is laid waste*: who will bemoan
her? whence shall I seek comforters for
thee?"

The final destruction of Nineveh is involved
in some obscurity; but the fact that its very
site was unknown in Xenophon's time, (about
400 B. C.) is proved by the statement in his
Anabasis, that in passing close to what is now
known to be the site of Nineveh he was shown
a mass of ruins which went by the name of
Larissa. McCurdy Vol. 2, book 8, chap. 10
gives a synopsis of the history of the decline
of the Assyrian Empire of which Nineveh was
the capital, and the attack upon the City by
the Medes under Cyaxares combined with the
Babylonian forces led by Nabopolassar. He
assigns the year of the siege and fall of the
City to 607 B. C. He says, "the destruction
of the City was summary and complete. The
world has not seen its like before or since.
The concentrated hatred of the long harassed
nations at last found expression. Though
Medes and Chaldeans took the lead there were
found in the ranks of the besiegers warriors
from far and near to whom the task of ven-
geance was *Militia Sacra*. That process of
devastation undergone by hundreds of cities
at the hands of the remorseless Ninevite was
now re-enacted upon the oppressor with for-
mal exactness. After the sword and fire had
done their work the City was buried under de-

bris and earth, so that its memory might van-
ish from among men. The obliteration was
complete. All the ancient fortresses that en-
circled the central City from Khorsabad to
Nimrud were reduced to a uniformity of desola-
tion, so that the Mound of Nineveh proper
could not be distinguished from the other ruins
by later generations."

Austin H. Layard, whose discoveries among
the ruins of Nineveh resulted in bringing to
light such wonderful monuments of this an-
cient and renowned City, thus writes of his
first visit to it.

"We entered Mosul on the 10th of April,
1840. During a short stay in this town, we
visited the great ruins on the east bank of the
river which have been generally believed to be
the remains of Nineveh.* We rode also into
the desert, and explored the mound of Kalah
Sherghat, a vast ruin on the Tigris, about
fifty miles below its junction with the Zab.
As we journeyed thither, we rested for the
night at the small Arab village of Hammam
Ali, around which are still the vestiges of an
ancient city. From the summit of an artificial
eminence we looked down upon a broad plain,
separated from us by the river. A line of
lofty mounds bounded it to the east and one of
a pyramidal form rose high above the rest.
Beyond it could be faintly traced the wa-
ters of the Zab. Its position rendered its
identification easy. This was the pyramid
which Xenophon had described, and near
which the ten thousand had encamped; the
ruins around it were those which the Greek
general saw twenty-two centuries before and
which were even then the remains of an an-
cient city. Although Xenophon had con-
founded a name, spoken by a strange race,
with one familiar to the Greek ear, and had
called the place Larissa, tradition still points
to the origin of the city, and, by attributing
its foundation to Nimrod, whose name the
ruins now bear, connect it with one of the
first settlements of the human race."

"Were the traveler to cross the Euphrates
to seek for such ruins in Mesopotamia and
Chaldea as he had left behind him in Asia
Minor or Syria, his search would be vain. The
graceful column rising above the thick foliage
of the myrtle, ilex, and oleander; the gradines
of the amphitheater covering a gentle slope,
and overlooking the dark blue waters of a
lake-like bay; the richly carved cornice or
capital half hidden by luxuriant herbage,—
are replaced by the stern, shapeless mound
rising like a hill from the scorched plain, the
fragments of pottery, and the stupendous
mass of brick-work occasionally laid bare by
the winter rains. He has left the land where
nature is still lovely, where, in his mind's
eye, he can rebuild the temple or the theater,
half doubting whether they would have made
a more grateful impression upon the senses
than the ruins before him. He is now at a loss
to give any form to the rude heaps upon
which he is gazing. Those of whose works
they are the remains, unlike the Roman and
the Greek, have left no visible traces of their

*These ruins include the mounds of Kouyunjik
and Nebbi Yunus.

†He (Nimrod) went out into Assyria and builded
Nineveh, the City Rehoboth and Calah, and Resen,
between Nineveh and Calah; the same is a great
city" (Gen. x: 11, 12).

civilization, or of their arts; their influence has long since passed away. The more he conjectures, the more vague the results appear. The scene around is worthy of the ruin he is contemplating; desolation meets desolation: a feeling of awe succeeds to wonder; for there is nothing to relieve the mind, to lead to hope, or to tell of what has gone by. These huge mounds of Assyria made a deeper impression upon me, gave rise to more serious thoughts, and more earnest reflection than the temple of Balbec and the theatres of Ionia.

(To be continued.)

The Practicability of It.

Several articles have appeared in THE FRIEND from time to time in regard to teaching Farming in our boarding schools, and upon more than one occasion the subject has had favorable mention in our Yearly Meeting. Taking the educational world at large, in this country and abroad, it is doubtful whether any single movement is now claiming more interest and more care than the movement to make agriculture an integral part of school work. It has been included in the public system of education in Canada, and two or three of the latest and best schools for high class pupils in England, Germany and France are emphasizing this feature. In these schools, of course, much incidental advantage comes from the healthfulness of the labor to high-born and luxuriously trained children, but the instruction is none the less systematic and the outcome is sure to stimulate intelligence in farming.

President Eliot of Harvard has more than once pointed out that the lower grades of education are nurtured by the higher. In the subject of agriculture this is strikingly true. The agricultural college has had about twenty-five years of active life. It has been in existence in places much longer, but as an institution of the United States its power has hardly been felt much longer than twenty-five years. Now, in every direction the agricultural college is conducting a crusade upon the elementary schools. Nature leaflets are circulated at every hand and in some sections thousands of children are banded together under the leadership of agricultural experts to study Nature, and so eventually to love the things of farm life. The question then, "Is it practicable to teach agriculture in our schools?" is on everybody's lips.

The curriculum of most schools is now overloaded, the poor child is already burdened and teachers are obliged to neglect the elements of an English education on account of this crowding. This is the immediate response to the plea for a place in the school system for agricultural instruction. It is further claimed that expensive equipments will be required, and these and the additional teachers will further burden an overdrawn treasury. New subjects in school have invariably meant this. In some cases they have been introduced at moderate cost as experiments, but have directly become expensive necessities. The natural sciences, physical training and shopwork are all witnesses of this tendency to expansion, and practical men are quite ready to call a halt. The subject has been referred (with all these difficulties and more) to an agricultural expert, and his suggestion must

be our answer to the question, "Is it practicable?" In the case of day-schools located in cities, the plea for the subject of agriculture, so says our expert, does seem chimerical. Even day schools in the country have limitations that will doubtless make it difficult to add so simple a text to the curriculum as the little book by Prof. James so largely taught in the elementary schools of Canada. School gardens, however, are not unknown, even in cities, and their effect is very striking. The case with the boarding school, however, that has a good farm as part of its equipment, is totally different. Here, our expert continues, the opportunity for this instruction is alluring and the means seem to be of a character to meet all objections of overcrowding and expense. Specifically the plan might be somewhat as follows: Put the farm into the hands of a graduate farmer. Select a man who has had a practical farmer's environment and has supervised the special training. If possible let this man be a born teacher as well. It is already demonstrated that such a man will increase the profits of the farm. His trained business character is part of his outfit as a specialist, and this counts in dollars and cents, whether you run an iron mill, a cotton factory or a four hundred acre farm. Gradually as such a man gets his farm well in hand, let him offer an elective course of afternoon or evening lectures in the school. There may be few volunteers at first. Suppose there are five. Naturally they will be attracted to their subject and to their teacher and it will be an easy step to retain them on the farm during the summer as apprentice hands under instruction. Their labor will gradually count for more and more, and at the end of a decade the farm will be largely manned by apprentices who appreciate that their work is of the truly laboratory style and that the profits of their labor are no more than a fair return for the instruction. The instruction the meanwhile gets more and more methodical, and at the right time is properly acknowledged in the school diploma.

So much for the dream of an enthusiast, if you please to call it so. Is it anything more than the dream of an enthusiast? The Thompson Island Farm School located in Boston Harbor entered upon this plan of management more than a year ago. It has been, ostensibly, a "farm school" for many years, but boys tilled the earth and gathered the crops in the good old style under the leadership of a very worthy farmer of the old type. Graduates of the "Farm School" under such conditions did not "take to the soil," and a certain inappropriateness was felt in the very name of the institution. Under the new leadership there is every promise of a change. One point at least is demonstrated,—the boys have become enthusiastic for farming, and their monthly paper the "Thompson Island Beacon" reflects a spirit of great promise.

Farming evidently does not offer a field for "fortune making," but it is fairly demonstrated in many centres that it does offer a field for happy and healthful and remunerative living with conditions much more natural than they can be in city life. Surely the Society of Friends should stand for natural conditions and for that form of education that leads to it! Let no one be discouraged with the oft re-

peated reflection that it is impracticable others are demonstrating that this fear is founded.

J. HENRY BARTLEY

Thomas Rayton.

(Concluded from page 302.)

My delight was much in reading some of the prophecies, which prophesied of the coming of the Just One and of the work of redemption that He would bring to pass, and although I have said I delighted in those things the crown of my rejoicing was that I counted worthy to know the blessed word of God. I not only read in private, but in family we used to read much by candle light, my master and mistress allowing it, and in the practice thereof themselves, being our best Friends, who feared God, with all their children, who were dutiful to their parents, and kept very much out of the evil communication of the world, so that we were a comfort one to another as we kept to that which was good.

When I have been alone at my work the Lord very often comforted me with his Spirit and gave me a sight that He would give me a dispensation of the gospel to preach; and for seven years the word of the Lord was very powerful in my heart, not only to fitting of me to so great a work but growing upon me to the affecting of my heart. During these years living breathings often came through me to the Lord, that He would serve me in his fear. After I had served the full time of my apprenticeship, I went to the place of my birth and there followed a trade about a year. But it was not long till the Lord brought that which I had seen before me near, viz: the work of the ministry. The nearer it came to me, I still saw the need to be weighty and solid and much involved in spirit, often filled with the word of life that I could scarcely hold my peace in the assemblies of the people of God; yet muchward and still, often remembering the blessing of Solomon's temple, where there was the sound of a hammer or iron tool. In quietness in meeting I was greatly refreshed and filled with inward joy to the Lord, it could not yet utter by words what I felt. Indeed, as the ministry is a great work, it made me the more cautious how I entered into it, remembering it was not approved that on old laid hold of the ark unbidden when it was shaken. By all these experiences and carefulness, in not offering until I was fully satisfied it was my incumbent duty, I found it safe to appear in the ministry until I was fully satisfied of the Lord's requiring therein, although the Lord had been often with me from meeting to meeting, and in his visitations, left a holy dew upon my spirit. Thus was I filled with the odor of his good ointment, which I was anointed to preach the gospel; and thus I was led into the ministry. Upon about the 30th day of the Tenth Month, 1661, in a meeting at the house of John Bowron Cotherstone, where I was, amongst many more, after a little time, my soul was divinely touched with the power of God, and his word was again in my heart, as a burning fire in my bones. I could no longer contain; my tongue being loosed, my mouth was open to speak to the Lord unto his people in that meeting. I cannot but observe one thing, and that was

ly silence which was in the fore part of meeting, before my mouth was opened. Though there were several there that had given testimonies, yet that power by which I opened, bound them to silence. But after I spoke what I then delivered there stood my friend and was like one that had a seal to the words I had spoken. As I grew in testimony a concern came into my mind to go to the friends in Cumberland, where after some I went, and was kindly received by them as at most of their meetings, if not all.

T. RAYLTON.

Our dear friend Thomas Raylton, after he had traveled much in the service of the cause, settled in London about the year 1705, where he was very serviceable and edifying in the ministry, sound in his doctrine, mighty in the Holy Scriptures, zealous for the truth, and a faithful reproof of any undue liberty in the sects of it. He was many years afflicted with infirmity of body; but being fervent in the faith, was strengthened in the work of the ministry beyond expectation; so that he bore testimony to the Truth at times in the meetings of Friends, not only in London but in the countries of England. The year before his death, in much bodily weakness, he took a journey from London, and visited the brethren of his native county, to their mutual comfort and returned home well satisfied in his conscience there.

His last sickness in the Ninth Month, he bore the extremity of his pain with patience and resignation; having some before signified a sense of his approaching departure by saying, "My day's work is finished." . . .

A few days before his death he told a friend he had settled his affairs, being satisfied his departure was at hand; adding in a humble manner, "Doubtless it will be a glorious exchange to me."

His wife he thus expressed himself: "My dear husband, be easy; let me go, and rejoice when I come to so great salvation."

He departed this life in peace and full assurance of future happiness the 6th day of the Ninth Month 1723, in the fifty-third year of age.

Science and Industry.

FOR the Siberian railroad can possibly be in regular practical working order, it is estimated, the total cost will be swelled to at least \$500,000,000—that is, nearly three times the amount provided for a decade ago.

TEA, or Paraguay tea, which is the favorite beverage among a population of some twenty millions, grows wild in the woods of southern half of South America. For years its cultivation was a lost art. Although large plantations were planted by Jesuit missionaries more than a century ago, later attempts to raise the plant were fruitless, and until recently have new plantations been established in Paraguay. The secret of cultivation, it is alleged, is that the seeds will not germinate until treated with a potassium salt.

THE FORCE OF VIBRATION.—"What force is expected does the greatest damage to buildings?" a *News* representative asked a known architect.

"It is difficult to tell. But I will venture to say that you would never expect violin playing to injure the walls of a building. Yet that is certainly the case. There have been instances when the walls of stone and brick structures have been seriously impaired by the vibrations from a violin. Of course these cases are unusual, but the facts are established. The vibrations of a violin are something terrible in their unseen, unbound force, and when they come in contact with regularity they bear their influence upon structures of stone, brick or iron. Of course it takes continuous playing for many years too loosen masonry or to make iron brittle, but that result is obtained. In the great Masonic Temple in Chicago I have thought of what the result might be if a man would stand on the first floor, at the bottom of the nineteen-story light well, and play there continuously. The result could be more easily seen there than almost any place else, because the vibration gathers force as it sweeps upward. A man can feel the vibrations of a violin on an iron-clad ocean vessel, and at the same time be unable to hear the music. It is the regularity of the vibration which means so much. Like the constant dripping of water wearing away a stone, the incessant vibration of the violin makes its way to the walls, and attacks their solidity."

"But why doesn't this vibration affect the player?"

"Because a man is a flexible object. He can give way to motion and resume his place again. A frame building would not be damaged by vibration, because the timbers are flexible. But it is different with masonry."

"You may have noticed that a dog crossing the room will shake the entire building, no matter how small the dog. A dog can shake a suspension bridge. There are some great and valuable bridges which dogs are never allowed to cross, except when carried. You see, in that case, it is the regularity of the vibration that is so powerful. The dog's movement is a fixed and positive institution. The first step on the bridge is not noticed so much, but every step comes just alike, at the same interval, and with the same firmness. The force gathers momentum, and each step makes the bridge sway more. But there is another way that it may, perhaps, be illustrated better. As you sit there raise one foot partially on tip-toe. That's it. Now work your knee up and down rapidly and regularly. See how everything in the room rattles and the floor shakes? That illustrates the dog's power better than anything else. You and I and all our friends could not jump up and down in his room and shake the floor as you have just shaken it while sitting down and using only the force of one leg. It is the regularity of the vibration which is powerful."—*Indianapolis News*.

HOW BIRDS DRESS WOUNDS.—Many birds, says the *Youth's Chronicle*, particularly those that are prey for sportsmen, possess the faculty of skillfully dressing wounds. Some will even set bones, taking their own feathers to form the proper bandages. A French naturalist writes that on a number of occasions he has killed woodcocks that were, when shot, convalescing from wounds previously received.

In every instance he found the old injury neatly dressed with down plucked from the stem feathers and skillfully arranged over the wound, evidently by the long beak of the bird. In some instances a solid plaster was thus formed, and in others bandages had been applied to wounds or broken limbs.

One day he killed a bird that evidently had been severely wounded at some recent period. The wound was covered and protected by a sort of network of feathers, which had been plucked by the bird from its own body and so arranged as to form a plaster, completely covering and protecting the wounded surface. The feathers were fairly netted together, passing alternately under and above each other and forming a textile fabric of great protective power.

A PILLAR OF FIRE. An experiment with electricity as offering means of establishing a new system of warning signals for those who go down to the sea in ships is to be tried at the Diamond Shoals Lightship Station, off the coast of North Carolina. Lightship No. 71, at that station, has been furnished with an electric search light of immense power, which is to be used to throw a column of pure white light straight up in the air. This luminous column, thirteen inches across, will be visible, it is believed, at a distance of thirty-five miles, twice the range visibility of the existing Diamond Shoal Light. Reflected from the clouds in thick weather, the new light will cause a glow in the sky which can be seen fully as far or, under some conditions, even farther than the direct light of the pillar of fire. As a new form of marine beacon, this new adaptation of electricity certainly promises well, and it seems reasonable to hope for important results from its use. If the experiment proves successful and the new light is found to promote the safety of passing ships, it will undoubtedly be adopted at other danger points on the coast of our continent. To warn sailors of a dangerous landfall is one of the problems that have long engaged the anxious attention of our Government, our navy, and our merchant marine. It will be a cause of thankfulness if a new means to this end has been found in the Diamond Shoals luminous signal.

MANUAL training is one of the few good things that are good for everybody. It is good for the rich boy, to teach him respect for the dignity of beautiful work. It is good for the poor boy, to increase his faculty for handling tools, if tools prove to be the thing he must handle for a living afterwards. It is good for the bookish boy, to draw him away from his books. But, most of all, it is good for the non-bookish boy, in showing him that there is something he can do well. The boy utterly unable, even if he were studious, to keep up in book-knowledge and percentage with the brighter boy, becomes discouraged, dull and moody. Let him go to the work-room for an hour and find that he can make a box or plane a rough piece of board as well as the brighter scholar, nay, very likely better than his brighter neighbor, and you have given him an impulse of self-respect that is of untold benefit to him when he goes back to his studies. He will be a brighter and better boy for finding out something that he can do well. Mind

you, it is not planing the board that does him good; it is planing the board in the presence of other boys who can no longer look down upon him when they see how well he can plane. He might go home after school and plane a board in the bosom of his family, or go to an evening school to learn to plane, without a quarter part, nay, without any of the invaluable effect upon his manhood that it will have to let him plane side by side with those who in mental attainments may be his superiors.—*American Magazine.*

Notes From Others.

"It is so easy in these days to let machinery take the place of the personal Christ.—*Joseph W. Cochran.*"

MICHAEL ANGELO'S REFLECTIONS.

The course of light has brought my lingering days In fragile ship over a stormy sea

To the common port, where all our counts must be Ordered and reckoned : worse for blame, or praise. Here ends love's tender fantasy that made—

(I know the error of the thought)—great art My idol and my monarch : now my heart Perceives how low is each man's longing laid.

O thoughts that tempt us, idle sweet, and vain ! Where are ye when a double death draws near One sure : one threatening an eternal loss ?

Painting and Sculpture now are no more gain To still the soul, turned to that Godhead dear Stretching great arms out to us from his cross.

TAKEN AT HIS WORD.—A recent item in THE FRIEND concerning one struck dumb after swearing an imprecation upon himself, reminds a correspondent of an incident which was related to him by a witness :

The narrator heard his acquaintance say with a dreadful oath, more than a score of times, "He wished he were in hell, with his back broken !" So it transpired. The reverse of the engine being out of repair, they were stuck in the bed of a stream. The reverse slipped and the engine drove back, running over the man and breaking his back. He lived only six hours.

Also the engineer was well nigh crushed between his engine and the separator. He had a vision of this two days before, but did not mention it to any one.

THE REDEMPTION OF THE EVENING.—The redemption of the evening is a problem which has more to do with progress in life than some of us imagine. Two of the greatest factors in the formation of a successful career are physical health and mental agility, and these are largely dependent on the way in which we spend our leisure hours. The worst thing you can do of an evening is to do nothing. No man grows wrong when he is at work. But at night—that is when the battle begins ; and when the young man shuts his books, locks his desk, puts on his hat, and goes out into the busy streets, free for the evening—then the dangerous time commences. Probably he is dull and fagged and listless, lonely and tired and discontented. The devil dogs his footsteps. He is tempted at every street corner. That is how men go wrong, having nothing else to do, they do evil. Life is so monotonous, and the daily round so oppressive—and thus killing time they are apt to kill themselves—in seeking for pleasurable excitement they find a slippery path which may end in degradation and despair.

The remedy is simple and obvious. We must fill our life so full of good that there shall be no room for evil.—*P. A. Atkins.*

SUMMARY OF EVENTS.

UNITED STATES.—Secretary Hay has been engaged in negotiating a treaty with Nicaragua and Costa Rica in anticipation of the construction of the Nicaragua Canal.

They grant the United States a perpetual lease of a strip of territory six miles wide across Nicaragua and Costa Rica, along the route defined by the Isthmian Canal Commission. During the construction of the canal this strip will be ten miles wide. The United States is granted police and judicial jurisdiction in the strip, and provision is made for the apprehension of persons who may commit crimes within the leased territory and escape into the interior of Nicaragua or Costa Rica. In its part, the United States guarantees the sovereignty, independence and integrity of Nicaragua and Costa Rica. The United States further guarantees the neutrality of the canal, in accordance with the provisions of the Hay-Panamaote treaty. The amount of money to be paid by the United States is not yet ascertained.

A fire at Atlantic City on the 3rd instant consumed property valued at nearly \$1,000,000, including several hotels and other structures.

Representative Patterson, of Tennessee, has introduced a bill to abolish slavery in the Philippines and to invalidate the treaty between General Bates and the Sultan of the Sulu Islands.

Under the name of the Allied People's Party of the United States, a new political organization has been formed at Louisville, Ky., composed of reform elements opposed to the Democratic and Republican parties.

The Plant system, controlling 2,141 miles of railroad in Southern Georgia and Florida, is to be consolidated with the Atlantic Coast Line Railroad. The interests represented own nearly 10,000 miles of road and 150,000 miles of water line.

The whaling ship *Kathleen* from New Bedford, Mass., was struck by a whale on the 17th ult., when about 1,100 miles east of Barbadoes, and so injured that she soon afterwards sank. The captain and crew escaped in boats.

A despatch from Washington of the 6th says : "Powell, United States Ambassador to Mexico, is to be the first person to secure the submission of a case to The Hague arbitration. For a third of a century the United States Government has been trying to effect a settlement with the Mexican Government of the celebrated Pius claim, involving about \$1,000,000, which involves a dispute between the Roman Catholic Church in California and the Government of Mexico as to the liability of the latter for the interest upon certain Church lands which the Mexican Government undertook to hold as trustee for the Church."

The attention of the Secretary of the Interior has been called to the state of destitution and distress which exists among a large number of citizens of the Cheyenne Nation, in the Indian Territory, and in order to meet this condition of affairs he has about decided to make a per capita distribution of the town site money belonging to these Indians, which is being held in trust by the Government. This will give to each Indian a considerable sum. There are, it is stated, 10,000 Indians in destitute circumstances.

In the Texas Beaumont district there are about 170 oil wells, and some of them are eight inches in diameter. Since oil was struck the amount of the product shipped, stored and consumed up to the present time is 8,500,000 barrels. Several wells are over 2000 feet in depth, and some have produced as much as 380 barrels a day.

In the series of States beginning with Maine and ending with Pennsylvania, 68 per cent. of the inhabitants are found in what are here regarded cities, while in the region lying between the upper Mississippi and the Missouri the proportion is only 28.5 per cent., and in the South Atlantic States, 21.4 per cent. In North Carolina, Mississippi, Minnesota, Iowa and the Dakotas, the percentage falls off to between 6 and 10.

Importations by the United States from Cuba include all sorts of vegetables, egg plants, cabbages, potatoes, green peppers, ocha or gumbo, and squash. Cuban farmers are experimenting with asparagus, radishes and sweet potatoes.

The recent floods have caused the Mississippi River near Jackson, Miss., to rise higher than it was ever known before. On the 1st inst. it was 4 or 5 miles wide at this point.

The total net earnings of the United States Steel Corporation for the first year of its existence were \$11,067,195.

A school principal in Passaic, N. J., has organized his boy pupils into a street-cleaning brigade, and it is said has so aroused in them the spirit of civic pride that they perform their volunteer work industriously, enthusiastically and thoroughly.

There were 506 deaths in this city last week, reported to the Board of Health. This is 6 more than the previous week and 16 more than the corresponding week of 1901. Of the foregoing, 262 were males and 244 females; 72 died of consumption of the lungs; 75 of inflammation of the lungs and surrounding membranes; 16 of cancer; 16

of apoplexy; 15 of typhoid fever; 2 of scarlet fever; 6 of small pox.

FORGIVENESS.—The British War Office call for 10,000 volunteers for the army in order to release those who have already served a year in South Africa to return home, it is said, proved practically futile. Only about nine have responded, or about 15 per cent.

After prolonged experiments in sending four graphic messages each way simultaneously over two wires, the German Postal Department has accepted the octuple transmitter invented by the late Professor A. Rowland, of Baltimore. The experiments were conducted between Berlin and Hamburg. Between 3 and 350 words were transmitted a minute.

During the progress of an international football match at Glasgow on the 5th inst., at which about 70,000 persons were present as spectators, a wooden structure containing seats collapsed, resulting in the death of injuries to 250 persons.

Natural gas, of which England was supposed deficient, has now been discovered and put to practical purposes in the village of Heathfield, Sussex.

England owns 7390 of the 14,077 steamers belonging to the twelve leading nations of Europe and America.

A dispatch from Simla, India, of the 31st ult., says : "The plague situation is growing worse in the Punjab, where 70,000 deaths are reported monthly." The first it is reported, has appeared in Rio Janeiro and Pinar del Rio.

The first census returns show that the population of India is 294,266,701.

It is stated that during the week ending Third March there were 928 deaths from cholera at Mecca and Jeddah. The cholera is also reported to have appeared at Manila.

No less than 30,000,000 acres of Cuba—nearly half the island—is forest. There are thirty different species of palms alone found there.

The will of the late Cecil Rhodes bequeaths a sum of about \$1,000,000 for the establishment of scholarships at Oxford University, which will include two for the State and Territory of the United States as well as British Colonial and German scholarships. His will for this act is thus expressed in a codicil :

"For a good understanding between England, Germany and the United States will secure the peace of the world and educational relations form the strongest tie."

NOTICES.

WESTTOWN BOARDING SCHOOL.—For convenience of persons coming to Westtown School, the stage will call trains leaving Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met when regular Stage fares, fifteen cents; after 7.30 P. M., twenty cents each way. To reach the school by telephone West Chester, Phone 114.

EDWARD G. SMEDLEY, Secy.

WESTTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to Wm. F. WICKHAM, Principal.

Payments on account of board and tuition, and donations in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

Friends' Library, 142 N. 16th St., Phila.

Open on week-days from 11.30 A. M. to 2 P. M., and 3 P. M. to 6 P. M. Recent additions to the Library include the following :

ADAMS, J. C.—William Hamilton Gibson.

BAKER, R. S.—Seen in Germany.

BLACKWELL, Elizabeth—Pioneer Work in Opening

Medical Profession to Women.

BORROW, George—Wild Wales.

BURROUGHS, John (ed.)—Songs of Nature.

DWIGHT, H. O.—Constantinople and its Problems.

EABLE, A. M.—Old Time Gardens.

HALSEY, F. W.—Old New York Frontier.

HARRISON, D.—Fish in the English Lakes.

STORY, A. T.—Swiss Life in Town and Country.

DIET.—At the home of his daughter, in Milford, Pa., on the twenty-sixth of 10th Month, 1901, JOSEPH B. LACK, aged 90 years, 6 months and 24 days. A member of the Monthly Meeting of Friends of Philadelphia in the Northern District.

Progressive Abiding.

those who would be truly progressive, is something to abide in. In vain for is the speed of the ship, except these in the ship. Men may run on the earth in their own strength till they are out of while being out-distanced seven-fold by is sitting calmly and trustfully in their of progress in the car of progress. To be sure, have had to surrender of themselves for their fare, their regulations to abide under to keep their safe safe, and especially a watchfulness when to step out upon earth for the to which they are undergoing promotion. their going forward by the superior depends on their abiding as those who they when called out. In short, the progressive Christian is he who abides in Christ, in the openings of his teaching and witness; he whose "obedience keeps pace," with gush and rush, but "with knowledge whose zeal for God is according to the edge,"—"the spirit of wisdom and revelation in the knowledge of Him."

whoever goeth forward and abideth not teaching of Christ, hath not God" (ii: 3, R. V.). This is true for any one of the aspects of the retrograde progressiveness; that it be a going forward past one's ("transgresseth," A. V.); or following far off,—the precursor of denying Him a sudden test; or taking the lead of without keeping in hearing distance of the Word, as living echoes of his voice teaching.

is anointing teacheth." To abide in his teaching is to abide in that anointing. The teaching is the gift of the anointing, the same Spirit which is the power and au-

thority of preaching, praying or praising, and without which all these are barren. The same apostle and loving disciple knew what his vision of the teaching was, when he wrote, "The anointing which ye have received of Him abideth in you, and ye need not that any man teach you, but as his anointing teacheth you concerning all things, and is true, and is no lie, and even as it taught you, abide ye in Him."

Accordingly the truly progressive Friend goes forward by abiding in the teaching of Christ. Outside of that, behind it or ahead of it, he is not progressive,—but off the track, however aggressive or demonstrative. "Ye are my friends," said he, "if ye do whatsoever I command you." And such Friends are the only true progressives. Through hearkening to and abiding in the teaching of this inspeaking and anointing Word, they go onward. Commissioned, they pursue their mission. And continues the apostle, "He that abideth in the teaching, the same hath both the Father and the Son. If any one cometh unto you, and bringeth not this teaching, receive him not into your house, and give him no greeting; for he that giveth him greeting partaketh in his evil works."

Doukhor Notes.

Jos. S. Elkinton, accompanied by Dillwyn Stratton of Ohio, and Peter Jansen of Nebraska, arrived in Winnipeg, Manitoba, on the 6th inst. There they had a conference with the Commissioner of Immigration, and were shown many letters on file in the office, having reference to the special object of their journey, of which they took notes. J. S. E. writes—"The insight into the gravity of the work on hand does not lessen by the opportunity given to read and take notes from the files of letters in the Commissioner's office." They were glad to find, however, that there has been a considerable proportion of the Doukhobors who have come into the Government measures, respecting the land entries. The address of the Philadelphia committee, which had been ordered to be printed in the Russian language at the University Press, in Cambridge, Mass., had not come to hand at the time of our friends leaving Winnipeg, but they had had a translation made by Emma Almonofsky, which met with the full approval of Peter Jansen.

The Assistant Commissioner of Immigration, James S. Cramer, whose station is in Yorkton, had been telegraphed to by Commissioner Smith to come to Winnipeg to see our friends, and to return with them to Yorkton on Fourth

Day the 9th inst; but, owing to a washout, he did not arrive until 4 a. m. of the 9th, and had not recovered sufficient strength since his late illness to make it safe for him to turn about and go with our friends at 7.30 a. m.; so that they had little opportunity of conference with him.

D. Stratton writes—"We found in the interesting files at the Immigration Office (in Winnipeg) propositions for the Doukhobors to go to Turkey, Russia (?) and Australia. A paper by the name of "Free Thought" is sent them from some source. Several other evidences of the work of agitators are manifest. Against this the work of the Doukhobors in establishing themselves here has been done with such hearty vigor, that many (Canadians) who were doubtful of them, have been won over to be champions of their cause. The part Friends have taken has drawn the attention of the officials to the [Russians] in a marked degree. I also think the public are curious to know the occasion of our unusual interest. The above considerations are sufficient, without reference to many, more important matters, to cause us to grieve that seeds of Anarchy are still being sown, on such good soil."

The Speaker of the Manitoba House of Parliament called on our Friends in Winnipeg, expressed his interest in the Doukhobors, offered to do all in his power to assist, when there was need of help that he could give, and would gladly have accompanied our Friends through the colonies, if he was at liberty to leave home.

Michael Sherbinin writes from Rosthern 4th Month 6th—"The North Saskatchewan River is soon to lose her ice, and the crossing will be impossible during perhaps a fortnight, because of the high water. Nurse Sarah Boyle sent by the England Committee of Friends arrived here on the first inst. in good health. We are very grateful for this acquisition to our force."

WM. EVANS.

A MAN who lives entirely for himself becomes at last obnoxious to himself. I believe it is the very law of God that self-centeredness ends in self-nauseousness. There is no weariness like the weariness of a man who is wearied of himself, and that is the awful Nemesis which follows the selfish life.—*Jouett.*

At a banquet a young man who had been thus far a Christian and an avowed total abstainer, allowed his wine-glass to be filled, and even went so far as to touch it to his lips. "Of course I disapproved of the wine," he said, "but I thought it would be boorish for me to intrude my personal opinions on the rest by an absolute refusal." "My boy, carry that principle into all walks of life and you will make a successful failure of yourself," was the reply.

FOR "THE FRIEND."

Let Zion Arise and Shake Herself from the Encumbrance of the World.

I have felt for some time to address a few lines to the readers of THE FRIEND, and especially the younger class, as we have traveled around under an exercise for the Truth, passing through places where it is on the decline, in the maintenance of it, for want of faithfulness. The testimonies of the pure Truth as set forth by Jesus Christ and the apostles, and declared of in the Scriptures, were sustained in the earlier days by those who counted not their lives dear, and who suffered therefor. Most important among which is the Light of Christ, believing in and obedience to the impressions thereof on the mind and heart, the only way to realize what is known of God and to experience a growth of grace and in the real knowledge of Christ within, and coming into this same Light, and Revealer, which is received in our felt nothingness, the only means by which we can realize the meaning of that which was penned by and through the inspiration of the Holy Spirit, or is still uttered by the same authority. Are we, my dear young Friends or any of us, to let those testimonies pass from us, through our unwillingness to become teachable in humility and to believe and yield to the restraining, constraining influence of the Spirit of Truth? For the Saviour said, if He went away He would send the Comforter, even the Spirit of Truth, which will guide unto all Truth. Shall we be seeking some easier way proposed by man, who is unwilling to yield to the cross? We may let the testimonies of Truth pass from us,—any of us who are not willing to sustain them through a preparation,—but in that event, I believe God will place his gifts and callings upon others, who will be willing in humility; but then will we have lost our place, and will not be clear, for "the gifts and callings of God are without repentance," and must be fulfilled or suffered for.

I have felt to encourage us to faithfulness, for I do believe the standard which was upheld by the early Friends, was and is not a peculiar one, but the Truth as Christ will reveal it to those who are willing, and as He will yet be to such. Let us do our part that we may be clear, not seeking to be at ease in Zion, but with the decision of Joshua, "Let others do as they may, as for me and my house we will serve the Lord." Then would the waste places be builded, and Zion no more be called desolate, a city forsaken in any wise. But with the feeling of David, "My soul thirsteth for God, for the living God, when shall I come and appear before God?" we would gather to the solemn assemblies, and witness solemn feasts, for the Lord would delight in us, a dedicated people, giving Him the first fruits; not serving ourselves first, and giving Him the rest if any, but baking Him a little cake first. I believe the Spirit of the Lord is loudly calling for our yielding to his visitation, with which I do feel to cooperate in endeavoring to turn our attention to our highest privilege, serving the Lord our Maker and Creator in our minds and hearts, that fruits might appear, and that those who know what it is to be taught in his school might be shown also unto Israel in his

own time, upon which would his blessing rest, having the promise of the present and of the life to come. With love, your friend,

CYRUS COOPER.

Edward Andrews.

The following interesting narrative was given me by a Friend, respecting Edward Andrews, the father of Peter Andrews, mentioned in John Woolman's journal, who was the first member of Our Society that settled in Little Egg Harbor, and the instrument in settling a meeting there. Before Edward Andrews became convinced of Friends' principles, he kept a boat, and played the violin on board his boat to collect people for the purpose of dancing and frolicking. One day when on shore in his [plowing a field], a human bone was turned out, which he took up, the viewing of which produced such serious impressions on his mind that he never was able to get from under them; he buried the bone. These serious impressions increased, and led him to take such a clear view of the danger of pursuing his mode of conduct and manner of obtaining a livelihood, that he burnt his violin, forsook his old course of life and became convinced of the principles of Friends. He did not hastily make a change in his outward garb, and before any material alteration took place in this respect, his mouth was opened in the ministry. Apprehending himself called upon to have a meeting appointed at Crosswicks for those of other religious Societies, he informed Friends thereof, but they could not then allow of his having such a meeting. On his way home, after his friends had put his concern by, he stopped at a brook to water his horse, and whilst his beast was drinking, the following considerations passed his mind: If this stream, at which the horse was then drinking was a living stream, was it possible that man could wholly stop its progress? It was presented to his mind that it might be dammed up for awhile, but even if this was the case, in time it would find its way over the dam, or make its progress through some other channel. These considerations, under his then trying situation, proved instructive to his mind and he was led to conclude that if the concern which he had cast before his friends, proceeded from the living fountain and spring of Divine Light and Life, and if he was careful to keep in the faith and patience in due time way would open in the minds of his friends for him to have a meeting at Crosswicks; which accordingly proved to be the case, and it was supposed to be this meeting which afterwards Edward Andrews had at Crosswicks, that Abraham Farrington alluded to when he said that Edward Andrews was the first instrument in the Divine hand, of proclaiming in the ear of his soul the awakening call, by attending to which he was brought into a near acquaintance with the Truth professed by Friends.—T. Shillitoe's Journal.

A Shaggy Newsboy.

The railroad ran along one side of a beautiful valley in the central part of the great State of New York. I stood at the rear end of the train, looking out of the door, when the engineer gave two short, sharp blasts of the steam whistle. The conductor, who had been reading a newspaper, in a seat near me,

arose, and touching my shoulder, asked, "I wanted to see a 'real country newsboy' of course, answered 'Yes.'" So we got out on the platform of the car.

The conductor had folded up his paper in a tight roll, which he held in his right hand while he stood on a lower step of the car, holding on by his left.

I saw him begin to wave the paper just as he swung around a curve in the track, and the farmhouse came into view, way off some open fields.

Suddenly the conductor flung the paper toward the fence by the side of the road, and I saw a black, shaggy form leap over the fence from the meadow beyond it, and, just where the newspaper, after being tossed along the grass, had fallen beside a tree, leinstalk in an angle of the fence.

It was a big black dog. He stood on the paper, wagging his tail, and watched as the train moved swiftly away from him when he snatched the paper from the dog in his teeth, and leaping over the fence away he went across the fields toward the farmhouse.

When we last saw him he was a black speck moving over the meadow, and then the train rushed through a deep cut on the hillside, and the whole scene passed from our view.

"What will he do with the paper?" asked of the tall young conductor by my side.

"Carry it to the folks at the house," answered he.

"Is that your home?" I inquired.

"Yes," he responded; "my father's there, and I send him an afternoon paper, Carlo every day, in the way you have said."

"Then they always send the dog with the time for your train to pass?"

"No," said he, "they never send him. He knows when it is train time, and comes out here to meet it of his own accord, to shine, summer or winter."

"But does not Carlo go to the wrong times sometimes?" I asked with considerable curiosity.

"Never. He pays no attention to any but this."

"How can a dog tell what time it is, and to know when to go to meet the train, asked again.

"That is more than I can tell," answered the conductor, "but he always is there, and an engineer whistles to call my attention. I fear I should not get out on the platform if we had passed Carlo."

"So Carlo keeps watch on the time, and then the conductor himself," I remarked. "The dog does not need to be reminded."

The conductor laughed, and I wondered how he walked away, who of your friends would be so faithful and watchful all the year round. Carlo, who never missed the train, though he could not "tell the time by the clock." *Dumb Animals.*

• WHERE the Spirit prevails that puts the labor, and slides away with the plea of utility, it hastens their rejection from the hands of God. One seemingly plausible suggestion is the want of proper qualification. But what is this want? Is it of the Lord of perfection that the people are lame and defective of themselves?—Sam'l Fothergill.

For "THE FRIEND."

Bible Prophecies Confirmed.

(Continued from page 310.)

Looking back upon the few months that I spent in Assyria, I could not but feel satisfaction at the result of my labors. A year before, with the exception of the ruins of Khorsabad, not one Assyrian monument was known. Almost sufficient material had now been obtained to enable us to piece out much of the lost history of the country—to confirm the vague traditions of the past and the civilization of its people. It had been my duty during my labors, that of the discovery of these remains was opportune, that it might be looked upon as something more than accidental. Had the ruins been by chance exposed to view long before, no European could have obtained them from complete destruction, or have preserved a record of their existence. Had they been discovered a little later, it is highly probable that there would have been insurmountable objections to the removal of any part of their contents. It was only just at the right moment that the ruins were discovered, and we have been fortunate enough to acquire the most convincing evidence of that magnificence, and that which made Nineveh the wonder of the world, and her fall the theme of the poets, as the most signal instance of Divine retribution. Without the evidence that the monuments afford, we might almost have believed that the great Nineveh ever existed, and that she had become a desolation.

The earliest king of whose reign we have any record is the builder of the palace at Nimroud, the most ancient city yet discovered in Assyria.* His reign, however, with other inscriptions, furnishes names of five, if not seven of his predecessors, some of whom, there is reason to believe, erected palaces at Nineveh and founded those which were only re-occupied by subsequent monarchs. It is consequently important to ascertain the periods of the reign of this early Assyrian king, and to ascertain the means of fixing it with accuracy. His son, we know, built a palace at Nimroud, and raised the city to its present position. The principal events of his reign were the conquests of his father, and the great conqueror and subdued many nations. The names of the subject peoples whom he paid him tribute are duly recorded in the inscriptions. In some instances with sculptured representations of the various objects of tribute. Amongst those kings was one whose name was "Jehu, the son of Khumri (Omri)," who has been identified by Dr. Hincks and Dr. Rawlinson with Jehu, king of Israel. This Jehu was certainly not the son, although he was the successor of Omri, but the term "son" appears to have been used throughout. East in those days, as it still is, is connected with connection generally, either by descent or succession. Thus we find in Scripture a person called "the son of Nimshi," who was the son of Jehoshaphat, the son of Nimrod. An identification connected with this Omri or Omri is one of the most im-

portant instances of corroborative evidence that can be adduced of the accuracy of the interpretations of the cuneiform character. It was observed that the name of a city resembling Samaria was connected, and that in inscriptions containing very different texts, with one reading Beth Khumri or Omri.* This fact was unexplained until Col. Rawlinson perceived that the names were, in fact, applied to the same place, or one to the district, and the other to the town. Samaria having been built by Omri, nothing is more probable than that—in accordance with a common Eastern custom—it should have been called, after its founder, Beth Khumri, or the house of Omri. As a further proof of the identity of the Jehu mentioned on the obelisk with the king of Israel, Dr. Hincks, to whom we owe this important discovery, has found on the same monument the name of Hazael, whom Elijah was ordered by the Almighty to anoint king of Syria.†

"Supposing, therefore, these names to be correctly identified,—and our Assyrian chronology for his period rests as yet, it must be admitted, almost entirely upon this supposition,—we can fix an approximate date for the reign of the obelisk king. Jehu ascended the throne about 855 B. C.; the accession of the Assyrian monarch must, consequently, be placed somewhere between that time and the commencement of the ninth century B. C., and that of his father in the latter part of the tenth.‡

"The inscriptions begin with the names and titles of Sennacherib. It is to be remarked that he does not style himself 'King,' or rather 'High Priest,' of Babylon, as his father had done in the latter part of his reign, from which it may be inferred that at the time of engraving the record he was not the immediate sovereign of that city, although its chief may have paid tribute to him, and no doubt, acknowledged his supremacy. He calls himself 'the subduer of kings from the upper sea of the setting sun (the Mediterranean) to the lower sea of the rising sun (the Persian Gulf).' In the first year of his reign he defeated Merodach Baladan, a name with which we are familiar, for it is this king who is mentioned in the Old Testament as sending letters and a present to Hezekiah, || when the Jewish monarch in his pride showed the ambassadors 'the house of his precious things, the silver and the gold, and the spices, and the precious ointment, and all the house of his armour, and all that was found in his treasures: there was nothing in his house, nor in all his dominions that Hezekiah showed them not,' an act of vain boasting which led to the reproof of the prophet Isaiah, and to his foretelling that all this wealth, together with the descendants of its owner, should be carried away as spoil to the very city from which these ambassadors came. Merodach Baladan is called king of Kar-Duniyas, a city and country frequently mentioned in the Assyrian inscriptions, and comprising the southernmost

part of Mesopotamia, near the confluence of the Tigris and Euphrates, together with the districts watered by those two rivers, to the borders of Susiana. This king, with the help of his Susianian allies, had recently recovered Babylon, from which Sargon, Sennacherib's father, had expelled him in the twelfth year of his reign. The battle appears to have been fought considerably to the north of that city. The result was that Sennacherib totally defeated Merodach Baladan, who fled to save his life, leaving behind him his 'chariots, wagons (?) horses, mares, asses (?) camels, and riding horses with their trappings for war (?)'.

"During the latter part of my residence at Mosul a chamber was discovered in which the sculptures were in better preservation than any before found at Kouyunjik. Some of the slabs, indeed, were almost entire, though cracked and otherwise injured by fire; and the epigraph, which fortunately explained the event portrayed, was complete. These bas-reliefs represented the siege and capture by the Assyrians, of a city evidently of great extent and importance. It appears to have been defended by double walls, with battlements and towers, and by fortified outworks. The country round it was hilly and wooded, producing the fig and the vine. The whole power of the great king seems to have been called forth to take this stronghold. In no other sculptures were so many armed warriors seen drawn up in array before a besieged city. The besieged defended themselves with great determination. Spearman, archers, and slingers thronged the battlements and towers, showering arrows, javelins, stones, and blazing torches upon the assailants. Part of the city, had however, been taken. Beneath its walls were seen Assyrian warriors impaling their prisoners, and from the gateway of an advanced tower, or fort, issued a procession of captives, reaching to the presence of the king, who, gorgeously arrayed, received them seated on his throne. The vanquished people were distinguished from the conquerors by their dress, those who defended the battlements wore a pointed helmet, differing from that of the Assyrian warriors in having a fringed lappet falling over the ears. Some of the captives had a kind of turban with one end hanging down to the shoulder, not unlike that worn by the modern Arabs of the Hedjaz. Others had no headress, and short hair and beards. Their garments consisted either of a robe reaching to the ankles, or of a tunic scarcely falling lower than the thigh, and confined to the waist by a girdle. The women wore long shirts, with an outer cloak thrown, like the veil of modern Eastern ladies, over the back of the head and falling to the feet.

"Several prisoners were already in the hands of the torturers. Two were stretched naked upon the ground to be flayed alive, others were being slain by the sword before the throne of the king. The haughty monarch was receiving the chiefs of the conquered nation who crouched and knelt humbly before him. They were brought into the royal presence by the Tartan of the Assyrian forces, probably the Rabshakeh himself, followed by his principal officers. The general was clothed in embroidered robes, and wore on his head a fillet adorned with rosettes and long tasseled bands. The throne of the king stood upon an elevated

* Sargon is called on the monuments of Khorsabad, "the conqueror of Samaria and of the circuit of Beth Khumri" (Dr. Hincks, Trans. of the R. Irish Acad. vol. xx.)

† 1 Kings xix: 15.

|| Isaiah, xxxix: 1 and 2 Kings xx: 12. where the name is written Berodach.

platform, probably an artificial mound, in the hill country. Its arms and sides were supported by three rows of figures one above the other. The wood was richly carved, or encased in embossed metal, and the legs ended in pine-shaped ornaments, probably bronze. The throne, indeed, appears to have resembled, in every respect, one discovered in the northwest palace at Nimrod, which I shall hereafter describe. Over the high back was thrown an embroidered cloth, doubtless of some rare and beautiful material. The royal feet rested upon a high footstool of elegant form, fashioned like a throne, and cased with embossed metal; the legs ended in lion's paws. Behind the king were two attendant eunuchs raising fans above his head, and holding the embroidered napkins.

"The monarch himself was attired in long loose robes richly ornamented, and edged with tassels and fringes. In his right hand he raised two arrows, and his left rested upon a bow; an attitude, probably denoting triumph over his enemies, and in which he is usually portrayed when receiving prisoners after a victory.

"Behind the king was the royal tent or pavilion; and beneath him were his led horses, and an attendant on foot carrying the parasol, the emblem of royalty. His two chariots with their charioteers, were waiting for him. The trappings of the horses were handsomely decorated, and an embroidered cloth, hung with tassels, fell on their chests. Two quivers, holding a bow, a hatchet, and arrows, were fixed to the side of the chariot.

"This fine series of bas-reliefs, occupying thirteen slabs, was finished by the ground-plan of the castle, or of a fortified camp containing tents and houses. Within the walls was also seen a fire-altar with two beardless priests, wearing high conical caps, standing before it. In front of the altar, on which burned the sacred flame, was a table bearing various sacrificial objects, and beyond it two sacred chariots, such as accompanied the Persian kings in their wars.* The horses had been taken out, and the yokes rested upon stands. Each chariot carried a lofty pole surmounted by a globe, and long tassels or streamers; similar standards were introduced into scenes representing sacrifices† in the sculptures of Khorsabad.

"Above the head of the king was an inscription, which may be translated, 'Sennacherib, the mighty king, king of the country of Assyria, sitting on the throne of judgment, before (or at the entrance of) the city of Lachish (Lakhisha). I give permission for its slaughter.'

"Here, therefore was the actual picture of the taking of Lachish by the city, as we know from the Bible, besieged by Sennacherib, when he sent his generals to demand tribute of Hezekiah, and which he had captured before their return; evidence of the most remarkable character to confirm the interpretation of the inscriptions, and to identify the king who caused them to be engraved with the Sennacherib of Scripture. This highly interesting

series of bas-reliefs contained moreover, an undoubted representation of a king, a city, and a people, with whose names we are acquainted, and of an event described in Holy Writ. They furnish us, therefore, with illustrations of the Bible of very great importance. The captives were undoubtedly Jews, their physiognomy was strikingly indicated in the sculptures, but they had been stripped of their ornaments and their fine raiment, and were left barefooted and half clothed."

Dishonestly Repcompensed.

The late Duke of Buccleuch, in one of his walks, purchased a cow in the neighborhood of Dalkeith, which was to be sent to his palace on the following morning. The Duke, in his morning dress, espied a boy ineffectually attempting to drive the animal forward to its destination. The boy, not knowing the Duke, bawled out to him:

"Hie, mun, come eerh an' gie's a han' wi' this beast."

The Duke walked on slowly, the boy still craving his assistance, and at last, in a tone of distress, exclaimed:

"Come here, mun, an' help us, an' I'll gie' you half I get."

The Duke went and lent the helping hand. "And now," said the Duke, as they trudged along, "how much do you think you'll get for this job?"

"O, I dinna ken," said the boy, "but I'm sure o' something, for the folk up at the big house are gude to a' bodies."

As they approached the house the Duke disappeared from the boy and entered by a different way. Calling a servant, he put a sovereign in his hand, saying:

"Give that to the boy who brought the cow."

The Duke, having returned to the avenue, was soon rejoined by the boy.

"Well, how much did you get?" said the Duke.

"A shilling," said the boy, "an' there's half o' it t'ye."

"But you surely got more than a shilling?" said the Duke.

"No," said the boy, "that's a I got—and d'ye no think it's plenty?"

"I do not," said the Duke; "there must be some mistake, and, as I am acquainted with the Duke, if you return I think I'll get you more."

They went back, the Duke rang the bell and ordered the servants to be assembled.

"Now," said the Duke to the boy, "point me out the person that gave you the shilling."

"It was that chap there," pointing to the butler. The butler confessed, and attempted an apology, but the Duke indignantly ordered him to give the boy the sovereign. "You have lost," said the Duke, "your money, your situation and your character by your covetousness; learn henceforth that 'honesty is the best policy.'" The boy by this time recognized his assistant in the person of the Duke, and the Duke was so delighted with the sterling worth and honesty of the boy, that he ordered him to be sent to school at his expense.—*Telegraph.*

"The tree will not only lie as it falls, but it will fall as it leans."

Reminiscences.

(Continued from page 307.)

In the early part of 1869, a deputation of Friends was appointed by the Meeting for sufferings of Philadelphia Yearly Meeting to present to the authorities at Washington a memorial in relation to the Indians.

Clarkson Sheppard, Thomas Wistar, C. Evans and Joseph Scattergood composed the deputation. In the course of their visit had an interview with General Grant, the ident-elect. This visit probably strengthened the impression on his mind to inaugurate a different policy towards the Indians in the religious Societies should be called to assist the Government in improving the character of the agents and their service. Shortly after the return of the Friends the following letter was received by Joseph Scattergood from Eli S. Parker, who was afterwards Commissioner of Indian Affairs under General Grant. He was himself an Indian of the Seneca nation and was probably familiar with the names of Friends among that people. Thomas Wistar received a similar letter. In mentioning his reception to Joseph Scattergood, Thomas Wistar observed, "Our good friend Thomas Wright informs with great satisfaction that movement is now on foot to offer the Society of Friends some control of Indian affairs. I believe they could be useful, provided women could be prohibited from intercourse with the Indians, but that is in the present state of affairs simply impossible."

The invitation of the Government was tendered to other religious bodies and was accepted by several, perhaps by all whose aid was requested, and led to the adoption of the well-known "Quaker" or "peace policy" of Grant's administration.

HEADQUARTERS ARMY OF THE U. S., WASHINGTON, D. C.
February 15, 1869.

JOSEPH SCATTERGOOD, Philadelphia.

Sir:—General Grant, the president-elect, is desirous of inaugurating some policy to protect the Indians in their just rights and enforce integrity in the administration of their affairs, as well as to improve their general condition, and appreciating fully the friendship and interest which your Society has ever maintained in their behalf, directs me to suggest that I will send him a list of names of members of your Society whom your Society will endorse as suitable persons for Indian agents.

Also to assure you that any attempt which may or can be made by your Society for the improvement, education and christianization of the Indians under such agencies, will receive from him as President all the encouragement and protection which the laws of the United States will warrant them in giving. Very respectfully

Your Obedient Servant,
E. S. PARKER.

Per A. D. C. Brevet Brig. Gen. U. S. A. The subject alluded to was brought to the notice of the Meeting for Sufferings in the Third Month, 1869, and a committee was appointed to consider it.

J. S. remarks, Third Month, 20th 1869.—That committee met to-day and as a preliminary matter appointed T. Wistar, C. Evans and myself to have an interview with the President. We expect to go to Wash-

regard to the invitation of the President ends to take part in the care of the ern Indians, I have felt so discouraged to little improvement amongst the Indians that I feel a desire that we may be very al not to engage in any more than the Head of the Church requires of us, at the time not to omit anything He may be d to require of us. Notwithstanding I

have passed through seasons of discourag- ment, I have at other times felt quite encour- aged. There was an Indian told me yesterday that he heard Wm. Mt. Pleasant speak in a meeting in Canada in which he spoke of a visit Friends had made to their reservation last fall, in a way that was very encouraging. (I do not wish thee to speak of this to others). I hope our desire may not be to get honor of men.

The Blessing in the Struggle.

"There is one thing which puzzles me," said a young man to the friend to whom he had come for counsel.

"Only one?" asked the older man with a smile. "Then you are unusually fortunate."

"One in particular, and because I must meet it daily. The inequalities of life seem to me inconsistent with any theory of overruling goodness. It is a mockery to say that all men are created equal or that God gives to every man according to his several ability. The men with the ability are the men who have to work hard, and the others waste, what would be a godsend to poorer men.

"I do not pretend to be able to explain it," said his friend, "but I am impressed less with the hardship of those who struggle than with the waste of those who squander what they do not earn."

"That is not the point that interests me most," said the young man—"except by con- trast," he added.

"It's hard to have to struggle for what other men receive without asking and waste when they get it."

"They waste it largely because they got it without asking or striving for it," said the older man. "Harry, listen to me! Your way seems hard, and so it is—so hard that you sometimes doubt if God is good. You will yet live to thank Him for the struggle.

"I know of a man who wished to add an em- peror moth to his collection of insects. He obtained a cocoon, and hung it in his library all winter. In the spring as he watched it, he found the moth trying to emerge. The hole was so small, and the moth struggled so hope- lessly, as it seemed against the tough fibre, that he clipped the hole larger with scissors.

"Well, the fine large moth emerged, but it never flew. Some one told him afterwards that the struggles were necessary to force the juices of the body into the insect's great wings. Saving it from the struggle was a mistaken kindness. The effort was meant to be the moth's salvation."

"I see the moral," said the younger man. "Perhaps it will do me good to think now and then of the moth." —Late Paper.

THE magicians of Ephesus were so wrought upon by the Word of God that they brought their books containing their incantations and magical formulas, by which they imposed upon the credulity of the people, and then burned them in the presence of all men. The price of these books was probably about ten thousand dollars, an immense fortune in those days, one Roman penny being the hire of a day's labor. No wonder the writer of the Acts says, "So mightily grew the Word of God and prevailed."

A Trip Through Siberia.

"In the public park in Khabarovsk, on a high bluff overlooking the Amoor and Ous- soursi valleys," said Representative Ebenezer J. Hill, of Connecticut, to the Washington correspondent of the Boston *Transcript*, in recounting some of the incidents of his recent trip around the world, "there stands a splendid statue of General Mouravieff. His back is turned upon the conquests of the past, and he is looking at and pointing toward Manchuria. It was he who in 1854 notified China that, with or without her consent, he proposed to resume control of the Amoor river. In 1855 he re-established the Cossack stations its entire length, and in 1860, by the treaty of Aigun gained this splendid valley of a river navigable for two thousand miles, and the whole Pacific coast of Manchuria reaching westward to the Oussouri river and south- ward to Korea. That accession made Siberia what it is to-day. Without it she would have remained a trackless waste. With it she will become the dominant power in the Orient, and it is not impossible, that in some distant future the United States of North America will clasp hands across the straits with the United States of Northern Asia.

"As I sat and gazed on this man's statue and thought of the events of the last two years I fancied I could see the bronze eyes twinkle and the lips move with words of triumph, for the Cossack has marched again, and by fire and sword almost to the Chinese wall has established Russian control over all Manchuria. Siberian history may be summar- ized in the Russian saying that the empire only goes where the Cossack can march dry shod."

"Few people realize the immensity of Si- beria. To think of a single State stretching through one hundred and thirty degrees of longitude, and possessing one-ninth of all the land surface of the globe, is staggering. Let us measure it by countries we are familiar with. The United States and all its posses- sions, and all Europe except Russia, could be put into Siberia, with land enough left to make thirty-five States like Connecticut. And Manchuria will make seventy more.

"I had thought of Siberia as a convict set- tlement only. I found it a country of nearly nine million people, ninety-seven per cent. of whom were either natives or voluntary immi- grants, and all living better and enjoying much more political and religious liberty than in European Russia.

"I had believed Siberia to be a frozen wil- derness. The part through which I traveled was like Minnesota and the foothills of the Rockies, where wheat and rye and vegetables matured, where strawberries, currants and raspberries abound, where sheep, cattle and horses graze unsheltered throughout the year, and where a greater extent of virgin forests of splendid birch and pine is found than the whole area of the United States. For about four hundred miles north of the Trans-Siberian road like conditions prevail, and north of this tillable land are four hundred miles more of unbroken forests, before the frozen tundra of Arctic waste is reached.

"I expected to find in every town a convict prison full of exiles and criminals. With the exception of the two convict barges floating

down the Amoor on their way to Saghalien, I saw no trace of the system, but I did see in every town and village, no matter how small, the dome of a Russian church, and in the larger cities Roman Catholic and Lutheran churches as well.

"Into and through such a country the Russian Empire has built a marvelous railroad. Although planned for military purposes, its freight and passenger traffic has so enormously increased that there is no longer a question of its financial success. From its beginning, a steadily increasing tide of immigration has flowed into Siberia from Central and Northern Russia. Vladivostok, which forty years ago consisted of four Chinese fishermen's huts, is now a flourishing city of fifty thousand and Khabarovsk and Plavovestchenk are not far behind in wealth of population. At first there was a Cossack occupation at strategic points, then an assisted emigration of the former serfs, now an eager and enthusiastic search for wealth in the fertile soil of a new country. To each family moving into the Amoor and Maritime Provinces an allotment of two hundred and sixty-nine acres of land is made, and into the central and western provinces forty acres for each male immigrant, with certain tax exemptions and lessening of military service in both cases. The car fare to incoming settlers is surprisingly low—about \$12 for forty-five hundred miles.

"On the 28th of June, as I bade good-by to Consul Harris in Nagasaki, he said: 'I will mail a letter to-night to you at St. Petersburg, by the way of San Francisco. It will go around the world before you do.' It did, reaching St. Petersburg in thirty-five days while it took me forty-two to get to Moscow.

"My first stop was in Korea, a poverty stricken land, which Russia and Japan, in eager rivalry, are attempting to exploit. There is an opinion prevalent that the Philippines are a doorway into China, and that Manila is an entrepot for Chinese trade. One might as well claim that Cuba or the Bahamas could control the commerce of the United States.

"My first purchase in Siberia was a postage stamp, and, living in a country where officials are public servants, it seemed strange to me to stand, with hat removed, before the counter, behind which a man sat with his cap on, dressed like a Major General, and graciously consented to sell me one five cent stamp. Great as the postmaster is, he is nothing compared to the army officer. On one extremely hot day on the Amoor a wealthy merchant was lying on a sofa in the cabin. He had removed his coat. A Lieutenant in the army, traveling third class as a deck passenger, happening to see him in his shirt sleeves and just above his head a picture of the Emperor, ordered him to put on his coat in the presence of the Emperor. The merchant appealed to the captain of the steamboat, but without effect.

"The Trans-Siberian railroad is well constructed, in my judgment much better than our transcontinental lines originally were. More than fourteen hundred wooden bridges are being changed as rapidly as possible to steel. The roadbed is well drained, and watchmen flag all trains its entire length. The cars,

though built on the English plan of compartments, are equipped with vestibules and Westinghouse airbrakes, and are in every way as comfortable as ours."

Mary Turner.

Mary Turner, the wife of John Turner, at Tottenham, in the county of Middlesex, was the daughter of that remarkable sufferer for the testimony of a good conscience, Richard Vickris, of Chew Magna, in Somersetshire. In her tender years, by the grace of God, through the care of her religious parents, she was instructed in and seasoned with the principles of the holy Truth, as professed by the people called Quakers; in which she continued faithful, and was an example of piety and virtue through the course of her life.

When a little child, our much esteemed friend, William Penn, coming in at her father's, where he was very conversant and affected with her pretty, innocent deportment, broke forth extempore, thus:

"Sweet soul! what makes thee stray
From the angelic way?
Was it to teach us how to love
The happy regions above?
If so O! let thy wandering prove our gain,
And take us with thee back again."

She was naturally of a lively and cheerful temper, which remained when she came to years of discretion, yet took pleasure in frequent retirement and Divine meditation, in meetings for worship, and religious conversation, and received worthy public Friends with great comfort and satisfaction. When at home alone, she entertained herself chiefly in reading the Holy Scriptures, Friends' writings, and the three first books of Thomas à Kempis on the "Imitation of Christ;" at other times with her pen and needle; for it was rare to find her unemployed in something useful or necessary, when her health permitted. In her dress and apparel she was very neat and plain. The tenderness of her love and affection to her husband, mother, brother and sisters, was more than common, and very remarkable, and likewise so generally extended to her acquaintance, especially where truth had a prevalence, that it may be said, love predominated in her.

A few years before her death she was sensible of a gradual decay of bodily strength, and when weakness and faintness prevailed, she bore it with much patience and resignation to God's holy will. In a sense of the uncertainty of the comforts here below, she wrote thus to a near friend:

"The enjoyments of this life appear very changeable, and we are apt to seek them more than is good for us, which hinders our inward comfort, so we have something to war against every day. I desire thou mayest be directed by that Divine hand which orders all things for our good every way, as we have an eye to it."

And in another to a relation: "I am very sensible of my happiness, and desire to walk worthy of the mercies I enjoy; yet the want of my health has been an affliction to me; but I do not repine at that, since it is an advantage to us to have some alloy to the comforts of this life, which are mostly attended with disappointments of one kind or other."

On her bed of sickness she said to her

brother, she admired people should place their affections so much on the things of this world which are but as dross, and like traveling misery; and earnestly desired their fan might, with Jacob, obtain a blessing; and they had such worthy parents, who had educated them in the ways of Truth, and enjoyed so many favors beyond many others, thought to be a double thankfulness to the Giver. She desired her brother to be a comfort to their tender mother, and to keep their honorable father's name, as one of the branches of the family, and then there would be a blessing laid up for him.

Speaking to her sisters, she said, "should be good examples in the plainness of our habits, as we make profession of the principle of Truth, and should take up the cross daily; for we were not born to serve ourselves, but to honor the Lord. That pain and weakness were hard to bear; and when we were going out of the world we had need to have nothing then to do; that she waited for the presence of the Lord, in which was more pleasure than in all the joys of this world." Turning to one of them said, "The Lord has done great things for thee, and may have work for thee to do; there is good seed sown in thy heart, and I desire the Lord will bless thee."

Having been tendered in her spirit, so friends came to visit her, and prayed with her; whereupon she said she saw the Lord had forsaken her, but sent his servants, to visit her, which was a great comfort to her.

Another time one of her sisters coming in the room, "O sister," said she "the oppressor of the brethren lies very near, but the Lord's hand is underneath, and sweetly supports."

Some days after, the same sister being her bedside, she had an extraordinary concern for her own welfare and her near relation saying, "Dear sister, I have a steadfast joy but not a full assurance. I desire thee, pray earnestly for me lest there should be any thing committed by me, that may have slipped off of my remembrance, and I not be earnest enough with the Lord for forgiveness. I pray earnestly for you all that you may continue where I hope to be; and for my dear husband likewise; and expressed her great care that not one of the family might be lost. Another of her sisters, leaving her a little time desired the Lord would support her under her weakness. She answered, "He hath, and I believe will;" and seemed comfortably resigned in spirit.

A few hours before her departure she desired to be raised in her bed, in which she seemed as if she should pass away, and bade all farewell; but reviving, said, "I thought I had been going, but the Lord hath given me life from the pangs of death, praised be his name! oh! praise be to the Lord He hath given me a little ease."

Her fear was so great of offending the Lord that having some disposition to slumber, she said to her mother, "dost thou think He will be angry if I should drop asleep?"

Some time after, being moved again seemed refreshed, and lay in a sweet frame of mind, praising the Lord, saying, "Lord thou art merciful, compassionate and true. Thou hast given me ease; Oh! I will praise Thee."

at all times from time to time; every minute while I live I will praise
 ing in great pain, she said to some that
 near her, "He will give me ease by and
 and earnestly prayed to the Lord for it
 this manner: "Dear Lord give me ease;
 t Lord Jesus, give me ease;" and then
 to her sister, He would. Her sister said
 id not doubt but the Lord would answer
 esire and give her a full assurance; to
 she answered, "I believe He will."
 she desired those by her to pray for her.
 iving slumbered a little, she awoke re-
 ed, and looking on one of her sisters,
 said to her, "Dear sister I shall do well,
 ll do well." After which she was heard
 sweetly in prayer to the Lord to receive
 and was sensible to the last.
 ward the conclusion of her days her weak-
 ness was attended with such faintness and
 sometimes that it made her apprehen-
 sion would be very hard to bear the strug-
 gle of her final dissolution, which she fre-
 quently begged of the Lord to make easy; and
 as pleased to answer her desire accord-
 ing, for she passed hence almost without
 groan, or any visible alteration of coun-
 tenance. She departed this life at Totten-
 aforesaid on the 30th of the Sixth Month,
 about the thirty-third year of her age.

Science and Industry.

GREAT AUK'S EGGS.—A few days ago an
 of the great auk was offered for sale
 London, and after a spirited competition
 knocked down for \$1,222. The price
 is enormous, but when it is remembered
 there are only, as far as known, sixty-five
 egg in existence, the wonder ceases,
 ere are many more collectors, whose col-
 lections would not be complete without this
 desired possession. The eggs, of which a
 one alone was laid in a season, were de-
 posed on a ledge of rock close to the sea,
 as inability of the bird to travel on land
 preclude it from seeking a nesting
 far from the shore, and the baby auk
 ed enabled as soon as possible to slip
 the sea.

The great auk is believed to be extinct.
 latest account of a living specimen was
 by the late Dr. Fleming, who in 1821
 cruising in the Hebrides, and observed
 which had been caught by some fishermen
 sea near St. Kilda. It was brought on
 the yacht by the sailors and tied by the
 a big bird of about three feet in length
 a large beak and wings of very small
 with which it made no attempt to fly. Its
 elling gait was most ungainly and difficult
 the smooth deck, but when, still tied by
 eg with a long rope, it was allowed to
 its food overboard it was astonishing to
 the rapidity with which it swam under the
 er. The wings, used as propellers, with
 l beats, aided by the feet, drove it
 ough the sea with incredible swiftness and
 boats had hard work to keep up with it.
 he amusement at length met with disaster,
 ne day, when exercising in the usual man-
 the rope broke or became detached and
 last scion of a noble race disappeared to
 en no more.—*Chicago News.*

A NEW THING IN FOG SIGNALS.—A new
 thing in fog signals is being installed off Egg
 Rock, Lynn—a bell to be rung about fifty feet
 under water. It is well known that water is
 a good conductor of sound, and this is to be
 taken advantage of by the submerged bell.
 The bell is to be hung below a buoy which
 will be moored in fifteen fathoms of water by
 three or four mushrooms and gny chains, so
 that it can not swing around and twist things
 up; and it will be struck by electricity from
 the Egg Rock Light Station, where a power
 house is already established. The bell will be
 under the control of an operator on the island,
 who can sound it whenever there is need. The
 theory upon which the plan is to be worked
 out is that the bell, being under water, its
 sound may be heard by persons on shipboard at
 a much greater distance than if the bell was
 suspended above water in the open air, while
 for the same reason its noise cannot be objec-
 tionable to residents along a nearby shore. It
 is said that a person placing an ear against
 a plank in the hold of a vessel will be able
 to hear the bell three to five miles away. It
 is an idea that has been experimented with
 most satisfactorily, but nothing of the kind
 has yet been put into practical service. Some
 of the experiments were made in Boston har-
 bor last year, and if the Egg Rock bell proves
 a success it may be that others will be placed.
 It is believed by some that the ringing of
 the bell can be heard at a distance of ten or twelve
 miles, and so this experiment will be watched
 by all mariners who are passing Egg Rock.—
Montreal Herald.

BATTLE BETWEEN BEES AND WASPS.—A
 story of a curious battle between bees and
 wasps comes from Semperingham. A band of
 wasps entered a beehive in search of honey.
 The bees not unnaturally defended their prop-
 erty and tried to turn the enemy out. They
 were, however, badly beaten and the wasps
 gained possession. When the bee keeper ex-
 amined the hive later on he found that nearly
 all his bees had been killed, and that the wasps
 were enjoying the fruits of their victory.

GREAT CAVE DISCOVERED.—Butte, Mont.,
 Twelfth Month 10.—Lime quarry men blasting
 rock discovered the opening of an enormous
 cave, sixteen hundred feet above the Jefferson
 River, fifty miles east of here. A partial ex-
 ploration of the cave covering ten miles has
 been made, a depth of one thousand feet being
 reached. A large river with a cataract of one
 hundred feet was followed for several miles
 without its source or outlet being found. In
 one compartment of the caves bones and stone
 and copper utensils were found, pointing to
 the fact that the cave was in prehistoric times
 inhabited. Scientists think an earthquake
 closed the cave's mouth and killed the inhabi-
 tants. The formation of stalactite and other
 natural decorations throughout the cave are
 pronounced the most beautiful and varied ever
 seen.

THE MOST COSTLY DRUGS.—"The price of
 many drugs used in medicine is astonishing to
 those who are not acquainted with the sub-
 ject," remarked a druggist. "There are sev-
 eral that are worth their weight in gold (about
 twenty dollars an ounce), while two dollars,

three dollars and five dollars an ounce are
 quite common prices in pharmacy. I filled
 a prescription the other day that cost twenty-
 five dollars.

"But there is one drug that I can recall that
 is worth more than its weight in gold. That
 is pseudo phosytigmine. I don't think that
 it has a popular name. It is too rich for that.
 In the pharmacists' list it was quoted at one
 dollar a grain, or four hundred and thirty-
 seven dollars and fifty cents an ounce. The
 seed from which the drug is made grows in
 India and Brazil, as well as in parts of South
 Africa. This seed, tradition says, was once
 used by native chiefs as an ordeal. The or-
 deal generally resulted in the death of the
 man upon whom it was tried, and so was con-
 sidered a great truth finder. The prepared
 drug is sometimes used now in the prescrip-
 tions for the treatment of heart disease.

"Another drug that takes the palm for cost-
 liness is, curiously enough, the one that is
 perhaps the most widely known by name of
 them all to the general public—musk. Its re-
 tail price at the present moment is about fifty
 dollars an ounce, six hundred dollars a pound
 apothecary, or two and one-half times the val-
 ue of pure gold, twenty-four carats fine. It
 is obtained from the musk deer, a very rare
 animal, and is contained in a follicle, of which
 there is only one in each animal, so that an
 ounce of the drug represents approximately
 one of these precious animals. As it is largely
 used for scent, the demand constantly exceeds
 the supply, and the price has been steadily ad-
 vancing. There is no reason why it should
 not go to two hundred and fifty dollars or five
 hundred dollars an ounce during the next few
 years, as the musk deer is gradually vanishing
 from the face of the earth.—*Baltimore Ameri-
 can.*

FACTS ABOUT THE SPONGE.—The surface of
 a sponge is covered with little holes that are
 larger at the top than at the bottom, while the
 whole mass contains a system of channels.
 When the animal is alive water is kept flowing
 constantly through these channels by means
 of minute hair-like appendages, which the lit-
 tle polyps agitate. The water thus drawn in
 brings with it the food required for the sus-
 tenance of the sponge.

THE LILY FIELDS OF BERMUDA.—Down in
 frostless Bermuda, not far from the sea, the
 great lily fields, some of them more than one
 hundred acres in extent, are white with frag-
 rant bloom; the smell of the sea mingles with
 the sweet, heavy scent of the blossoms, and
 negroes wend their lazy way among the flow-
 ers, gathering in the snowy harvest. From
 these lily farms the bulbs will be sent north in
 summer and next Easter florists here will
 grow the flowers in their greenhouses. All the
 lilies used in decorating the church buildings
 at Easter are grown from these southern
 bulbs, in the immediate neighborhood of New
 York. It is the expensive lilies that are
 home-grown. As in England the roses and
 violets that are hawked about the streets of
 London at Christmas and Easter are imported
 from the villages along the Riviera, so the
 lilies that are peddled along the Bowery and
 the lower city, and those that are sold by the
 very small florists, come north in the flower
 from Bermuda.—*Everybody's Magazine.*

For "THE FRIEND."

For The Yearly Meeting now at Hand.

May we not hope that, as the time of our Yearly Meeting is now nigh at hand, that there are many amongst us who on looking towards it feel their minds clothed with an exercise similar to that expressed in a private letter of Clarkson Sheppard addressed to a friend, dated Fourth Month 10th, 1895, which we subjoin with a hope that our dear young friends, as well as some who may feel that they have but little part in the business of the meeting, may be enabled to enter with others into the same exercise of spirit as that of our deceased Friend who, in his day, was deeply beloved for the works' sake, and who though dead, yet speaketh much, in the few words quoted from the letter addressed to—

"As many minds as there will be in our Yearly Meeting now nigh at hand, how well would it be could we each seek to be guided by, and dwell in the one eternal and Divine mind." T. H. W.

Fourth Month 10th, 1902.

The largest induction coil, which produces the longest spark for service in wireless telegraphy, is said to be the one which was recently made for flashing messages between the coast of Japan and Korea. It can produce, in fact, a miniature streak of lightning forty-five inches in length, capable of killing any number of persons who might get in its way, and when in operation sends out something like thunder rolls. The entire apparatus weighs about two thousand pounds.

DEEP humility is a strong bulwark; and as we enter into it, we find safety and true exaltation.—John Woolman.

Items Concerning the Society.

William Cooper, of Sydney Monthly Meeting in Australia, is proceeding by way of California and Western States, hoping to attend Philadelphia Yearly Meeting before embarking for England to represent before London Yearly Meeting the four Monthly Meetings of Australasia, in regard to their need of an organization subordinate to some superior Meeting of their own in those islands.

We hear also of a prospect of the attendance at the Yearly Meeting of Jacob Maule and wife, of Colerain, Ohio; and of John S. and Esther H. Fowler, of Ohio, and of Eliza H. Varney, of Canada.

In Berkshire Inn, at Pinehurst, N. C., on the 3d instant, an address delivered by Joshua L. Bailey, of Philadelphia, at the request of the guests, on "The Origin, History and Distinguishing Doctrines of the Society of Friends," is said to have awakened considerable interest and drawn out numerous inquiries.

SUMMARY OF EVENTS.

UNITED STATES.—Both Houses of Congress have passed a bill repealing the war revenue taxes, and it has been signed by the President.

A syndicate of powerful companies, called the Beef Trust, appears to control the supply of meats in this country, and has lately advanced the prices to such a degree as to cause great dissatisfaction among the retail dealers and consumers. The greater use of milk, eggs and fish articles, instead of meat, is recommended as the only method of securing a reduction in the prices of meats, which are reported to have advanced from three to twelve cents per pound over usual rates.

The consumption of sugar per capita in the United States is stated to have increased from thirty-three pounds in 1870 to thirty-eight pounds in 1901.

The Mayor of Philadelphia has signed the ordinance

for an underground railway in Market Street, between the Delaware and Schuylkill Rivers.

A report issued by the Census Bureau shows that 2,063,912 farms in the United States during the census year 1900 produced 658,234,229 bushels of wheat of a farm value of \$369,945,320. This wheat was raised on 52,588,574 acres; 4,697,992 farms cultivated 94,916,866 acres of corn, producing 2,666,638,294 bushels, of a farm value of \$830,257,726.

An effort has been begun in Illinois to collect \$50,000 for the ex-terminates of the concentration camps in South Africa, and to provide for the children, where the mortality has been frightful, and Secretary Hay, by direction of the President, cabled to United States Consul General Bingham, at Cape Town, an instruction to draw on him for \$5000, the amount of the fund now in his hands, and to exercise his own discretion in the distribution of the money among the Boer sufferers. Before the Senate Committee on the Philippines on the 10 inst. a report was submitted, written by Governor Gardner, of the Philippine Province of Tayabas, dated Twelfth Month 16th, 1901, in which he says: "As Civil Governor I feel it my duty to say that it is my firm conviction that the United States troops should at the earliest possible moment concentrate in the one or two garrisons if it is thought desirable that the good sentiment and loyalty they formerly exhibited to the United States Government among the people of this province should be conserved and encouraged. Of late, by reason of the conduct of the troops, such as the extensive burning of the barrios in trying to lay waste the country so that the insurgents cannot occupy it, the torturing of natives by the so-called water cure and other methods, in order to obtain information, the harsh treatment of natives generally, and the failure of inexperienced, lately appointed Lieutenant commanding posts to distinguish between those who are friendly and those unfriendly and to treat every native as if he were, whether or not, an insurgent at heart, this favorable sentiment above referred to is being fast destroyed and a deep hatred toward us engendered. It has been stated that a Filipino or an Oriental does not appreciate just or kindly treatment, and that he considers it an evidence of weakness, and that severe and harsh measures are the only ones that are permanently effective with Filipinos. We have found that the kind and kind treatment, uniform and continued is the only way by which these people can be permanently our friends, and satisfied with United States superiority."

Steps have been taken to establish in Washington a Columbus Library. This institution, projected at the Mexican Congress, is to include not merely matters relating to Columbus, but also all literature touching geographical, administrative and governmental functions, history, natural resources and other matters of interest pertaining to the American Republic. The beginning will be made in the present quarters of the Bureau of American Republics.

George F. Kuntz, special agent of the Geological Survey in charge of precious stones, has prepared a report showing the production of precious stones in the United States during 1901. Among those enumerated are the following: Sapphire, \$90,000; beryl (aquamarine, etc.), \$5000; tourmaline, \$15,000; quartz crystal, \$10,000; gold quartz, \$2000; silicified wood, \$7000; rhodolite, \$21,000; turquoise, \$118,000; chlorastrolite, \$3000, and pyrite, \$3000. Gold is reported to have been found in the Thunder Mountain gold fields, in Idaho, in decomposed ore, lying on the surface.

The census of Texas shows that only one-fifth of its population is colored, and that this number is chiefly found in the five counties about Fort Bend, on the Gulf coast. Texans, in going to Oklahoma, tried to exclude negroes there. A recent outbreak in Lawton, Okla., has occurred in consequence of these efforts.

A Boston despatch says that grain has become so scarce for export at that port that transatlantic steamers now leaving have been obliged to take out coal and water as ballast.

A consolidation of various companies engaged in the hardware and iron and steel trading business. The capital involved is stated to be \$120,000,000.

Petroleum has been found in a depth of 1,000 feet in Michigan, six miles north of Rapid river.

A company has been organized with a capital of \$2,000,000 to manufacture pulp for paper out of sugar cane as it comes from the mill in Louisiana.

There were 194 deaths in the last week, reported to the Board of Health. This is 12 less than the previous week and 25 more than the corresponding week of 1901. Of the foregoing, 254 were males and 240 females: 59 died of consumption of the lungs; 72 of inflammation of the lungs and surrounding membranes; 11 of diphtheria; 13 of cancer; 27 of apoplexy; 14 of typhoid fever, 2 of scarlet fever, 49 of small-pox.

FOREIGN.—Serious riots have occurred in Belgium, es-

pecially in Brussels, in consequence of agitation of socialists, who demand a revision of the Constitution, universal suffrage. Collisions have occurred between troops and rioters, and many persons have been killed.

The conduct of a Major Waller of the Marine Corps of the Philippines in murdering Filipino prisoners he under examination in a court-martial in Manila: in Waller states that he was instructed by his superior, General Smith, to "kill and burn; to convert; to a hotbed of insurrection, into a wilderness;" "to no prisoners," and to "carry them over our top;" and that he was simply carrying out these commands. He was acquitted.

Negotiations for peace are reported to be still going between the Boer leaders and the British Government.

With a population of over 1,800,000 Berlin is one of the largest cities in the world, while there are said to be several times as many hells where the principles of democracy and so-called philosophy are taught. The condition is said to exist in other large cities in Germany.

The Prussian Minister of Public Works, reviewing experiments on the application of electricity to gauge long distance railroads has stated that electric light is a great security, as it is so great a light as to be so secure from accidents. On a road between Berlin and Zossen a speed of one hundred miles an hour had been reached.

A despatch from Melbourne states that the cable has reached the Fiji Islands. The American minister is to be at Kelp Bay, Vancouver Island, in China. The productiveness of the banana is so great that it has been estimated that the ground that would grow 80 pounds of wheat or 99 pounds of potatoes would, as mere space is concerned, give 4,000 pounds of banana and with a fractional amount of the same trouble it has been called the "Prince of the Tropics," because it takes the same place, only to an even greater degree than wheat, but counts them wheat, try and barley in West Asia and Europe, and that rice takes in India and China.

The number of deaths from cholera in Manila has continued nearly the same, while in the provinces the deaths are becoming alarming.

It has been found that at the present price of alcohol in Germany (about 13.5 cents a gallon) alcohol can be used with all forms of motive energy in engines of less than twenty horse power.

NOTICES.

WANTED.—A complete set of the writings of G. Fox (8 volumes). Any one willing to sell, please write to the editor of THE FRIEND.

A Friend; experienced in nursing, desires a paid companion, or care-taker for invalid (woman or child) a Friend's family. Correspondence solicited.

Address—A. A. Smith, Office of THE FRIEND, Philadelphia.

WESTTOWN BOARDING SCHOOL.—For convenience of persons coming to Westtown School, the stage will be in operation leaving Philadelphia 7:10 and 8:15 A. M., and 4:32 P. M. Other trains are met when required. Stage fare, fifteen cents; after 7:30 P. M., twenty cents each way. To reach the school by telegraph, West Chester, Phone 114x.

EDWARD G. SMEDLEY, Superintendent.

WESTTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to Wm. F. WICKESHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

MEALS will be furnished as usual during the third Yearly Meeting, commencing on Sixth-day, the 18th; same as heretofore—fifteen cents. It is hoped that a committee that Friends will avail themselves generally of the privilege, as much expense has been incurred to refit the dining-room more commodious and pleasant than heretofore.

MARRIED, in Twelfth Street Meeting, Philadelphia, the fifth of Fourth Month, 1902, EDWARD HENRY and MARTHA CORCORAN DUNHAM, both members of the Monthly Meeting of Friends of Philadelphia for the Western District.

It is a second-class matter at Philadelphia P. O.

A Plea for Faithful Fellowship.

Exactions of business, the constant temptations presented by a world that lieth in iniquity, and the desires of the unregenerate; and on the other hand the profession of religion in which obedience to the yoke of Christ is largely kept out of view, powerfully tend to captivate the mind and lead it from that watchfulness unto prayer, which alone there is safety. Earnest desires felt that this inward exercise of might more prevail among us, wherein we may know the gentle intimations of the Divine will and receive strength to obey it, and "in wisdom and spiritual understanding" might "walk worthy of the Lord unto all glory, being fruitful in every good work, increasing in the knowledge of God."

The maintenance of true unity between the senior and junior classes of our Yearly Meeting, yielding themselves to the government and influence of the tendering spirit of our Lord Redeemer, and thereby becoming one mind, has engaged our earnest concern. The ruling power of the gospel would thus induce us to fervent love for each other and strengthen the church where weakness is now felt.

Adding to the duties which have been laid upon us as part of the profession of pure Christianity which we are to exemplify before men, we should keep in constant remembrance that renewed life which comes through faith that works by love to the purification of the heart, and is that operation of which Christ Jesus taught to Nicodemus he insisted upon the necessity of being born again.

Upon an exhortation of the Philadelphia Meeting, sufferings, presented to the Yearly Meeting's week.

No education in the principles and doctrines of the religion of Christ, nor mental assent to them, however valuable, can take the place of a full surrender of our whole being into his hand; by which act of faith all obstacles to the renewing of the Holy Spirit are removed, and that change of heart takes place by which we become the true born children of our Father in Heaven.

Being thus made members of Christ's body, which is the Church, the source of our life as such will be in Him; and as participants in his work for the salvation of men, we will be led into all the knowledge of his will that is needful to act our part in the holy economy of his family and flock.

It is to this Divinely ordained method of conversion that we desire to draw the attention of our Friends, that all may become joyful partakers of the grace which comes by Jesus Christ, and through his constraining love perform the part he assigns them in his militant Church. Then should we know the bright arising of the sun of righteousness, and the glory of his light would shine upon us.

Philadelphia Yearly Meeting.

An opening of the Yearly Meeting coincident with an opening of Divine anointing seemed to take place in the Meeting of Ministers and Elders which preceded, and was held as under the wing of ancient goodness, on Seventh-day previous.

A solemnity of silence for some time unbroken was succeeded by vocal supplication for the blessing and enriching of this and all the assemblies which should follow. Time does not permit an account in detail of the exercises of this and of the opening session of the Yearly Meeting, which we trust will be presented in unbroken continuity next week. It may suffice to say here that favored meetings for worship were held on First-day; also that the proceedings of the Meeting for Sufferings attracted unusual interest. One of its exercises concerning the welfare of our membership is given above. The Representatives were sorry to lose the acceptable service of Ephraim Smith as Clerk, but yielding to his plea for release on account of ill health, united in the nomination of William Evans for Clerk and Charles S. Carter as Assistant Clerk, for this year, and they were accordingly appointed.

Doukhorob Notes.

Our friends J. S. Elkinton, D. Stratton and P. Jansen left Winnipeg for Yorkton, two hundred and eighty-two miles by rail, on the morning of the 9th inst. They had as traveling companion a Doukhorob named Vassili Obiedkoff, who had been exiled to Archangel for five years, for influencing the young men against war. Two of his friends, who were sent out at the same time, for a three years' banishment, had already completed it, and are now in Canada.

Dillwyn Stratton has kindly furnished, for the readers of THE FRIEND, some information of his first experiences of the Doukhorob villages and of their inhabitants.

"At Yorkton we laid our plans for a fairly early start on the morning of Fourth Month 10th, but many things being needed to supply such a company for an indefinite time, away from grocery or feed store, new harness to be procured, and wagons to be put in trim and packed, nearly filled the morning hours, so that we finally set off at noon, our dinner having been previously eaten. The deep mud near the town was hard for the teams, and the first sixteen miles required more than four hours, when we stopped for supper at the new log house of Alexander Simpson. For the remaining fifteen miles to the village of Terpenie we drove on the open prairie, seldom using the trail, as the mud in it was very sticky, formed of that curious soil that is found with alternate boulder and limestone formation.

The snow was mostly gone, but the water stood in vast ponds, taking but a slight depression to put the wagon hub deep, and three times water came into the wagon bed. Satchels were not entirely water proof, so the good fire at our house, in an old fashioned box stove, came in to advantage.

About ten at night we drove upon the wide village street, when our friends Peter Jansen and Emma Almantefsky made use of their Russian sdrashitsky, which soon brought to us quite an animated scene. Among the villagers was a fine looking young woman whose eight years old daughter could use a little English, and told J. S. E. that she remembered him on shipboard, when her father had died on the way from Batoum. The mother took us to her cousin's house for the night, entertaining Emma in her own home. Our host was a widower, with two sons. Their bachelor quarters were very clean, the house almost new, the finest specimen of their work I have yet seen. On lying down the bed seemed a bit solid, but our sound sleep was favored by the day's experiences.

Fred, our host, was the Elder of the village, and looked the personification of religious fanaticism, a lean, worn face, full of determination of soul, coupled with a resigna-

tion of the flesh, that would court death without fear. He will not eat flesh, nor even milk, butter or eggs, and hopes to come where he will not yoke the ox nor harness the horse. This sentiment has found several advocates in the villages, forming an argument against the Donkhobors remaining in this country, where stock-raising is the main support; some proposing to find a place where fruit grows, that they may dig the earth with their own hands.

Peter Jansen and the Elder talked long after the rest of us were sound asleep, so, when we awoke in the morning, our companion was in possession of their logic, that follows a circle, touching on the risks of individual ownership breaking the authority of the Elders and obedience to grandparents. This they at much length vindicate, from their principle of freedom from man's government; over and over asserting, in substance, that they cannot serve two masters. Some would ask to rent land for a time; others would have it set aside in a block to each village any—plan except individual ownership. They do not object to the ten dollars entry fee, some saying they were willing and able to give much more.

They are afraid to pay taxes, not knowing what use will be made of the money. They claim not to have authorized Prince Hilko to arrange for their homesteading, that they could never have agreed to come under the laws. Registration and marriage regulations they include with their other objections to government. While it is not openly admitted by them, we regret to note evidence of a few followers of Alexander Bodjansky, in each of the five villages we have visited, who are ready to go anywhere to be free from all restraint.

Upon their established lines of reasoning no apparent change is made by the address of our Philadelphia Friends, by practical comment on their prosperity, or the disaster awaiting them by losing their homes by others coming in and taking claims.

On the other hand, many are present at these meetings who we believe have decided views of their own, that would not dare openly to oppose their seniors, yet will eventually take homesteads, becoming good citizens. It is from this class that we hope for some fruits of the labors of our Society, in planting and for a time sustaining them, in this wonderfully fertile land.

After reading of their house construction, we were surprised not to be able to guess aright the next morning what material these smoothly plastered walls, so straight, so firm, and so neatly whitewashed, were built from. Adobe, concrete and stone were each suggested, when to our surprise we learned these houses were built as those first described in *THE FRIEND*; first perpendicular poles, then horizontal work from small staff; two walls thus built are packed with straw, when both outside and inside are very well plastered. The roof is so thick with sod on top with brush and poles for support, with neat whitewashed plaster below, that it is like the walls, air tight and very warm. The windows are not more than 2x3 feet, made with their own sash but wonderfully tight; and there is no way to open anything for ventilation except the inner and outer doors. The air of these rooms, in which

we have had an average of forty or more individuals at each gathering, not being at all fresh when we enter, soon becomes a test on our endurance.

We were wonderfully interested in their barns; built much as the houses, with a sort of gothic ventilator in the roof, that we were glad to see, and would be still better pleased to have a flue from near the floor to extend clear above the roof, that would not be affected by the wind, and might always remain open, as this we fear was closed most of the winter.

They are now using boards in building their granaries that they saw, themselves, from logs of spruce and tamarack growing in reach of the villages. The log is raised some six feet from the ground, upon huge trestles; one man stands on the log to man the top end of the saw, while another works from beneath, as many of our fathers have so well known. We visited the threshing floor, on top of a little knoll, where we saw their method of separating the grain from the straw. The ground was first beaten very hard. Poplar drags, four feet deep by seven feet long, had stone set in the under surface, rising an inch above the wood, with rough surface out, something after the shape of Indian darts. Two horses were hitched to this, and a woman sits on the drag knitting, as the horses go around. After the grain is well loosened the straw is forked from it, and the remainder thrown in the air for the chaff to be winnowed from the grain. Their oats are very heavy, over forty pounds to the bushel, and so nicely cleaned that they do well for feed. At one village we saw sheep already shorn, and afterwards we saw the wool, at the house; some of it carded, spun into thread and woven into cloth, and being made into a coat. The two fronts were completed, and the heavy pleats to make the gathers at the back were about ready to be sewn fast to the body, making a short bell-shaped skirt.

Their dough troughs looked clean; their ovens are made of brick and after heating, the coals and ashes are well cleaned away, when the loaves are slipped on to the wooden spade and shaken from it to their place in the oven without the use of any pan, at this time of year. In the summer they use cabbage leaves to bake the loaves upon, but it is said by members of our party that it is best baked upon the bare brick. We have eaten it side by side with our boughten bread. In some places one gets the preference and at others it will be reversed. Eggs are generally offered, and potatoes and milk mostly plenty. They don't seem to prefer our seeing them at their meals, but we know they need not want. They so far have abundance of nicely cured hay, upon which, with no grain, many of their cattle have fattened, ready for the butcher; they cannot sell them to be killed, yet some are willing to trade for young animals or cows. Would that their faith might be cleared from excrescences that do not belong to Bible teachings.

Thy friend,

D. S.

THE test of a fine character is attention to the minutiae of conduct—to do the little common place service of love—the cheerful word—the cup of cold water—when rendered not grudgingly or of necessity.

"That's What I'm Here For."

It was the uniformed young porter said it, as he smiled pleasantly on the woman whose bundles he had started to carry for. The station was full of travelers, hurrying and fro from their trains, but the porter was not in the least hurried. He was quiet, respectful; and he found a seat for the woman in the right car, and repeated, as she thanked him for his trouble, "That's what I'm here for, madam, all day long; just to see that each passenger gets aboard all right." Then he went back to the gate, and promptly helped somebody to another train. Cheery and pleasant, he carried babies, lifted heavy bags, reassured nervous people who were afraid the train would start without them, and made himself generally helpful, hour after hour.

"That's what I'm here for." The cheerful words carried an unconscious message. The porter's lot was not a very pleasant one. Perhaps he, too, longed to travel away from the hot city to the sea or the woods, yet all the year round he was shut within the crowded station, with its tracks and platforms. He thanked him for helping them, and he could hardly have been blamed if he had been a cross over his work. But he had no such thought; he was there to be helpful, and his heart was in his work.

The woman who had been helped to a seat by him, thought it over as the train rolled away. She was one who had carried many burdens for other people, and had given thanks. She seemed to herself to repent her life in starting other people where they wanted to go, and staying by herself; and, lately, she had felt rebellious about it. But the young porter's work had started a new line of thought. "That's what I'm here for," she said to herself, "and I isn't my business to complain or to question. If he can do his day's work in that best spirit, I guess I can, too," and she felt her heart lighter than for many a day. The porter did not know it, but he had preached a whole sermon in five words that afternoon. *Exchange.*

VALUE OF RELIGIOUS DISCIPLINE.—Frederick Seeborn, at whose house we are entertained, has five children, and shows much religious care over them. He instructs them in reading and writing and has daily a siting with them in silence. I was this day at one of their little meetings, the four eldest being present. They sat very quietly and the father's mind seemed bowed and exercised on his own and the children's behalf. This little meeting held about half an hour and then the children were put to their books. If this were a generally the practice of parents, that restlessness and undisciplined conduct, which is so apparent in many places and families, would be removed and much profit redound to parents and children, and consequently to religious society. For the Lord would not fail to bless such care, and would grant countenance. May the world be less regarded and the knowledge of God and his ways be more diligently sought after, that the durable riches and righteousness may be experienced and possessed. *John Pemberton.*

WE mistake education extremely.—*Frederick Penn.*

For "THE FRIEND."

Joshua Barber, 1660-1732.

narrative of Brighouse Monthly Meeting, and is as follows:—

My dear and worthy friend Joshua Barber, of Samuel and Elizabeth Barber, was born in the parish of Guiseley, in the year

His father died a prisoner for attending the meetings of the people called Quakers, and his son was two years old; so that the mother, who was a religious woman of the parish of England, educated him in that way, and he being brought up in the trade of a cooper, about the seventeenth year of his age, he went to Doncaster to work, where, having an inclination to go to a meeting of Friends, he made enquiry if there was any in that part of the country? Hearing of one kept at the house of Thomas Kellam, of Balby, he went to it, and was there reached by the testimony of our Friend Thomas Oldam.

After that, he returned to his mother's house, not far from Rawden, and being in the midst of a great convalescence there, when that Jeremiah Grimshaw, his former acquaintance, was joined with Friends, and became a public preacher among them, he had an opportunity to go to their meeting, which he did the next First-day after his return from Doncaster, and was there effectually reached, and his divining testimonies being borne by Jeremiah Grimshaw and others; so that he went away after that meeting to the public worship where he had been educated in (the Church of England), but joined with Friends of Rawden amongst whom he lived, and married his daughter within the compass there-

of his life, he was a prisoner in York Castle for twelve years, and about three years after he came out at liberty he removed with his family to Burley, in the parish of Leeds; and he became zealously engaged in the work of Truth amongst Friends of Leeds, who were under a fresh visitation; although not a member of Friends* then belonged to the meeting, many were convinced, and came to join Friends in that time of silence, to the benefit of the meeting considerably; in the time this our Friends' mouth was open in public testimony among Friends, of which concern he had been many years; and he grew in the gift, he faithfully and assiduously labored among Friends, both at home and abroad, traveling in the service of Truth through Wales to Bristol, and several long journeys in this nation, Ireland, and part of

Scotland. Towards the latter part of his time, great infirmities coming upon him, he often expressed his thankfulness that he had entered to discharge his Truth among the best whilst health and strength lasted; he had been many times and in divers places called to bear a faithful testimony against unbelief, and plainly and particularly to the contrary with offenders; and also some whose cry he believed proceeded not from the heart, but were got into a form of hypocrisy without the power; unto such he was a good example in meetings, steadily sitting in deep silence upon the movings of the Holy Spirit, both to enable him to worship and to open counsel before he durst apply to our Friend means Friend in the ministry.

pear by way of ministry, how great soever the people's expectation might be from him, being very careful to minister in the ability that God gives; so that his ministry was living, truly edifying, and generally well esteemed.

He was a diligent attender of meetings on First-days and other days, both for worship and discipline, wherein he was very serviceable, having a spirit of discerning beyond many; and was, as the apostle says, swift to hear but slow to speak, in such meetings.

He was greatly beloved by the generality of the meeting he belonged to, for his good example, steady walking and impartial judgment, even among his nearest friends, as well as others. When he thought there was occasion for advice he dealt in great plainness with all where he was concerned, as he found his way open in the Truth, so that he became a terror to evil doers, though a comfort to them who did well.

Notwithstanding his bodily infirmity he diligently labored in his vocation so long as he was able, being not slothful in business, but fervent in spirit, serving the Lord, rejoicing in hope, patient in tribulation, continuing instant in prayer, and much delighted in the enjoyment of Divine goodness, which failed him not when he was confined to his own house the last four months of his time, by an asthma and dropsy; but he would often say to friends who visited him, although he had been sometimes counted over zealous, like the good man of old who said the zeal of thy house hath eaten me up; yet he now reaped the precious fruits of his faithfulness unto his great Lord and Master, who spake peace to his soul and gave him the earnest of everlasting rest, by overshadowing him many times with his heavenly love and lifting up his mind above his great afflictions of body to rejoice in his holy name and power. And near his conclusion, he said to a friend present—It was his faith, the Lord would overturn that dark power which so often prevailed in the churches, and would raise up many that should stand for his name. We well know that his travail of spirit, in this respect, had been often very deep before the Lord, and his mourning great for the true Seed's sake.

Upon taking leave of his friends a few hours before his departure he said, "It has been my judgment a long time, and I am still of the same mind that there is none can worship, praise and glorify God, but in a measure of his own Divine Spirit."

He departed in great peace, comfort and hope in Christ, the Second-day of the Eleventh Month, 1732, aged seventy-two.—Waymarks.

Interpretations.

The following words of a Persian traveller, writing from France a few years ago to his friends at home after visiting one of the libraries of Paris, aptly illustrated the folly of "hobby" teaching.

"Father," said I to the librarian, "what are these huge volumes which fill the whole side of the library?" "These," said he, "are the interpreters of the Scriptures." "There is a prodigious number of them," replied I; "the Scriptures must have been very dark formerly and must be very clear at present. Do there remain still any doubts? Are there now any points contested?" "Are there?" answered

he with surprise; "are there? There are almost as many as there are lines." "You astonish me," said I. "What, then, have all these authors been doing?" These authors" returned he, "never searched the Scriptures for what ought to be believed, but for what they did believe themselves."

For "THE FRIEND."

A Vision.

I find your paper freer from error than any religious periodical with which I am acquainted, hence I offer this to THE FRIEND for publication.

In a village near where I reside, a Methodist revival being in progress in which a member of the Society of Friends took a prominent part, preaching alternate nights with the Methodist minister, and in which much good was seemingly done,—and believing as I do that there can be but one body or church of Christ (Eph. iv: 4, etc.) and that all sect-denominations [though containing we trust,] members of Christ's Church, are distinguishable therefrom, I did not attend or take part with them. But being taunted with being an outsider by some who had fallen under the power of the excitement which ran to a very high pitch, I felt a sincere prayerful desire to spring up in my heart to the Lord, that I might know how these people stood in his sight.

During the following night a wonderful state of happiness and bliss came over me, and I saw the similitude of the Lord standing at the foot of my bed, face to my face. I immediately asked, "Why do these people make such an ado about religion?" He answered, "They have some light." Upon the information being given that they have not the full light of the gospel, I asked, "Then why do they cry out 'conversion,—conversion to God?'" He answered, "They are in the outer court." Immediately the scene was shifted, and I found myself standing near the right hand corner of a great temple building pointing eastward overlooking the court of the Gentiles, and I saw a great light like a fiery stream issuing forth high up from the front of the temple and passing outward over the outer court into the darkness of the world beyond, which gave but little light to the court below.

And I beheld all the sects called denominations, sitting in the outer court separated from each other under canopies, which each had erected for themselves to worship under. The color of these canopies impressed me, which had no brightness nor glory about them, all being of a dark, sooty color. And I marvelled that they had so little light, which was like twilight or starlight. Some were as near the temple as their lower position would allow, where they had most light, and I could see their countenances, just as they appear in their enjoyable meetings.

The whole outer court was filled with them, except a few spaces near the temple. Whilst as far back in the distance as the light revealed anything, the court was completely filled with these canopied congregations. Then the words of Rev. xii: 1-2 were spoken with power within me, saying, "There was given unto me a reed like unto a rod, and the angel stood saying, rise and measure the temple of God and the altar and them that worship therein. But the court which is without

the temple leave out and measure it not, for it is given to the Gentiles. And the Holy City shall they tread under foot forty and two months."

This ended the vision. But it has been so impressed on my memory that, although some ten years have elapsed since, yet I feel convictions that in truth and sincerity I can say that I have not added to, nor subtracted one iota from what I saw and heard.

These sectarian worshippers were sitting and worshipping contentedly where they were, appearing wholly unconscious of the presence of the temple of God and of the great light shining out into the world overhead.

I have since remembered a remark from my father, that the various denominations were in the outer court, he holding that the Friends' worship was in the sanctuary.

Seeing a vision in No. 20 of THE FRIEND by a female minister, Matilda Branscomb, which corresponds with this one in that these societies have sought their own glory and not the Lord's, I feel freedom to offer this for publication, as throwing much light on the present condition of the professing religious world. And as M. Branscomb was informed, the change should be brought about by the Lord himself alone, without the help of herself or any man or woman, then certainly not by the help of any Society.

"The man of sin, the son of perdition who sitteth in the temple of God and who opposeth and exalteth himself above all that is called God or that is worshipped, and is showing that He is God, the Lord shall consume with the Spirit of his mouth and shall destroy with the brightness of his coming" (2nd Thes. i. to 12). Many shall think they know Him who do not. For "If any shall say unto me in that day, Lord, Lord, have we not prophesied in thy name and in thy name have cast out devils, and in thy name done many wonderful works? and then I will profess unto them, I never knew you. Depart from me, ye that work iniquity" (Matt. vii. 22-23). W.

SAFFORDVILLE, KANSAS.

MUSIC is for pleasure, while truth is for practice. When man hears the truth of God's eternal love for a sinful and lost world; when he is told of the reality of the gift of his only begotten and well-beloved Son to die upon the cruel cross for man's sin; when he is reminded of the fact that the life of Christ dwells in the heart of man and transforms the life; when he hears of the onward, conquering march of Christianity by people whose lives are under the control of that Divine life, his sensibilities and emotions are stirred—he is pleased—but he may have been pleased only by the music of truth. If he hasn't made these eternal truths his; if they haven't become a part of his being; if they are not manifesting themselves in honesty, integrity, love, kindness and beneficence; if, in other words, they have not been reduced to practice, he has not yet found the vital distinction between music and truth. The message has been only a lovely song. Clearly did the Apostle James discriminate in this particular when he exclaimed, "Be ye doers of the Word, and not hearers only, deceiving your own selves."—*Presbyterian*.

The principal fountain of Truth is Truth itself.

The Father's Point of View.

BY WILLIAM L. WORCESTER.

A paper written for a Parents' Meeting of the Philadelphia Branch of the National Congress of Mothers.

I have no doubt that I speak for all the men who are present, as well as for myself, in saying that we appreciate the opportunity to confer with the mothers in regard to the home and the children. The invitation to be present at this meeting is a recognition of the fact that mothers and fathers are equally responsible, and equally interested in the welfare of the children. The care of the children is a labor which neither should leave to the other, and a blessing and pleasure which neither should be so selfish as to wish to enjoy alone.

The thoughts which I wish to express at this time I have arranged under three heads: first, preparation for parenthood; second, the association of parents with very little children, and third, the association of parent with older children.

The duties and responsibilities of parents are so great that they surely deserve to be looked forward to and to be prepared for in every possible way. There seems to be a growing appreciation in the public mind of the need of preparation on the part of women to perform their duties well in making and caring for a home and their duties toward their children. It is recognized that a school education is not all that is required in preparation for these duties, nor even a college education, nor proficiency in music or other arts. A girl and young woman, who has had only such training finds herself sadly unprepared when she is called upon, perhaps suddenly, to undertake the duties of wife and mother.

I speak of the need of preparation on the part of women, because I wish to express the belief that there is equal need of preparation on the part of men. A young man should look forward to being a husband and a father. It is the normal state of life for him; it is the highest, most perfect state. He should regard fatherhood as a most sacred relation; it is from God, and it in a small way images God's relation to all created beings. If the relation of fatherhood is faithfully filled, there is a blessing in it from the Lord.

The looking forward to wife and children should lead a young man to industry that he may gain the means for their support. It should make him saving, especially it should prevent his waste of means in selfish personal indulgence. The thought of a home of his own and of sharing it with wife and children should lead him to avoid and to correct all habits of life that would make home less perfect and that would be an annoyance to others. It should lead him to cultivate those habits and ways that are useful and pleasant in the home. Above all, this looking forward to the married state should lead a young man to cultivate reverence for marriage and for all things connected with it. It should be a motive to strictest discipline in all that relates to marriage, that he may bring to that intimate and sacred relation a body and mind pure and holy and self-controlled. If the thought of marriage is such a powerful motive in a young man's life, the thought of children is not less so; for deeply as the wife's life and

happiness are affected by the husband's, children are even more deeply and intensely affected. There are those now-a-days who would lead us to attach small importance to heredity, and who even question if anything exist. It does exist, and it is a real and important factor in a child's life. A child does not indeed inherit the virtue or sins of his parents, but he does inherit a tendency to the ways of life which have been matters of habit in the parent's lives. There are wise teachers who assert that inheritance from the father is even more persistent and enduring in the child than the inheritance from the mother, and for the reason that it is more interior. If we remember this matter of heredity, and if we realize its immense significance, it would be a powerful motive with a young man to refrain from worthless ways of life and to cultivate those that are true and noble. He would ask himself, Shall I indulge in some evil thing which seems pleasant, and by doing so, bind a man which others will have to bear? Has any right to do what will, or may, make hard for others? The thought must often come to him to keep in the right way, repeating himself the words which our Lord spoke to his disciples: "For their sakes I sanctify myself." By carelessness of act or thought, feeling a young man wrongs his wife and children.

The preparation for parenthood should begin long before the time of marriage. The preparation, as has been suggested, is not only for the material support of the family, but must prepare by personal correction and discipline, and especially by cultivating a reverence for marriage as holy and from God. Parents should make this preparation, thus far as is in their power they may surround a child's opening life with influences of purity, holiness and strength. This duty of preparation is one in which the father and mother have equal share. It need hardly be said that what parents do in this way for one another and for the children's sake, and whatever sacrifice it involves, bring to themselves a reward in the fuller, deeper blessing of marriage and of home.

We pass now from the duty of preparation to the responsibilities and blessings which come with the presence of children in the home. I use the two words responsibilities and blessings, and I do not know how to separate them. It is an immense responsibility to have a helpless little life intrusted to your keeping. Not only is the physical welfare of the child dependent upon you, but to a large degree his mental and spiritual development. It is a great responsibility, to the care of the little life is at the same time a wonderful happiness. It is also a happiness to do for those who cannot do for themselves but the happiness is wonderfully increased when, in response to our care, we see the little life developing and gaining day by day in power, and when the child responds to our affection and loves us in return.

The association of parents with a little child is a most helpful and happy experience. A mother who avoids the care of her child and leaves them to hired nurses and teachers, both robs the child and loses something precious from her own life. What I have said

mother is true also of the father. So possible, he should not avoid, but seek association with the little children. He should learn to do every thing for them so he can, should keep acquainted with should get near to them and keep near. Father does not know how to hold the child and does not love to hold him, does not know to dress him, to play with him, to take him outdoors in the carriage or in his arms to put him to bed, he misses a great deal. As I speak there come to mind the twilight by the open fire when the child is getting quiet and ready for bed. The mother comes to mind walks on summer days, talks in the woods, the baby laughing at bits of sunshine which come through the leaves and stretching up her hands to the green trees in wondering delight. I would change such experiences for any recreation I know.

association of parents with little children is not merely a superficial pleasure. It is a deep benefit in it, both to the children and the parents. We have spoken of the care of a child who is intrusted almost wholly to the care of nurses. There may be conditions which make it necessary, but as a rule, a mother is expected to come so close to a child in sympathy as his own parents? Can we expect the same of hirelings whose own children are not? Can any so well understand the children, or be so patient with the children's faults as the parents, who may oftenize the children's failings as their own? Often defects of character are due to influence, perhaps, of very early years! Many persons, for example, carry through their life a fear or dread of certain things which they might often be traced in its beginning to association with some ignorant or uncompanionable as a very little child! And there is no positive harm from such association, what a lack there is in it of influence for the best and most helpful kind! We realize how susceptible little children are to the influence of those about them. This is a power in itself in their life, beginning the way for association and helping their minds as time goes on. The influence of mother and father with the child are both alike. They appeal to different elements of character in the child and both are necessary to its fullest development.

of the influence of parents upon the child. We must not forget the influence of the children upon the parents. It is a mutual and precious thing. Those who are ignorant of it do not know how much they miss. The child appeals to the child in us. It is our heart, he awakes the childlike elements lying dormant in our souls. We all have little children once, and we all are little children deep inside. The child helps us to understand the conventionalities of the world and to make him simple and loving, and this is restful to us, most refreshing, nothing like so. And remembering the Scripture that we must become as little children to enter the kingdom of heaven, we must be that this association with children is very important help in the best development of character.

association with the children, with the mother of it, is for both parents. The

mother will naturally be with the children the longer time. Indeed, she may be with them so much that even the happy association loses something of its charm. If the father can at times relieve her, she returns to it with new benefit and delight; and to the father, his share of association with the children will be most precious. A man more than a woman is exposed to the chilling hardening influences of the world. On this account he needs more than a woman the counteracting influence. The childish face and voice are an inspiration to him when engaged in work away from home; they are a monitor to warn him from ways which are not innocent and to make him true to his best self; and in coming home to the children and their innocent ways there is wonderful rest and refreshment. If a father fails to make the most of his opportunities for association with a little child, he not only deprives the child of something important to his life, but he deprives himself of one of his greatest helps and pleasures.

As a child grows older, the influence of parents is no less important, but it is different. Having become acquainted with the children in their babyhood and having come near to them in sympathy and affection, parents should keep near to them and follow them in their changing states, entering into their new experiences with sympathy and being their companion in them all. Both father and mother should take an interest in what the children are learning; they should know what the children read and enjoy it with them; they should share their interest in the study of nature, being with them out of doors, enjoying with them the flowers and birds and stars; learning with them, for there is always something new to learn in the book of nature, yet exercising a gentle, guiding influence in the study. Parents should be the companions or interested friends of the children in their games, in acquiring the use of tools, or gaining any accomplishment. They should be with them in their friendships and should help wisely in the choice of friends. All this they can enjoy with the children and feel the refreshment of it, and at the same time can give the help of their experience.

This duty of companionship with the growing children and of sympathy in all the interests of their life, is for both father and mother. Perhaps a larger share falls to the father as children grow older and become more active; and he has a special duty with the boys. Among the precious experiences of my boyhood was such companionship with my father: not only in the study of nature which he always encouraged and shared with us, but in riding and walking, in mountain climbing and camping and swimming, and in nearly all the work and pleasure of my boyhood. It may be thought by some persons that such intimate association of parents and children may tend to lessen the children's respect for their parents, and may make it more difficult to secure obedience which, probably, we all recognize as the most important lesson to be learned in childhood. The intimate association may lead to less of reverence of a mere external and formal kind, of that kind which too often is forced and hypocritical, and which conceals feelings which are not respectful. But if there may be somewhat less of formal

deference, there is more of real affection and of the real spirit of obedience, which leads the child willingly and lovingly to do what he knows his parents wish and regard as right.

The companionship between parents and children which we have described, the close sympathy, encourages a confidence on the part of children which is most precious. It makes it easy and natural for the child to make known his troubles to his parents, to bring to them his questions, as they come with experience in the world or with his own changing state. The parents being near to the children may often know their state without being told and can give timely instruction and warning and encouragement, removing many needless fears. Quite apart from the profit and pleasure of living in close association with the children all the way long, it is worth all the effort it may cost, all the pains and trouble, if it were only for this, to be near to the children and to have their confidence when hard times come to them.

I have not tried to separate sharply between the father's and the mother's duty. Probably, as was suggested, the mother has the larger part with little children, and the father more as they grow older. Perhaps the mother has more to do for the girls and the father for the boys but father and mother will be together everywhere, each relieving the other, each supplementing the other. Even if they do the same thing, they will do it differently and will bring a different benefit to the child. My belief is, that if father and mother work together lovingly, each trying to do what he can do, or she can do best, they will find their right places and their right relations to the children. By acting together and in accord they complete the helpful influence which surrounds the child, and they find in the child a living bond of union between themselves. The care of the children is by no means a duty and a pleasure for the mother alone; at each stage of a child's development the father has his part in the responsibility and in the blessing.

THE BIBLE.—McCulloch's tribute to the Bible, as follows, will, of course, be referred by Friends to the Author, the Spirit of inspiration in its writers and readers:—

How comes it that this little volume, composed by humble men in a rude age, when art and science were but in their childhood, has exerted more influence on the human mind and on the social system than all other books put together? Whence comes it that this book has achieved such marvelous changes in the opinions of mankind—has banished idol worship—raised the standard of public morality—created for families that blessed thing, a Christian home—and caused its other triumph by causing benevolent institutions, open and expansive, to spring up as the wand of enchantment? What sort of a book is this, that even the wind and waves of human passion obey it? What other engine of social improvement has operated so long, and lost none of its virtue? Since it appeared, many boasted plans of amelioration have been tried, and failed—many codes of jurisprudence have risen and run their course and expired. Empire after empire has been launched on the tide of time, and gone down and expired. But this

book is still going about doing good—leaving society with its holy principles—cheering the sorrowful with its consolation—strengthening the tempted—encouraging the penitent, calming the troubled spirit and smoothing the pillow of death. Can such a book be the offspring of human genius? Does not the vastness of its effects demonstrate the excellency of the power of God?

A Prophecy Through Francis Howgill.

In a hot time of persecution, Francis Howgill wrote, and gave forth the following paper for the encouragement of his friends:—

The cogitations of my heart have been many, deep and ponderous, some months, weeks and days, concerning this people which the Lord hath raised to bear testimony unto his name, in this the day of his power; and intercession hath been made often for them to the Lord, and a patient waiting to know his mind concerning them for the time to come; which often I received satisfaction in as to myself, but yet something I was drawn by the Lord to wait for, that I might comfort and strengthen his flock by an assured testimony. And while I was waiting out of all visible things, and quite out of the world in my spirit, and my heart upon nothing but the living God, the Lord opened the springs of the great deep, and overflowed my whole heart with light and love; and my eyes were as a fountain because of tears of joy, because of his heritage, of whom he showed me, and said unto me in a full, fresh, living power, and a holy, full testimony, so that my heart was ravished there with joy unspeakable, and I was out of the body with God in his heavenly paradise, where I saw and felt things unutterably and beyond all demonstration or speech. At last the life closed with my understanding, and my spirit listened unto Him; and the everlasting God said, "Shall I hide anything from them that seek my face in righteousness? Nay, I will manifest it to them that fear me; I will speak, do thou listen, and publish it among all my people, that they may be comforted, and thou satisfied." And thus said the living God of heaven and earth upon the 28th day of the Third Month, 1662:—

"The sun shall leave its shining brightness, and cease to give light to the world; and the moon shall be altogether darkness, and give no light unto the night; the stars shall cease to know their office or place; my covenant with day, night, times, and seasons, shall sooner come to an end, than the covenant I have made with this people, unto which they are entered with me, shall end, or be broken. Yea, though the power of darkness and hell combine against them, and the jaws of death open its mouth, yet will I deliver them, and lead them through all. I will confound their enemies as I did in Jacob, and scatter them as I did in Israel in the days of old. I will take their enemies; I will hurl them hither and thither, as stones hurled in a sling; and the memorial of this nation, which is holy unto me, shall never be rooted out, but shall live through ages, as a cloud of witnesses, in generations to come. I have brought them to the birth, yea, I have brought them forth; I have swaddled them, and they are mine. I will nourish them and carry them, as on ea-

gle's wings; and though clouds gather against them, I will make my way through them; though darkness gather together on a heap, and tempests gather, I will scatter them as with an east wind; and nations shall know I am the living God, who will plead their cause with all that rise up in opposition against them." These words are holy, faithful, eternal, good, and true; blessed are they that hear and believe unto the end; and because of them no strength was left in me for a while; but at last my heart was filled with joy, even as when the ark of God was brought from the house of Obad-Edom, when David danced before it, and Israel shouted for joy."

FRANCIS HOWGILL.

FOR "THE FRIEND."

Plainness and Self-Denial.

The following from the pen of one of the worthies of the past generation is so comprehensive in statement, and so fully covers the ground of a felt need in our Religious Society at this time, by way of an incentive to Friends to hold fast our profession in its ancient purity and simplicity, that I have felt constrained to ask for its publication in THE FRIEND.

D. H.

COAL CREEK IOWA, Second Month 28, 1902.

My mind has often been brought into much painful exercise on account of the many departures from the wholesome Christian testimonies of simplicity and plainness; testimonies faithfully upheld by the Society of Friends in its earlier days and times of its greater purity; leading to humility and meekness, and to the avoiding of pride and high-mindedness.

There is no difficulty in ascertaining from whence these testimonies were drawn by our early Friends, even from Jesus Christ himself that great example of meekness and self-denial; and the source, too, from whence every wholesome admonition, and good and perfect gift are received. And if through all good conscience we will "observe whatsoever he commandeth us, even to follow him;" and what the apostles preached and observed also, we shall find it needful to make a stand against the insidious pursuits of vanity, and a worldly spirit, and a nurturing of the will of the flesh. The apostles declared that "the grace of God which bringeth salvation," teacheth also the denying of ungodliness and the world's lust; and this truth, with the declarations of Christ himself, to wit, "If any man will be my disciple let him deny himself and take up his daily cross and follow me," and "Take my yoke upon you, and learn of me, for I am meek and lowly of heart;"—this coming to be a disciple of Christ and wearing his yoke, brings us to the denying of what another apostle calls "the lust of the flesh, the lust of the eye and the pride of life." It is by this practical self-denial that the followers of Christ are distinguished from other people. It is not what men say, or profess, that makes the true distinctive character, for a man may think much, and believe much, and rely much upon the sufferings of Christ upon the cross and at the same time be an utter enemy to the cross of Christ, as it regards his own practical endurance of it, a thing indispensable to a disciple of Christ; and it is very evident that there can be no true follower, without possessing so much of the spirit and power of

the cross, as will work in him to the denying of the deeds of the body; to the tifying of the spirit, and to the subjugation of the will of the flesh.

And a good degree of this experience is doubtfully witnessed by individuals under different denominations; but the Society of Friends from the first, found it needful to here to greater purity of manners than professors had done, in order to be more perfect followers of his example, as well as of doctrine of the straight and narrow way leads to life, believing indeed the verity of the truth of his sayings; and that his sayings of the cross are unequivocal; and finally by practice too, that the bearing of his cross patiently and honestly, did in very deed, lead to the mortifying of the deeds of the flesh; hence as a people we have seen more than others the necessity of "always bearing our cross in the body, the dying of the Lord Jesus, that the life also of Jesus might be made manifest in our body." "For we which live, are all delivered unto death for Jesus' sake, that the life also of Jesus might be made manifest in our mortal flesh" (2 Cor. iv: 10, 11).

Whatever then may be the practical sayings of others, we feel bound faithfully to adhere to the commands and doctrine of Christ and his apostles as recorded in the Bible. Writ, as well as to the word of God's grace to our hearts, to the denying of all desires of the maxims and manners, fashions and customs of this vain world.

And as this was a subject not unworthy of the Son of God and his apostles in his preaching and personal simplicity, none do well in charging his more scrupulous followers with narrow-mindedness because of their conformity to the doctrines and practice of Christ and his apostles; seeing that even one of his disciples should conscientiously keep commandments and follow his example of meekness and humility. Nor let any one be deterred from the practice of a self-denial because he may sometimes see traditional or hypocritical professors trusting in a form of godliness without the power, for there is one of the Christian virtues, but attempts to be made to counterfeit it; and they also make such attempts are enemies to the cause of Christ and him crucified, which is the power of God, and which alone the apostle told us of the churches, he was resolved to know amongst them. There was, I think, more than one reason why the peculiar and prime testimonies of plainness were given to and upheld by the Society of Friends; and first because they are congenial to the very nature of Christianity in its purest form, and agree better to its other testimonies. And secondly, because if conscientiously maintained they would serve to exhibit this constant acknowledgment of the world, "I am the Lord's!" And thirdly, because it would be an enclosure round all the tender plants of the rising generation. For by observing these peculiarities in language, manners and appearance there would not be that inclination to mix familiarly with others; and this has proved to our beloved youth a great preservation from the corruptions and vanities of the world. In this point of view, the benefit to our Society has been incalculable; for though it is not these peculiarities of plainness that cause us to

yet by them as an enclosure, they are kept from being devoured. It is the soil of the garden, well cultivated, bringing forth the fruit, but it is the wall of God's providence round about, keeping it from being devoured by the eyes without.

So far is this testimony from being a hardship, it is through the gift of no helpeth, a choice blessing from his and a blessing too, which if we as a begin to despise and lightly esteem, all in his displeasure perhaps remove.

Yea, and if the vine which he has, when he looked for grapes, should be bringing forth only wild grapes, he will remove this safe enclosure, and suffer it to be trod to dust; and he will command the clouds that they should rain upon it. And as a small leak, if to continue, will sink a ship, however richly laden; and as a small breach in the enclosure of the vineyard, however small, will let in the devourer, so I believe this testimony (however small any may be) should be abandoned, it would greatly endanger our safety. Yea, and if the bountiful demarkation between this people and as exhibited in our peculiar testimonies removed, or suffered to go down to the fear of controversy or of singularity, then should we be prepared to go back, and angle again with others, and that defilement honorable characteristic by which we are known and distinguished from all would be seen and known no more. I consider it highly important to be faithful, and to train up, and in our families in these Christian testimonies and other doctrines of Christ by a exhibition of this good and comely example, as well as by clear, plain, and open and full declaration of the truth.

If the true ground of the gospel of our Saviour in its primitive purity as we cannot be supported without controversy; then let it be done in the meekness of Jesus by controversy; for the of the blessed Truth is worthy both of peace, and of a warfare too, under the of the Prince of Peace. And to the minds of any, who might be led, we may well refer them to the and unabating exercises and advice of our Meeting in London, for upwards of a hundred and fifty years past; a body which [1840] has extended its concern and for the whole Society for its preservation meekness, simplicity, and purity of the and which, in point of religious knowledge, Christian authority, and weight of character has never been exceeded in the Christendom, since its establishment.

Now, in conclusion, — I feel a fervent desire that all may stand fast in the and hold the profession of their faith unwavering, cleaving to the blessed and submitting to its humbling power; thankfully receiving every provision of providence, which is dispensed to us in common with others, and holding fast to which have been in a more peculiar and mercifully committed to us, as the laws and statutes of the Lord were to

a people formerly. Then might we not all well say, "Woe is me, that I sojourn in Mesek that I dwell in the tents of Kedar," even in the land of Midian, for the crown of his pride must be reduced in Jacob; Yea, and it must be brought down in Israel; and again; "though Esau be thy brother and the Lord hath planted him upon his high mountain, and given him a place in the earth, yet Israel must not dwell with him nor abide there, for he must dwell alone;" and behold Moab also, his kinsman, for neither shall he join himself to Moab, however multiplied his burnt offering and exalted his sacrifices upon his high places; for Israel must abide in his tent, yea, even in his lowly tabernacle a little longer, until the indignation be overpast; for the Lord is his tent and his tabernacle, and it was He that first led him forth and allotted to him his possessions in the valleys, and as trees of lignales hath he planted him in his garden enclosed, and made him fruitful as by the riverside; and if he will be content to dwell in the land where the Lord his God has planted him, and keep his statutes, then the Lord will bless him still, in the midst of the nations, and he will cause that no enchantment nor divination shall prevail against him and so shall he abide as a tabernacle that shall not be taken down. And though many may forsake him, and despise him, because he is small, and his dwelling is in a low place, and because the glory of this world shineth not upon the ark of his testimonies, yet let him not be dismayed, the Lord is his light and God his glory; and he will encamp round about him; and his righteousness shall "go forth as brightness," and his "salvation as a lamp that burneth."

Alexander Clarke.

Alexander Clarke was by occupation a shepherd, whom the Lord visited in his youth, when given to pleasure and worldly delights, and begat in him a true hunger and thirst after the knowledge of God and his Truth. He was drawn from the public ways of worship of divers that profess God and Christ, and from following those that said, "Lo, here is Christ," and "Lo here!" seeing by the light of Christ in his heart, that their lives and conversation were not agreeable to their profession, of which Christ was the High Priest and Apostle; and observing the lives and conversation of the people called Quakers to be agreeable thereto he inclined to hear them, and to be joined to them; but was cautioned by those professors who knew him, to beware of the Quakers, telling him they were an erroneous and pernicious people, so that he became an earnest contender against them. Some time after he went to hear them at Gedinton in the county of Northampton, and after at Wellingborough, where that zealous minister and servant of Christ, William Dewsbury, preached the gospel powerfully, so that Alexander Clarke was convinced and became a frequent attendant of Friends' meetings, received the Truth in the love of it and waited upon the Lord in silence, and came to know the Spirit and power of God to work in and upon him; and he became a faithful follower of Him.

And when the Lord had fitted him for his work, and committed to him a dispensation of the gospel of peace, the word of the Lord

came to him as he was following his flock in the field, and said unto him, "Be thou faithful, and thou shalt prophesy;" and indeed he did, and freely preached the gospel of Christ. Though he knew not letters, he was well acquainted with the Word of Life, and he often reached to the hearers, and stirred up friends to feel life, and was instrumental to bring them to the feeling thereof, as they witnessed: to whom he would often appeal or say, "Ye are my witnesses in the Lord, that I am his servant to serve you in love, and that I preach not myself, but Christ the Lord."

He labored in his Master's harvest nearly forty years; and a little before he died, he gave friends who came to visit him much good counsel and Christian advice, which is not inserted, because not taken down in writing, and told them he had finished his course; and charged his family to love God and each other, and not to forget the Lord, saying "Grace teacheth us all;" which was the last sentence.

So this faithful servant of the Lord, kept the faith, finished his course, and fell asleep in the Lord, and is at rest. He died in the seventy-fifth year of his age, having been a minister forty years. *Pity Promoted.*

GREAT is the advantage of faithful obedience, it sweetens every cup, and speaks peace to the soul. — *S. Fothergill.*

"It is the sun that makes the shadows possible."

Notes From Others.

As an effect of militarism we may instance that a prominent American is credited with writing in the *London Times* that the "Blond Beast" philosophy is "common in business, social and military circles in America, where deeds of a type once denounced as criminal are now applauded as clever, and where Christianity, the golden rule of ethics, is for slaves."

The opposite doctrine, that of Christianity, would bring this about: that the old struggle for life passes on to "the struggle for the life of others."

WEDDING RING A BARBARIC RELIC. — The romantic ideals of seventy-five "co-eds" in a class of anthropology at the University of Chicago have received a rude shock at the hands of Professor Frederic Starr, who bluntly told them that the wedding ring was a relic of barbarism, an absolutely useless survival of primitive people. He said:

"The wedding ring is a beautiful example of barbaric tradition, living in this modern twentieth century, and filling no function whatever. Perhaps one of you can tell me the origin of the use of the wedding ring?" He received no answer from the seventy-five young women, so he answered himself.

"The wedding ring represents the nose ring, ankle or manacle by which in past ages the sold slave was led away from the mart by his new master. But every one to-day knows that a woman, when she is given a ring to symbolize the wedding sacrament, is by no means a slave."

The dress coat was also included in Professor Starr's idol shattering discourse.

Turning to the men of the class, he asked: "What is the origin of that absurd garment, the dress coat? Nothing less than the hunting coat of our ancestors, who divided the tails of the long frock coats, cut away the front, sewed buttons on the back to hold up the tails, and used the coat for a hunting jacket. Now, why is the servant dressed in the conventional evening costume also? Just because he formerly had to wear out the old hunting coats of his master."

Philadelphia Yearly Meeting.

The opening of the two hundred and twenty-second Yearly Meeting, was touched upon in our last number, preceded by the several meetings for world in the four meeting-houses on First-Mary earnest exercises by visiting and Friends were handed forth.

Demerit covered the waiting moments sitting on Second-day morning, under the clerk duly read the opening minute, sixty-nine representatives, but one was

meeting soon turned to the hearing of proceedings of the Meeting for Sufferings past year. Way had not opened to the Yearly Meeting any recommendation to the admission of women as members Meeting for Sufferings,—a subject rest to this body by the Yearly Meeting last. A catalogue of Friends' books for sale book-store had been mailed to seven persons and institutions throughout the world,—a movement which had been read to encouragingly. During the year has been issued from the bookstore one hundred and eighty-nine volumes and three thousand and fifty-seven pamphlets. Those disposed of gratuitously numbered to four hundred and seven dollars. are in the bookstore at present nearly four hundred volumes and pamphlets of literature, including some eight thousand foreign languages. The distribution of the year has extended into twenty-two and ten foreign countries. There are hand sixteen thousand dollars worth of type plates and eight thousand five hundred dollars worth of books, one-sixth of them in foreign languages. From the Charleston hundred and thirty-six dollars have been appropriated for repairs to three meeting-houses in Western States.

had been given many years ago pasture of Friends' horses, the fund for the sale of the lot, called the Pemberton fund, now used for the help of Friends who are unable to travel, their traveling expenses

in coming to the Yearly Meeting and attending to services appointed by the Society. For the past ten years the income of the fund has been twelve thousand dollars, of which nearly eleven thousand dollars have been expended.

In distributing religious and moral literature—chiefly five thousand copies of the "African's Friend,"—among the Southern negroes and in Liberia, about six hundred dollars of income from the Charles L. Willits legacy of ten thousand dollars has been used.

It appeared that the only assistance likely now to be needed by the Doukhobors in the matter of education. Anxiety had arisen on account of the communistic views held by many of them in regard to land tenure, and their objections to the land registry required by law. Their avoidance of marriage registration, which in Russia meant conscription, has been brought with them hither. But their faithfulness to the marriage relation is surpassed by that of no other people. The Canadian officials have shown much forbearance while waiting for the colonists' better enlightenment in these respects, and a cogent and sympathetic address to the Doukhobors as prepared by Friends' Committee was read, advising compliance with the laws on grounds laid down in the New Testament. Joseph S. Elington and Dillwyn Stratton with an interpreter are now among them, distributing the address and using such influence as best help may give to reconcile their difficulties. The Committee has expended thirty-six hundred dollars on behalf of the Doukhobors in the past year, sixteen hundred dollars of the amount being paid for sheep and fifteen hundred dollars for education.

Included in the proceedings of the Meeting for Sufferings was an account of the presentation of an address, and the language of the address itself, which was handed last autumn to President Roosevelt, asserting the conscientious loyalty of Friends to civil government and embodying an appeal for peace. A sketch of this visit to the President was given in THE FRIEND, page 161 of the present volume.

In order to afford a religious opportunity of avoiding the use of a priest or paid minister, when a member is about to marry one not in membership, a petition was offered through one of the Quarterly Meetings that such might be granted the use of the Friends' mode of solemnizing their marriage in one of our meetings, according to the good order of our discipline. Also a re-examination of our rule about being present at certain marriages was asked for. The subject was referred to a committee of three from each Quarterly Meeting; who later announced they would not be able to report this year.

Third-day, the 22nd.—William Evans and Charles S. Carter, as nominated by the Representatives, were united with by the Meeting

for the service as Clerks, and much sympathy and unity with Ephraim Smith were also expressed, in his retirement by reason of ill health from his acceptable service.

A letter from a member of the Yearly Meeting who had removed to a distant locality having been approved by an examining committee, was now read, to the satisfaction of the meeting, and sent in to the Women's Meeting as having a part in its concern. As it took the place of an offering such as members may deliver vocally when present, its reception was not noted on the minutes.

1. The answer to the first Query showed that in two localities no meetings have been held during the year, and that in sixteen instances other small meetings have been omitted, about half of these by reason of sickness or epidemic. Such report did not discourage some speakers in their sense of an awakening of religious life well begun among us. No outward arrangements or encouragement, nothing short of an appetite for spiritual things, would afford a relish for attending meetings. It was believed that all the members and not overseers only, should have the same care one of another in inducing attendance upon Divine worship.

2. All the answers in regard to love and unity and the discouragement of detraction were satisfactory.

3. Some laxity as regards plainness of dress and of speech was shown by the answers. The reading of the Holy Scriptures appeared general in our families. A considerable, though not sufficient, concern was manifest to guard children from pernicious literature and from the contaminating influence of worldly associations. The concern of the query was expressed in the language, "Lead us not into temptation, but deliver us from evil." Much could be done by parents in directing their children away from the allurements of worldliness. The essence of each query should be laid to heart and practice, and not its form only. An inward simplicity of heart and life was the essential, which should develop an outward simplicity. The reasons on which this testimony is based should be made known to children. Parental duty includes also authority and control, as much as it was due in the days of Eli. The helpful influence of family Bible reading was testified to. One young man who had adopted the practice at breakfast, having overslept one morning, gave up his breakfast rather than the reading and worship. As he left home he said to his wife "I never felt so happy in my life." In a few hours his body was brought back, killed on the railroad.

Fourth-day, the 23d.—After considerable expression, the judgment prevailed that the Women's Meeting should be offered the opportunity of appointing a committee to act in con-

junction with the Men's committee in considering a revision of the marriage rules. Hitherto men only have decided questions of discipline. But the joint interest of women in this special subject seemed to many to justify their cooperation.

4th Query.—The members were reported as generally careful to discourage, by abstinence from intoxicating liquors their manufacture and unnecessary use. It was believed that very few Friends frequent taverns. The diversion from family life and from spiritual life which clubs and lodges now afford, was seriously brought to view. Prominent actors have of late been re-asserting the dangers to morality in stage-life. If it would be wrong for one of us to hire his daughter or sister to enter that kind of life, it is wrong to hire by paying for a theatre ticket, the sister or daughter of another to pursue that life, or path to ruin;—wrong to pay for the young to ruin themselves for our evening's entertainment. The remedy for diversion from the Holy Spirit is conversion to Him who has bought us with a price; who being lifted up and tasting death for every man again coming, has done the uttermost to draw us into Himself and reconcile us by his death. "Walk in the Spirit and ye shall not fulfill the lust of the flesh."

5. The care of Friends needing relief, or education for the duties of life, and the placing of children under the influence of members, had been suitably attended to.

6. But one had violated our testimony against War, and one that against Oaths. The remaining exceptions were in the encouragement, by attending its services, of a stated and paid ministry. Without impugning the sincerity or gift of some ministers under that system, Friends must contend that there can be no living ministry of the gospel except that which is exercised under the immediate inspiration of the Holy Spirit. All other is dead ministry, whether paid for or not.

7. With slight exception, moderation, punctuality and uprightness in business had been observed, and living within one's circumstances.

8. The Discipline had mostly been administered according to the last Query.

One minister and ten elders had deceased during the year. One of these was near one hundred and one years old, two over ninety and but one under seventy. One meeting had been discontinued, and no new ones established.

Sixteen schools are under the care of subordinate meetings.

In response to a minute from Salem Quarterly Meeting a committee was at a later session appointed to be incorporated with it for its help.

At 3 p. m. the adjourned session of the Meeting of Ministers and Elders was held under much Divine favor.

Fifth-day, the 24th.—Meetings for worship were held in the Meeting houses on Arch, Sixth and Twelfth streets. That at Arch street was overcrowded, with fourteen hundred attenders. The occasion was, as usual, of remarkable interest.

In the afternoon a business session was held, in which a concern was laid before the meeting that a committee should be appointed to visit subordinate meetings. The discussion related rather to the duties of such committee than to

its appointment, for which substantial unity appeared. The nominating committee now chosen brought in the next morning the names approved by them, which were adopted by the meeting as a committee to visit the meeting and perform such other service relating to their welfare as way might open for. The Women's meeting also appointed a committee to join the men's committee in the same concern.

The Quarterly Meetings reported six hundred and eighty-two children of school age, about four-fifths of whom are in Friends' schools.

As regards the use of intoxicating drinks, the number partaking of them remains about the same. Several Monthly Meetings appeared clear of an instance. In Philadelphia Quarter the delinquents were generally not among the young men.

Sixth-day, the 25th.—The thirty men Friends appointed in the interest of subordinate meetings may properly be placed here for reference, namely:—Ephraim Smith, John B. Garrett, Edwin P. Sellew, Isaac Sharpless, Joseph Elkinton, John Way, David J. Brown, Samuel Morris, Samuel Emlen, Alfred C. Garrett, Henry E. Hall, Edward G. Smedley, Jonathan E. Rhoads, Joseph Rhoads, Thomas H. Whitson, William B. Moore, Zebedee Haines, Watson W. Dewees, William B. Harvey, Harry E. Moore, James M. Moon, Joseph S. Middleton, William Bishop, Samuel C. Moon, Walter L. Moore, Henry B. Leeds, George Abbott, Chas. Rhoads, William C. Allen, Josiah Wistar.

Among others, a Friend from Ohio spoke of his interest in the appointment of the committee, and of the satisfaction which Ohio Friends had felt at the reception of an epistle from Philadelphia several years ago, as also in the general epistle then addressed to all bearing the name of Friends. A Friend from Australia, near the close of the sitting, expressed his fellow-members' appreciation of the same epistle and of the living epistles who, as ministers, came to them nine years since, and gave them counsel from which they are now profiting. His interest in the conduct of the Meeting, especially during its coming to a decision on the appointing of the visiting committee, was declared to be profound. A similar sentiment was expressed by a visitor from New England.

The auditors recommended that two thousand dollars be raised for the use of the Meeting, which with two thousand dollars for the Educational Committee, and twenty-five hundred dollars for the Indian Committee, makes the amount to be raised six thousand five hundred dollars.

The Committee in charge of the boarding school at Tunesassa for Indian children of the Allegheny Reservation, reported the school as in a flourishing condition. Forty-eight scholars are in attendance, and seventy-five usually in waiting for admission. The large farm is devoted mainly to stock-raising. The boys do most of the work, including the milking of forty cows, and the girls do the housework. Industrial as well as intellectual training is furnished. Thirty-seven hundred dollars received for timber sold had swelled the invested funds to fourteen thousand dollars. The school is operated at an expense of five thousand dollars annually.

The sixteen smaller schools in the neighborhood of country meetings have received care of a committee since the year 1881. They instruct at present three hundred sixty-seven pupils in schools varying from fifty-four in the enrollments. The Atlantic City school, which had been assisted during its first two years, is now independent of help. A majority of the pupils in all the schools are not children of Friends, but such as value most highly what these schools stand for as moral and religious exponents.

The next business was the consideration of the condition of the Friends' Boarding School at Westtown, consisting of one hundred eighty-five pupils, and conducted last year at an expense of fifty thousand six hundred eight dollars. The receipts from all sources were forty-nine thousand and fifty-five dollars. A bequest of the late Thomas Elkinton announced, amounting to fifty thousand dollars, to be used for the institution so long as it shall remain select for members of the Society. Also a bequest from a former teacher, Martha Sankey, amounting to six thousand hundred and forty-one dollars was acknowledged.

Comment was mostly confined to the reputation of ten in numbers of pupils as compared with last year, and the deficit in this well eclipsed the much larger consideration of satisfaction for the good work of the school, which deserved expression. The blame of decrease was charged by some on school management, and by others on more home management, which alienates children from Westtown's aims and principles. The value of acquaintance among all our members as fostered by Westtown associations, was acknowledged; and the religious and moral training of the institution was not forgotten.

No survey of the exercises which appeared in unusually lively degree during consideration of the Queries and Answers, was thought to be formulated into Adverses for this year. This omission proved serviceable in allowing the Meeting to conclude its business, though at a late hour, yet without necessitating adjournment to an afternoon session.

The solemnity of disbanding for a year unforeseen vicissitudes gathered upon the assembly, and continued prayerfully after Clerk had read the appropriate conclusion Minute as follows:—

"The business of the Yearly Meeting having been conducted with brotherly love and economy and the truths of the religion which profess having been clearly set forth by our concerned Friends; with desires felt that the good which we have experienced in coming together may not be suffered to be dissipated when we return to our ordinary vocations, and with gratitude for a continuance of the mercies we are surrounded with, the meeting concludes, to meet again at the same place next year, if in accordance with the Divine will."

STATIONS for the artificial hatching and rearing of clams and lobsters in large numbers have been established at several points along the Atlantic Coast. The experiments are gone so far as to make it clear that the business of clam farming or the raising of clams for the market offers large pecuniary returns.

FOR "THE FRIEND."

toward Ceremonial as a Manifestation of Unity.

long ago there was a large gathering of many ministers at what is known as West-chapel, in City Road, London, which was led by Hensley Hensen, a canon of the same Church, a number of other clergymen of same denomination being present. The orator, broaching the subject of church unity, contended that "the first elementary of communion was in the Divinely appointed sacrament. He did not think that the conformists would be humiliated in following the lead of the Church of England in matter of communicating. In seeking outward manifestation of unity, the Sacrament of the Lord's Supper would be the best first point to begin with. The time was his opinion for a religious rearrange-

it may well be questioned whether the canon is wise in suggesting as an end of unity that which for centuries has been as a fertile seed of discord. Where, such a scheme would be the Society of the Church, which, while honoring the letter of the law, and equally with other denominations, would evangelize, yet disclaim an outward manifestation as obligatory or required, pleading communion which is "in spirit and in truth" and for that eating of the flesh and drinking of the blood of Christ (John vi), which which He Himself testified—"It is the flesh that quickeneth; the flesh profiteth nothing, words that I speak unto you, they are life, and they are life."

In the case of the Reformed Episcopalians came away from the main body some years ago, condemning and rejecting erroneous and strange doctrine, which added with such exceeding tenacity as to develop into Romanism, "that the table is an altar on which the oblation Body and Blood of Christ is offered anew to the Father. That the presence of Christ in the Lord's Supper is a presence in the element of bread and wine." Now, is it supposed that these nineteenth century Protestants, who were assured that any variation of establishment from the above doctrine would be "impossible," would now, following to "follow the lead of the Church of England," back into what they deem to be a gross error, (though not seeing all the ways we apprehend it, and from which with heavy hearts they had come away)?

us go back a matter of three hundred and twenty years to that period of the Reformation when the different views concerning outward sacrament, as held by Luther in Germany, and by Zwingli in Switzerland, were

there are those in the "Church of England," as well as those to sacramentalism and the doctrine of the apostolic succession, who are not without understanding of the essential unity. Thus, in Henry Freemantle, bishop of Ripon, in a work remarks: "We may be thankful that as a body of Christians distinguished for their plain simplicity and good works, who have always discarded the use of outward sacraments, they then the Christian name and a place in Christian Church would be to deny the Spirit of Christ. The Friends stand as a witness that the power of believers has complete power over the outward."

felt to be so serious as to threaten the very survival of Protestantism. To reconcile, were it possible, these diversities of views, a conference was arranged at Marburg (1529), which well represented in its attendance the differing elements, there being present besides Luther and Zwingli, many of their respective sympathizers, as Melancthon, Ecolampadius, Bucer, Brenz, Cruciger, Hedio, Osiander and Myconius. The Landgrave of Hesse, presiding, and the four theologians first above named being seated at a table on the rostrum, Luther straightway arose, and, taking a piece of chalk, bent over the cloth of velvet covering it, and wrote in large characters the four words *Hoc est Corpus Meum* (This is My Body). This declaration, we are told, he wished to have continually before him in the discussion, that it might strengthen his faith, and be a sign to his adversaries from which they must not wander away.

"Let them show me that a body is not a body," said Luther in opening the argument. "I reject reason, common sense, carnal arguments, and mathematical proofs. God is above mathematics. We have the Word of God; we must adore it and perform it." But, it was interposed, the New Testament, figures of the Saviour, contains numerous figures of speech, as "I am the vine," "I am the door," "The rock was Christ." Similarly, "This is my body," is one of the like kind. Attention was especially drawn to Christ's own saying, "The flesh profiteth nothing," but as often would the worthy of Wittenberg return to the words upon the velvet, "This is my body." "The devil himself shall not drive me from that. To seek to understand it, is to fall away from the faith." But to this, Zwingli, a little nettled, perhaps, that Luther would not move from his established ground, replied, "St. John explains how Christ's body is eaten, and you will be obliged at last to leave off singing always the same song."

This response the impulsive Luther characterized as unmannerly, when his opponent, emphasizing the clearness of the explanation in the sixth chapter of John, was thence rebuked for his arrogance, and was told "that passage had nothing to do here," and, a little later, "Christ is substantially in the sacrament, such as He was born of the virgin." So out of the faith were the Zwinglians believed to be, that Luther would not accept the extended hand of fellowship, and thus this notable conference of Marburg broke up without effecting any agreement in the way of religious concord, but rather the opposite.*

To be broken upon the Rock is essential; upon that, all can or should unite; but to seek to formulate a basis for fraternal agreement upon the outward communion as now so divergently held, would be, if the lesson of history is to be considered, to unloose an endless and unprofitable controversy. "For if I," said Paul, in discoursing to the Galatians how he had left the obligations of the Jewish law, and

* Nevertheless, when Luther, two years later, heard of the death and maiming of the too belligerent Zwingli, at the battle of Cappel, and, immediately afterward, of the decease of the gentle Ecolampadius, at Basle, he was greatly affected. To Bullinger, the historian of those events, he remarked, years after: "Their death filled me with such intense sorrow that I was near dying myself."

come under the ministry of the Spirit, "if I build again the things which I destroyed, I make myself a transgressor."

JOSEAH W. LEEDS.

The Story of Daniel Defoe.

In former days, when people were rougher in their habit and customs than they are now, it was a very usual punishment to put evildoers in the pillory. The pillory was the very ancient practice, used as far back as in the days of Canute when it was called a "heals fang." It was made in various shapes but was generally a wooden frame, erected on a scaffolding and in the frame were holes through which the prisoner's head and hands were fastened.

When a man was placed in the pillory, the mob crowded to see him, and would jeer and insult him, and pelt him with rotten eggs and stones. Often the prisoners died from the ill-treatment thus received. But I am going to tell you of a man, who, when he was put in the pillory, was treated very differently. He had written a book which made the government so angry that they sentenced this man to stand in the pillory for three days, in three different parts of London; but he was a clever man, and such a favorite with the people, that when they saw him in the pillory, some of his admirers made a ring around it, to protect him from insult; others bought garlands and roses from the flower girls, and wreathed the pillory itself with chaplets, while the mob drank his health and cheered him loudly.

What was this man's name? Daniel Defoe. You may never have heard his name before, but I think you have all read a book he wrote—I mean "Robinson Crusoe."

Would you like to hear more about Defoe?

He was born in London, where his father was a butcher. He was sent to Newington Green Academy, and here the great preachers, John Wesley, and his brother Charles, the founder of the great Methodist Church, and Isaac Watts (who wrote many hymns for children), were among his schoolfellows.

When Defoe left school, he had a very adventurous life. First of all he joined the Duke of Monmouth's expedition, which was defeated at Sedgemoor. Then he settled down in London, at Cornhill, as a hosier, and when this business failed, he set up a manufactory of Dutch tiles at Tibbury.

He worked chiefly, however, as a writer or journalist. There were not nearly so many newspapers in the seventeenth and eighteenth centuries as we have now, but people used instead to write pamphlets on all the exciting questions of the day. Defoe wrote a great many of these pamphlets, and it was because of one of them—called "The Shortest Way with the Dissenters,"—that he was condemned to stand in the pillory, and was afterwards imprisoned in Newgate.

While in prison, Defoe did not remain idle. Fortunately he was allowed to have pen, ink and paper. So he continued to write pamphlets, and also started a newspaper, called the *Review*.

You will remember that other men, besides Defoe, have written while in prison. Sir Walter Raleigh wrote his "History of the World" when he was in the Tower of London; and Bunyan his "Pilgrim's Progress" while imprisoned in Bedford jail.

Here are some lines written by another prisoner, Lovelace, a royalist officer:

"Stone walls do not a prison make,
Nor iron bars a cage,
Minds innocent and quiet take
Them for a hermitage."

At length Defoe was pardoned and released from Newgate. After this for many years he served the Government with great zeal, by writing in newspapers and pamphlets, and by going on secret missions for the Government. One of these missions was in Scotland to help to bring about the union between Scotland and England.

Defoe was an old man—nearly sixty years old—when he wrote "Robinson Crusoe." When it first appeared, in 1719, people thought it was true, but we know now it is only a story, though founded on fact.

A Scotchman, Alexander Selkirk, who went for a voyage around the world, quarrelled with his captain, who left him on the island of Juan Fernandez. There he remained alone for four years and four months, till rescued by an English vessel.

"Robinson Crusoe" has been translated into many languages and has been the delight of men, women and children all over the world. A great many writers have tried to copy "Robinson Crusoe," but their imitations are far below Defoe's story. One of the best known of these imitations is the "Swiss Family Robinson," which you may have read, and there is a French story, "Paul and Virginia" which some people greatly admire.

Defoe wrote many other stories, but none of these are so clever, nor so well-known as "Robinson Crusoe." A great French critic once said about this book: "The great ruling virtue of Robinson, is the spirit of enterprise and perseverance, the spirit of pluck; he never gives up, or thinks it is all ended."

Defoe's last days were sad. He had various troubles; his son behaved unkindly to him, and he also had money difficulties. He died suddenly, in a London lodging, poor and alone.

Defoe was buried in a large cemetery in London, called "Bunhill Fields." Not far from his grave is that of John Bunyan, and on the opposite side is the grave of Isaac Watts. About thirty years ago a monument, given by the boys and girls of England, was placed over Defoe's grave, in memory of the writer of "Robinson Crusoe."—*Exchange.*

Concerning Christ.

There is scarcely any article of Christian doctrine in which the Society of Friends have more fully or repeatedly declared their sincere belief, than in the proper divinity of our blessed Lord and Saviour Jesus Christ. They have uniformly testified that He was the Word of God, spoken of by the Evangelist John, by whom the world and all things else were made, who was with God in the beginning, and who was and is over all God blessed forever. Amen. They believe that in the fulness of time this eternal "Word was made flesh and dwelt among men in the person of our Lord Jesus Christ, who was conceived by the Holy Ghost, and born of the virgin Mary, at Bethlehem of Judea, in the days of Herod the king; concerning whom the angels declared to the shepherds who were keeping watch over their flocks by night, "unto you is born this day in

the city of David, a Saviour, which is Christ the Lord; that He went about doing good to the bodies and souls of men, preaching the gospel of salvation, and giving eternal life to as many as believed on Him; that He wrought many mighty miracles, and gave other infallible proofs that He was the promised Messiah, the true Christ, the Son and sent of God, the Redeemer and Saviour of the world, one with the Father, agreeably to his own blessed declarations.—*Adopted by the Representative Meeting of Philadelphia Yearly Meeting, Jonathan Evans, Clerk.*

The Fatherhood of God.

I have been much interested in two articles which appeared in THE FRIEND upon the Fatherhood of God. To me this is a most vital point; and while I cannot hope to say anything new, I should like to show how it appears to me.

We often, it seems to me, distort Scripture and violate nature in our endeavors to make them tally with some preconceived notion of our own imbibed from Milton or some medieval theology. What does it mean that God created man in his own image? Not surely that God looks like a man as to external appearance. We are so hopelessly anthropomorphic that we cannot picture God in any other form; and even those of us who have not had Murillo's Holy Family engraved upon our minds from childhood are apt to think of Him as a most benignant and beneficent man. Still to our reason this conception of Him is by no means an adequate explanation of "in the image of God created He him." By Friends, at least, it would seem that the meaning of this passage is easily understood to be the spiritual man—the power, whatever it is, which is in all men to know the truth, and for the truth to make them free.

We have been taught from our youth up that this is a universal human capacity, and that to every soul the Great Father says, "My son, give me thine heart" (Pro. xxiii: 26). "This is the way, walk ye in it" (Is. xxx: 21). Is not this our evidence of sonship? Is He not thus stamped in our very life as our Father? It seems to me utterly foundationless to say that unless we are born again He is not our Father. The parallel is so common in nature and experience that it seems almost trite to point it out. Is not the father of the most vagrant and disobedient earthly son still that son's father? What else is the teaching of the parable of the Prodigal? Jesus certainly treated unconverted men as his brothers. In the fifth chapter of Matthew this teaching is especially striking, that all men are brothers.

I believe that there are those who in reality would insist upon the brotherhood of all mankind who still would stoutly deny the universal Fatherhood of God. How can all mankind be our brothers unless God is our Father? Where is there any base of brotherhood otherwise?

Now, an earthly son does not fill the place of a son, nor can a father treat him as a son unless he is obedient to that father. The father may do his best; he may love him and follow him all his life; he may desire to save and comfort him, and to shield him from evil, but he cannot do it unless the boy will allow it by being turned to his father and minding him. Just so a man cannot stand in that loving

relationship toward God, unless he is again, and learns to walk in the Spirit with Heavenly Father as his leader, his comforter, his protector.

The whole of Christ's teaching seems to inculcate this truth. We hear that passage quoted which seems to contradict the very tenor of the Gospel—"Ye are of your father the devil." It is evident that Jesus did not mean that the devil was their father in the sense that God was his Father. He tells us that "Every one that committeth sin is bond-servant of sin," and because they thus acted, they are the children (in the sense) of the devil.

The passage "If ye were the children of Abraham, ye would do the works of Abraham" exactly illustrates his teaching. They were certainly the children of Abraham according to the flesh, but not sons in that larger sense in which obedience is the *sine qua non*. Although descended from Abraham, because of disobedience and the bondage of sin, they were the children, bond-servants, of the devil. The parallel is complete as regards the degenerate children of God. Though he is their Father, though they bear in their spirits the undeniable evidence of their relationship, they still, through hardness of heart, are so turned from Him, as to be, to all intents and purposes, children of the devil. It were God to lose his Fatherhood and cease to follow them as they through disobedience of their sonship, there would be no hope of claiming the lost.

The meaning is farther elucidated in the passage "for he is a liar, and the father thereof," showing that the devil was the father of bad deeds rather than of persons. Their conduct was his offspring, not they themselves. Christ's appeal to them in the same place, "to be free indeed" shows to my mind that He regarded them as God's children, and the potentiality of becoming "abiding" sons.

Almost the whole of the sixth chapter of Matthew is an exposition of this Fatherhood of God. Many of the passages presuppose an accord with the will of God; but in the following there is surely implied a want of what we should consider filial obedience, and still God is "your Father." Fifteenth verse, "But if ye forgive not men their trespasses neither will your Father forgive your trespasses."

The disciples and multitudes to whom he habitually talked of God as their Father were not what we should consider converted people. Jesus told Peter long after, "when thou art converted, strengthen thy brethren." (1st xxii: 32) showing that Peter had not yet been born again.

In the twenty-third of Matthew He is telling to the "multitude and to his disciples" and in the ninth verse he says, "Call no man your Father on the earth, for one is your Father which is in heaven." We know that He did not teach disrespect for, nor disregard of, the earthly relationship—as that of child toward parent; but He was teaching them not to be divided, part obeying one human teacher and part another. They were to understand that God was the Father of all, and from Him alone was to receive instruction. This would surely apply to all people now, as well as to the mixed multitudes of that day.

tances might be multiplied, but enough
been quoted to show what Christ taught,
also plain that while God is our Father,
in only enjoy this relationship by turning
in with full purpose of heart, and giving
lives into his keeping through obedience
known will. Then, we become sons in-
"heirs of God, joint heirs with Christ"
viii: 17).

is a beautiful, a most holy thought, that
be came the "son of man" in order that
might make every man a son of God. If
were not already the relation of Father
od's part, this was impossible, because
is the same yesterday, to-day and forever.

ted.

then enumerated the Redeemer's sor-
—his sufferings in the garden;—his final
for the sake of sinners. Then in-
d the sufferings of the apostles, "We
doubled on every side, yet not distressed;
perplexed, but not in despair; perse-
but not forsaken; cast down, but not
ruined." This was still the lot of the dis-
ciple. At some length he discarded on the
which trials should work for us inward
outward.

our Society was again to arise, it would
patiently abiding under suffering and
these light afflictions, which are but
moment, have their perfect work. Un-
his discipline some might be prepared
to sound the trumpet in Zion.
First Month 18th, 1842, in North Meeting,
Philadelphia.)

SARAH HILLMAN.

ah Hillman had been reflecting upon the
of ballast; it was very unusual for her
to be thus occupied and she did not
for whom it was intended. Ballast was
sight, yet let a vessel be provided with
of sails and rigging, it would be very
to enter on a voyage without compe-
ballast. This might be in some sort
tured to the bones and sinews, equally out-
right, but certainly indispensable. She
ed there were some present who were
ing to become ballast in Society, and
and the children she appropriately ad-
d. (At North Meeting, Third-day, Eighth
20th, 1844).

ELIZABETH EVANS.

were not to mix with others; we were

in the situation of the Israelites of old, for-
bidden to mingle with the surrounding nations;
texts were quoted showing the prohibition.

There were some who loathed and hated the
simplicity of the profession they belonged to
—who wanted greater liberty than the sim-
plicity of the gospel admitted of; who longed
for forms and ceremonies, a greater assimila-
tion to the world.

In the hearts of some of these the Holy
Spirit was at work; she instanced what had
been done for herself.

No one who had given up to the requirements
of duty ever regretted it upon a death-bed.
We should have a constant regard to this,
what would bear the examination of a death-
bed? The youth were affectionately ad-
dressed. The belief was expressed that the
Lord was as near this people as He ever was,
etc.; the doctrines and testimonies He had
given us would never be suffered to fail. (At
North Meeting Third-day, First Month 27th,
1846).

Investigating the Potato.

The Government has been prying into the
inner life of the humble potato, and after a
most thorough and rigid investigation declares
in the year book of the Department of Agri-
culture that the potato is a deserving and ex-
tremely valuable member of the community.

Scientific investigation has shown that the
practice, which has become so general, of
serving potatoes with meat and other similar
foods which contain liberal amounts of pro-
tein is based upon correct principles, one food
supplying the deficiencies of the other. Po-
tatoes and other foods containing carbohy-
drates are sometimes objected to on the ground
that they are starchy foods and do not supply
much nitrogenous material. It should be re-
membered, however, that the potato does
contain a by no means inconsiderable amount
of protein, and further that carbo-hydrates
are an essential part of a well-regulated diet.
The digestion experiment referred to shows
that potatoes properly cooked furnish much
material in a digestible form. They have been
a staple article of diet for many years without
harmful results and therefore the conclusion
that under ordinary circumstances they are
other than a useful and wholesome food seems
unwarranted.

The potato, called in different regions white
potato, Irish potato, English potato, or round
potato, was first introduced into Europe be-
tween 1580 and 1585 by the Spaniards and
afterward by the English about the time of
Raleigh's voyages to Virginia. It is com-
monly believed to be a native of Chile. Wild po-
tato plants closely resembling those cultiva-
ted to-day are still found there, though it is
a fact worthy of mention that, as the potato
has been modified by cultivation, it has largely
lost the power of producing seeds, and the
cultivated potato differs from the wild in sel-
dom producing seed-bearing fruits.

When first visited by Europeans the aborig-
ines in Chile and adjacent regions cultivated
the potato for its edible tubers and had ap-
parently long done so. It was probably intro-
duced into the United States, especially Vir-
ginia and North Carolina toward the end of
the sixteenth century. It is not surprising
that the new foodstuff should have grown rap-

idly into public favor, when we remember its
prolific yield, superior keeping qualities, ease
of propagation and agreeable flavor.

The principal ways of cooking potatoes are
baking, boiling and frying, or some modifica-
tion of these processes. The objects sought
are principally to soften the tissues and ren-
der them more susceptible to the action of the
digestive juices and to improve the flavor.

Just why cooking changes the flavor as it
does has apparently never been made the sub-
ject of investigation. In potatoes as in other
foods the cooked starch is more agreeable to
the taste than raw. In the raw potato the
separate starch grains are inclosed in cells
with walls composed of crude fiber, a material
resistant to digestive juices. If potatoes
were eaten raw the digestive juices would not
reach the starch as easily unless the cell walls
happened to be ruptured mechanically, as in
mastication.

To obtain the highest food value potatoes
should not be peeled before cooking. When
potatoes are peeled before cooking and placed
directly in hot water and boiled rapidly less
loss of material is sustained than when they
are cooked in water cold at the start. The
wholesomeness of potatoes cooked in different
ways is largely a matter which each must de-
cide for himself, the general experience being
that for men in health most of the methods
followed are satisfactory.

Although under ordinary circumstances po-
tatoes are unquestionably a wholesome food for
most persons, illness is sometimes caused by
eating them. There are undoubtedly some per-
sons in health with whom potatoes do not
agree, just as there are those who cannot eat
strawberries without distress. This is due to
personal idiosyncrasy, and not to the harmful
character of the food.

Cases of actual poisoning by potatoes, how-
ever, are by no means unknown. So far as
can be learned, the abnormal symptoms in such
cases were caused by the presence of solanin
in the potatoes. Several years ago three hun-
dred and fifty-seven soldiers in a battalion of
the Austrian army showed symptoms of sol-
anin poisoning. The potatoes used for food
were examined. Those which were fresh con-
tained a small amount of solanin, while those
which had sprouted contained much more, still
larger amounts being found in the sprouts than
in the tubers themselves. The potatoes
undoubtedly caused the poisoning in this case.

Potatoes a year old which have lain in a
cellar and shriveled, and small potatoes, which
have sprouted without being planted, are con-
sidered especially dangerous, and should not
be eaten. If perfectly fresh potatoes contain
any solanin the amount is so small that it does
not cause harm.

PERSONAL CHARM.—The women who are
most loved are not by any means always the
most beautiful; but they have that indescrib-
able something that, for lack of a better
term, we call personal charm. Their natural
and gracious manner, their thoughtfulness for
others, the blended good sense and wit of
their conversation, and, above all, their mys-
terious power of sympathy, draw the hearts of
friends to them as the moon attracts the wa-
ters. It is strange how you are often thor-

oughly disillusioned the moment a woman opens her mouth. You think to yourself as you notice the classic contour of face, what a charming personality she must be! But the lines about her mouth as she begins to speak, her choice of words, her hard and rasping tone, lead to an instant revision of the opinion. Again, have you not often found that a rather plain and unattractive face has been lit up in conversation with an inner light, that the liquid tones of a well modulated voice have stolen into your heart, and that delicacy of insight has captured your imagination? Beauty of spirit has more than made up for the lack of physical attractiveness. And there are no accomplishments of music, art, or languages that are quite so winsome as sanity, efficiency, and sympathy. — *The Watchman*.

Simplicity of Life.

There is a fine strength exhibited in the case of Daniel and his three companions, who, when they came from the misery and comparative barrenness of besieged Jerusalem to the rich and luxurious Babylon, and were exalted from the lowly rank of the common life to the magnificence, as it was then considered, of the life of the court and the king, yet resisted the whole miserable business of feasting and living "delicately," and ate only their old Judean fare of pulse and water. It was their self-denial and their abstinence which made them loved and trusted of God and man. We live in an age of great luxury, for it is far distributed. It is not confined to kings and courts, but enters everywhere. Elegance is seen on all sides, from the rich extravagance of public buildings (for which poor people pay) to the brilliancy and shining equipment of the saloon and club room. The appetite is not only tempted but almost forced to satisfy itself by the abundance which is displayed. Even the old Quaker and Puritan simplicity seems to be a thing of the past in New England and in Pennsylvania, and the age of high living has come. Perhaps we are not called too vehemently to inveigh against good things. A good man need not be an anchorite to live in monastic misery. And yet, if we are to stem the current of evil which is flooding in, must we not have a bit more of that virility which is associated with denial and abstinence? Is it a fair sign for a temperance worker to gorge himself with good things to eat till it would seem as if his digestive organs must fail, and then rise and cry out against men who drink more than they eat. The general luxury of life weakens the cause of temperance, there can be no doubt about it, just as it weakens all good causes. An old friend of mine used to say he did not think a man could be a good Christian worker who regularly had more than four courses at dinner! At any rate, dear fellow Christians, let us have more simplicity, more denial in our living. Let us welcome a bit of hardness, [as a preparation to] have Daniel's power to rebuke vice, and John the Baptist's power to cry out concerning repentance. — *Ledger*.

Bravery of a Mother Grouse.

When first I came to the Territory of Washington, the desire to explore the mountains to the west of my home near Valley grew upon me, and at the first opportunity, taking ponies

and blankets, and accompanied by my eldest son, a lad of seventeen, I set out on a few days' trip into the new wonderland. The summit of the range was reached on the second day, at a point entirely out of the line of travel of either Indians or whites, and when almost at the summit, just as we were passing a clump of bushes, we ran into a brood of little ruffed grouse.

My boy was riding in front a couple of rods in advance, and the first move of the mother bird seemed to be to hustle her babies away from the horse's feet, and just as he rode past she rose in the air and flew directly towards me. I pulled up my pony instantly, and as I sat still she flew straight for my head, rising just above it as she came, and suddenly the boy cried out, "She is going to alight on your head."

It was true, and to the day of my death I shall regret that the unexpected sound of the fluttering of her wings as she settled towards my head for an instant startled me from my composure, and the temptation to glance upward was momentarily irresistible, and, in consequence, my slightly tilting hat brim frightened her while just in the act of setting her feet upon my head, and swerving lightly to her left, she swung round and settled on the rump of the tired pony under me. The pony stood perfectly still, and slowly—very slowly I turned my head and looked at her. Beginning in a very low tone and gradually raising my voice I talked to her and to my boy about her, for a minute or two before she fluttered away in search of her babies.

Telling her what a graceful little beauty she was, and how we had no thought of hurting either her or her babies, I coaxed her into listening for quite a time, and, though I am well persuaded, that she had never before seen either man or horse, I contend that it was courage—pure and simple—which prompted her to fly in the face of so formidable an apparition in defence of her little ones. — *Correspondence Forest and Stream*.

Known By His Voice.

I was standing at the counter in a Chicago grocery store, not long since, footsore, hurried, jaded by the city's uproar and confusion. The clerk was executing my order as quickly as he could, but I was inwardly fuming as the cable cars passed the door on their way toward my longed-for home. So I frowned when the floor-walker stepped up and said to the clerk: "Mr. Thompson, this gentleman wishes to speak with you—he is in something of a hurry."

The clerk looked up, and to my intense satisfaction merely nodded gravely as he would to any stranger and went on tying up my package. The gentleman had smiled most cordially, but the smile was lost on the prepossessioned clerk.

"You are busy, Mr. Thompson?"

The last knot was half tied, but Thompson held the string suspended, and looked quickly into the speaker's face, evidently puzzled.

"What did you say, sir?"

"You are busy to-day. You do not know me I see."

Down went my coffee. Gone was the clerical gravity. The busy hand stopped to stretch out cordially across the counter.

"But I do know you! You are Mr. E. Morgan! I know your voice, sir! I am very glad, indeed, to meet you face to face. Y indeed, I know you—few men better. I shall be at liberty in one moment, sir."

They were telephone friends who had established relations "over the wire."

As the cable car carried me home, my head was warm within me, and something was singing in my soul. It was this: "Wh—having not seen—whom having not seen, love."

Ah, yes! I knew his voice. How often has spoken to me over heavenly wires, sending me messages from the throne. So good day I will stand before Him and He will speak to me. Then shall I look up into his face and see the King in his beauty. — *Brotherhood Star*.

"Old Jim."

Boys, do you know that you cannot be cruel to a horse without his telling on you? Then, he is just as ready to tell when you are gentle and kind. Do you wonder how a dog animal can "tell"? A writer in an exchange tells the following true story which will illustrate this fact, and will help you to understand how a horse makes known the fact that he has been unkindly treated. He says:

"My brother, who is a doctor, bought 'Old Jim' from a gentleman who was slightly disabled in both arms, that is, they were not very strong. He frankly told my brother that he was selling the horse because it was so restless and nervous that he was a little afraid to drive him. Indeed, he could only be kept in long enough for any one to get into the buggy by the hostler's standing at his head and keeping tight hold of the bit. After my brother bought him, his whole nature seemed gradually to change. His new master attended him entirely himself, and as he was the gentlest, most patient of men, Jim never heard a harsh word, nor experienced anything of the kindness. The consequence was he soon became as gentle and patient as his master, would stand for any length of time without being fastened, and scared at nothing. We wondered greatly at the change, hardly knowing how to account for it, until one day the man who had formerly taken care of him was called upon to drive home for the doctor. When the man came in front of him and attempted to pat him on the head the horse started as if a snake had bitten him, and hardly waiting for him to get hold of the reins, was off with a bound, prancing and dancing and plunging in the same nervous manner as before we met him. Nobody could doubt that this boy had been cross and cruel to the animal in his stable. So you see a horse can tell his story very plainly in his face and by his action to those who choose to look for it."

Science and Industry.

PECULIAR CURRENCY.—The currency of Abyssinia is somewhat varied, to judge by the account given of it by Count Gleichen in his story of the mission to Menelik and reported by Appleton's *Popular Science Monthly*.

For standard money the people of Abyssinia use the Maria Theresa 1780 dollars, but a small change a very different coin is resorted to.

his is no other than a bar of hard crystal, about ten inches long and two and broad and thick, slightly tapering to the end. Five of these bars go for a at the capital.

are very particular about the standardness of the currency. If it does g like metal when struck with the finger or if it is cracked or chipped, they will ke it. It is a token of affection when meet to give each other a lick of their ameils, and in this way the value bar is decreased.

ller change than a bar of salt is some-needed, and then the natives have-re to a cartridge. Three cartridges go to lt. It does not matter what sort of ges they are. Some sharpers use their ges in the ordinary way, and then put a dummy bullet to make up the ce and others take out the powder and the bullet again.

ucky the man who has parted with his for such money. When next he is g and puts his hands into his belt, he only misfires there. He is so well aced to such a fraud, however, that he little notice of it. A bad cartridge to answer for money as well as a good Coin collectors will possibly find it hard specimens of the salt, but cartridges ssily be found.

EST WORKING STEAM ENGINE.—A writer *ier's Magazine* tells of the discovery at ery at Rutherglen, near Glasgow, e believed to be the oldest engine now A few years ago an engine of James manufacture, with sun and plane-wheel te, was taken down at a London brewt It had been continuously working for ored and two years, and was not at all it when dismounted. It now forms an logical exhibit in the museum of Sidney sity. But this engine though interest- of about the same age as the Glasgow men, was of a comparatively modern It did not represent an extinct race. women engine at Farme Colliery, Ruth- was built in 1809 and was worked con- sly to the present time.

Christian Advocate of Nashville, Tenn., s: "If but a small portion of the im- ums spent in war and in preparation r within the last two years might have ent in giving some financial encourage- o the arts and sciences, in creating r for the better development of the resources, in finding employment for employed, in cultivating waste places dding them blossom as the rose, what hve of happy workers this world would t! Some day let us hope that we shall war no more."

KEEP A WATCH IN GOOD CONDITION.— known watchmaker says that if people llowed the directions given below, he have very little work in the way of repairs:

1. Wind up the watch in the morning. at night, as, directly after winding, it best, and can thus better stand the

constant movement of its wearer during the day.

Second. Wind it slowly, holding it quite still in the hand, and carefully avoiding jerks.

Third. Keep it as nearly as possible in the same position—that is, if worn in the pocket during the day, do not lay it down quite flat at night.

Fourth. Avoid sudden changes of temperature; do not wear it in a warm pocket all day and hang it on a cold wall at night.

Fifth. Clean out the pocket in which it is kept frequently, or dust is certain to get into it.

Sixth. Have it cleaned once every year, even though it is going well.

THE TRAILING ARBUTUS.—The trailing arbutus, *Epigaea repens*, is extensively cultivated in England to grow under trees. It is called the North American Mayflower, and gardeners recommend it as growing well under all kinds of trees, especially under pine trees. Trailing arbutus and a few other wild plants are the only things that will grow on what are termed "pine barrens." The needles of the tree do not render the soil fertile when they fall, and if allowed to remain, as they are in the native forests, they actually prevent many plants from growing beneath these trees. English gardeners seem to have discovered the secret of cultivating our trailing arbutus, the loveliest of our wild flowers, by planting it under the trees with ferns and other wild flowers, where it escapes a greater part of the rain of their notoriously moist climate. The hairy leaf of the trailing arbutus seems averse to rain, and it is always found growing wild under trees and bushes, where it is completely protected from rain drops.

Items Concerning the Society.

Encouraged by the way in which Friends subscribed to make a popular edition of John Woolman's *Journal* possible, Headley Brothers (14 Bishopsgate Street Without, London, E. C.), have secured the copyright of William Guest's *Life of Stephen Grellet*, and offer to issue it in stiff paper covers at a cost to subscribers of sixpence net per copy, this price being raised to one shilling after publication: At the same time a superior edition on antique paper, with illustrations and a steel engraving of Stephen Grellet will be prepared. This is offered to subscribers at two shillings net, the price to be raised after publication to two shillings sixpence.

A fresh reminder of this *Life of Stephen Grellet*, by William Guest, occurred to some of us on the 12th ult., in attendance at the funeral of MARIA S. REEVE in Medford, N. J., at whose house her relative, the late Rachel Grellet (Stephen Grellet's daughter), had for several years had a home, and was much interested in distributing copies of this biography of her dear father. Concerning Maria Reeve, who had reached the age of ninety, emphatic testimonies were borne to the sanctifying work of Divine grace on her spirit, and to the blessed influence of her Christian character and bright adorning of the doctrine of our profession in the town of her residence.

The published mode of observing "Easter at Ackworth," including "Good Friday" and "Monday," by reunions of old scholars that divide the time between athletic games, devotional meetings, and dramatic spectacles, can please neither consistent "churchmen" nor consistent Friends. The one part will see in it a desecration of a "sacred

season," the other will, like the apostle Paul, be afraid of them as conceding the observance of "days and months and times" of ecclesiastical invention. These festivities are probably a taking advantage of vacation time, but they carry the name of joining in the testimony for Easter.

Notes From Others.

A paper containing "Some Advance Hints to Travellers," by William Howard Francis, in this month's *Lippincott*, warns the traveller of impositions he will meet with on the other side of the Atlantic, and is particularly appropos at this season. This is interesting as showing the difference between America and Europe in hotel customs and other characteristics, with the balance always in favor of America.

The most widely known and oftenest quoted verse in the English language is:

"Thirty days hath November,
April, June and September,
February hath XXVIII alone,
And all the rest have XXXI."

It is the one thing learned at school that few forget, the one aid to memory that really helps remembrance. Yet probably not one person in a hundred thousand who habitually use it in everyday life recollects or has ever known the name of its author, Richard Grafton, who wrote this enduring poem, was one of the earliest and most distinguished of English publishers. He embarked in the business only about sixty years later than Caxton, "the father of English printing," and, between 1539 and 1553 brought out "The Great Bible" (Matthew's), Coverdale's Translation of the New Testament, "Acts of Parliament" and other books. The name of Grafton has lately been rescued from an undeserved obscurity, and made familiar to the reading public at least, by a firm of New York publishers, who have established "The Grafton Press," thereby reviving a title honored 350 years ago.

What are probably the largest and smallest books in the world have rested side by side for many years in the British Museum. The largest volume measures 5 feet 10 inches in height by 3 feet 2 inches in width. It is held together by great iron clamps, and required eight different skins for the binding. It was presented to the nation by King George IV in 1823. The smallest book is only three-fourths of an inch by one-half inch. It is called "Schloss's English Almanac of 1838," and was published in honor of the accession of Queen Victoria to the throne.

By the use of the Rational Method of Reading, a system of phonetics originated by the late Superintendent of Brooklyn Schools, Edward G. Ward, more than two score of Chinamen have gained an understanding mastery of English. Such feats as the pronouncing of the names of the books of the Bible, containing sound combinations hitherto considered impossible for a Chinaman, gave convincing proof of the teaching value of Superintendent Ward's method. As a suggestion to all classes containing foreigners, adults or children, the success of this Chinese school is most pertinent.

PROGRAM OF THE THIRD ANNUAL MEETING OF THE FRIENDS' EDUCATIONAL ASSOCIATION.—To be held at Moorestown, N. J., on the afternoon and evening of Seventh-day, Fifth Month 10th. A general invitation to all persons interested is extended by the Association.

Afternoon Session, 3.30 P. M.—1. Regular Business and Reports of Standing Committees; 2. Reports from Schools and Colleges Represented in the Association; 3. Friends and Public Education:

- (a). The Interest of Friends in Public Education Agnes I. Tierney.
- (b). Problems and Duties of a School Director Julia Cope Collins.
- (c). What the Public Schools Expect from Citizens Sup't Geo. E. Megargue, of Moorestown Schools.

The Faculty and Committee of Moorestown Academy invite the members of the Friends' Educational Association and their guests to supper between the afternoon and evening sessions. Those intending to accept this invitation will kindly notify Wm. F. Overman, principal of the Moorestown Academy, Moorestown, N. J., not later than Fifth-day, Fifth Month 8th.

Evening Session, T. P. M.—Some Historical Aspects of Quaker Education:

1. The Beginnings of Education in Philadelphia Edward Bettle, Jr.
2. Some Teachers our Fathers Knew. Watson W. Dewees.
3. The Forrest Trust and its Influences in Promoting Education Among Friends. George Vaux.
4. The Changes in Quaker Ideals with Regard to Education Isaac Sharpless.

Trains leave foot of Market Street, Philadelphia, at 2.30, arriving at East Moorestown at 3.10; 4.00, arriving, 4.30; 5.08, arriving 5.45; 6.08, arriving 6.40, and 6.28, arriving 7.04. Returning, trains leave East Moorestown at 5.19, arriving at foot of Market street, Philadelphia, at 5.47; 5.58, arriving 9.35, and 10.17, arriving 10.55. Trolleys leave from close beside Camden Station at frequent intervals.

In addition to the incidental expenses in connection with holding its regular meetings the Friends' Educational Association annually contributes toward a course of lectures by some distinguished educator in connection with other educational clubs of Philadelphia, and appropriates fifty dollars to the work of travelling libraries and the use of apparatus in the smaller Friends' Schools of Philadelphia Yearly Meeting.

Friends are requested to send contributions to the Treasurer, Walter W. Haviland, 140 N. 16th St., Phila.

ANNA S. WOOD, Secretary.
Moorestown, N. J.

SUMMARY OF EVENTS

UNITED STATES.—Resolutions as follows have recently been introduced in the House:

"Whereas, There has been recently an unusual increase in the price of beef, mutton, veal and pork, which is abnormal, and due largely, if not altogether, to trusts and other combinations, alleged to be unlawful in their organization; therefore,

"Resolved, That the Ways and Means Committee be instructed to investigate the question of the recent increase in the price of these articles, and determine the causes thereof, and, if practicable, offer some measure of legislation that will afford relief against the evil complained of."

The Attorney-General has directed that bills in equity to restrain corporations and persons from violating the laws of the United States in regard to inter-state trade shall be prepared, directed against the large dealers in merchandise and persons who have entered into a combination contrary to law.

Representative Sims, of Tennessee, has introduced a bill abolishing the duties on imports of beef, mutton, pork and veal. An extended preamble recites that the present high price of these food products is due to trusts and monopolies.

A gift of \$1,000,000 has recently been made towards educating both whites and blacks in the Southern States by J. D. Rockefeller, all of which may be used at once under the direction of a Board of Education.

A dispatch of the 25th, from Pittsburg, says: Representative men from all over the country met here to-day and formed the Winona Agricultural and Technical Institute, to be established at Winona Lake, Ind., to teach boys scientific farming. The students will mostly be under 10 years of age. The school will be a denominational. Prominent men have guaranteed \$3500, a year for five years to pay the faculty.

Since the discovery by Dr. Koch in 1882, that tubercu-

losis is contagious, and the introduction of means to prevent its spread, deaths from this disease have notably decreased over the civilized world. In New York City it is found that in 1881 the death rate from tuberculosis was 4.27 per thousand of population, while in 1901 it was only 2.50. The diminution in the rate of deaths from tuberculosis was more marked between 1881 and 1891 than in the last decade. It may probably be further reduced.

The average wages of the farm laborer in the United States in the year 1899 is said to have been \$1.01 without board.

The report of Insurance Commissioner Durham for 1901 shows that there was paid out for fire losses in Pennsylvania for the year \$8,710,632, whilst the premiums received by the companies amounted to \$16,827,130.

The Steamship *Haverford*, belonging to the American Line, has lately arrived at Philadelphia from Liverpool in 11 days. She is the largest vessel that has ever been engaged in the trans-Atlantic trade, and is now in use. The system is only long, 60 feet in breadth of beam and can carry 150 cable and 2000 stowage passengers.

A dispatch from Saginaw, Mich., says: Physicians of the college hospital have performed a remarkable operation, that of grafting a piece of dog's skull upon a human head. The patient is John Olberg, of Kenton, Houghton county. Olberg's skull was fractured four years ago. Over the wound, which was an inch and a half in diameter, there formed a foreign growth, which pressed on the brain and caused convulsions. The doctors chloroformed a dog, removed a piece of its skull, and implanted it in the opening in Olberg's head.

As a result of persistent investigation, the Weather Bureau has developed a system of wireless telegraphy which is said to be ready for any now in use. The system is the invention of Professor Willis Moore, Chief of the Weather Bureau, and Professor Reginald Fessenden. It is claimed for it that messages can be transmitted as rapidly as over the ordinary wire telegraph. Another advantage is that it has telephonic receiver, enabling the dots and dashes to be read without the difficulty present in other systems.

Two stations have been established by the Weather Bureau—one on Roanoke Island, off the North Carolina coast, and the other at Cape Hatteras. The distance between these points is about fifty miles. Before the experiments are concluded the stations will be moved a greater distance apart. It is expected that eighty miles can be covered without difficulty.

The Fifth Annual Conference for the development of education in the South has lately been meeting in Atlanta, Ga., attended by prominent educators from all parts of the South, jurists, business men, and students. The objects in view are stated to be that the people should tax themselves for education; that school authorities should promote the best ideas of education, and that philanthropy should supply the lacking margin beyond the capacity of the public press and private local liberality; education for all the people; good, well equipped school houses, with competent teachers, and an eight months' term in every school district.

The Marconi Wireless Telegraph Company of America has been organized with a capital of over \$5,000,000. It controls the Marconi system in the United States and its outlying dependencies and in Cuba.

By means of the electric power generated at Niagara Falls, an intense heat is produced, whereby amorphous and almost valueless carbon is turned into valuable graphite.

There were 473 deaths in this city last week, reported to the Board of Health. This is 10 more than the previous week and 12 less than the corresponding week of 1901. Of the foregoing, 263 were males and 210 females; 501 for all the people; 57 of inflammation of the lungs and surrounding membranes; 5 of diphtheria; 13 of cancer; 29 of apoplexy; 22 of typhoid fever, 4 of scarlet fever and 6 of small-pox.

FOREIGN.—The rebellion in China appears to have grown too powerful in certain districts to be suppressed by the Government. Many hundreds have been killed by soldiers in the attempt to come to terms with the rebels. Certain incendiaries arising from the late Boxer troubles.

General Jacob Smith has lately been court martialled at Manila for his sanguinary orders to Major Waller, etc. It was admitted that he "gave instructions to Major Waller to kill and burn, and make Samar a howling wilderness; that he wanted everybody killed capable of bearing arms, and that he did specify all over ten years of age, and the Samar boys of that age were equally as dangerous as his elders."

Widespread disorders continue in Russia, and three Government officials have lately been assassinated within a week. The students and laboring men appear to be the most clamorous for relief from over taxation and ar-

bitrary police regulations. In the provinces of Poland and Kharkoff in the South of Russia, 18,000 peasants reported to have been engaged in riots, which have come so serious that land owners are leaving their estates for safety. The agitation has also been serious at Moscow.

Late dispatches from Guatemala state that a large part of country was shaken by earthquakes on the 18th and 20th ult. In Guatemalan, it is estimated that persons were killed and millions of dollars' worth of property destroyed. Fires, which followed the earlier added to the loss, and many heartrending stories of suffering are received. The whole country is panic stricken. It is said that twenty-five per cent. of the population of Glasgow live in one room houses, and 45 per cent. only two rooms. In China not over one in 1000 more than one room to a family.

Many ancient documents, it is said have been discovered in the exploration of the sand covered towns of Chit Turkestan. They consist of writings on wooden tablets and are sealed and when found, the sand having served them in excellent condition. Even the seals, which they were written is still black, and easily read. It is believed that these documents will throw much on the life and customs of the people that formerly lived in this desert. The script in which they are written is a kind still known in India.

T. Estrada y Palma, the newly elected President of the Republic of Cuba, the 20th ult., after an absence of 35 years. In 1867 he left that country a prisoner in the hands of Spaniards. In a public speech he lately made he counted upon the Spaniards in Cuba, whom he characterized as one of the principal factors in the island to assist in the republic's success. He said the Cubans should unite on economic, rather than political lines, to establish the state of the first Cuba, and the people know the world that the Cubans were not like the people of certain South American republics.

A substance called Plasmon has been made in England from skim milk after coagulating it and drying it at a temperature of about 160° under an atmosphere of carbonic acid gas. The resulting granular substance is said to be very nutritious.

NOTICES.

WANTED.—A complete set of the writings of G. Fox (8 volumes). Any one willing to sell, please write to the editor of THE FRIEND.

A Friend, experienced in nursing, desires a position as companion, or care-taker for invalid, woman or child in a friend's family. Correspondence invited.

Address: A. A.
Office of THE FRIEND,
Philadelphia.

WESTTOWN BOARDING SCHOOL.—For convenience of persons coming to Westtown School, the stage will leave Philadelphia 7.10 and 8.15 A. M., and 2.30 and 4.32 P. M. Other trains are met when required. Stage fares, fifteen cents; after 7.30 P. M., twenty cents each way. To reach the school by telegraph in West Chester, Phone 114x.

EDWARD G. SMEDLEY, Secy.

WESTTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to WILLIAM F. WICKESHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

YOUNG WOMAN FRIEND, a University graduate, who has had a year's post-graduate work at Bryn Mawr College, wishes a position as tutor in a family or to help the care of children for the summer months.

Address "The Tutor," Office of THE FRIEND.

DIED, on the twenty-first of Second Month, 1902, JOHN WOOLMAN, in the seventy-fourth year of his age; a valued member of the Monthly Meeting of Friends of Westtown for the Northern District. This dear friend was of a humble spirit, always ready to help the weak. During an illness of several weeks his concern was for the full assurance of peace, which his friends' consolation was granted.

At her residence in Downingtown, Pa., First Month 1st, 1902, HANNAH MARX, in the eighty-fourth year of her age; a member of Downingtown Park and Uchlan Monthly Meeting of Friends.

Backsliding Tendencies of War.

We have received solicitations concerning being more conspicuously stirred up by the atrocities in war lately confessed. We have a right to expect anything of war that is of the nature of Sin, still the hope had been indulged that, in the men representing a Christian civilization, the conduct of wars had passed the state of unscrupulous barbarity and

disappointment has again dashed that the ground, in view of what generals Anglo-Saxon or European states could and soldiers perform. Whether these, by hands sometimes called Christians, of late years done in the Soudan, in the isles of the sea, or on our western, it is needless to specialize guilty crimes, save for illustrations of its spirit. It is at its real heart, not an affair of love, but the same Sin in every place, and its of its father it will do. Carnal war, essence, like the carnal mind from it proceeds, is not subject to the law, neither, indeed can be. Were warfare it would be of love, generalised in love right in love.

Before we think it not strange that war, is however civilized, should continue to use itself as an overmatch for all civil and all nominal Christianity, to uncover man of sin" as its source; and to open humiliating disclosure that the natural heart under sin "is deceitful above all and desperately wicked."

One remedy for all this condition is Christ in men, the hope of glory, is Peace;—Christ for this purpose stated, that he might destroy in men the

works of the devil. "Behold the Lamb of God, who taketh away the sin of the world!"

And there is no other name given under heaven, or among men, whereby they must be saved from sin, and all its brood embraced in war. Therefore such an apostle among men (and such should we Friends be), as is determined to know nothing in his life and ministry but Christ Jesus and him crucified, best lays the axe at the root of the blighting tree of war. It is the gospel that we must not be ashamed of which must be our reliance as the power of God unto international salvation, and to cause wars to cease into the ends of the earth.

We might pluck at the policy of some branch of that tree, named Philipines; of another named African, &c., only to hurt the cause of Peace by being irritators rather than eradicators. More wisely we say to each of those branches of the corrupt tree, "Thou bearest not the root, but the root thee!" Most wisely, in the wisdom which is "first pure, then peaceable," would we apply Christ the one Antidote, to the corrupt root. Thus in our hearts and to other hearts we ought by his grace to do, and not to leave the other service undone,—that of doing all to which the love of Christ constrains us, in having our own country's present branch of the corrupt tree cut off. True, until the root of sin is destroyed, the same sap may yet put forth other branches. But meanwhile, as mercy calls for checking the horrors of war at every putting forth, whose is touched with the call is without excuse if he contribute not his mite to mercy, whether it be to drop a word to a legislator, or to plead the cause of Christ and humanity at whatever door the responsibility may lie. But as says the editor of the *Australian Friend*, "let no sorrow of heart at the sufferings of mankind, nor indignation at wrongs committed in the name of justice be the occasion of our laboring according to the 'rudiments of the world' and not according to Christ." So far as official memorials go, Friends have by timely testimonies made their appeals for the cause of Peace clear.

The murmur of a righteous indignation at present awakening over the land, is a healthy sign of a conscience still susceptible among the people. But continued militarism with its "necessary" barbarities may make even this grow callous, and a war four years since as-

sumed on the plea of humanity may more than hispaniate ourselves. How its mammon shaves down our mercy for Cuba now. How deplorable its hardening effect already visible throughout church and state and society! Yet the Spirit of Christ can surmount even this accumulating mountain of sin, and cause it to melt down at his presence. That where sin abounds grace shall much more abound, the Lord hath need of us as one Christian denomination committed to the cause of Peace, to stand more prayerfully and move more faithfully in that vital Christianity of the Spirit in which the Lamb and his followers shall have the victory.

Wars can cease unto the ends of the earth only by Christianizing the individual, in a spirit that calls for that conception of Christianity, still new to the masses and to the war-teaching churches, of which Quakerism was raised up to be a messenger—the immediate and perceptible operation and obedient following of the Spirit of Christ, which, if "any man have not, he is none of His."

If one may chase a thousand, or a "true Quaker shake the country for miles around," what an effective manifesto for peace would the societies under the name of Friends be, did all their members wherever scattered, live like George Fox, "in the virtue of that life and power which takes away the occasion of all war."

CORRECTION.—The number of catalogues which were sent out during the year from Friends' Bookstore, at 304 Arch Street, Philadelphia, naming publications there for sale, amounted to seven thousand five hundred copies. Our writing numbers in figures in the manuscript report of the Yearly meeting, as given last week, made the number to appear as "seven hundred."

FOR "THE FRIEND."

FRIENDS IN ANGULLA.—Since the paper on Friends in Tortola was in print (THE FRIEND Fourth Month 5th) my attention has been called to a reference in Thomas Chalkley's Journal relative to a visit he made to the island of Angulla in 1707, in which he says, "At this island several people were heartily convinced and did confess to the Truth, among whom a meeting was settled." It also appears that Thomas Chalkley visited Angulla several times afterwards and held meetings there. This indicates that the statement in James Birket's letter that John Pickering's father came from Angulla is correct, and it is clear that the development of Quakerism in

Tortola was not spontaneous, but that the seed was sown by Thomas Chalkley and transplanted by John Pickering's father.

GEORGE VAUX.

Fourth Month, 21, 1902.

Testimony of True Witnesses.

Jeremiah Waring, son of Henry Waring, was born at Hayli, in the parish of Witney, and county of Oxford, in the year 1652. While very young, he had the fear of God so impressed on his heart, that he was led out of many childish vanities and diversions that others, his equals and contemporaries, were in the practice of; and by a sober conduct gave early indications of being under the operation of that power which prepares for the service of God. As his mind became more and more enlightened by the light of life, he grew dissatisfied with divers ceremonies, customs, and usages of the Church of England, into which he had been initiated. Hence he was led while an apprentice in London, to seek carefully after a people whose doctrines were purely apostolic, and whose lives like the primitive Christians, were full of piety and good works. After having with a religious seeking mind, tried several other professions without finding among them the desired satisfaction, his unwearied and commendable search after Truth at length led him to a meeting of the people called Quakers, when the testimonies delivered that day, cooperating with the Spirit of God in himself, he embraced their doctrines with joy and gladness of heart, and soon became thoroughly convinced of the blessed Truth, which broke in upon his understanding with demonstration and power, and dispelled the many doubts, fears and troubles that had heretofore surrounded his mind.

About two years after this, as we judge, being out of his apprenticeship, he received a dispensation of the gospel to preach to others, and though in the discharge of his duty he twice suffered imprisonment in London with others of the then afflicted people of God, yet he was no ways discouraged thereby, but, as soon as liberty was granted him, continued visiting the meetings thereway, exhorting Friends to be faithful to the discoveries of his will God had made in their souls, and to stand immovable for his Name and Truth on earth.

About the year 1681, he visited the meetings that were settled near his native place in Oxfordshire, where his testimony was well received, many having been lately convinced in those parts. Among these was Mary, the daughter of Henry Wheeler of Witney, a modest, discreet, religious young woman, with whom he contracted an honorable intimacy, and at length obtained her in marriage.

They settled first at Croydon in Surrey, and not long after removed to Ensham, in Oxfordshire, and at last, about the year 1685, to Witney, where the Lord was pleased to bless them with many temporal and spiritual blessings, which enabled them to open their hearts and house to entertain friends and to contribute to the necessities of others in distress. And as he was often engaged abroad in the discharge of his duty to God and the churches round about, the conduct and diligence of his wife in their temporal affairs, rendered his absence of very little inconvenience to his family

and business. Inspired with the hope of sharing in the reward of his [gospel] labors, she spared no pains, and grudged nothing she could do to render the benefit thereof as diffusive as possible, and her endeavors she used to think were blessed, the more he was given up to the service of the Truth, in which he was an unwearied laborer, even when old age and infirmity of body might have pleaded his excuse.

He was a minister of the New Testament, and diligently labored according to the gift bestowed on him. His ministry was plain and instructive and according to the measure of it tended to convince the understandings of the ignorant, to the reformation of those who obeyed not the gospel, and to the confirming the feeble-minded and the nourishment of the drooping soul.

For the weak and hindermost of the flock he had a tender regard, that they might come forward; and those meetings might be visited to which no public Friend belonged, rather than too many to go to one meeting at the same time. He would often say he went not out at the invitation of others, except to marriages and burials, but as he found drawings in his own mind, which have engaged him to travel much in this nation, but more especially in his own and adjacent counties. He was generally well received, not only for his labor in the ministry, but also for his cheerful, free and easy behaviour in the families where his lot was cast.

He was a zealous promoter of brotherly love and unity, and where any difference had arisen in families, would endeavor to reconcile the parties by visiting and treating with them in a manner becoming a minister of the gospel of peace, whose labor of love in this respect was generally well accepted, and doubtless by some to their no small advantage.

His company was sought after by the sick and distressed, to whom he had frequently a word of advice suitable to their state and condition.

His service in meetings of discipline was too considerable to be wholly omitted here, or easily forgotten by those who knew it. Being an elder in the church, he was concerned that the flock of God might be fed, and took the oversight thereof, not by constraint but willingly; not for filthy lucre, but of a ready mind; not as a lord over God's heritage, but as an example to the flock.

About three months before his death, it pleased God to remove hence his dear and loving wife, after they had lived together above forty-six years, of whose virtue it may not be amiss to give the following short account:

She was a kind and faithful wife, frugal and industrious but not covetous. A mother tenderly affectionate and even-handed, shining in example; a neighbor peaceable, obliging, and beneficent, of good report; and it may be said of her, she was a mother in the church; having brought up children, lodged strangers, relieved the afflicted, and diligent in good works.

She departed this life in great peace, in unity with Friends, and in full assurance of an inheritance with the saints in light, saying on her death-bed, she had done her day's work in the day time. It was easy to enlarge on her virtues, both public and private. But

to avoid prolixity, I shall hasten to mention of his last illness, which seized him the 14th day of the Eleventh Month, 17 being the morrow after his return from visiting Stow meeting, and continued about a week, in which time having some intervals of ease, he spoke many sweet and heavenly sentiments to his children and those that came to see him, among which the following to children are remembered: "Dear child, when your mother and I came together, it is in the fear of God. We had but little of this world, yet we were content, and He made it little sufficient. Our hearts were always open and our house too, to receive friends, and never thought we had the less, but on the contrary believed we were blessed the more for we experienced that saying verified, 'They that seek the Lord shall not want any good thing.' O! He is a good and gracious God. If you keep to the Truth and love Him, I will never leave you or forsake you." His daughter speaking to him, he said, "I felt the love of God so strong upon my heart, I have been supplicating his name, and I have freely offered up myself to his disposal, to do what it pleases Him. He can bring down to a grave, and He can raise up again; his will doeth. I observed in my last journeys to visit the elders everywhere appeared, and His religion appeared, to be at a low ebb. Yet a principle of Truth must prevail; for the Lord has promised, He will give his Son the heirs for his inheritance, and the uttermost part of the earth for his possession. And though I see but little of this yet, I shall die, as several elders have before me, in the faith of it. I have said but little of that large promise made to him of multiplying his seed as the stars of heaven, and as the sand on the sea shore."

Being asked how he did, he said, "I have comfortable time both in body and mind. I have been looking back to my youth, reviewing the narrow way that leads to life; remembering how our ancient Friends used to be in words, and lived in love one with another. And as it was in the beginning so it must be again. But now how many are there who take delight in backbiting, detracting and exposing the failures of one another, and the conversation too often turns upon modes and forms of dress, things too mean for a Christian spirit." His children mentioning what loss it would be to part with such dear and tender parents, he said we have lived to a good age, and the Lord has never forsaken us and if you cleave to Him, He will never depart from you. "And you my grandchildren, caution you against reading profane and idle books, but read the Holy Scriptures, and regard there the precious promises of Christ."

After having taken something, he said, "This will not do. This poor old house will do, but I have a new house eternal in the heavens, where is no pain, no sorrow; where all tears are wiped away. No need of the light of the sun, or of the moon to shine in for the glory of God and the Lamb is the light thereof."

Mention being made of the Lord's reward to him for his labor and service in the church, he said, "We are poor empty creatures, we do merit nothing. All we have we receive from Him, and all we do is but our reasonable duty. The Lord hath no need of us, for He is al-

er glorious and happy in Himself; but we need of Him." Another time when he could take no rest, he "Sweet Lord! ease thy servant for his love me from my youth upward." Verifying out of a violent fit of pain he cried, "Lord thy will be done! thy will be done!" has been with me all my life long. Oh! I thank thee now in these my dying moments, with my children and grandchildren, that I may meet in thy heavenly habitation, and we shall never part more. Oh! thou Shepherd and Keeper of Israel, who neither sleep nor sleeps, into thy everlasting arms I commit them with my own soul. I thought thee in my tender years and Thou foundest me, and hast been with me unceasingly. Thou hast cast all my weaknesses behind thy back when they shall never be remembered more; and hast many times given me a full assurance of a resting place in Thee, for ever and ever.

He departed this life the 21st of the Eleventh Month, 1729, aged seventy-seven, and a year nearly fifty years.

Daniel Wheeler.

His was not the language of precept only, of his example was still more powerful. It was impossible to observe from day to day his bankful, cheerful, humble frame of mind in him so uniformly manifested, his watchfulness to check every rising of improper feeling and above all, the deep reverence and filial which pervaded his heart towards his Father without being made sensible of that deep principle which regulated his daily life. His children at once loved and honored him for while he possessed their entire confidence and love, they knew that he was unflinching in the refusal of whatever was not their highest good. Notwithstanding the tenderness of his nature, and the strength and truth of his parental feelings, his known tenderness precluded all hope of inducing him to their inclination when these stood opposed to their eternal interest. From their early years he patiently labored to imbue the hearts of his children with the love and fear of the Almighty. He instructed them daily in the Holy Scriptures. He was also diligent in his efforts to exhibit to them the example of the righteous of other generations; and finally that exemplified in the lives of the members of our Society, so strikingly revived. For this purpose he set apart a portion of time to read to his family works of description.

He might think that such a course would be too much to the young; but certainly the love was widely different, and his children recalled the feelings of interest and enjoyment that attended these readings and the period of quiet which followed. It was his custom each evening, when his children had retired to rest to visit their chambers and endeavor to direct their hearts to the Father.

On these occasions he would repeat, or teach to repeat, passages of Scripture or devotional poetry, to which his own admonitions were added; and he closed these sweetly remembered seasons with a quiet prayer; during which prayers were offered up to the Lord. As his chil-

dren advanced towards maturity, instead of relaxing his watchful care, he felt there was need of redoubled vigilance to shield them from surrounding danger. Ever anxious for their best welfare, yet deeply sensible that through Divine Grace alone their youthful minds must be awakened and enabled to lay hold of a Saviour's love, he was earnest in imploring for them this heavenly gift, and in watching for opportunities to impress upon them the importance of spiritual things. One instance of the condescension of the Lord in hearing and answering his prayers, was as his eldest son attained the age of manhood, earnest were the cravings of his father that the Lord would direct his heart into the love of God, and patient waiting for Christ. He knew well that to the natural man the things of God must ever be a mystery; and he longed that through submission to the Spirit of Truth they might be opened to his understanding. Often with tenderness he watched the convictions of his inquiring mind, and explained to him the views he had himself received. At one time the sentiments of his son on these all important subjects were exceedingly unsettled and he passed through deep mental conflict before he yielded to the light of Divine Truth in his soul which dispelled the doubts and reasonings by which he was assailed. It was at this period that one evening his father and he, being alone together, they had much conversation on the points which then pressed heavily on the mind of the latter. Before retiring to rest his father handed him the Bible, asking him to read a chapter; he took the book and read the third chapter of Malachi. Deep seriousness overspread his countenance, and after a time of silence he repeated, "The Lord whom ye seek shall suddenly come to his temple, even the messenger of the covenant whom ye delight in;" and he shall be "like a refiner's fire and like fuller's soap," adding, yes, He will come into his own temple, the temple of the heart and there do his own work. I never understood this chapter before, nor saw, as I now see it, the spiritual nature of the gospel dispensation." It was evident to his thankful and rejoicing parent that the prophetic declaration was indeed fulfilled in his son's experience that the Lord had come into his temple and was there working to the purifying of his soul. The change which succeeded was most striking; clearly evincing that the day had dawned and the day-star arisen in a heart long oppressed with darkness and many doubts. In reference to this period, his father remarked with much emotion, "this kind can come forth by nothing but by prayer and fasting;" intimating the long continued exercise of soul he had on behalf of his son. Two avenues to evil he guarded with jealousy in his domestic sphere, the introduction of books of an injurious tendency, and the associations which he allowed to his children. With respect to reading, he was liberal in supplying what was calculated to improve or expand the mind; but very few of a hurtful nature escaped the vigilance of his watchful eye. On these occasions he regarded not the inclinations of those he so tenderly loved when works that he disapproved had been lent to his young people he returned them to those from whom they came with a frank avowal of his sentiments respecting them.

He endeavored to render home as cheerful and pleasant as possible. Perhaps few domestic circles ever presented a happier scene than his own, while its links were permitted to remain unbroken. His children can look back, with grateful hearts, to the wisdom and care of their departed parent and feel they have abundant cause to rise up and call him blessed.

Written by one of his children.

For "THE FRIEND."

Christianity Revived.

Are there not evidences from various sources that Christianity is being revived in many hearts with desires to know the Master's will and do his commandments? according to his promise, "Ye are my friends if ye do whatsoever I command you." And can we not see evidences that this language to some in former days may be applicable unto us as a people? "Arise, shine, for thy light is come, and the glory of the Lord has risen upon thee. For behold darkness shall cover the earth and gross darkness the people, but the Lord shall arise upon thee, and his glory shall be seen upon thee, and the Gentiles shall come to thy light and kings to the brightness of thy rising." If we know these things happy are we if we do them.

For we must acknowledge that blindness in part has happened unto Israel, and is it not more for a lack of our doing what we know, than from not knowing what to do? For it is said, "This is the whole duty of man: fear God and keep his commandments."

And is it not individual faithfulness that is needed, in order that this may be more fully realized? It was because He loved us and de- desired to do his Father's will, that our Saviour laid down his precious life for us and that we might live henceforth not to ourselves but unto Him who loved us and gave Himself for us. Paul had Christianity revived or revealed in him, when his eyes were opened in the light of Truth, to see things as they really are, self was laid as in the dust and he could love Him whom he had been persecuting, and could say, "I am crucified with Christ, nevertheless I live, yet not I, but Christ liveth in me. And the life that I now live in the flesh, I live by the faith of the Son of God, who loved me, and gave himself for me." Likewise, "I will not glory, save in the cross of our Lord Jesus Christ, by whom the world is crucified unto me and I unto the world."

Primitive Christianity was revived also in the hearts of George Fox and other worthy Friends of that day. Yet they were persecuted for their principles and testimonies which being almost nearer to them than their natural lives, they could not allow the standard of Truth to be lowered nor compromise with the world, and were enabled to see more clearly the spirituality of the gospel dispensation and that the kingdom of heaven stands not in word but in power. Now, dear Friends, shall we after all this allow these practices to fall to the ground or be trampled under foot? May we not hope and trust that primitive Christianity may be more and more revived amongst us in its ancient purity, although it may seem needful for some under our name to return to first principles? Not that we believe that salvation depends alone on a mere observance of our testimonies as to dress and address, etc.,

—far from it. For we believe no true Friend entertains such an idea or belief. But they feel that their peace and safety depends upon faithfully supporting these as well as the doctrines as ever held by Friends. And it pains my heart to hear our precious principles and testimonies lightly spoken of, and in so saying I believe I speak the mind of many other honest hearted Friends. And why? Because they are the fruits or outgrowth of faithfulness to manifested duty; and the time will come (if it is not already near at hand) when many others will seek just such a religion as we profess, because it is the truth and it changeth the heart from a state of nature to a state of grace and is Christianity revived in its simplicity and purity. Many, very many no doubt, there are, who would gladly wear the crown; but are we willing to bear the cross and follow in the way that leads to the crown? If we are willing to suffer with Him, we hope and trust that, if faithfulness is abode in, we may also reign with Him. And whilst thus feeling it our duty earnestly to contend for the faith once delivered to the saints, let none conclude that it is with a wish to find fault in any wise with others; for we are well aware that "the servant must not strive but be gentle and patient." Yet is it charity to justify a wrong in any, and grieve the Holy Spirit? We believe not. For "they that are faithful in the little shall be made rulers over more," but "they that despise the day of small things shall fall by little and little."

In meekness may we instruct those that oppose themselves. For it is "the Lord by might not by power, but my Spirit saith the Lord."

But we need not marvel if some would say as of old "to the seers, see not; and to the prophets, prophesy not unto us hard things; speak unto us smooth things, prophesy deceit."

In the preface to Mildred Ratcliffe's Journal, speaking of those with whom she had taken sweet counsel, but for want of keeping on the watch they had run astray into crooked paths, she says: "The words of these though smoother than oil, are as drawn swords against the Truth and the faithful supporters thereof." And, dear Friends, whilst it is a Christian duty to have forbearance and make due allowance for others, yet the safety and preservation of our scattered Society depends not so much on not compromising our principles and testimonies, as a willingness to be taught by Him who is the alone healer of breaches and the restorer of paths to dwell in. There always has been a remnant preserved by the good Master, and there is cause to believe that such is still the case; and we can but hope and trust that the number of such as these in various places is increasing. And it is also a satisfaction to concerned Friends to see evidences from time to time that it is still the wish of those interested in the publication of THE FRIEND, as in years past, to have it conducted on the right foundation; and we hope its united influences will still tend toward the reviving of primitive Christianity in its ancient purity.

EMPORIA, Kansas, Fourth Month 26th, 1902.

THANKFULNESS is not an outcome of the natural mind, so much as a Divine gift that we should wait for and cultivate.—*J. Bellows.*

Reminiscences.

(Continued from page 317.)

The tract of land containing about seven hundred and eighty acres given by the Commonwealth of Pennsylvania to Corn Planter in 1796, located upon the west bank of the Allegheny River in Warren County, Pennsylvania, was held in common by his descendants after the death of Corn Planter in 1836. In the belief that advantage would arise in several respects to his heirs by a division of this property to be held by them in severalty under certain restrictions to prevent its alienation, the members of the Indian Committee interested in their welfare strongly advised them about the year 1870 to take steps to have it divided.

Joseph Scattergood and Ebenezer Worth were particularly engaged in recommending this step, and according to this advice these Indians generally united in a petition to the Legislature of Pennsylvania for the necessary authority to have it done.

These Friends gave their assistance in aiding the passage of such an act, and in the Sixth Month, 1871, a bill was passed which provided that the Orphans' Court of Warren County shall be empowered upon the application of a majority of the heirs of Corn Planter to appoint three commissioners to make partition of his estate and allotment of shares as they think just and equitable, having regard to the value and the location of the improvements made by the parties interested, etc; and also providing that no sale of such property should be made to others than the descendants of Corn Planter or members of the Seneca Nation of Indians or be liable to taxation to the lien of any judgment, mortgage or claim, or to any execution or to any judicial sale, except to descendants of Corn Planter or to members of the Seneca Nation aforesaid.

In accordance with this authority the Orphans' Court of Warren County, upon application to it, appointed Thomas Wistar, Joseph Scattergood and Ebenezer Worth, commissioners to carry out the purposes of this act and the petition of the descendants of Corn Planter, and the two last named Friends spent several weeks during 1871 on this tract and its neighborhood in making an amicable arrangement between the heirs for the partition of the estate.

Francis Lightfoot, a member of the Society, was employed as surveyor, who remained there for some months in running the lines and preparing a map showing the boundaries of each tract assigned to the respective heirs.

A report of the Commissioners was presented to Judge S. P. Johnson in the Tenth Month 1871, who in a private letter to Joseph Scattergood acknowledging its receipt, thus expresses his satisfaction with the labors of the Commissioners:

"I have read your report carefully, and discover no error in fact or defect in form, but think it the most perfect document of the kind I ever saw. By the labor and pains you have taken to make it such, you have certainly entitled yourselves to the boundless gratitude of the Corn Planter descendants and the thanks of all others who feel any interest in their welfare. I must be allowed to express my own in warm and earnest terms."

FOR "THE FRIEND."

The Indian Committee in their report Yearly Meeting in 1872 referring to this subject states that "Owing to the number of the conflicting interests involved, and ignorance of the Indians as to our method business the task thus undertaken was none; and it is gratifying to be able to state that, upon its completion a certificate signed by all the heirs or their representatives expressing satisfaction therewith and the Commissioners and Surveyor, having performed their respective services without compensation or charge of any kind, we hereby gratefully acknowledge our obligations therefor and them individually for the attention they given to this important business." The thus accomplished proved to be timely, as shortly thereafter, the death of the only living child of Corn Planter occurred, which had it taken place earlier, might have caused greater embarrassment. The Committee long desired to bring about a satisfactory settlement of this estate, not only for the sake of the parties immediately interested, but as an example and encouragement to the Indians of the Allegheny and Cattaraugus Reserves to hold their lands in severalty. This success we have been glad to observe is claiming increased attention on their part, since we do not but believe such a measure would, by proper safeguards, promote their advancement towards civilization, encourage them in their industry, and tend to allay many of the animosities and misunderstandings which unhappily disturb them."

The following letter from Alfred Cope contains an interesting tribute to the character of Thomas Scattergood, whose journal has been reprinted in 1874 from stereotype plates with some additional matter not contained in the first edition:

My Dear Friend:

I am much obliged by thy valuable portrait and hope it may prove to be a useful possession as a faithful portrait of a true Quaker of the primitive type, a man eminently gifted with truth in his calling in great simplicity and amity. May it be another happy proof of the truth of the declaration "The memory of the just is blessed."

Thine with love, A. Cope

FOR "THE FRIEND."

The New Oxford Movement.

A book has lately appeared, "Contention of the Primitive," by Six Oxford Tutors, which may prove to be an epoch-making book. It marks an advance on the old Tractarian movement, and yet we are amazed at the following statement by William Inge: "The symbolic of washing and eating are the most natural, the simplest and the most widely diffused of all ceremonies. So natural are they that we may say that, if Christ had not instituted baptism and the Eucharist the Church would have had to invent them. A Christianity without sacraments could never have converted Europe."

All Tutors are not true teachers for it would not be difficult to upset the position assumed by the writer on these carnal ordinances which depend so largely on tradition rather than on "Thus saith the Lord."

BEAMSVILLE, Ontario.

Account of the Imprisonment of Two Friends at Malta, With Quotations from Their Letters, Etc.

In the year 1658 Catharine Evans and Sarah Worsley having felt drawn to travel toward Malta, went by water from Plymouth, England, to Leghorn, Italy, the passage occupying thirty-one days, but at last they landed in Malta where finding countrymen and friends, they staid several days, distributing many tracts.

They also spoke to the people without being molested by any.

When they got passage in a Dutch ship for Sicily or Scanderoon; but the master of the ship being in company with another vessel bound for Malta, went also thither, though no business in that place.

When they came there, Catharine in great distress of mind exclaimed, "Oh we have a cruel cup to drink at that place;" and hawtered in the harbor, as she stood upon the deck of the ship and looked at the people upon the shore, she said in her heart, "Shall ye deny us? If we give up to the Lord, then He will be sufficient to deliver us out of your hands; we disobey our God, all these could not be taken from his hand." And all fear of man was taken from them.

On the next day being First-day they went on shore when the English consul met them, in what they came there for and invited them to his house, where they went, and many saw them, whom they called to repentance that that several became tender; about which they went on shipboard. Coming on shore again the next day, when the governor came to see them, they went, and talked with the governor and gave them some books, affidavits going to the consul's again, where they staid many weeks, he having "told them that he had was at their service while they were there;" but he seems to not have exercised the power he could have had to protect his English subjects; neither to have allowed them the freedom they might have had abroad in the place, eventually yielding to the Inquisition by whom they suffered and were imprisoned nearly four years, they being ever ready to bear testimony against the many evils they saw and heard of; say a word for their Master when opportunity offered, as was frequently the case of repairs, etc., to the "inquisition" when persons of note came to see the things, the work occupying about one and a half years.

They did not feel free to sew for the monks; they did much sewing for the poor prisoners and knit stockings for those who were unable to work. Their sufferings seemed extreme and little pity was shown them by their tormentors. Upon one occasion Catharine replied to a very taunting remark—"I desire to be burnt, but if the Lord will call me to it, I believe he will give me the strength to undergo it for his Truth; and if he will on my head was a body, I could melt all up, for the testimony of Jesus." All here give a letter, signed by both of them, expressing of their feeling:

Our dearly beloved friends, fathers and elders and pillars of God's spiritual house, and our dear sisters in the Lord Jesus Christ,

in the measure of love and life of our God, do we salute you in that which is eternal, and we do greatly rejoice and glorify the name of our Heavenly Father, that He hath counted us worthy to be partakers of the death and sufferings of his blessed Son with you. Though we be the least of God's flock, yet we are of the true fold, whereof Christ Jesus is Shepherd; and He hath had as tender a care over us, as he hath had of any of his lambs which He hath called in this the day of his power, and hath carried us through and over as great afflictions as most of our brethren and sufferers for his name, both in mockings, scoffings, scornings, reproaches, stripes, contradictions, perils at land, and perils at sea, fiery trials cruel threatenings, grief of heart, sorrow of soul, heats and colds, fastings and watchings, fears within and fightings without; terrible temptations and persecutions and dreadful imprisonments, and buffetings of Satan; yet in all these our trials, the Lord was very gracious unto us and did not absent himself from us, neither suffered his faithfulness to fail us, but did bear us up, and keep us from fainting in the midst of our extremity. We had not another to make our moan to but the Lord alone; neither could we expect a drop of mercy, favor or refreshment, but what He did distil from his living presence, and work by his own strength; for we sat one in one room, and the other in another, near a year; as owls in deserts, and as people forsaken in solitary places.

(To be continued.)

To the Christians of the Universal Brotherhood in Canada.

The Friends of Philadelphia send Greeting.

From the time your trials through persecution became known to us our hearts have gone out to you and our minds have been affected by the griefs you were made to bear.

We still greatly desire your welfare both in the things which increase your comfort in this world and in that spiritual knowledge and holy obedience to the laws of God which come to us through faith in Him; and in the possession and practice of which we are saved with an everlasting salvation through Jesus Christ.

We desire to be closely united with you in seeking after this hope of eternal life which our Father in heaven has revealed to the children of men by the sending of the Lord Jesus Christ into the world.

He is indeed our king and lawgiver and it is He whom we must obey as He makes known to us his holy will. This we believe He does both by the Light of his Holy Spirit in the secret of our hearts and by the teachings of the Holy Scriptures which holy men of old wrote as they were moved by the Spirit of Truth.

Ancient Israel acknowledged God to be their ruler and guide, but at the same time were given written laws to regulate their actions and dealings which were administered by men

who were appointed for this purpose; and to these good laws and human rulers the people submitted themselves.

After the coming of the Lord Jesus Christ into the world his apostles enjoined obedience to outward rulers, as being those who in the providence of God are set over the nations and peoples to preserve order amongst them. The Apostle Paul wrote "These are God's ministers attending to these very things;" and again "Rulers are his ministers to us for good;" and to them we must "be obedient, not only for wrath, but also for conscience' sake."

He commands that we should pray for kings and for all who are in authority, that we may lead a quiet and peaceable life in all godliness and honesty. Now, we are aware you have lived under a government which has required you to do some things which are directly contrary to the laws of Christ. To fight and destroy men's lives, and to offer to God a worship which is not in Spirit and in Truth. These are matters in which the rule of Christ, as it is plainly laid down in his teaching, is denied and set at naught. And in these matters Christians ought to obey Him rather than men.

There are, however, many laws enacted by men which contribute to peace and good order among them, by securing to all their just rights and privileges, and give to every one an opportunity to seek his own welfare without at the same time depriving others of the like opportunity.

Among these laws which we approve as being agreeable to the Divine law, is the holding of land in individual ownership by which the legal occupant may improve, cultivate and use it for his own maintenance and for the general advantage of the community in which he lives. It is easily perceived that such laws help to preserve the peace, by preventing unjust and covetous persons appropriating to themselves the fruits of the labor of those who are industrious and quiet in their lives.

There are persons in almost all countries who disregard justice and honesty, and it is to restrain and correct these that laws are made; as the Apostle Paul has written, "the law is not made for a righteous man, but for the lawless and disobedient, for the ungodly and for sinners."—Righteous people intend to live holy and innocent lives, but are willing to be put to whatever inconvenience may come to them in complying with laws made for the general good, in order to give the influence of their example in favor of good government, that it may not be weakened in its dealing with those who practice injustice and crime.

While we speak of ownership in land and other property, as Christians we know that ourselves and all we possess belong to God and that we are only stewards to use that which has been honestly acquired, for his glory and for the good of our neighbors who need help. Therefore in this sense none of us can say that what he possesses is his own; but as a steward to whom has been entrusted a charge, he should manage and use it for the benefit of his fellow-creatures as well as for himself. We will remember and observe the golden rule, "Whatsoever ye desire that men should do to you, do ye likewise even so to them."

In the covenant of marriage our Saviour has laid down a rule which his followers are bound

to observe. It is this: "What God has joined together let not man put asunder. Whosoever putteth away his wife saving for the cause of fornication, and marries another, commits adultery; and he that marries her when she is put away commits adultery."

It is the duty of human government to prevent vice and immorality in this matter, and to make regulations by which children should be cared for by their parents which would not be the case if parents loosely lived together and separated when they are tempted to cohabit with another person.

Much scandal and reproach would result to the Christian name if those who claim it adopt a practice sometimes called free love; or allow men to have more than one wife, or a woman more than one husband. The laws of Christian nations rightly forbid such libertine practices; and the law of Canada requiring the registration of marriages is designed to prevent bigamy, by making it plain who are joined in marriage; while the registration of births shows who are the children of married parents and who are responsible for their care. We thus address you, our Christian brothers, in the desire to help you to accept the experience of many who are and have been the faithful servants of God and yet have in these things to which we herein refer, been able with a good conscience in the sight of their Maker and Saviour, to be governed by the laws of the countries in which they live.*

Among the members of our Friends' Society we have known no instance of any one refusing to comply with the laws of their country regarding the registry of land titles, marriages, births and deaths; although many of them have suffered much for their conscientious objections to war, oaths, tithes to the clergy, and other matters relating to religion.

While human government is so often enforced by the use of deadly weapons and the punishment of death, and in those respects is opposed to the law of love and mercy enjoined by the teaching and Spirit of Jesus Christ, yet Christians have safe precepts and examples for submitting to and actively complying with those requirements which are intended to promote the general welfare of a nation, without involving any acts which are injurious to their fellow men or are contrary to the worship and service due to Almighty God, whose we are and whom we wish to glorify.

We therefore would persuade you humbly to look up to Him, and ask that He will give you light and grace to see and believe that He will justify you in complying with the laws of Canada which are now referred to, and enable you to enjoy with thankful hearts the fruits of his goodness, in making a way for settlement in a country where peace and liberty of conscience are so largely found. We have been instructed and encouraged by your faithfulness to religious convictions, in refusing to take any part in preparation for war; and by learning of the dreadful persecution you suffered for the possession of a good conscience. Our

* While the ceremony of marriage among the Doukhobors is not so binding in its form as we would like it to be, they nevertheless do not lightly regard it, are apparently behind no Christian denominations in faithfulness to the marriage relation, and we know of no divorces among them.—W. E.

desire now is that we may be closely united together in the bonds of Christian love and fellowship, and that we may continue to be helpers of each other towards the Heavenly Kingdom.

From an Old Time Letter.

May ye 16th, 1679.

... This place is called the Naraganset country, near Mr. Williams's towne of Providence.

Governor Easton told a story of a magistrate who had been a great persecutor of his, the magistrate's, friends. After he had cast a worthy Friend into jail, he dreamed on this wise: That he thought he was in a faire delightful country, where were sweet springs of water, green meadows, rare fruit trees, with a river flowing in the midst whose waters were clearer than chrystal.

Moreover he did behold a great multitude walking on the river bank or sitting lovingly in the shade of the trees. Now while he marvelled at all this, he saw the Quaker whom he had cast into prison, sitting with his hat on beside the minister then dead, whom the magistrate held in great esteem. Whereat feeling very angry he went and commanded him to take off his hat in the presence of his betters.

Howbeit the twain did give no heed to his words, but continued to talk lovingly as before. Whereat he was exceeding wroth and would have laid hands on the man. But hearing a voice bidding him forbear, he turned and saw one with a shining countenance and clad in raiment so white that it dazzled his eyes: who said, "Dost thou well to be angry?" Then said he, "Yonder is a Quaker with his hat on, talking to a godly minister!" "Nay," "thou seest but after the manner of the world and with the eyes of flesh. Look again and tell me what thou seest." So he looked again, and lo! two men in shining garments like unto him that talked with him, sat under the tree. "Tell me, if thou canst, which is the Quaker and which is the Priest?" And when he could not, but stood in amazement, confessing that he did see neither of them, 'twas said "Thou sayest well; for here is neither Priest nor Quaker. Jew nor Gentile, but all are one in the Lord!"

Then he awoke and pondered long on his dream, and when it was day he went straightway to the jail, and ordered the man to be set free, and ever afterward carried himself lovingly towards the Quakers.

INDIVIDUAL concern to know the mind of truth, and faithfulness in performing it, is the surest way to promote our own happiness and the strength of the bonds of outward fellowship that bind our widely separated meetings together in Christian nearness.—*Kansas to Western Y. M.*

It is never in ease or luxury, with freedom from sense of need and care, that the world's best and strongest helpers are trained. Those who have grown in the midst of common human conditions, knowing cares and the pressure of life's burdens, feeling the press of need and the pinch of narrow limitations, meeting trial and enduring struggle, learn in these very experiences to be sympathetic and helpful to others.—*Forward.*

Science and Industry.

"PENNIES," says Treasurer Roberts not composed entirely of copper, the alloy being ninety-five per cent. copper, twenty cent. tin, and three per cent. zinc. The cost the government about forty-two cents a pound for 'blanks,' meaning the circles prepared ready to receive the impression of the die. As it takes about one hundred and forty-eight to weigh a pound the government apparently makes \$1.06 on every pound minted, and would, in fact, make a surplus were it not that they are redeemed in gold upon presentation at the treasury, though, of course, the amount present redemption is comparatively small. All the pennies coined in the country are minted at Philadelphia by law."

CARE OF THE EARS.—Never meddle with the ear if a foreign body such as a bead, button, seed, enters; leave it absolutely alone, but call a physician attend to it, says *Woman's Friend*. More damage has been done by injudicious attempts at the extraction of a foreign body than could ever come from its presence in the ear.

Never put anything in the ear for the relief of toothache.

Never apply a poultice to the inside of the canal of the ear.

Never drop anything in the ear unless previously warmed.

Never use anything but a syringe and water for cleansing the ears.

Never strike or box a child's ears; they are known to rupture the drumhead and incurable deafness.

Never wet the hair if you have any tendency to deafness; wear an oiled silk cap, and bathe and refrain from diving.

Never scratch the ears with anything but the fingers if they itch. Do not use the tips of a pin, hairpins, pencil tips, or anything of that nature.

Never let the feet become cold and do not sit with the back towards a window, as these things tend to aggravate any existing deafness or hearing.

Never put milk, fat or any oil substance into the ear for the relief of pain, for soon become rancid and tend to incite inflammation. Simple warm water will answer the purpose better than anything else.

Never be alarmed if an insect enters the ear. Pouring warm water into the canal will drive it out, when it will generally come to the surface, and can easily be removed by the fingers. A few puffs of smoke blown into the ear will stupefy the insect.

A SHIP dating back to the time of Christopher Columbus yet still sailing the seas may well be considered a curiosity after a few several centuries. The Anita, as the cargo ship is called, is, oddly enough (says the *London Post*) engaged in the carrying trade between Spain and the United States. She recently went to Baltimore with a cargo of Spanish wines and other articles of a non-perishable character, and has started on her return voyage to Spain. It goes without saying that she has been frequently repaired during the course of her life, but the original style has a

erved, and she still presents the high luster and the elaborate carvings of days.

YOUR WATCH BY A STAR if you wish to hit the times, these days. Out of the mber of stars in the heavens, and visiting eye at night, and out of the much multitude that celestial photography is set forth on its negatives, there are some that may be depended upon, stars we so long been watched by the astronomer that they are known to be practically true. Any one of these you may set watch by, but it would be rather a difficulty for you to pick out the star you yourself, and even if you should select at one, you would not be likely to know how to go to work to regulate your time.

About two centuries most of these six stars have been under the critical eye of the astronomers, who have measured arc places in the skies again and again. Thus come to be known that these stars are the meridian of any place at certain every night. The meridian of any place on the sun crosses there at noon—an imaginary line from pole to pole directly over-riding East and West. The times the stars so cross the meridian are precisely the astronomer years in advance and are made which are exact to a small of a second. After the astronomers long series of years of testing, found that it occurred to somebody that there is perfect test for timepieces. Perhaps it mainly to the great railroad company, the time of the country finally being regulated throughout the length and of the land. Railroad companies must regularity in their schedules; they can their trains according to clocks and that do not agree; priceless human life every beyond valuation would pay the of such policy.—*W. S. Harwood in St.*

Items Concerning the Society.

NEW FRIENDS' SCHOOL AT LANDSOWNE.—Plans have been completed for a Friends' school to be erected on the ground adjoining the house on North Lansdowne avenue. The school will be in every respect a Friends' school, and not the direct charge of a Friends' School Association rather than under the meeting itself. Children, who will be satisfactory to the meeting on admission, will be received on equal terms with the children of Friends will, in this regard, in the amount charged for tuition be on a par with others. The purpose of the school is to afford to its scholars a first-class education, under the best available religious

instruction which will be a component part of the curriculum of the Philadelphia Yearly Meeting School, in which Friends' Select School in Philadelphia, is one.

LANDSOWNE FRIENDS' MEETING-HOUSE.—The first Friends' held in Lansdowne, or Upper Merion, was then called, was in the old frame building, which stood at the corner of the Pike and Darby road, where the Barker house now stands. It was on First-day, First month, 1828. The house belonged to Mary Owen, and was on

her farm, which ran back as far as where the Presbyterian Church building now stands. She was a member of the Society of Friends, and lived in the old two-and-a-half story red and black brick building, still standing on Baltimore avenue, west of Lansdowne avenue; it was built in 1720. The Friends continued to meet in the frame building until the fall of 1831, when the present stone meeting-house was completed, and meetings opened therein.

The tract on which the house stands was purchased of Mary Owen in 1831, and contained two acres, for which \$400 was paid. It was the intention of Friends to have used the upper portion of the lot for a burying ground, but this was abandoned, only one interment having been made, that of an infant, which was afterwards removed.

The benches for the new meeting-house were sent out from the city. They had originally been in the old meeting-house at the southwest corner of Second and Market streets, built in 1698 and called the "great Meeting House" on account of being the largest place of worship in the city at that time. This old meeting-house was torn down in 1808, Friends removing to their new meeting-house, which was much larger, at the corner of Fourth and Arch Streets. Nearly all of the material used in building the meeting-house on Twelfth street above Chestnut, built in 1812, came from the old meeting-house, as well as the benches which were used there till 1827, when they were sent to Upper Darby Friends. It may be of interest to note, that at the beginning of the Revolutionary War, the old meeting-house at Second and Market street was occupied by the Continentals, a detachment from Maryland under Col. Paxson, being quartered here. That officer acted in a very friendly manner, removing the troops on First and Fifth days, and putting the benches in their places, so that Friends could hold their meetings.

In this old meeting-house, George Fox, the founder of the Society of Friends, and William Penn, the founder of this Commonwealth, both preached.—*Extract from J. R. Elfrith's Account, in the "Darby Progress."*

INTEREST IN EARLY FRIENDS' WRITINGS.—A series of meetings, with the object of studying the writings of the early Friends has been arranged by the Leeds Preparative Meeting, England, to be held at intervals this spring. The first was occupied with a brief survey of the chief events of the seventeenth century, to illustrate the political and religious condition of England during George Fox's time. At the second a brief account of William Penn's life and labors was given, leading up to his Introduction to George Fox's Journal, of which it is intended to make a study at subsequent meetings.—*London Friend.*

An account of "Lindley Murray and his Friends" was recently given by John S. Rountree. It is interesting to recall the fact that the grammarian cited continually for the first six months of his life, and to such an extent that his mother wished he might die. Born in 1745 in Pennsylvania, he spent his school days in Philadelphia and New York, leaving at the age of fourteen years. He studied law for four years, and was called to the Bar. He visited England for the sake of his health in 1769, and finally settled at York in 1785, where he resided until his death at the house which, until quite recently, was occupied by the chairman Morrell. The summer house in which he wrote his grammar has now become the property of the Mount School.

Having named last week the men members of the Philadelphia Yearly Meeting's committee appointed for the welfare of subordinate meetings, we are hereby enabled to report the women Friends named for the service:

Mary D. Allen, Anna K. Cadbury, C. Virginia

Sellew, Sarah Emlen, Elizabeth Allen, Hannah B. Evans, Mary S. Walton, Jane S. Warner, Deborah C. Smedley, Annie Cook, Susanna T. Cope, Elizabeth D. Meredith, Sylvia C. Frame, Edith Sharpless, Sarah B. Dewees, Ann Elizabeth Comfort, Elizabeth C. Dunn, Elizabeth B. Moon, Sarah Nicholson, Beulah M. Rhoads, Susan R. Williams, Martha Mickle, Mary Ann Wistar and Sarah K. Baker.

Some of the Yearly Meeting's committee attended Philadelphia Quarterly Meeting on the 5th. Also John S. and Esther H. Fowler, John Hall and wife, and Eliza H. Varney. A solemnized session.

A reunion of the Westtown Old Scholars' Association is arranged to be held on Seventh-day, Sixth Month 7th, 1902. Further notice will be given of special trains to be run to and from Broad St. Station at convenient hours of that day. The meeting is expected to be held in the large new tent purchased a year ago by the Association. Interesting speakers, school exhibitions, luncheon, play-ground games, etc., are to fill in what is hoped and expected to be an interesting day.

DECEASE OF JOHN BELLOWES.—A cablegram received on the 5th instant informs us: "John Bellowes passed away to-day." The satisfaction to many Friends in and about Philadelphia which the visit of this dear Friend and his wife from Gloucester, England, nearly a year ago afforded them, remains fresh in their memory. With a mind stored with interesting information both from history and by personal acquaintance with notable men of England, Russia and other parts of Europe, and evincing a sound grasp of the history, doctrines, and testimony of the Society of Friends, his company was deemed a privilege in many homes. His French Dictionary, embodying peculiarly useful features of its own, is permanently esteemed over both continents. By recommendation of Senator Hoar, whom as a personal friend he visited in Worcester, Mass., he was, on Commencement day at Harvard University last summer, accorded the degree of Master of Arts. Perhaps few men in England have been more faithful in ministering to the needs of their fellow men, than John Bellowes. He went with Joseph James Neave to Russia, on behalf of the Studentists, and later with Edmund Wright Brooks on account of the Doukhobors; and only by infirmity of health was he prevented from visiting the latter in the far West last summer. His interviews with Count Tolstoy at different times, and later with the highest dignity of the Russian church for the release of the Doukhobor prisoners still in Siberia, could they properly be put in print, would be of wide-spread interest. His son Philip, who had chosen Philadelphia for his residence, having on account of his father's condition, been summoned across the ocean a little before the opening of the Yearly Meeting, would appear to have been favored with a timely arrival at his bedside.

Notes From Others.

SECRET SOCIETIES.—The object of the National Christian Association (221 W. Madison Street, Chicago), is to keep the membership of the churches out of secret organizations, for these among other reasons: 1. Because they are declared to be organized on a basis so necessarily broad as to exclude the idea of Christ as the world's only Redeemer. 2. Because they substitute in their claims and in the minds of many of their membership, the secret society of the Christian church. 3. Because of the relation of the obligation of these secret orders to the oaths and decisions of courts.

As a desirable substitute for the few lines in last week's FRIEND on the names of the months, indicating the number of days in each, the following

is submitted, which probably is not new to many readers of THE FRIEND. W. P. T.

"The Fourth, Eleventh, Ninth and Sixth, Have thirty days to each affixed, And all the rest have thirty-one, Except the Second Month alone Which hath but twenty-eight, in fine Till leap year makes it twenty-nine."

"Where two or three are gathered together in Christ's name, there you will find a Christian congregation. A thousand church members do not make a Christian congregation if they are gathered together in some 'great preacher's' name—they simply make an audience," says the *Presbyterian*.

SUMMARY OF EVENTS.

UNITED STATES.—An oleomargarine bill has passed both Houses of Congress, which imposes a tax of \$600 per year upon the makers of adulterated butter and of \$50 a year upon the manufacturers of process or renovated butter.

All process or renovated butter is to be marked with the words "Renovated Butter," or "Process Butter," and no such butter can be shipped or transported from its place of manufacture into any State or Territory, or to any foreign country, until it has been marked as prescribed by the Secretary of Agriculture, who is charged with an inspection of all factories and store houses where process or renovated butter is made, packed or stored. Wholesale dealers in adulterated butter are to pay \$480 a year, and retail dealers \$48. Oleomargarine colored to resemble butter is taxed 10 cents per pound.

The Chinese Exclusion bill has been signed by the President. It re-enacts the provisions of the law which expired by limitation on the 5th inst., and was passed in 1892 to continue 10 years.

A resolution has been passed unanimously in the House, requesting the Secretary of War to furnish the House with a copy of all orders and instructions which have been forwarded to the commanding military officer in the Philippine Islands relating to the conduct of military operations in the island of Samar, and especially those orders issued prior to and relating to the campaign of General Smith.

A bill has been prepared against the Beef Trust directed to Armour & Co., Nelson Morris & Co., Swift & Co., the C. H. Hammond Packing Company, the Cadbury Factory Company, and the Anglo-American and Sulberger Company. As a consequence of this and other efforts the sale of cattle and meat has greatly declined at Chicago, and the shipments of live cattle to Denver, Kansas City, Omaha and Chicago have become much less. Prices have declined.

Secretary Hitchcock has received a protest from prominent Sioux chiefs, living on the Standing Rock Reservation, in South Dakota, against the action of the Commissioner of Indian Affairs in allowing gangs of workmen to go on the reservation to build fences to enclose grazing lands which the Indians refuse to leave.

Practically one-half of the importations of the United States are now manufacturers' materials. Ten great articles form the bulk of the manufacturers' materials imported. These are, cotton, wool, silk, iron, rubber, raw silk, tin, manufactured wood, wool, copper, raw cotton (chiefly Egyptian), and a large proportion of the articles classed under the general head of "chemicals."

A dispatch from Topeka, Kansas, of the 2nd inst., says: Twenty-one years ago yesterday prohibition was adopted in Kansas. Governor Stanley discussed its effects as follows: "Prohibition in Kansas has been marked by very beneficial results, and it is apparent to any one who will travel through Kansas and through any of the license States that may be selected and note the difference in the types of young men in the United States. There are thousands of young men in Kansas who never saw a saloon and will avoid it, if for no other reason, because it is under the ban of the law."

Senator Cass has introduced his bill into Pennsylvania manufacturing. The figure shows that the number of manufacturing establishments in the State in 1900 were 52,185, as compared with 39,339 in 1890. The bulletin shows that the manufacture of iron and steel is the most important industry in the State. The manufacture of textiles ranks second among the industries of the State, with 1102 establishments. There were 129 establishments engaged in 1900 in the manufacture of foundry and machine shop products, the industry third in rank.

William Thompson, now known as Lord Kelvin a distinguished English scientist, now in this country, has lately said: "This world must depend on its water for

power in the future. The supply of coal will soon become so exhausted that it cannot be profitably used for manufacturing purposes. America has millions upon millions of horsepower in connection with her rivers that are utterly neglected. This power is bound to be developed in the near future. The start that has been made at Niagara Falls is only the beginning of a new era in the manufacture and transmission of power."

Eighty-three thousand acres of forest land have been purchased by the State Forestry Commission in Central Pennsylvania, of which 8500 acres are in Huntingdon county, 74,000 acres in Union, Centre and Mifflin counties, and 500 acres in Pike county.

The city of Boston contains 35.1 per cent. of foreign born population, Chicago 34.6, New York 37, and San Francisco 31.2 per cent.

The effect of the earthquake of the 18th ult., which was so destructive in Guatemala, were felt as far north as Alaska, where the film in the seismograph—an instrument for measuring movements and disturbances in the earth—at the Johns Hopkins University observatory registered the severest shock that has been known since the instrument was put into operation. The disturbance lasted over two hours and a half.

There were 459 deaths in this city last week, reported to the Board of Health. This is 14 less than the previous week, and 14 less than the corresponding week of 1901. Of the foregoing, 237 were males and 222 females; 58 died of consumption of the lungs; 76 of inflammation of the lungs and surrounding membranes; 3 of diphtheria; 20 of cancer; 9 of apoplexy; 14 of typhoid fever; 7 of scarlet fever and 1 of smallpox.

FOREIGN.—The disturbed condition of the laboring classes in Russia has continued, and there have been numerous encounters between the workmen and the troops, and many persons have been killed or wounded.

A spurious proclamation purporting to be an order from the Czar authorizing the peasants to partition the land of the nobles among themselves, has been widely circulated, and has led to serious results. A despatch says: "The most serious feature of the present situation is the growing distinction between the peasantry and the nobles."

A despatch from Washington of the 4th, says: The rebellion in Southern China and the outbreak in Chi-Li shows that the whole of the empire is in a state of ferment, and diplomats in Washington who are well informed, regarding conditions in the Far East, say they would not be surprised should the situation become far more serious.

It is said that fugitives flying to the mountains and the scenes of bloodshed and pillage that the slaughter at Ching Shue Feng when that city fell into the hands of the Kwang Si rebels was awful. More than one thousand persons were killed and their bodies left lying unburied in the streets, while the rebels burned and looted the stores and houses. Terrible slaughter is also reported from other captured towns.

A despatch from Washington, says: A copy of the convention recently entered into by Russia and China with regard to Manchuria, received here, shows that it provides primarily for the complete evacuation of Manchuria, in execution of the pledge made by Russia when she first occupied that section of China. In addition, it has many important and interesting provisions which establish Russia's preponderant position in the northern part of the Empire, and will certainly give that nation some part of the foreign Powers regarding it. The first article states that the Emperor of Russia consents to the re-establishment of the rule of the Chinese Empire, and returns to the Chinese Government the right to establish its governmental and administrative power such as existed before the occupation of this territory by the Russian troops. Government officials say that this article concerning plants of the empire, of the charge, so persistently circulated by the European press, that she proposed to maintain permanent sovereignty over Manchuria. Russia agrees by the treaty to evacuate Manchuria within eighteen months.

A despatch from Berlin of the 1st inst., says: The German cast iron works and foundries are preparing to form a giant combination, which will embrace all the leading plants of the empire. The negotiations have progressed so far that an agreement has already been drawn up and signed by most of the concerns. There will be no transfer of capital, but the main purpose will be to do away with competition and defend the industry against the "American invasion" and other rivaling interests, and to increase exports.

The "Prussian Diet" designed to show the necessity of action by the government to lessen the evils from the use of intoxicating drinks. The Germans, it is stated, spend 3,000,000 marks per year in drink, twice the amount of the army and navy budgets, and 180,000 persons were brought before the courts through drink. The number of criminal

cases was increasing by 10,000 annually, and the number of convicted persons had increased from 239,249 to 478,139 in 1899. In the insane asylums there had increased 30 per cent. of the inmates, and 30 per cent. of Germany's idiots were the children of intemperate. The loss to industry through a excessive drinking is incalculable. Germany, while leading the world in reform legislation, had done practically nothing about drinking. The United States was far more advanced than Germany in this respect.

Professor Bing, of Germany, affirms that tuberculosis in man and cattle is propagated by identical and that the seeming differences between the human and the cattle bacilli result from the capacity of the human to accommodate themselves to the organism in which live, and that he has successfully infected cattle with virus from human beings, producing thereby fatal tuberculosis. He has discovered a method to render the immune against tuberculosis, which is done by injecting the cattle when they are young. This he does on his farm at Marburg, and says the method is so big as Marburg.

A despatch from Berlin of the 1st inst., says: The Professor Behring's diphtheria serum has resulted according to statistics just published, in the lowest rate of mortality from diphtheria in 1901 ever recorded. The deaths from diphtheria were then 469. From the introduction of Professor Behring's serum the death-rate in this disease ranged from 20 to 2600 a year.

During the last three months more than 1,000,000 of steel rails have gone into Mexico, via Galveston, by the railroad building now under way in the Sonora Republic.

For every 100 deaths in rural districts in England are 118 in town districts.

NOTICES.

WANTED.—A complete set of the writings of Fox (8 volumes). Any one willing to sell, please terms to the editor of THE FRIEND.

WESTWOWN BOARDING SCHOOL.—For convenience of persons coming to Westtown School, the stage wills trains leaving Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met when required. Stage fares, fifteen cents; after 7.30 P. M., twenty cents each way. To reach the school by telegraph, West Chester, Phone 1144.

EDWARD G. SMEDLEY, Supt.

WESTWOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to Wm. F. WICKESHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

YOUNG WOMAN FRIEND, a University graduate, who has a year's post-graduate work at Bryn Mawr College, wishes a position as tutor in a family or to help the care of children for the summer months.

Address "Tutor," Office of THE FRIEND.

NOTICE.—It is desired to make up sets of *Freedom's Friend*, which was published by the Freedmen's Association, beginning Sixth Mo. 1864, and continued till about 1886. Any one having numbers or volumes of this publication which they would be willing to donate to the association will please communicate with

WILLIAM S. VAUX, JR.,

515 Stephen Girard Building,

Philadelphia.

DIED, at the home of Lewis L. Rockwell, his nephew, Paulina, Iowa, the 14th of First Month, 1902, REBECCA KNOWLES, in the eighty-second year of his age, a member of Paulina Monthly Meeting.

—, on the 9th of Fourth Month, at her residence Medford, N. J., MARIA S., widow of Josiah R. Reed, the ninetyeth year of her age. What are raised are arrayed in white robes, and whence came? "These are they which came out of great tribulation, have washed their robes, and made them white in the blood of the Lamb."

The Earthquake.

(Psal. xlii; Hebrews xii: 25-29.)

name St. Peter is not enough to protect from earthquake, nor the name Christ-ought to save a man not imbued with a Spirit from being denied by Him; nor announcements of the glad tidings of salvation, apart from the power which the gospel ought to give to believers the gospel; nor reciting of the name of Jesus at the time of an offering of prayer place it in me or authority; nor anywhere upon does the kingdom of God stand other- than "not in word, but in power."

Our foundation is not nominal and sandy, on the Rock of Truth's own witness, we are not to be moved or soon shaken in these so momentous in the spiritual and in the natural world, by the coming forward of one that speaketh from heaven hath pro- saying, "Yet once more I shake not only earth only, but also heaven. And this Yet once more," signifieth the removal of those things that are shaken as of things made, that those things which cannot be shaken may remain. Wherefore we, as a kingdom which cannot be moved, let us stand in grace, whereby we may serve God ac- cordingly, with reverence and godly fear."

Each man is appointed his earthquake, the day of Divine visitation which saith- able, thou earth, at the presence of the Lord, when, as we are bearing the image of Christ, its utter instability is felt as a time of naught, and the necessity of an es- tablishment on the spiritual and eternal founda- tion is alarmingly opened to view. But to have as tremblers at his Word yielded up to be hid with Christ in God, there is a confidence that the things which

cannot be shaken shall remain, and that, as our part is in these eternal principles of his Love, Life and Truth, "we have a building of God, an house not made with hands eternal in the heavens."

Abiding thus in the principles of unchange- able Truth, the Quaker does not quake with the earth, though it be removed; but in that he trembles at the Divine Word his name is justified,—and in the trembling not of a slav- ish fear, but of obedient love with reverence and godly fear. Having borne the image of the earth and passed through its earthquake, if we then be risen with Christ to bear the image of the heavenly, what if, instead of be- ing shaken by earthly upheavals, we are made spiritual and ministering centres of little earth- quakes round about us? that the things in our sphere of influence which cannot be shaken may remain, and the worldliness which can be shaken may be dislodged.

It is not for the true Quaker, though he "shakes the country for miles around," to be aware of the extent of his spiritual life's sur- rounding effect upon earth. He does not live for effect, nor without effect. As he is moved by the inward baptism of the Holy Spirit and of fire, his commission will work its mission to serve his generation according to the will of God, and "in the midst of a crooked and per- verse nation to shine as a light in the world, holding forth the word of life."

For "THE FRIEND."

Doukhorob Notes.

COMPILED BY J. E.

The address to the Doukhobors issued by the Meeting for Sufferings of Philadelphia Yearly Meeting, and published in the last number of THE FRIEND, might be supplemented with some estimate of the character of the Russian colonists as given in recent letters received from Joseph S. Elkinton. Under date of Fourth Month 24th.

"T. Beatis (a merchant) of Swan River, (a new town of four hundred to five hundred in- habitants, near the Doukhobor settlements), says that there was not a merchant or store- keeper in Swan River who would not give them credit, and that all who knew them best would greatly regret it, if they should go away and lose the benefit of their improve- ments for the past three years."

"A. E. Saylor, the Methodist minister of Swan River, came into the Land Office and manifested a heartfelt interest in the Douk- hobs; he spoke of them as a religious and

moral people and he doubted whether any sim- ilar number of people living together as they do, could be found to go ahead of them in in- tegrity and morality."

Hugh Harley, the Canadian Land Agent, accompanied J. S. E. through several of the Doukhobor villages, soliciting and obtaining many applications for homesteads from the Russians.

They held several conferences with repre- sentatives from different villages, and by tact and earnest entreaty, with fuller explanations of the meaning of the Government's policy, many who had objected, yielded, so that the prospect of a satisfactory settlement has greatly increased during the past two or three weeks.

The Doukhobors have labored under a misap- prehension, that an oath would be required, if they took out a "patent," or title for their homesteads. This was particularly unfortu- nate, especially as it was owing to a bad transla- tion—the work of a Galician interpreter.

In starting out with the agent, who sym- pathizes much with the Doukhobors. J. S. E. says: "The bridge (over the Swan River) had been carried away by the recent flood, and it was the problem of the hour how to get the team over the river."

The provision boxes were placed on the seats, and a young man stood up on the car- riage to hold them on, while the driver started the team into the flood.

"It was an interesting, almost terrific sight, standing as we did on the bank, right in front of the scene, especially as one of the horses did not seem to know, when in the mid- dle of the stream, whether or not he would keep up to his work; but through they came, and I felt it a mercy."

"I have dreaded the crossing of this river on more than one occasion, on a raft, which was once so overloaded that one of the passen- gers was drowned, and her body never found."

A little further on he writes, "how I wished I had given place to an impression to buy an axe which I saw in a hardware store in Swan River; for, in attempting to get over a tree which had fallen across the trail, one of its branches got between the spokes of the wheel, and another limb shot in behind my back, so as almost to carry me off the seat."

After a journey of twenty-three miles over a very rough and muddy road, they arrived at a village where they held a conference be- tween nine and eleven o'clock, p. m.

This was a most encouraging occasion, and the Land Agent thought the conversation and kind greeting before the conference were a good preparation for the business in hand. J. S. E. writes, "I introduced the object of my errand amongst them, and the address of the Committee was read. Ivan Ivin was sitting at the head of the council, and the room was well

filled. There was the expression of thanks and then a pause, but a right spirit prevailed." They were told that five hundred and twelve homesteads, including thirty-seven granted to women whose husbands were in exile, would be granted to them in a solid block of land. This would comprise a tract of about twelve miles square, with the exception of four sections for school purposes, and two for the Hudson Bay Company.

This liberal offer was considered by all the thirteen villages composing the North Colony, consisting of a total population of fifteen hundred. The meeting broke up with a good feeling, which was cause for thankfulness."

J. S. E. writes (25th of Fourth Month) "There is reason to believe that the kind letter of the minister of the Interior has not been thoroughly understood." Seventy-five acres of wheat had been sown about this village, and seventy-five more are ready for seeding.

"On entering the house of Masha Markin, a little son, ten years of age, was engaged saying a lengthy prayer, the pith of which his mother told me, was asking the Lord to hide him under his wing and from evil men."

"It is a comfort to me that the greeting and parting from the villages are such as they have been, as pleasant as I could desire, whatever may be the conclusion of their supposed wise men."

In several of the houses timepieces were seen. Ivan Chemoff made a complete clock himself, saying by this and other work that he is a mechanic, while the father of this young man has made a spinning wheel. . .

"Hugh Harley, our driver (John Hunter) and myself had a room to ourselves, furnished with a little stove, with a writing table, lamp, and good, regular-sized beds. In another house we saw sliding doors between the bed rooms.

"Fourth Month 26.—About twenty men called on us, who seemed very friendly and rather with the view of making an apology for the scene of last evening, when two of the speakers were quite captious about school houses, roads, taxes, etc. They said their brethren who had opposed us were not of a good spirit, and they were sorry to have me grieved.

"From their representation we might suppose one village at least was prepared to co-operate with our wishes for them."

"The holding of business or religious meetings, two in a day, calling at forty or more houses, and conversing with those who desire to converse about the interests of their people, with what traveling is to be done, does not favor very clear records."

"Hugh Harley spoke at one of our conferences in a way that was very touching to me, saying before the people that he believed the Spirit of God was with the seven men who adopted the address, and that he believed it was the means appointed of God for a reconciliation or settlement, or to this import."

"We had one ride across a creek on solid ice, with water flowing over it, but there is little if any floating ice on the rivers. The mercury has kept pretty close to the freezing point."

J. S. E. attended a First-day morning sunrise meeting, in which fourteen men, three boys, and about seventeen women, and quite a

number of girls took part, reciting psalms, etc., for two hours, after which he addressed them on the resurrection of Christ, and the power of it. The Doukhobors were observing Easter.

This seemed to open the way for Hugh Harley and himself "beyond anything (they) had experienced on this journey, so that (J. S. E.) could address individuals in divers cases, and in a way that H. H. was glad to witness," especially as they expressed an appreciation of the love which was felt for them.

"After the religious Doukhobor meeting was over we went to the house where we had lodged and H. H. seeing a number of Doukhobors who evidently wished to take up homesteads, remarked that he supposed it was lawful "to do good on the Sabbath day."

"We had a swarm of those who were in good humor with us, and I cannot tell how many names were taken for entry, neither do I know that any went away without being satisfied."

"A noble looking woman, about sixty-four years of age, made a most touching speech stating that when they landed on the prairie and were without food we sent them corn-meal and when they had nothing to draw with we sent them oxen and cows. I cannot remember any occurrence more touching or affecting when visiting the colonies, than the sight and manifestation of affection during the last two days."

"There was one unusual sight of a company of women and girls about twenty-four in number, and thirteen little boys, gathering up roots, and casting them into heaps to be burned; and in another part of the field there were two harrows each drawn by three horses."

"I left our carriage and walked up to the company. The men stopped their teams and they were invited to come to a meeting at half-past seven. When I turned to go to the village the company followed, whereupon I picked out the smallest girl and took her hand, and with the other hand a boy, and with my cane under my arm I started in the lead. The company fell into two lines, chanting a psalm, as is their custom. Five or six men came out from the village to greet us, and they also fell in line. From the expressions of some countenances it was evident they wished a photograph taken."

(To be continued.)

P. S.—On the 12th instant J. S. E. telegraphed from Yorkton that he had been delayed by rain and bad roads, but expected to reach Winnipeg at midnight, and proposed to start for Rosthern on the following day. It is believed he has visited all the other colonies but this, and possibly may reach Philadelphia within two weeks.

PREJUDICE never reasons, but moves and sways the mind and action from some instinctive or sudden or biased impulse. It has its seat in ignorance, weakness or idleness. It is a blindness of perception and relation which leads to personal and public injury. It acts as a hindrance to truth, knowledge and to progress. It is a neutralizing force that resists and modifies the most cogent arguments, the most powerful discourses, the most moving appeals and the most stirring considerations.

FOR "THE FRIEND"

The Tract Association of Friends.

EIGHTY-SIXTH YEAR.

The preparation and publication of the calendar and the almanac, while done year, requires the careful selection of new suitable matter.

About the usual number of almanacs was used for 1902, and the demand for them been nearly the same as for several years excepting that about eight hundred and usually placed in the Penitentiary, have as yet, been so placed on account of relations owing to the prevalence in the small-box. The edition of the calendar the largest we ever printed, being two thousand copies; of which nineteen hundred eighty-two have been sold.

Matter for a tract, which had previously been considered, was taken up again this year and approved. It has been published with the title "Card Playing—A Narrative," and be known in our future lists as No. 4, a series, taking the place of "Evidences of Truth of the Christian Revelation," a tract of forty-eight pages, one of our earliest publications the need of which appears to have largely met by other tracts since published.

The work of our Association may be like "casting bread upon the waters," but have evidences that some of it is not so. Among these the following may be encouraging to others as they have been to us:

A minister, not a Friend residing now in Canada, a distributor of our tracts for over twenty years, says that on one occasion he offered a tract to a trapper. The latter refusing slipped one into his pocket. Within an hour the trapper, going alone through a piece of country, was caught in a heavy trap, and though preserved from seriously injury, could not release himself. He spent several hours in this involuntary confinement, after having shot away all his ammunition in the hope of attracting the attention of one who might be within hearing. Having made use of his hands, he took the tract referred to, and read it through. When relief finally reached him, he was a changed man, and from that time was concerned for his soul's salvation."

The same distributor writes: "I take to read them before I distribute. It is years since a dear Friend used to replenish my stock; and the literature of Friends has been profitable to me in the old country and in the new. I gave several of your tracts to a preacher of a leading denomination, and afterwards gave it as his opinion that your baptism had a very slender place in New Testament teaching."

"A young man many years ago who was a member of the Society of Friends and had become much discouraged respecting his spiritual welfare, picked up a tract in the street at West Chester, Pa., which he found on examination was that published by this Association giving an account of the life and religious character of Thomas Chalkley, an eminent minister formerly living in the neighborhood of Philadelphia. Soon taking an opportunity of reading it in a secluded spot, he found it a narrative of the gracious dealings of God with one who had strayed from the heavenly fold but had become restored through our

and faith. On reading this narrative of God's mercy, the mind of the young man touched with feelings of lively hope that his experience might also become his. His vision was powerfully turned away from the life of the world which had previously attracted him, and with his expectations set high above, he earnestly sought for the blessing. Another heavenly visitation upon afterward mercifully granted him, he yielded obedience to the pointings of Divine finger he became established as a Friend and elder in the meeting he led, and a helper of others in their exercises."

A school teacher in North Carolina who to a Friend acknowledging the receipt of a tract, "The Teacher's Influence in the Education of Character," expressed her concern for the spiritual welfare of her pupils, said: "Your little tract was just what I needed, and I thank you very much for it."

In the past, the different "missions" devoted to the comfort and instruction of the visiting this port, situated along the coast, as well as the one on the Schuylkill Point Breeze, have been frequently by one of the members of our Board, as kept them supplied with our tracts and literature. Some of these missions send matter on board of all ships departing here, in which are placed some of our tracts; they are also put in what are known as "comfort bags," a small bag in which are needles, thread, buttons and such other as sailors need. A small Testament is also added; in this manner our tracts are distributed over a wide field. Sailwriting from foreign ports to those connected with these missions frequently mention assurance and benefit derived from finding our tracts among the reading and other material in their hands.

A mission situated in the northeastern portion of the city, which mill operatives frequent, has also been supplied, and much opened to receive them has been manifested.

A colored man who was a member of a lodge of Free Masons, and who also had taken an interest in theology, and is at this time a member in a religious body, was handed a copy of our tract No. 178 on "Secret Societies."

He read the tract on retiring at night, and so impressed with its statements that he concluded to read it carefully the following morning.

On doing so, he felt, to use his own words, that "he had never had so complete a revelation, and had never before thought of the teachings of the Scriptures as so important subject. Being convinced that it would be improper to remain any longer in connection with this society he went to the meeting of the lodge, and severed his connection with it.

On making this statement, he expressed a desire for a supply of the tract, in order he might distribute it among his fellow-laborers.

During the past summer a member of this lodge had a number of tract pockets placed in prominent public places in Atlantic City, and that they should be filled as occasion demanded. The Friend who performed this duty says that while the pockets were gener-

ally empty when he made the rounds, he seldom saw any tracts lying about or under foot. One little newsboy, seeing him coming with a fresh supply, asked if he might have a copy of the tract entitled, "The Power of Truth." Being asked what he knew about that, he said he had had a copy and would like another one. In another instance, the caretaker of a pavilion where a pocket had been placed said he had read the tract entitled "The Injurious Effects of Tobacco," and that he had since broken off from the use of this narcotic. During the summer about three thousand one hundred tracts were thus disposed of.

It seems proper again to call attention to our financial condition. Our income is almost entirely derived from voluntary contributions of interested Friends, the number of whom is from time to time reduced by death, and although occasional bequests have been received, yet we are almost entirely dependent upon subscriptions and donations. In view of these facts we desire that the number of those who are interested not only in the distribution of our tracts, but in providing the means for keeping up and increasing the stock of our publications which are almost entirely disposed of gratuitously, may be increased.

There have been printed during the year: Tracts in English, 46,000; Tracts in Chinese, 2,100; Juvenile Tracts, 8,000; Card Calendars for 1902, 2,000; Almanacs for 1902, 4,500; Select Readers, No. 2 (102 have been bound), 250; Select Readers, No. 3 (100 have been bound), 250.

There have been bound from sheets in stock: Biographical Sketches, 40; Musings and Memorials, 49.

The distribution for the year has been: Tracts, 60,333; Juvenile Tracts, 6,708; Almanacs (including 97 for 1901), 2,933; Memoir, George Fox, 1; Select Extracts, 38; Divine Protection, 23; Account Sarah Grubb, 3; Spiritual Progress of Mary Rathmell, 1; Biographical Sketches, 37; Musings and Memorials, 42; Select Readers, 242; Card Calendars, 1,982; Round Volumes Tracts, 23.

On behalf and by direction of the Board of Managers,

HENRY B. ABBOTT, Clerk.

PHILADELPHIA, Third Month 13th, 1902.

For "THE FRIEND."

HOW THE FASCINATION OF THE GAMING TABLE INCREASES AS YIELDED TO.—An acquaintance informed me, that when a young man he with three others agreed to spend certain evenings together, and for amusement cards were introduced. For a time they played simply as a trial of skill. Then by way of giving their pastime a zest, they played for cigars, and later for theatre tickets. Finally small amounts of money were put up.

My friend said that just as the clock struck twelve one night, he threw his last card and lost. Though less than a year had elapsed, the stake on the table was then fifty dollars. He sat back in his chair, and the path from

nothing to this opened before him, and then it continued to open up, and at the end he saw a state's prison and a gallows. Rising he said to his companions, "I will never throw another card as long as I live!" And he kept his resolve, becoming a religious character. *

For "THE FRIEND."

Some Account of the Imprisonment of Two Friends at Malta, Etc.

(Concluded from page 341.)

"O the sorrows the mournings, the tears! 'But those that sow in tears, shall reap in joy.' A true sorrow begets a true joy; and a true cross a true crown; for when our sorrows did abound, the love of God did abound much more; the deeper the sorrows the greater the joy; the greater the cross, the weightier the crown.

"Dear friends and brethren, marvel not that Israel is not gathered; our judgment remains with the Lord and so do our labors; for it was not for want of travail nor pain, nor love to their souls; for we could have been contented to have fed upon the grass on the ground so we might have had our freedom amongst them, for had it not been for the great opposition, they would have followed after us, as chickens after a hen, both great and small. But oh! the swelling seas, the raging and foaming wave, stormy winds and floods and deep waters, and high mountains and hills, hard rocks, rough ways, and crooked paths, tall cedars, strong oaks, fruitless trees and corrupted ones, that cumber the ground and hinder the righteous seed to be sown, and the noble plants from being planted. Oh! they shut up the kingdom against the simple-hearted and hide the key of knowledge from the innocent ones, and will not enter into the kingdom themselves, nor suffer them that would enter, but stir up the magistrates to form carnal weapons thinking to prevent the Lord of taking to Him his inheritance, and to dispossess his Son, who is heir of all, that He might not have a dwelling-place among them, nor a habitation nigh them; because that his light will discover their darkness, and his brightness will burn up all their abominations, and mar their beauty, and stain their glory, their pomp and their pride, that it may perish as the untimely figs, and fall as the flower of the field, and wither as the grass upon the housetop.

"Oh! the belly of hell, the jaws of Satan, the whole mystery of iniquity is at the height and all manner of abomination that makes desolate, and stands where it ought not, and is upheld by a law, that upon pain of death none must speak against it nor walk contrary to it. But praises to our God, He carried us forth to declare against it daily.

"Oh! the blind guides, the seducing spirits, that do cause the people to err, and compel them to worship the beast and his image and have his mark in their foreheads, and in their hands, and to bow to pictures and painted walls, and to worship the things of their own hand, and to fall down to that which their own fingers have fashioned, and will not suffer them to look toward Zion upon pain of death, nor to walk towards Jerusalem upon pain of faggot and fire, but must abide in Babel, and believe whatsoever they speak or do to be the Truth.

"But oh! the ways, the worships, the fash-

ions, forms, customs, traditions, observations and imaginations, which they have drawn in by their dark divinations, to keep the poor people in blindness and ignorance, so that they perish for want of knowledge and are corrupted, because the way of Truth is not made known among them. They are all in the many ways out of the one true and living way, and their ways be so many and so monstrous, that they are unrehearsable; but the Lord our God hath kindled a fire in the midst of them, that will consume all forms, fashions, customs and traditions of men, and will burn up the briars, thorns and tares, stubble and fruitless trees and corrupted ones; and will blast all the fruits, works and labors of wicked and ungodly men, with the mildews of his wrathful indignation, and will scatter all his enemies with the whirlwinds of his displeasure.

"They do not know the Scriptures. Their Bibles would grieve any honest heart to behold them because of the corruption."

Fach had left a husband and children behind her, for whom their hearts yearned; beautiful letters were written, showing they were not without natural affection, but they trusted all to the care of the Shepherd of Israel who comforted them with a spiritual communion that must have been refreshing and that the natural man comprehendeth not. C. E. says in a letter to her husband and children "who are more dear and precious to me than the apple of mine eye." "Most dear and faithful husband, I have unity and fellowship with thee day and night, to my great refreshment and continual comfort. Praises, praises be given to our God for evermore who has joined us together in that which neither sea nor land can separate or divide."

"Oh my dear husband and children, how often have I poured out my soul to our everlasting Father for you," night and day with tears "that you might be kept pure and single in the sight of our God."

"You may feel the issues of love and life, which stream forth as a river to every soul of you, from a heart that is wholly joined to the fountain. My prayers are for you day and night, without ceasing; beseeching the Lord God of power to pour down his tender mercies upon you, and to keep you in his pure fear, and to increase your faith, to confirm you in all righteousness, and strengthen you in believing in the name of the Lord God Almighty, that you may be established as Mount Zion that can never be moved."

"Keep your souls unspotted of the world, and love one another with a pure heart fervently; serve one another in love, build up one another in the Eternal and bear one another's burdens for the Seed's sake, and so fulfill the law of God."

"Dear hearts, I do commit you into the hands of the Almighty who dwelleth on high, and to the word of his grace in you who is able to build you up to everlasting life and eternal salvation." . . .

"I do believe we shall see your faces again with joy." . . .

"In our deepest affliction, when I looked for every breath to be the last, I could not wish I had not come over the sea, because I knew it was my eternal Father's will to prove me with my dear and faithful friend. In all afflictions and miseries the Lord remembered mercy, and

did not leave nor forsake us, nor suffer his faithfulness to fail us; but caused the sweet drops of his mercy to distill upon us and the brightness of his glorious countenance to shine into our hearts, and was never wanting to us in revelations or visions. Oh, how may I do to set forth the fulness of God's love to our souls! No tongue can express it, no heart can conceive it, no mind can comprehend it."

S. Cheevers wrote in the same loving spirit to her family, though perhaps to quote so much from her pen is not now needful. The following is expressed "to her friends in Ireland;"—"My life is given up to the service of the Lord; bonds, chains, bolts, irons, double doors, death itself, is too little for the testimony of Jesus, and for the word of God; so the seed be gathered, it is but a reasonable sacrifice. Bonds and afflictions bide the gospel of Christ. Those that will live godly in Christ Jesus, must suffer persecution."

In a letter to D. Baker, Catharine says:—"The time is too little for me to disclose the twentieth part of the terrible trials; but whensoever we were brought upon any trial, the Lord did take away all fear from us, and multiplied our strength, and gave us power and boldness to plead for the Truth of the Lord Jesus, and wisdom of words to stop the mouths of the gain-sayers; but then they would say, we had not the true faith, but we had all virtues. Dearly beloved, pray for us that we fall not, nor fail; whereby our enemies may have any advantage to rejoice and say, we served a God that could not save us, and called upon a God that could not deliver us; as if we were like them, to call upon stocks, stones, pictures, and painted walls, and dead things that cannot hear, see nor speak."

"We do beseech thee to tell all our dear friends, fathers, and elders, the pillars of the spiritual building, with all the rest of our Christian brethren, that we do desire their prayers, for we have need of them."

Probably what most grieved these devoted messengers was the wickedness and superstition of those who kept them in bondage, and the little apparent fruit of their labors, though sometimes they spoke so effectively to persons who came to them, that they could not gainsay them but were made to confess that God was with them. Once when Catharine was crying to the Lord in prayer that it seemed that all their travail and labor was fruitless, she felt this answer, "Be not grieved, though Israel be not gathered, the seed of Malta is to increase into multitude. That which ye have sown shall not die but live."

At another time she said the spirit of prayer was upon her, but she was afraid to speak to the Lord for fear she should speak one word that would not please Him; and then it was returned her from the Lord, "Fear not, daughter of Zion, ask what thou wilt and I will grant it thee, whatsoever thy heart can wish; but she desired nothing of the Lord, but what would make for his glory, whether it were her liberty, or bondage, life or death; and in this resignedness she found herself accepted of the Lord."

A friar once said to them—"It is God's will ye should be kept here, or else we could not keep you." On which C. E. told him, "The Lord suffers wicked men to do wicked-

ness, but He doth not will them to do it; He suffered Herod to take off John the Baptist, but He did not will him to do it; He suffered Stephen to be stoned, and Judas to betray Christ, but He did not will them so; for if He had He would not have damned them for it."

Sarah in reply to a question of the Irish consul what she did want, said, "The was her Shepherd, she could not want good thing, but she did long for her dom." He said "That you may have in it but he did not live to see it."

I shall not attempt giving a description of the many hardships they endured; for during perhaps weeks they were kept in a room excessively hot that they often left their beds and lay down at the chink of the door to air; their skin became parched; their hair fell off their heads and they often fainted; sometimes lacked food, at other times did feel free to take what was offered.

Their Bibles were taken from them, but they did not know how long they were deprived of them, and they were not always allowed to have any, for writing.

The time of their deliverance drew near. Friends and others made great efforts to obtain their freedom, being often baffled; but Baker's efforts were very touching, though ineffectual; but he obtained an interview with them through the prison gates. Yet S. E. says the time of their redemption drew near, which was brought about at the instance of George Fox and Gilbert Lathey by writing to the Lord d'Aubigny.

About six months after Daniel Baker came into Catharine's heart that she could speak with the inquisitor he would obtain them their liberty. Not many days after she had an opportunity of speaking with him, after which he was very courteous to them, came to them within a few days, with his tenant, the chancellor and others, and in some discourse, asked them whether they would return to their husbands and children if it were the will of God; to which they answered, it was their intent in the will of God so to do.

Hereupon they were released and the inquisitor took his leave very courteously of them, wished them a prosperous return to their country, as did the magistrates and inferior officers. Being thus set at liberty, they and prayed God "never to lay to their charge what they did unto them, because they were them not."

They were kept eleven weeks at the castle house before they could get a passage there, and though they met with tempests, yet at length they arrived safely in England.

S. W.

DOING the best we know how is not enough for us to do. We are commanded to do it. If we fail in so doing we have to suffer for it. Even in human governments, it is not enough for an evil-doer to say that he did not or that there was any law against his doing what he did. It is every man's duty to know the

OUR salvation is by Christ alone, therefore howsoever or whatsoever we add unto it in the matter of salvation, we overthrow Christ.—Hooker.

THE ROBIN'S MESSAGE.

The bluebird's call, so plaintive,
Has echoed o'er the hills,
The willow buds have swollen
Beside the tiny rills.

The brooks have burst their fetters,
And from the soft, brown earth
The tiny little snowdrops
Right bravely have stepped forth.

O'erhead the crows are calling,
I heard the old refrain,
And from the distant alar
The blackbird pipes again.

But none of these can fill me,
These tokens fair of spring,
With such delight as comes to me
When first the robins sing.

The bluebird is a poet,
With fancies quaint and sweet;
The blackbird a musician,
The whole world at his feet.

The crows are queer old farmers,
In plainest costume dressed,
The grackles noisy gossip,
Chatting with eager zest.

But you, my darling robin,
A homely message bring
Of brave and loving courage.
"Cheer up! Cheer up!" you sing.

And when I hear you singing
High in the old elm tree,
I am rebuked for doubting,
And trust comes back to me.

For he who knows the sparrow
His children, too, will bless,
And he hath sent the robin
To teach us cheerfulness.

G. A. H.

Bibliolatory.

Bibliolatory I understand the tendency of
ting, in the first place, the Book from
Christ, and in the second, from the Holy
and of thus substituting the Book for
who alone is the light and guide of the
h.

is the theme of Adolph Saphir's article
"Hope." He cites the irony of the Jews'
st, who while perfectly familiar with the
es of the prophetic Christ in the pages
of Old Testament, nevertheless, did not
nize the actual Christ when He did mani-
f Himself. They had read the Bible with-
out Christ, the letter divested of the Spirit,
is Bibliolatory.

en he points at Bibliolatory among Prot-
ests. But we will let him do this in his
ords.

at while this form of Bibliolatory is
among those who have not accepted
essage of God (though they accept the
e, and who are often encouraged in
state by not having this dead acceptance
Bible pointed out to them, there is an-
form of Bibliolatory which is more dan-
to the children of God. Such phrases
the Bible is the religion of Protestants,"
neat, and true to a certain extent, al-
indicate an incipient decay. Where
is life, and life in health, such expres-
do not exist. Paul never would have
had the Scriptures were the religion of
ristian. Christ was his Light and Life.
ed further about Christ, he would de-

scribe Him as the Scripture testifies of Him,
and as the Spirit revealed Jesus to his soul.
It is not that Paul thought otherwise than we
do about the Divine authority, sufficiency,
and fullness of Scripture, but he stood to Scripture
in a true relation.

"The Reformation churches soon departed
from the true and living view of Scripture.
Luther saw Scripture in its relation to Christ
and to the Spirit; indeed, many of his sayings
are unguarded, but in reality only strong and
one-sided expressions of what he felt so deep-
ly,—that we do not place the Bible as
Christ's substitute or the substitute of the
Holy Spirit; that the great value of the Bible
is that it testifies of Christ; and that the
Holy Spirit is the true enlightener and teacher.

"Luthers' followers too soon forgot the
true position of the Scripture. The Holy
Spirit is above Scripture. Not that there is
anything in the Scripture which is not in ac-
cordance with the Spirit's teaching, for all
Scripture is inspired of God, but the Church
is in danger of ignoring the existence of the
Holy Spirit and her constant dependence on
Him, and of substituting for the Spirit the
Book. And now commences the reign of in-
terpreters and commentaries, of compendiums
and catechisms; for if we have the Spirit's
teaching in the Book instead of the Spirit's
teaching by the Book, men wish to have it ex-
tracted, simplified, reduced to a system, meth-
odized. And then practically speaking, the
creed is above the Bible.

"Thus there has been to a great extent
'text' preaching instead of 'Word of God'
preaching. The word was 'outside' of us, in-
stead of 'dwelling' in us. And our testimony
is different in tone and power from that of the
apostles and primitive Christians; for their
testimony was in the Spirit and of Christ ac-
cording to Scripture, while ours has become
testimony concerning the Bible in reference to
Christ and the Holy Spirit. The apostles
spoke of Christ, and confirmed and illustrated
their testimony by the prophecies of Scrip-
ture. They looked to the Man in the first
place, and secondarily to the portrait given of
Him in the Book. Whereas the pseudo-apost-
olic preaching fixes its own eye and that of
the hearer in the first place on the Book, and
deduced from it the existence and influence of
the Christ. The impression in the one case
is: that the preacher announces a message
from Christ, who is a reality to him; and this
his experience of Christ, he asserts, is accord-
ing to Scripture. The impression in the other
case is: that Isaiah, Paul, John teach, accord-
ing to the preacher's exposition, such and
such doctrine. The one is preaching Christ;
the other, about Christ. The one is life and
spirit; the other is possible without the Spirit
and vitality. The one is testimony; the other
is an exposition of another man's inspired tes-
timony. The one is preaching the Word (with
or without text); the other is text-preaching
without the Word. Paul preached Christ; our
tendency is to preach that Paul preached
Christ.

"Why is it that God, in speaking to his own
people, says so often, 'I am the Lord?' Why
does He speak so frequently and so earnestly
against idolatry? Why does He teach us con-
tinually that the Spirit quickeneth; that the
letter, even the good and inspired letter kill-

eth. Because the root-tendency of man is to
substitute shadow for substance, the form and
outline for the fulness, rules for life, and dead
things for the living God. Because we like
to stand on terra firma, and resemble children
who cannot understand on what pillars earth,
sun, and moon do rest. Because we think of
catching a sunbeam in a trap, instead of de-
pending on the sun in the heavens. Therefore
we are always apt to deify 'brazen serpents,'
'Bible doctrine,' past experiences.

"The man who first made a crucifix, doubt-
less simply meant it as an aid to his memory
and devotion. The thought of the Saviour's
love and death filled his heart with contrition,
ardent affection, peace, and joy. 'Oh, if I
could always thus see a crucified Redeemer!'
And why not? Is not the same mercy and
love, which manifests Christ unto the soul
now, continually with us? Will there be no
manna to-morrow? Ah, but he wants to fix
and secure the impression. He makes the
crucifix; and now, instead of Christ, we have
an expedient—an aid to devotion, which will
soon become an obstacle and then a substitute
for the living Christ. For the process of de-
terioration is rapid; soon is Christ forgotten,
and the crucifix becomes not a symbol, but an
idol, and men think not merely of the crucifix,
but attach importance to a special crucifix,
with wood from such a place, and which has
been used by such a saint, etc.

"But idolatry in the large and spiritual
sense, is not confined to 'crucifixes.' The
Bible may be the Protestant crucifix.—*The
Mennonite.*

Benjamin Kidd.

Benjamin Kidd, of Banbury in Oxfordshire,
was born in the County of York, and educated
among Friends. While very young he was fa-
vored with a visitation of Truth, to which he
was faithful and through the powerful op-
eration thereof was, about the twenty-first year
of his age, called to the work of the ministry;
wherein he was eminently qualified rightly to
divide the word of Truth, and to unfold the
mysteries of the gospel in great brightness,
to the informing and convincing many, and
to the comfort and encouragement of such as
were under affliction and distress of mind in
their religious progress.

He was eminently qualified for great and
singular services in the Church; a diligent at-
tender of meetings, both for worship and dis-
cipline; in both which he was very service-
able. He was a man of sincerity and integri-
ty, of good understanding in matters useful to
mankind, and freely communicative; universal
in his benevolence, and laborious to do good to
all. Deep in Divine experience, sound in judg-
ment, wise in counsel, zealous for the promo-
tion of Truth and righteousness, and the ex-
altation of the cause of his Lord and Master
in the earth. He was instructive and weighty,
yet becomingly cheerful in conversation; ex-
emplary in life and conduct, peculiarly kind
and fatherly towards his friends, compassionate
to the poor and distressed, generous and
noble in his disposition, highly useful and
agreeable to his neighbors, and generally be-
loved by persons of all ranks, and denomina-
tions to whom he was known.

The principal design of these observations
is to excite thee, reader, to consider in what

manner he was raised to his dignity in the Church; and also to reflect that the same Divine principle is in thee, and if thou art faithful thereto, the same fruits will appear according to thy measure.

About the thirtieth year of his age he visited America, where many were convinced, and others confirmed through his powerful ministry. His service there was very great, and much to the edification, comfort, and satisfaction of Friends, as appears from sundry accounts. After he settled at Banbury, he visited Ireland and various parts of Great Britain. The city of London, in particular, frequently partook of his pious and fervent labors, to the great help and consolation of many, who have just reason to bless the Lord on his behalf.

A few months before his death he was greatly afflicted with a disease which was very painful to bear; but at times he got out a little, and particularly he attended the Quarterly Meeting at Oxford, in the Tenth Month, 1750, though under great affliction of body, which gradually increased, attended with a dropsical affection; through all of which his patience and resignation were very remarkable. About a month before his decease, he attended the meeting at Banbury, at the burial of a young man whom he greatly esteemed, which he got to with great difficulty, being obliged to be supported by two friends. In the course of the meeting he was raised beyond all expectation, to preach the gospel powerfully for about an hour, to the tendering the hearts of almost all present. Many of his neighbors being there, confessed, with admiration, to the power by which he was raised that day, remarking that he had been a good man all his time, and that the Almighty had crowned him in the conclusion. After this he was mostly confined within doors and continued in great submission to the Divine will, without murmuring or repining.

A Friend from London visiting him, found him under great bodily affliction, but freely resigned to the Divine will, expressing his firm hope in that power which had all along supported him; and that though the greatest kindness to him was to solicit a release from his pains, yet he desired to be content and wait the Lord's time. When the said Friend took his leave of him, he expressed himself to him in an affectionate manner, to his great comfort and encouragement. At another time, having delivered some excellent exhortations to those present with him, he added for their encouragement to persevere in their Christian progress "I am under no fear or doubtful apprehensions; for I know that 'for me to live is Christ and to die is gain.'" When he was first seized with the hiccough, he seemed full of joy, saying "This is a welcome messenger; it is one step nearer." His wife standing by, asking why, he answered, "It will be a glorious change; I am not afraid to die and to put on immortality; that will be desirable; yet I leave it, though of choice I had rather be dissolved; but the Lord's time will be the best time;"—often saying death would be the most welcome messenger he ever met with.

Thus this good man finished his course, his sun going down in great brightness, at Banbury, the Twenty-first of the Third Month, 1757, aged about fifty-nine; a minister about thirty-eight years.—*Selected.*

Reminiscences.

(Continued from page 349.)

"Ye call these red-browed brethren
The insects of an hour,
Crushed like the noteless worm amid
The regions of their power;
Ye drive them from their father's lands,
Ye break as faith the seal,
But can ye from the court of Heaven
Exclude their last appeal?"

—L. H. Sigourney.

The unselfish, disinterested and practical devotion of time, talents and labor for the welfare of the Indians, of such men as Joseph Scattergood, Ebenezer Worth and Thomas Wistar, is worthy of notice, regard and imitation. Thomas Wistar in about 1849 accepted an appointment from the Government of the United States to carry to the Indians, or rather the mixed blood of the Menomonesies, residing at or near Green Bay, Wisconsin, a sum of money to pay to them on behalf of the United States.

The journey by the usual route is nearly fifteen hundred miles. In this journey, a somewhat perilous one, because they carried a large sum of money, he was accompanied by our late valued friend Alfred Cope of Germantown. His interesting account of the journey and intercourse with the people there is well told in a series of articles which may be found in Volume xxiii of THE FRIEND. It is believed that neither of the Friends would receive any compensation from the Government for their services.

During their intercourse with the natives Alfred Cope was much interested on observing their habits, etc. In the mornings they went down to the water to perform their ablutions and as they had no towels, he watched them to see how their faces would be wiped dry; "the universal blanket" answered the purpose.

The same generous and practical attention to the interests of these poor people by Joseph Scattergood and Ebenezer Worth is some measure manifested in these reminiscences.

Complications resulting from the leasing of lands by the Indians on the Allegheny Reservation in New York had for many years been increasing, causing much anxious thought on the part of the more intelligent Indians, the white settlers in Salamanca, etc., and also of members of the Indian Committee of Friends of Philadelphia, as to the best mode of dealing with the confused and irregular condition of affairs then existing there. With a view to ascertain the situation in which the illegal leaseings on the Allegheny Reservation were viewed by the authorities at Washington, J. Scattergood spent some time, in the latter part of 1874, in consulting with officers of the Indian Bureau and others and in devising a plan by which some of the difficulties might be removed. By the cooperation of individuals a bill was prepared and submitted to Congress, legalizing the leases already made within certain villages, the limits of which were to be defined by Commissioners appointed by the President. This bill also provided for the renewal of the leases at intervals of twelve years, and enacted that the income derived from these leases should hereafter be the property of the Seneca Nation, instead of individuals as had been the case heretofore.

For "THE FRIEND."

This bill became a law Second Month 1875. After its passage the Indians were doubtful that the three Commissioners to be appointed should be chosen from among Friends, a petition to that effect was circulated on Cattaraugus Reservation requesting the President to appoint Thomas Wistar, Joseph Scattergood and Ebenezer Worth to that service. Their request was so far regarded that President named Joseph Scattergood as chairman of the Commission, associating with him John Manley, a politician from near Salamanca, and Henry Shanklin, of Kansas colleagues.

The labor involved was very considerable, and although the running of the lines and preparation of the map showing the location of the villages was done by Charles E. F. a trustworthy surveyor from the immediate vicinity, and his assistants, yet the responsibility of deciding the various questions arose, and a considerable part of the labor largely devolved upon Joseph Scattergood, who required him to make frequent visits to the Reservation, some of them for weeks at a time.

The exercises and exposure attending performance of this labor his family have reason to believe shortened his life.

The following extracts from one of his letters will give some idea of the difficulties he met with.

SALAMANCA, N. Y., Seventh Month 9th, 1875.

"I have been occupied most of the time since I have been here in collecting leases, copying the descriptions of the lots leased. Some of the so-called leases are remarkable specimens of loose contracts. Some have definite description of the boundaries of the lots, some are not witnessed and in some instances the names of witnesses and parties to the covenants are all in the same handwriting.

How we shall be able to straighten these transactions remains to be seen.

"It is very evident it will be a troublesome business, and one not to be accomplished without giving some dissatisfaction to the parties."

Science and Industry.

THE BLAZED TREE.—In running a line establishing bounds through a forest the surveyor blazes in this manner: If the line is to the left of a tree designed to be blazed, the tree is blazed upon the right side; if to the right the tree is blazed upon the left side the line strikes the tree "plump" it is blazed upon both the front and rear sides. In running a boundary line at a corner where two lines come together either a monument is erected, a stake and four boulders being usually regarded as such a monument—or a tree blazed on all four sides, or, as is sometimes the case, three or four trees are scarred so to indicate as nearly as possible the turning point in the line, or, in other words, its corner, around which they grow. In this State the surveyor registers the distance from each of these posts or monuments at every mile thereby establishing his line with absolute certainty at that point and giving a secondary basis of the written description of a boundary required in title deeds and abstracts of claims.

The permanency of the record made by blazed trees is quite remarkable, and it is

of fact that in many cases of disputed or boundaries of lots in forest land have held the record of the blazes whereby drawn plans and formally attested deeds have been set aside as containing errors. The wound of the blazed tree over, but never so completely that the will not be readily recognized by the excited woodsman. Therefore, so long as the blazed tree escapes the axe of the lumberman, so long as a tree is an ineffaceable record of the truth of the line. The surveyor's figures may be in error, and his description may not coincide with the line traced on the tree trunk with his axe, but blazes are unchanging, and in a court of law they are undisputable evidence. An attempt to be made to lie, no cross-examination can confuse them, no argument can remove them, they fixed dates as accurately as the stones preserve inscriptions. The outer shell has grown over the scar is sawed away, rings in the wood beneath the bark tell to the date.

The whole subject is most interesting. It is taken as an early landmark in the history of the State before roads were common, establishing bounds of farms or set-off points in town or great-roads before courts the blazed tree is of historic and legal importance that hardly be overestimated.—*Bangor Commonwealth.*

By the aid of science can now send light waves through objects that were considered opaque, shall we refuse to be that the omniscient eye of God can see our heart and know the very thoughts of our soul? And if He not only knows what we do, but what we would do if we followed the thoughts that we think and the purposes we intend to carry into effect, is it not time to be able in his presence and seek that forgiveness and regeneration that will make us able to have what we wish to be? In the light of the full truth our cry may well be, "God be faithful to us miserable sinners."—*Methodist.*

Charcoal is invaluable as a deodorizer and is used constantly about the kitchen and the refrigerator. When a few lumps of charcoal are left in the refrigerator they absorb the strong smell of cooked food. Besides the refrigerator is unpleasant because of dampness which gets into the wood and rises to a musty odor. In such a case, a cake of unslaked lime in the refrigerator will add to the coolness of the air taking up the moisture and destroying the odor. Again charcoal finely powdered and mixed with water and applied to anything to use in scouring out any sort of stain has vague reminders of its past con-tingling to it. Lye is good for use when buckets or stone jars need purifying, but a solution should never be allowed to dry on the hand.

Items Concerning the Society.

Names given to our last number as those of the Friends of the Yearly Meeting's common to the interests of meetings generally, have been found to be those on the Marriage Committee. The following are those appearing on the welfare of meetings: S. Abbott, Susanna Howe, Anna W. Lip-

pincott, Rebecca S. Conard, Jane W. Bartlett, Ellen Bromley, Elizabeth Allen, Sarah Em-son, Susanna S. Kite, Hannah B. Evans, Sarah W. Roberts, Rebecca Smedley, Sarah T. House, Debbie E. Cope, Mary S. Walton, Jane S. Warner, Susanna T. Cope, Annie Zook, Anna P. Haines, Margaretta E. Moore, Edith Sharpless, Sarah M. Walter, Ann Elizabeth Comfort, Elizabeth C. Dunn, Anna P. Moon, Mary W. Haines, Ellen M. Moon, Beulah M. Rhoads, Mary R. Matlack, Sarah Nicholson, Elizabeth C. B. Allen, Anna Mary Woodward and Mary Ann Wistar.

In closing an article in the English *Review of Reviews* on the beneficent service of a prominent Friend, the editor, contrasting him with the late Cecil Rhodes, remarks that the one has been said to think in continents for the extension of empire, while the other thinks in humanities for the realization of the Kingdom of God.

Since the death of our friend Rachel Brooks [of Baltimore], one of her nieces has received a message to the following effect from a prominent Christian lady of Baltimore. She said, "Tell her that years ago when I was overwhelmed with distress, I thought to myself, 'I will go and sit with the Friends and see if I may receive a message of comfort.' I went. In the meeting Rachel Brooks arose and, evidently in weakness, said: 'I have a message for some one here—' Come unto Me all ye that labor and are heavy laden, and I will give you rest.'—Then she paused and said, 'I hope someone will receive this message.' That was all, but it was the word I needed and it brought me comfort and rest."

The above incident has remained in the lady's thoughts all these years as an encouragement and help. It illustrates the great value of faithfulness in little things. The lady knew that Friends held their meetings in waiting upon the Lord, and that they expected messages to come directly or through his obedient servants. Knowing this, and feeling the need of just such a message, she came to meeting. Doubtless others spoke at greater length and gave messages to others in the room. But the message for her was sent through one who seldom spoke, and who probably felt great diffidence in breaking the silence. Yet had she withheld her word, one heart that needed comfort would have remained uncomfortable.—*The Interchange.*

A little book of "References Showing the Scriptural Basis of some of the Christian Doctrines of the Religious Society of Friends," and issued, we understand, by John C. Winston Co., 718 Arch Street, Philadelphia, is found on our table. Besides a carefully prepared list of texts on The Holy Spirit, Divine Worship, Ministry and the Priesthood of Believers, Women's Ministry, Baptism, The Lord's Supper, Peace and War, and Oaths, a list of Books and treatises for further reading is given under each head. After a cursory examination it seems to us likely to serve a useful purpose in teaching our religious doctrines.

The Annual Meeting of Friends' Educational Association of Philadelphia, which was held at Moorestown, N. J., last Seventh-day afternoon and evening, proved to be of remarkable interest and value. The papers and addresses given by well-qualified authorities in both sessions were enriched with solid worth and information, some of which we hope yet to present to our readers, as they relate to the history and exercises of our religious Society.

It seems an episode of the conference worthy of note that in giving John Dickinson large credit in the movement to set up Westtown Boarding School, the speaker, who is eminently versed in the history of Friends in Pennsylvania, said he had never been able to determine till the day previous whether John Dickinson was a member of the Society of

Friends or not, though his associations and interests were conspicuously with them. But Paul Leicester Ford, the author who has so recently died, had held in his keeping a bundle of John Dickinson's correspondence, and shortly before his death had directed that it should be sent to Philadelphia. So Isaac Sharpless examining these letters the day before had found a very bright letter from a woman Friend addressed to Dickinson, suggesting his joining the Society of Friends, if he could do so on the right ground and with an humble heart.

We have received, to be examined later, a copy of George A. Barton's recent book entitled "The Roots of Christian Teaching as found in the Old Testament," from John C. Winston & Co., the publishers.

The body known as the "Independent Methodists," or "Quaker Methodists," as they were once called, from the fact of their views on professional ministry, on peace, etc., being in harmony with those of the Society of Friends, is one we would willingly know more of. They originated at Warrington towards the beginning of the nineteenth century, and still flourish in the towns of South Lancashire. The editor of the *Independent Methodist* has expressed his desire for closer co-operation between our two bodies, and for a better knowledge one of another.—*British Friend.*

Notes From Others.

THE MONROE DOCTRINE AND JOHN QUINCY ADAMS. The New York *Evening Post* says: "Behind the Monroe Doctrine lies a political philosophy which it did not formulate. To affirm our desire and intention to maintain a political system on this continent free from any foreign influence, might be only an assertion of brute force, if we had not had some strong and guiding principle determining our action. But we had, and by no pen was it laid down more clearly and forcibly than by that of John Quincy Adams. His opening was given him by the Russian Minister, who informed our Government of the purpose of Russia not to recognize the independence of any of the South American republics, and, at the same time, improved the occasion to refer to the 'political principles' which the Czar deemed applicable to the case. In this Adams saw both a challenge and an opportunity. 'If Alexander could exploit his political principles—those of a brutal, repressive policy—the United States could show that another system of government... could give rise to a new and more active political principle.' Accordingly, the Secretary of State prepared a draft of 'Observations on the Communications Recently Received from the Minister of Russia.' It was a paper which underwent much mutilation before the President would allow it to be read to Baron De Tuyl, the Russian Minister. Yet, taken as a whole, it is a powerful statement of the moral and political principles which not merely justify the Monroe Doctrine, but which underlie our very existence as a nation.

"One of the omitted parts, now first reproduced by Worthington C. Ford, is so telling an epitome of our historic polity, and so pertinent a reminder of the paths from which our feet have strayed, that it deserves the widest reprinting and discussion. Here are the words in which the Adams Doctrine, that alone gives life and vigor to the Monroe Doctrine, was set down by that early American statesman who had as vast a hope for the continental expansion of his country as Jefferson, yet who could as little as he think of the flag flying over soil where the truths for which the flag stands are denied:

"The Institution of Government, to be lawful, must be pacific, that is, founded upon the consent and by the agreement of those who are governed;

Witnessing a Good Confession.

Numerous persons will be saying again in various churches to-morrow, "I believe Holy Ghost." We doubt not the word, the godly intention of many who thus re-baptize, but no one truly believes in what he does not practice or conform to. Whoever professes his living by the witness of the Holy Spirit in Him. Others may merely profess to the fact of his existence. If faith be the evidence of things not seen, it is the assurance of invisible Truth. But it is not, except as lived in our behavior. How, then, the confession, "I believe in the Holy Spirit," becomes an empty sound, except as it is fully expressed in terms of conduct. We are watching for the secret Witness of the Spirit, what alertness to respond in obedience, ready to make the confession good.

It is not *vain repetitions*, but practical witnessing. The repetition of a faith, not to be used to be in works. It is a law of nature, that "passive impressions by repeated grow weaker and weaker, while active habits by repetition grow stronger and stronger."

The frequent saying of a sacred maxim, the great services not served in daily practice, the "a savor of death unto death in that perish." We sometimes hang up professions, or professions, or best wishes on the walls of our rooms,—choice texts of Scripture worked in worsted in some hope they may be wrought into our life. But we are forgetful to observe them in practice may at length fail to be able even to the daily-seen language that has stood before us for years, or remember whether there. On asking a company how many minutes for the hours of the day are figured

on their watch-faces, the answer almost invariably comes, "Twelve, of course!"—although their eyes have seen for a thousand times that the number six is absent. Not so would the workman reply whose practised hand had marked the dial. The same repetition which helps fix a truth in the faithful, wears it off from the mind of the neglectful. One may physically hear or say the profession of the Holy Spirit without his baptism, so systematically as to become equal to those water-baptized believers who told Paul, "We have not so much as heard whether there be any Holy Ghost."

Though we in our meetings for worship may not regularly pronounce the words, "I believe in the Holy Spirit," yet perhaps no Christian society is saying it oftener in their modes of testimony. Are we aware of being made, under listlessness to his movings, callous to the power of the Holy Spirit, by our very frequency of profession through modes of public worship, through our daily dress and address, by our sitting in meetings for discipline without a visible president, in our holding forth that the baptism and communion of the Holy Spirit in us supersedes the carnal ordinances,—indeed in every distinguishing peculiarity based on a belief in the Holy Spirit? But what if anyone in these testimonies exhibits a form of godliness, while idly and usually neglecting the power thereof? Is not that condition creeping over him, of knowing not when good cometh?

We would not have these testimonies abolished, but fulfilled, that they may witness a good confession. They are incitements and reminders to the bearers to be true to the Spirit which they stand for. Let the Spirit of Truth be our first concern, and He will beautify his testimonies and make them honorable. Who wants a sordid, unspiritual, worldly-minded, or ill-tempered fellow-member going about, where men will point to him and say, "There goes a professor of the Holy Spirit?" If any of our outward expressions of grace are empty, it is a sign that they ought to be filled, and not cast away as if never anointed. Be filled with the Spirit by surrender to his rule, and more movements of ours than we are conscious of will unmistakably be spelling and gospelling to mortals the language, "I believe in the Holy Spirit."

John Bellows.

The appreciation of a good man who has passed to the state where eulogy ceases from hurting, and who was by the grace of God what he was, is the eulogy, not of man, but of grace. Instructive incidents in the life and testimony of our beloved friend John Bellows, of England, to which the *Gloucester Journal* gives several columns, will be of interest to our readers later on. At present we give place to the following appreciative editorial from the *London Friend*, and might add others from English and French papers:

A man of God has passed away. John Bellows was no imitation, but had his own marked individuality. He was an individual manifestly seeking to live under the control of the Good Spirit. His strength lay in the quiet walk with God. His intense fellow-feeling with men of different conditions was the secret of his great service. Many men were intuitively attracted towards him or ever they were aware, and thereby drawn towards that which was good.

Whether or no we united with him in judgment, we respected a man who sought in all things to honor his conscience. Such men are a haven of righteousness. While his walk with God was a reality, while his sympathy with his fellow-men was genuine, his gifts in certain directions were almost unique. He delighted in retirement of soul amid an active and successful business career. John Bellows loved work well done. Accuracy of detail and of finish, and delight in the beauty of simplicity were his. This became such a feature in his life that his printing works developed a purity of taste as opposed to vulgar display that has left its definite mark. It was the charm of his conversational talent that most quickly attracted strangers. Men most unlike to the peaceable Gloucestershire Quaker in theological opinion seemed spell-bound. The little books he wrote have the same exquisite charm. Not as a controversialist, but for clear-cut perspicuous descriptions of human incident, he stood in the front rank. We loved him greatly, whether we united with him in judgment or not. When we differed from him, we were ready to distrust ourselves. We loved him for the Divine Spirit that dwelt within, and right on through his busy life and through his declining day he has given a clear testimony to the bright reality of the Light which lighteneth every man. Gloucester has lost much, especially the men in his employ. Yet the people of Gloucester have gained much in having such a citizen going in and out among them. The religious community he loved has lost much, yet his ministry has been an eternal gain. Philadelphia,

whose citizens he loved and visited, has lost an unfaithful Friend. The Russian Doukhobors, for whose welfare he has greatly striven, and over whom, in their mingled gropings after higher truths and communism in Manitoba, his heart yearned, seem to have lost an invaluable friend. Yet in all these regards, are we sure that those who pass on or before are lost? He who has now through the Beloved of souls entered into his eternal rest has not ceased his ministry, but is translated to fuller and more unfettered service.

A Present Need.

To some of us, the recent Yearly Meeting came nearer the Quaker ideal than any we have ever known, and the deep concern for "the uplifting of the church within our borders" was full of hope and inspiration for the future.

This concern and the action of the Yearly Meeting in regard to it, was certainly the result of many secret prayers, and we may hope the beginning of that revival, for which the spiritually-minded have earnestly longed and prayed. The work thus prayerfully begun must be prayerfully carried on, if the right results are to come. We may well believe the members of the Committee appointed to further this concern, will give themselves much to waiting and prayer for guidance and help, in their solemn and blessed service; but each member of the church separating them, shares, perhaps, equally with them, the responsibility of the work. Much depends upon us individually, who are not on the Committee; we shall greatly help or sadly hinder their work, according to our faithfulness in our hidden ministry of prayer and intercession.

Christ's commands and instructions regarding prayer were far more frequent, more urgent, and more specific than those concerning preaching; unto all, even the smallest and most humble of his children, He grants this blessed service.

In the difficulties of the early church there was strong emphasis laid on the necessity and value of prayer, and Paul was constantly asking for the prayers of the different churches and urging them to this ministry. "Brethren pray for us." "Continue steadfastly in prayer." "I will therefore that men pray everywhere." "Now I beseech you, brethren, by our Lord Jesus Christ, and by the love of the Spirit, that you strive together with me in your prayers to God for me."

Shall not we, the members, resolve that we will heed God's call to prayer; that we will "give Him no rest until He make Jerusalem a praise in the earth;" that we will repeatedly go apart into the silence before Him, with this concern of the Church on our hearts, and give Him time to pour out upon us His Spirit of intercession.

We do indeed need, as a Church, and as individuals, to draw near unto God, humbly confessing our pride, our prejudices and our faults, and earnestly asking his forgiveness; thanking Him that He has brought us to some sense of our needs, and that He is, as we may earnestly believe, reviving us again. Shall we not ask Him to sanctify and to bless every member of this Committee, and to prepare them for this work, giving them understand-

ing hearts to study our needs; and the grace of Christ to minister to those needs. Let us ask that any word preached or work done, whether in meeting or out of meeting, shall be done in the Holy Spirit, and shall be so mixed with faith in our hearts that we shall profit thereby.

Let us then give time and strength to waiting and prayer, for the building up of the Church among our members, and as we join with Christ in the intercession which He ever lives to make for us, we shall learn to pray not merely for our portion of the Church, but for that far larger and deeper work,—the extension of the true spiritual kingdom of Christ in all the world.

C. WALTER BORTON.

MOORESTOWN, N. J.

FOR "THE FRIEND."

Noise and its Antidote.

Man is a creature of noise. God is a God of silence. It is only in the outer-infinite that you hear his voice.

There is the noise of abundance of rain, as it falls upon the forest. The noise of the waterpots foaming in terrific energy;

The noise of the sea booming its thunder in the caverns, lashing the mountain gullies into feathery whiteness;

The noise when the Lord of Glory thundereth;

The great noise of the heavens when they shall pass away;

With man there is the noise of multitudes in the mountains;

The noise of fear, when men do tremble and have no strength;

The noise of war, multiplied confusion, shrieks of the wounded, moans of the dying.

Coming to the element of gladness: There is the noise of joy in the feast, in the way of laughter, and triumph and often there is the

"Muddled maniac mirth."

And goodness comes with a noise; the Master's work was noised abroad and was often hindered instead of being helped.

It is given to man to form estimates. We can enter into the silence of the Supreme and watch the poise of the beam as actions are being weighed.

We can mark the plumb-line as it stands out in the sincerity of its righteousness. We may wait upon the beauty of those lips which sent thrilling words of music and majesty into the great congregation. We may take the Bible into our counsel and learn the worth of noise in business, in politics and pleasure, and as the trees gather sap in silence, hidden and unobserved, so the kingdom of God cometh not by observation.

We may see the slippery places of the great, and tremble before the winds. "Pharaoh King of Egypt, is but a noise" (Jer. xlvii: 17). His functions of state are as nought, the vibrations that flow from his feeble fingers are a sound that soon shall cease.

We are invited to learn the majesty of silence. This is the eldest born of things. There was silence before there was speech. At the fount of silence we are at the spring-head of beauty, the beauty of the Lord. Words are an impertinence, there is no speech nor language, no sound salutes the

outer ear as we bow before this silent sea are thereby enlarged. In the minutes our admiration we can only say "O depths."

How silence helps us in our search, feel a hand laid upon our poor palpitating heart, bidding us be still. O welcome tranquillity as we stay in the secret of his tabernacle. Our spirit meets the Holy Spirit there is interflow; our capacities are enlarged and filled with fresh revelations of the God of Christ, new explanations are given of meaning and mission of life, and there is conscious growth in power and purpose.

Here saints are fed in the welcome wilderness apart from men, here they gather food and hardihood, and a full equipment. At Saul's conversion, he went into Arabia to enlarge his horizon, to calm the surges of his mind. O prison discipline without a jail, liberty limited by God!

At such times even prayer is not vociferous, the mute ecstacy of devotion it shows emptiness and invites the overflowing fullness.

"Sweet to lie passive in his hand,
And know no will but his."

To be strong in the Lord is to have power with men. Here we get strength for service, and suffering, gathered in secret, embodying silence, humble before God, bold before men.

"Nothing that mine eyes can see,
Shall disturb my faith in Thee,
Love to wait can well afford,
For the leisure of the Lord."

H. T. MILLE.

BEAMSVILLE, Ont.

FOR "THE FRIEND."

The Book of Jonah.

The authenticity of the Book of Jonah is placed beyond all doubt and questioned by several passages in Matthew and Luke as the Lip of Truth itself, which read in Matthew xii: v. 38.

"Then certain of the Scribes and Pharisees answered, saying, Master, we would see a sign from thee."

39. "But He answered and said unto them, An evil and adulterous generation seeketh after a sign, and there shall no sign be given unto it, but the sign of the Prophet Jonah."

40. "For as Jonas was three days and three nights in the whale's belly; so shall the Son of Man be three days and three nights in the heart of the earth."

41. "The men of Nineveh, shall rise in judgment with this generation, and shall condemn it; because they repented at the preaching of Jonas; and, behold a greater than Jonas is here."

Matthew xvi: v. 4.—

"A wicked and adulterous generation seeketh after a sign; and there shall no sign be given it, but the sign of the Prophet Jonah. And he left them and departed."

Again in Luke xi: v. 29, He says,—

"And when the multitudes were gathered together unto him he began to say, This generation is an evil generation; it seeketh after a sign; and there shall be no sign given unto it, but the sign of Jonas. For even as Jonas became a sign unto the Ninevites, so shall the Son of Man be to this generation."

W. P.

True Witnesses.

Selected.

Elizabeth Kendall, of Manning tree in Essex, was convinced of the Truth in her young tender years, although in the beginning was not sensible what it was that folded her with reproofs, if at any time she was turned out of the way which she was joined she should walk in; which brought anguish upon her tender mind, and made to seek solitary places to pour out her before the Lord, who heard her prayers supplications for preservation, and was alone helper.

Her parents not being at all sensible of her state of mind, and that it was for her soul's sake that it might rest in the day of trouble, and to be very harsh with her, by threatening and using all endeavors to drive her from her thoughtfulness, fearing it would be her ruin. But powerful was that good hand and which was made bare for her support, so the more her suffering increased the nearer she grew.

In this time she was quite unacquainted with death, not knowing there was such a people; some time after, her parents removing to be near which some Friends resided, she became acquainted with them, in whose company she was often refreshed, and her afflicted much comforted.

During of a meeting she found means to go to it, in which, though there were but few spoken, she was melted down as wax to the fire, not wanting to hear words: but sensible that these were the people she was to join with, which she did for peace's sake about the nineteenth year of her age. Her sufferings increase by her part in a more severe manner from her father, he having a great dislike to the name of a Quaker, saying, "I had rather she had been a Quaker than that," and spoke much against her. Yet was she steady and immovable, sometimes having much to say in vindication of the Truth, but he could not bear it, therefore more severe against her. About the twenty-first year of her age, she came forth with public testimony to the great comfort and satisfaction of Friends, which occasioned fresh love to her parents, and made her suffering greater from them, yet it did not alter her ready resolutions in pressing forward in which brought peace, neither occasioned her to show any uneasiness to her parents, but lay her father being in great warmth with her by the arm and thrust her out the door, saying, "Let me never see thee more, if you do not leave the Quakers." He patiently bore it and went to a Friend's house, who gladly received her until her journey was opened. After some time it pleased the Almighty to grant her father a vision of the day-spring from on high, and brought him to a sight of his state and condition, and made him seek a place of refuge. He became willing to suffer and endure the cross, and betook himself to a prospect of way of life and after a considerable time, hearing his daughter was to be at a meeting near where he resided, he privately got to it; in which she was favored to give living testimony to the Truth, and was instrumental to his being fully convinced. At the meeting he embraced her with tears,

saying, "My dear child, hold on thy way, fear no more, thou art in the right." And from that time he constantly went to meetings and continued faithful to the end of his time. Some time after his wife, one son, and another daughter, joined Friends. After some time she settled at Bradfield near Manningtree in Essex, and being freely given up to the Lord's requirements, grew much in the Truth. Her testimony was large, lively, and powerful, to the great comfort and satisfaction of the honest hearted. She was often concerned to go forth and leave all that was near and dear to her behind; was several times drawn to visit Friends in this nation (England), once in Ireland, twice in Wales and Scotland, and in all was well received. She appeared much to the consolation of the afflicted, but as a sharp threshing instrument to the careless and to the stirring up and awakening of many.

A pattern of plainness and true humility, zealous for promoting the Truth, having no greater joy than to see its professors prosper in it, nor sparing any pains to admonish or rebuke where occasion required. For several years before her decease she was attended with great bodily weakness, yet as long as it was possible to be had to meetings, did not give it over. Soon after her being disabled from attending meetings, she was taken with something of the palsy, which afflicted her speech, so that she could not well express herself; but was sometimes understood to say, "I love, I love all;" nothing more pleasant to her than to see her friends. She was often retired in her mind, sweetness appearing in her countenance; a pattern of patience, not finding fault with what was done for her, nor heard to say it was hard she should be afflicted with so many weaknesses, but always appearing in an easy frame of mind with great pleasantness, endeavoring to make those about her sensible she counted it a great favor she was provided for.

She departed this life the nineteenth day of the Second Month, 1765, about the eightieth year of her age, having been a minister about fifty-eight years.

LITTLE can be done for the benefit of others until the great and necessary work is first wrought in ourselves. As a stream cannot rise higher than the fountain from which it issues, so it is impossible for any to instruct others further than they themselves have learned in the school of Christ. Self must be cast out, and all that belongs to it. The silence of all flesh must be attained, the holy command must be obeyed, "be still and know that I am God. I will be exalted among the heathen; I will be exalted in the earth." Let us then seek until we find the prize immortal. Let us be determined to know nothing save Jesus Christ and Him crucified; for unless we are crucified with Him to the world, and the world unto us, we can never rise with Him into life. And why should not we, in this, our day, be as complete as the Colossians, to whom the great apostle writing, said, "and ye are complete in Him."

DANIEL WHEELER.

THE latest astronomical photograph, prepared by the joint exertions of the observatories of London, Berlin and Paris, shows sixty-eight million stars.

Reminiscences.

INDIAN NAMES.

(Continued from page 350.)

"How can the Red Men be forgotten, while so many of our States, and Territories, bays, lakes and rivers bear names of their giving?"

"Ye say they all have passed away,
That noble race and brave,
That their light canoes have vanished
From off the crested wave;
That 'mid the forests where they roamed,
There rings no hunter's shout,
But their name is on yon waters,
And ye may not wash it out.
'Tis where Ontario's billow
Like ocean's surge is curled,
Where strong Niagara's thunders wake
The echoes of the world,
Where red Missouri bringeth
Rich tribute from the West,
And Rappahannock sweetly sleeps
On green Virginia's breast.
Ye say their cone-like cabins,
That clustered o'er the vale,
Have fled away like withered leaves
Before the autumn's gale,
But their memory liveth on your hills,
Their baptism on your shore,
Your everlasting rivers speak
Their dialect of yore.
Old Massachusetts wears it
Within her lordly crown,
And broad Ohio bears it
Amid her young renown;
Connecticut hath wreathed it
Where her quiet foliage waves,
And old Kentucky breathed it
Through all her ancient caves.
Wachussett hides its lingering voice
Within her rocky heart,
And Allegheny graves its tone
Throughout his lofty chart;
Monadnock on his forehead hoar
Doth seal the sacred trust,
Yon mountains build their monument,
Though ye destroy their dust.
Ye see their unresisting tribes
With toilsome step and slow,
On through the trackless desert pass,
A Caravan of woe.
Think Ye the Eternal's ear is deaf?
His sleepless vision dim?
Think ye the soul's blood may not cry
From that far land to Him?"

—L. H. SIGOURNEY.

No doubt many yet living can call to memory the manly form, pleasant smile and voice of our late worthy friend, John S. Comfort.

He was an elder of Bucks Quarterly Meeting before it was joined to Burlington Quarterly Meeting; also a member of the Indian Committee of Philadelphia Yearly Meeting. At one time when on a visit to the Indians at Tusnessa, he attended one of their Councils or Meetings, with some other Friends of the Committee, at which he spoke to them in so interesting a manner as to induce them to confer upon him as a mark of respect and esteem an Indian name, the meaning of which was "one who comforts," or "the comforter."

Joseph Scattergood under date of Seventh Month 17, 1875, writes from Salamanca: "The plan pursued (in regard to dividing the Indian land and examining the leases), is to get all the leases and make a rough map of the lots described, with the assistance of some one familiar with the locations; then each lot to be

numbered on the map, and the corresponding number placed over the description of it, which is copied in a book. In this way the surveyors have no difficulty in determining each leased lot and its dimensions, and this business has fallen exclusively on me since I have been out this time. Having completed the Great Valley leases, I commenced on those of West Salamanca, on the 15th, and finding that notwithstanding the public notice of our wishes to have all the leases brought in, but few came. I went down to the town and went from house to house. In this way I got about (50) fifty. Then I enlisted the services of one of the principal men in making a map of the place, which was done, he knowing the lessee of every lot and the locality. Yesterday I copied the descriptions in all these leases. I hope in a day or two I shall be able to complete it. There are so many leases in this eastern town, that we shall have to employ some one to go from house to house to get them. I shall not stay to see them all recorded, as it will probably take two or three weeks for the surveyor to complete the survey of the three places, already or nearly prepared for him." . . .

In addition to the duties assigned the Commissioners by the act of Second Month, 1875, they were occupied for some weeks by direction of the (Indian) Department in resurveying the boundary lines at the Reservation and marking the corners by suitable monuments. The whole work was not fully accomplished until the close of the year 1876. His last visit to Salamanca made in the latter part of the Twelfth Month of that year.

At this time symptoms of that painful affection of the heart known as "Angina Pectoris" had appeared, which were aggravated by much physical or mental exertion, warning him of the probability of a speedy termination of his life.

His feelings on this subject are thus expressed in a letter to his valued and beloved friend Clarkson Sheppard, under date of Third Month 25, 1877:

"This and other unmistakable signs indicate that I have a very serious complaint, which is said to terminate life very suddenly. The consciousness of this affects me with great solemnity, and induces a searching of heart, which results in an abiding sense of my many deficiencies and unworthiness. I trust Divine Mercy will reach me, for nothing but it can help, strengthen and sustain us when the summons shall come, "Steward give up thy stewardship."

"Count each affliction whether light or grave, God's messenger sent down to thee. Do thou With courtesy receive him: rise and bow; And e'er his shadow pass thy threshold, crave Permission first his heavenly feet to lave, Then lay before him all thou hast. Allow No cloud of passion to usurp thy brow, Nor mar thy hospitality, no wave Of mortal tumult to obliterate Thy soul's marmored calmness. Grief should be Like joy, majestic, equable, sedate, Confirming, cleansing, raising, making free, Strong to consume small troubles, to commend Great thoughts, grave thoughts, thoughts lasting to the end."

AUDREY DE VERE.

DUTY clearly apprehended must be followed.

Evening Meetings.

Account by Joseph Kite of the evening meetings for the Winter season of 1843.

This has terminated our evening meetings for the season.

They were twenty in number and two of them held in silence; in some others but few words were spoken. Friends had been impressed with the belief, that it would be profitable if the widely scattered members of our Society in the city and districts who, spreading with the growth of the place, are some of them miles apart, and further in communication, could occasionally be brought together for the purpose of social worship, where they might mingle in feeling, and know the bands of fellowship strengthened by a united and harmonious labor for the arising of light and life. Yet the importance of holding such meetings to the reputation of Truth, brought doubts and misgivings to the minds of some rightly exercised Friends, and with anxious desires for best help, the measure was concluded on. On the evening of First-day the 13th of Eleventh Month, the first meeting was held; when the wing of Ancient Goodness was early extended over the very numerous assembly, and continued to the end.

This propitious beginning was received by many as "a token for good" nor were they disappointed.

Though several trying circumstances occurred during the winter, they tended to drive the mind closer and closer to the abiding Rock for safe anchorage; and it may be thankfully acknowledged, that during some portion of every evening his presence was felt who is the crown and diadem of all rightly gathered assemblies, and many times the holy covering was as a seamless garment from the Alpha and the Omega.

Very steadily were these meetings attended by many young Friends who will doubtless often recur to them as places for the drawing of water. Many of our sober and inquiring fellow citizens often attended and the solidity of the department of nearly all seemed to indicate that they felt for what purpose these meetings were held.

The solemnity which crowned the conclusion seemed to render the language applicable, "Having loved his own, he loved them unto the end."

[Sketch of some of the public exercises of Thomas Kite and Samuel Bettle, Sr., in some of these meetings have been preserved, and will be given in continuation of this account.]

Thomas Kite at an evening meeting, First Month 1st, 1843, spoke of the darkness which had succeeded the bright portion of every Society, and period of time, and referred to the days of the Saviour and his immediate followers, the glory of which remained for a time after their departure, while the early Christians withstood the persecutions of the world; but when its spirit got in, an eclipse came with it.

After a long period of darkness our early Friends were called to bear witness to the Truth; and many were gathered to them; persecution but purified these faithful children of the morning of our Society; their lustre continued until persecution ceased, when the love of other things caused blindness in part to happen to our Israel.

But from season to season the Lord still raised up amongst us faithful men and women to bear witness for him, and would continue to do so. The ministers now had to hold to the people the same Light which was a guide to our forefathers. When the faith and ceremonies of the old dispensation was abolished, there was no priest left to the Church, but the great Head, yet all who were rightly gathered were of this class, "a royal priesthood, a peculiar people." He was encouraged in believing that the testimony this Society would continue to be upheld, and addressed the young people, encouraging them to faithfulness.

Samuel Bettle in an evening meeting First Month 8th 1843, rose with the text, "I never I was aware, my soul made me like chariots of Amminadab." He referred to the operation of the Spirit, "As the light cometh out of the East, and shineth even to the West, so shall the coming of the Son of Man be," and spoke of our evening meetings being more remarkable for mental prayer and vocal declaration. He remarked upon Grace, and after sundry observations upon its operation, terminated by saying that the labors of the apostles, and nearly all their epistles concluded with commending to the grace of the Lord.

At an evening meeting First-day, 1st Month 22nd, 1843, Samuel Bettle spoke of the remarkable solemnity which had attended our evening meetings, which was a cause of thankfulness; but he believed they would have yet more evidently favored, if we had all leaned to the gift within us, and not looked ward or desired to depend upon the labors of others. He had latterly believed, both in religious meetings, and as he walked by the way in social intercourse, that the Lord was afresh renewing his invitations to many more of whom received the seed; but the love of the world and its riches choked it; one wanted to be doing something and going far, rather than the progressive nature of true religion warranted, and sought an easier way than the searching operations of Truth, and as a result into forms and ceremonies.

He spoke of our forefathers being conversed in all these ceremonies, and welcomed out of them all by the Spirit of Truth, etc.

Muskets in the Stern-Sheets.

Far away in the thirties I was engaged in trading voyages up the Levant. Our master told us one night on deck an incident in the interest of peace.

A ship was short of water and as the weather was calm and settled, the master thought it good to order out the boat with small casks to go ashore in search of water. "And as you don't now what you will get, you had better take half a dozen muskets with you."

The boat landed on a quiet beach within one in sight, and the crew went in search of water. After a long search they returned and found the boat had been seized by a gendarme and they were required to go on board immediately to get what satisfaction could be obtained from the master. The ship had been taken to the nearest port and grave examinations had to be made that no hostile intention was meant by the muskets being on the boat.

the foolish master thought that the firearms
a protection to his crew, whereas they
trouble and delay, and he learned better
to answer the question on a strange
"Comets thou peacefully?"

For "THE FRIEND."

Encouragement of Alcoholic Drinks by our Women Members.

is with a feeling of no little anxiety that
have listened this year to the reports as
in the Quarterly Meetings, more particu-
those in or near the larger cities, and it
oped that by laying this subject before our
s individually they will consider their
of the responsibility for the present con-
of affairs.

members of the Society of Friends we
all familiar from childhood with the query
"the unnecessary use of intoxicating liq-
."

that is unnecessary is a debatable ques-
and can only be answered by each indi-
l. A personal annual inquiry is carefully
systematically made by the Men's Monthly
ings in regard to the use of intoxicants,
we believe there are many women who
d be glad if a similar inquiry could be
of their members. In the Women's
ings the query is answered in a general
and earnest counsel on the subject fre-
ely given, but even this does not reach
large number who do not attend the busi-
meetings. Should not the women feel
it is just as incumbent upon them as upon
men, to be entirely free from the use or
ing of that which is harmful?

is the early habit that is formed and the
taste acquired, which may lead a weak
er into paths that are unsafe. If the
associations have been free from offend-
ing which may lead to temptation, such
doubtless prove a safeguard throughout
business and social life.

ce intoxicating liquors of all kinds are
ly unnecessary in cooking, why cultivate
e for them? While in most families of
society the non-use of wine sauces and
ings in cooking is the rule, it may never-
less not be superfluous to call attention to
particular phase of woman's influence for
ake of others who do not feel this nee-
y, and who, it is believed, will take no
e at this friendly appeal, but rather co-
te in an earnest, prayerful effort for the
mon good. We must also remember it is
ly the members of our own families who
acquire the taste, but possibly our
es, or some of those employed to prepare
tempting dishes, who are unable to with-
in the fumes of alcohol, whether they find
in a bottle of whiskey or in brandy sauce
in the cuisine.

A address to medical graduates, calling at-
tion to the unwise and indiscriminate use
of stimulants in their practice, is sent each
to the various medical colleges. And
ough there is a wide difference of opini-
on as to the value of the medicinal use of al-
colic stimulants, yet, inasmuch as statistics
show that in the Chicago and London temper-
ance hospitals where they are not used, a
greater percentage of the patients recover,

than in other hospitals where they are used,
we hope that if any Friends are not already
convinced, they will investigate for them-
selves, and become, what we as a body have
the name of being, a people thoroughly com-
mitted to total abstinence.

Scientific temperance instruction has been
encouraged in the schools in order to teach all
children the evil effects of alcohol on the hu-
man system. Temperance literature is dis-
tributed among mission schools, factories and
markets and along the poorer streets of the
cities; yet withal are we not losing sight of
the social drinker? Can we sanction the clubs
that are drawing in our members and encour-
aging familiarity with the social glass?

The question has pressed upon us of late
whether we have not a measure of responsi-
bility toward our own members who have not
yet realized the great importance of individual
faithfulness in regard to the use of alcoholic
liquors.

SPIRITUAL GROWTH.

By MARTHA FRISCILLA SPENCER.

Growing in the Spirit,

Dying unto self,

Growing in his likeness,

Yielding hearts to God.

Rom. vi: 11.

Rom. vi: 13.

Growing in the Spirit,

Face unveiled to Christ,

Transformed in his image

By the Spirit's life.

2 Cor. 3: 18, R. V.

Growing in the Spirit,

Crucified with Christ,

Living in the Spirit,

Christ within is life.

Gal. ii: 20.

Growing in the Spirit,

Risen with our Lord,

Seeking heavenly manna,

Through the Spirit's word.

Col. 3: 1-3

Growing in the Spirit,

Abiding in his word;

Fruit unto the Spirit,

Peace and joy and love.

Gal. v: 22.

Growing in the Spirit,

Tongue and lips aflame;

Working in the Spirit,

All in Jesus' name.

Acts ii: 4.

Acts iv: 12.

Growing in the Spirit,

Walking in the light;

Fellowship with others,

Robes all spotless white.

1 John i: 7.

Growing in the Spirit,

A living sacrifice;

Christ within resplendent,

Hope beyond the skies.

Rom. xii: 1.

Col. i: 27.

Titus 2: 13.

Servant of All.

There was the deepest practical wisdom in
the saying of Christ, "He that will be the
greatest among you let him be servant of
all."

It is not agreeable to one's natural inclina-
tions to be a servant, much less to be
the servant of many masters. To be called
hither and thither, and ordered about by
one and another, is, to many persons, ex-
tremely distasteful; but this was precisely the
training which our Lord prescribed for those
who would be advanced to fill the highest posi-
tions. He that seeks to be greatest must be
"servant of all."

He that would be wise must know himself a
fool, he that would be great must become as a
little child, and he that would be chief must be
"servant of all."

We knew a man who once went into a paint-
er's shop seeking work. "What can you
do?" "Well, I can do plain lettering, and I
can fill up letters; and if you can try me you
will find out what else I can do." The man
hired him, and he went to work. The next
morning he came down to the shop half an
hour or an hour earlier than the other hands,
and swept the shop out and cleaned it up,—
something that apparently had not been done
for months. His tardy fellow workmen came
and saw what he had done, and sneered at
him "He is a fool." "He is trying to do
something great." But he kept about his
business, and he understood it, too and in a
fortnight's time he was foreman of the shop,
and the rest of them had to come to the
"fool" to get their orders and their work.
He was willing to be a servant of all and he
soon came to fill an honored place. What boy
will learn a lesson from Arthur?—*The Chris-
tian.*

The Complaining Preacher.

Some years ago, a pastor of a small church
in one of the villages of Indiana became ex-
ceedingly discouraged, and brooded over his
trials to such an extent that he became an in-
evitable grumbler. He found fault with his
brethren because he imagined they did not
treat him well. A brother minister was in-
vited to assist him a few days in a special ser-
vice. At the close of the Sabbath morning
service our unhappy brother invited the minis-
ter to his house to dinner. While they were
waiting alone in the parlor he began his do-
leful story by saying: "My brother, you
have no idea of my troubles, and one of the
greatest is, my brethren in the church treat
me very badly." The other propounded the
following questions:

"Did they ever spit in your face?"

"No; they haven't come to that."

"Did they ever smite you?"

"No."

"Did they ever crown you with thorns?"

This last question he could not answer, but
bowed his head thoughtfully. His brother re-
plied: "Your Master and mine was thus
treated, and all his disciples fled and left him
in the hands of the wicked. Yet He opened
not his mouth."

The effect of this conversation was wonder-
ful. Both ministers bowed in prayer and ear-
nestly sought to possess the mind which was
in Christ Jesus. During the ten days' meeting
the discontented pastor became wonderfully
changed. Some weeks after a deacon of the
church wrote and said: "Your late visit and
conversation with our pastor have had a won-
derful influence for good. We never hear
him complain now, and he labors more prayer-
fully and zealously."

The Bible says: "Rebuke a wise man, and
he will love thee. Give instruction to a wise
man and he will be yet wiser." The above in-
cident shows the power of the gospel as seen
in Christ's sufferings, to subdue pride, and
cast out discontent. Read Matthew xxvii, or
John xix, to any fretful, gloomy, or discontented
Christian. It will be efficacious, like
the balm of Gilead.—*Christian Press.*

Dokhobor Notes.

COMPILED BY J. E.

J. S. E. writes Fifth Month 1st: "This morning brought the time for parting with Hugh Harley and it was with very tender feeling and affection that we each felt that it had been a Providence for us to have been together on our present mission.

"After getting our supplies we started off in pretty good condition and crossed the Assiniboia on an iron bridge. This was accomplished much more easily than Eliza H. Varney did on a certain memorable night as also, on another occasion, when the horses plunged through the river while I crossed on a flat boat.

"We had the experience of passing between two prairie fires and it was quite warm enough for us, but the ruts of the road had seemed to stop the fires from crossing it.

"In one meeting we had an animated time after reading (the address). One Dokhobor, who was a blacksmith, took the ground that none of God's laws were written. This gave me a keynote and I quoted to the contrary that there were several instances recorded in the Bible where it was commanded for some things to be written which were revealed by the Spirit of God. The apostle John (for instance) was told to write what the Spirit of the Lord said to the churches, and holy men of old wrote of the dealings of the Lord with his people.

"It is pretty plain, however, from what was said in this and the next village that when the subject of marriage is touched upon or the registry of their marriages, births and deaths that the Dokhobors feel that the discussion is on forbidden ground.

"It is a question whether the Territorial government would not have done better to have waited awhile before insisting upon this requirement, with the penalty of fifty dollars for refusing information, as the Dokhobors have used this fact to say the Government is against them, especially as some mischief maker had told them that an oath is required with the registry—the latter statement being flatly denied by Hugh Harley."

The Government has instructed its Registrars not to press the matter, and J. S. E. says "as far as it goes this will make for peace," and he adds "as with schools so with giving their signatures the Dokhobors will only bear so much."

At the village of Terpenie "the chief speaker who sat next (to J. S. E.) seemed as nice as nice could be in his manner of giving a welcome and in adverting to what Friends had done for them and how comforting the letters of Elizabeth C. Dunn had been to them.

"On breaking up the meeting they manifested a very friendly feeling and when I told them I thought to go through their houses to see the children they said they would like me to do so for the children loved me; so I had a little troop of them from house to house leading one by each hand.

"At the village of Proterpovsky Grandmother Verigen received me with a warm heart in her nicely furnished room. She had been presented with an easy chair by Rose M. Osborn and other furniture in her house was in keeping with it. I saw the first oil cloth on her floor."

For "THE FRIEND,"

Grandmother Verigen has failed considerably during the past two years but she hopes to see her son Peter, (who is still in Siberian exile), this fall. She said her prayers were that she might live to see him again after sixteen years of separation. Her faithful daughter was sick and this together with the objection which some of the Dokhobors expressed about applying for their land in severity was a great trial to the old lady—who had urged their men to comply with the law.

The men of the village were assembled in her house and after this meeting a supper was provided, of which J. S. E. says, "I prized the privilege of partaking with them at the table and for an hour or more after tea it was a high order of enjoyment. After she retired I had a nice visit with six of her grandchildren."

"Grandmother Verigen's trials in life have been of no common order and she is justly honored by her people"—one evidence of this was the carriage which she had bought for her and of which J. S. E. had the use.

She married Vasil Verigen when about sixteen years of age—some seventy years ago. About ten years after their marriage her husband was trading with Tartars at some distance from his home. They invited him to stay with them over night which he at first declined, saying he had left two women and three children alone at home, but upon being pressed accepted their hospitality. That night some Tartars went to his house and his brother's wife went to the door. She was killed on the spot and the house ransacked. His wife tried to hide herself upon the top of the oven but she was pulled down and beaten nearly to death, being kicked under the bed and left with four frightful wounds, for dead.

A grandson of Anastasia Verigen accompanied J. S. E. about this village pointing out the school building recently erected by the Dokhobors. It has a basement designed for a workshop. The youth said, in English, that a Dokhobor was expected to act as teacher.

On parting with the grandmother she reminded J. S. E. how he had visited her grandson during a previous visit when he was sick, and her gratitude was very manifest both for the recovery of the lad and for this visit.

On going out of her door he was confronted by quite a company of boys and girls who wanted to chant a hymn for him as an expression of their love.

At the next village he met with their men in conference—some of these Dokhobors had the idea that the penalty attached to the failure to register their births, marriages and deaths was a threat of persecution—such as they had experienced enough of in Russia. They did not want to comply with that or the severity law but J. S. E. told them they were getting one hundred and sixty acres of land for ten dollars and he did not believe any persecution or deception was intended on the part of the Canadian Government and further that he deprecated the influence of certain socialists amongst them; "that it could not be supposed any nation would consent to a body of people being admitted into their midst who would not submit to the legal regulations intended for the good of all; but while my prayer was for the enlightenment of their conscience I would not contend further."

J. S. E. then went through their houses

speaking to the women and children which much appreciated. One of the men of the lage spoke of John Bellows and Edmund Brook's visit to Russia three years ago.

One evening in attempting to go from village to another the driver lost his road it resulted in five hours of wandering about on the prairie in total darkness without idea where they were until about one o'clock they came into the same village from which they had set out.

This was a very memorable ride for it went over two bridges in the dark; as it approached the last one J. S. E. got out of the carriage and walked behind it so he would not off the edge of the bridge, in case the carriage was overturned. The driver had led the horse for two or three miles and when they found themselves safely sheltered for the night 1.30 a. m. J. S. E. says, "It did not take to get off my boots and coat and letting my jacket stay on to lay myself down on the fixed for me. At breakfast time I was to wait to snoring five minutes after I laid down and I replied 'that is what I went to bed for'."

"When it was light enough to count the household lying around me on the beds and benches of the room,—there were four or three women, two children, a cat and a dog. The hostess came down from the top of the oven pretty early.

"The host and hostess manifested much hospitality and our return to the village aroused a very kindly manifestation on part of others and I felt our cause was furthered.

"We learned afterward that we were alone at the village for which we started the evening before, when at the point where the driver lost his faith and yet one man told us that had gone over the road we were on and that he could not get on and had to turn back.

"I said in my heart as I travelled in the dark if the Lord permitted us to get where started from, a certain woman who had a broken leg in that village should have five dollars and this was sent to her with this promptly 'It was not without tears that I received this present from you. Your kindness is very dear to me, dear grandpa, in time of our journey. May the Lord save thee in this life may He not keep from thee the kingdom of heaven. All our family thank you; may the Lord save you all. Polia Chursinova."

J. S. E. had called upon this woman the evening before and felt an impression to leave some money with her but as that article was disappearing he left without doing it, which he said "did not rest with me comfortably."

When at Grandmother Verigen's house the daughter said, "We are going to have to go. God will give it to us, we are going to agree which J. S. E. said "was a pleasant surprise my ear." He had been speaking of grief her mother felt at the attitude of some of the men.

(To be continued.)

"It is another man who will go on, a man within this man; and that he may go on first man must stop."

ONE hundred and seventy-two species of blind creatures are known to science, many more are constantly being discovered in great caves.

ently "Dr. Horton," of the Hampstead pulpit,
gland, who had offered to discuss questions
might be proposed by members of the con-
tion, undertook the following :
"What is the ultimate authority in the Chris-
religion?" In introducing the discussion,
he *London Friend*, Dr. Horton referred to the
distinct that led men to look for some ex-
t authority in religion to which they could
tely submit themselves. At first they found
authority in the Church, but when the Refor-
mation overthrew the authority of the Church the
ect was still so strong that Protestants set up
ble in place of the Church. Dr. Horton re-
the main point of his sermon, that the real-
ity is the *Christ within*, the Christ whose
and character are recorded in the Gospels.
ous questions were asked, among others
er the placing of the authority of Christ
a man did not tend to make religion purely
tive, and, in fact, to make conscience the
e authority? And another person queried
at the close of Christ's earthly life his
pers were not left to a less authoritative
e than that of Christ himself, under the
sation of the Spirit? In his reply Dr. Hor-
ld the "dispensation of the Spirit" was not
than that of Christ. It was really Christ
oke through the Spirit. It was expedient
to go away. Instead of the relation with
dly Christ without, his disciples now had
our relation of the spiritual Christ within.
death he had entered the spiritual sphere,
was present everywhere as a living teacher
thority. The questions and answers are of
that must keenly interest many Friends."

DARDING-HOUSE FOR FRIENDS :

Friend.—In looking over some old copies
of *FRIEND*, I came across this extract. It
seems to me there is a loud call to-day for just
such a place in this city.

Sincerely,

EDWARD L. SOUTH.

PHILADELPHIA, Fifth Month 16th, 1902.

Without imputing to our friends residing in
Philadelphia any want of hospitality, yet from the
point of view of so many parts quite remote and
separated, it does appear desirable that a
home should be provided, where those visit-
ing the city on business of the Society as well as
on other occasions, could, for a moderate com-
pensation be accommodated with comfortable lodging
facilities. Such a home properly conducted,
if it is apprehended, be found also to be a
convenience to many even in the city, not
keepers, who would be glad to avail them-
selves of the opportunity to obtain quiet, pleasant
rooms, and where, as desire prompted, they could
find a social way with those holding similar
views and feelings. Friends are a social people,
and feeling themselves restrained from much
necessary intercourse with people of the world
over religious persuasions, do feel at times
want of the Society and sympathy of their fel-
low members. There is also an advantage in
mingling together—asperities are rubbed

off, and prejudices many times removed; and if
access were had to a good library, it would add
greatly to the advantages of such an institution."

Notes From Others.

"Speaking once to an assembly of young soldiers,
Ruskin faced them with this: 'If you cared to do
your duty to your country in a prosaic and unsen-
timental way, depend upon it there is now truer
duty to be done in raising harvests than in burning
them; more in building houses than in selling
them; more in winning money by your own work,
wherever to help men, than in other people's work,
taxing for money wherewith to slay men; more
duty, finally, in honest and unselfish living than in
honest and unselfish dying, though that seems to
your boys' eyes the bravest.'"

"Then he turned to the ladies present, and told
them to their faces that 'the rage of battle
throughout Europe' was greatly due to them.
'You women of England,' he cried, 'You women of
England are all now shrieking with one voice—
you and your clergymen together—because you
hear of your Bibles being attacked. If you choose
to obey your Bibles, you will never care who at-
tacks them. It is just because you never fulfil a
single downright precept of the Book that you are
so careful for its credit; and just because you do
not care to obey its whole words, that you are so
particular about the letters of them. The Bible
tells you to dress plainly, and you are mad for
finery; the Bible tells you to have pity on the poor,
and you crush them under your chariot wheels;
the Bible tells you to do judgment and justice, and
you do not know, nor care to know so much as
what the Bible word 'justice' means. Do but
learn so much of God's truth as that comes to;
know what He means when He tells you to be just;
and teach your sons that their bravery is but a
fool's boast, and their deeds but a firebrand's toss-
ing, unless they are indeed just men and perfect in
the fear of God; and you will soon have no more
war.'"

The Vicar of St. Paul's, Peterborough, replying for
"The Clergy," at a public dinner, had the courage
to say, as he might have done to any profes-
sedly Christian nation: "It is not honest, or playing
fair with the Almighty, to pretend that English-
men in the collective sense are a religious or
Christian people. Englishmen as a nation believe
in justice and fair dealing, but when it is said that
England is a particularly religious nation, speaking
of the majority of the people, I answer, No. We
like to have a little religion, just enough to die on.
We do not want too much of it. The sudden access
of religious zeal is all very well, but God cannot
be turned on like gas." "This has a queer uncon-
ventional sound, but it is big with sense and real
reverence. There have been a good many attempts
lately to turn Him on and off like gas."

"How is it, my dear," inquired a school-teacher
of a little girl, "that you do not understand this
simple thing?"
"I do not know, indeed," she answered, with a
perplexed look; "but I sometimes think I have so
many things to learn that I have not time to un-
derstand."—*Schoolmaster.*

The Post Check Currency question is still justly
exciting considerable interest amongst the public,
particularly that part of it which has to transact
business requiring the sending through the mail of
small sums of money. From all quarters come
hearty press endorsements of this feasible and use-
ful scheme for the transmission of money through
the mail. The best part of the plan to us is that
it provides for the use of a fractional currency.
When a man wants to send a small amount of
money through the mail, all he has to do is to take
from his pocket the needed amount and write across

it the name of the person to whom it is to be paid.
The transaction is then complete. By all means,
let us have this Post Check currency.—*Ex.*

One objection of an Association against Secret
Societies, given on page 343, was "Because they
substitute in their claims and in the minds of many
of their membership the secret society for the
Christian Church." The meaning was obscure to
us, while the circular, which was quoted, read "of"
instead of "for" the Christian Church. But a
correspondent correcting the word, adds: This ex-
presses an objection that has often struck me with
much force." Also, as to some open associations,
he remarks: "Dwelling so much on the one sub-
ject, tho' it may be a very important moral reform,
it is liable to become too nearly the sum total of
their Christianity."

SPARTAN SCHOOL FOR BOYS.—Prof. Ringel, of
Skegining, has opened a Spartan school for boys,
says a Berlin correspondent of the *New York World*.
His pupils wear loose flannel jackets without
sleeves, tightened at the waist with a leather girdle;
flannel trousers, and sandals without socks.
That is all. The food is the simplest possible—
biscuits, lean meat and vegetables, and that in
very moderate quantities.

No boy is allowed to be idle for a moment. If
his studies are ended he must begin another sort of
work, if it is only cleaning windows. Absolute
cleanliness is enforced. The boys are constantly
washing, swimming, scrubbing their bodies or
scouring their clothes.

In summer the boys rise at 4.30 o'clock, in win-
ter at 6 o'clock. The greater part of the time
they spend in the open air, and most of their les-
sons are prepared out of doors. Sickness is prac-
tically unknown. The lads are encouraged to bear
pain of all sorts, although cruelty is forbidden.

The success of the establishment has been so
great that Ringel intends to open a girls' school
soon on the same lines. His idea about girls, how-
ever, is that they are not to be taught as scholars,
but to become good housekeepers. The less a
woman knows outside of her own house, says Prof.
Ringel, the better.—*More Spartan than Christian.*

"They did the thing that they were set to do."
On very ancient authority we are told that if ten
such men could have been found in Sodom, even
Sodom would not have been destroyed. It would
have been better had there been fifty, but ten were
enough to save it. And it is well for us to reflect,
as we ponder over our daily tales of theft, of
adultery, of murder, and of other crime, that it is
because of the righteous men and righteous women
who are every day quietly doing their share in
the business which they and God have in hand,—
it is because there are enough of such men and
such women that our city, our State, and our coun-
try prosper and are strong.—*E. E. Hale.*

TWO TEXTS.—I was in a small company of men
recently, when for a moment the conversation
turned on the subject of the present wars. One
said, "O, it's all right. It will work out for good
in the end. You know the text: 'Surely the wrath
of man shall praise thee.' " (Ps. lxxvii, 10.)

I said to him, in reply: "There is a much better
text than that, and from the New Testament, not
the Old, from the Christian dispensation, not the
Mosaic. It is in James i., 20, 'The wrath of man
worketh not the righteousness of God.' " Apparent-
ly none of the company present was acquainted
with this passage of Scripture.—*Messenger of Peace.*

The *Troy Press* notes the presidential assassina-
tions in this country, beginning with that attempted
on President Jackson, as contemporaneous in each
instance with militarism,—that of President Gar-
field, brought out by the spoils system, being
scarcely an exception.

SUMMARY OF EVENTS.

UNITED STATES.—A strike of miners in the anthracite coal region has been ordered, which throws 147,000 men and boys out of work as a direct result, and incidentally causes a partial suspension of other industries employing tens of thousands of men.

A congregation of Roman Catholics at Hanleton, Pa., acting under the advice of their pastor, J. V. Hussie, pledged themselves to refrain from intoxicating drinks during the strike. It is said fully 2500 persons made this promise.

A despatch from Baltimore of the 13th says:—The seismograph in operation at the Johns Hopkins University shows no record of any disturbance of the earth's crust here concurrent with the volcanic outbursts which are devastating and remodeling the West Indies. The seismograph at the observatory recorded the several phases of the recent Guatemala earthquake in considerable detail. Magnetic disturbances coincident in time with the eruption at St. Pierre on the 8th instant were observed at the two coast and geodetic survey observatories, the one situated at Cheltenham, Maryland, sixteen miles south-east of Washington, and the other at Baldwin, Kansas, seventeen miles south of Lawrence.

The President has appealed to the public to contribute generously for the relief of those upon whom the calamity of Martinique has fallen, and asks that the contributions be sent in as speedily as possible. The President directs all the postmasters throughout the country, and requests the presidents of all the national banks, to act as agents for the collection of contributions, and to forward the same at once to Cornelius N. Bliss, Treasurer, New York. The postmasters are also directed to report to the Postmaster General, within ten days, any funds collected on this account. Large amounts of money have been received in response to these appeals. Two vessels have been despatched to Martinique with more than thirty days' rations for 50,000 people, together with a proportionate amount of clothing, etc.

In looking over the annual money bills which have passed the House and Senate during the present session it appears that the appropriations already made aggregate about \$725,000,000. This does not include all of the general appropriation bills.

Andrew Carnegie has acknowledged that he had offered to pay \$200,000 for the Philippine Islands, provided he was permitted to announce to the Filipinos that their independence would be acknowledged ultimately by the United States. In commenting upon this it has been remarked that the war against the Filipinos had already cost the lives of over 4,000 American soldiers, maimed 6,000 more, invalidated many thousands and drawn out of the \$450,000,000 from our National Treasury, including the appropriations just made.

A letter from President Roosevelt to the Episcopal bishop of Massachusetts has been made public, in which he says: "I hope it is unnecessary to say that no one in the country can be more anxious than I am, save perhaps Secretary Root, to discover and punish every instance of barbarity by our troops in the Philippines. In reference to these cruelties, I agree with every word in your address. No protest is more powerful than that which is based on the misce of the necessary severity of war, and above all for torture of any kind or shape. The investigation will be of the most thorough and sweeping character, and, if necessary, will be made by the civil as well as by the military representatives of the Government in the islands."

A despatch from Washington says: "The Senate Committee on Indian Affairs has ordered an investigation of the charges that Indian Commissioner Jones is interested in the leasing of the lands of the Standing Rock Sioux. The President has asked George Bird Grinnell to go to Standing Rock and report on the lease question. The injunction suit brought by the Sioux, which was decided against them by the District of Columbia Supreme Court, will be appealed to the United States Supreme Court."

The House of Representatives has authorized the publication of a document of 9,000 copies of a compilation made by Thomas Jefferson from the New Testament, in which the passages which relate to the divinity of Christ are excluded. The proposed publication is to have as its introduction of about twenty-five pages written by Dr. Cyrus Adler, of the Smithsonian Institution, a Jew. This book, which would complete the publication of Thomas Jefferson's writings by Congress, has been strongly objected to by representatives of different denominations as unwise, uncalled for, and an improper use of the public money.

The Chicago and Northwestern has placed in service between Omaha, Neb., and Chicago one of the fastest passenger trains in the country. The train makes the run

in eleven hours, at an average speed of a mile a minute for the entire distance.

A health commissioner in Chicago recently decided to investigate the statement that a rain or snow storm will purify the atmosphere. He tested portions of the air of the city on a certain day before a snow storm. His test showed an average of 630 colonies of growing germs—the least number was 1,050, the smallest 350. After a rainfall equivalent to 1.28 of an inch of rain, he repeated the experiment, and found the average number of colonies to be sixty-six, ranging from nineteen to 180.

It is announced that the hardware combine, known as the National Hardware and Metal Company, has fallen through. Some of the largest hardware companies have withdrawn from the scheme. The Bureau of Entomology at Washington has sent out 5,000 circulars to observers in different parts of the country, asking for reports in reference to the 17 year locusts, which are expected to appear this year in different places in New Jersey, Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Tennessee, Kentucky, Ohio, Indiana, Illinois, Michigan and Wisconsin.

There were 396 deaths in this city last week, reported to the Board of Health. This is 60 less than the previous week and 50 less than the corresponding week of 1901. Of the foregoing, 206 were males and 190 females; 10 died of consumption of the lungs; 40 of induration of the lungs and surrounding membranes; 12 of diphtheria; 14 of cancer; 14 of other diseases; 1 of typhoid fever; 3 of scarlet fever, and 1 of smallpox.

FOREIGN.—A despatch from St. Lucia of the 13th says: The Soufriere volcano, on the island of St. Vincent, is still in destructive eruption. A terrific cannonade can be heard a hundred miles away. The reports are followed by columns of smoke, rising miles in the air. Immense plumes of colored fire also issue from the crater. Lightning is playing fiercely in the upper sky, and the whole northern part of the island is one mass of traveling flame. It is impossible to reach the burning district by land or sea, and there are no means of estimating the destruction wrought to life and property.

Among the killed are a large number of Carib Indians, a few individuals of whom only remain on the islands of St. Lucia and Dominica.

On the 15th the earth quaked incessantly, the mountains shook, stones, lava and great quantities of ashes never ceased to fall. So terrible were the thunders that it seemed to the terrified that the earth was being rent to pieces.

The atmosphere was so laden with sulphurous gas that life was made almost impossible. It is believed that many of those nearest to Soufriere were suffocated by the gas which they were touched by the burning lava.

Seventeen hundred persons are said to have perished in St. Vincent.

A despatch of the 16th says: No one has been able to approach nearer than five miles to the crater of the St. Vincent Soufriere, which still shows signs of activity. Scientists believe that a general expectation that stopped emptying, and there is a general expectation that there will be another and severe explosion.

The island is constantly in a tremble. Earthquakes follow one another in quick succession. They are not sufficiently severe to do great damage, but they fill the inhabitants with fear, and if they were possible to obtain transportation it is safe to say that St. Vincent would be depopulated in twenty-four hours.

It is estimated that 2,000,000 tons of volcanic dust from the eruptions at St. Vincent have fallen on Barbados.

A despatch from Fort de France, Martinique, dated the 17th, says, that during the previous night fifteen violent detonations from Mont Pelee were heard, and that they were accompanied by lightning which lit up the entire island. The eruptions redoubled in violence, says the despatch, and the moment a second catastrophe was feared. New craters are forming in the neighborhood of Le Rocher.

In spite of the danger which threatens them the refugees from the northern part of the island are beginning to return to their homes.

Chinese advisers give the following as among the objects of the Manchus: the overthrowing of the present dynasty; the founding of a new dynasty, with a Chinese Emperor on the throne; the helping of the oppressed and needy. They also say, "be it known that the Western people are not to be interfered with; their lives are to be protected and their trade not to be meddled with. Let them go in peace. We are the enemies only of the Manchu dynasty."

Earthquakes are reported from the southern part of Portugal. The disturbances are supposed to be connected with the upheavals in the West Indies.

A despatch from St. Petersburg of the 15th, says: Enormous crowds of starving peasants are flocking to Moscow from the central provinces in search of food and extension. Half a dozen freight trains, each carrying 1500 persons, are despatched daily from R. to about a hundred miles from Moscow, in addition to the ordinary traffic. The railroad station at Riazan is so crowded to hold the refugees, and the wretched condition of the open air, suffering from rain, cold and hunger.

Alfonso, the young King of Spain, attained his majority on the 17th inst.

On the line of the proposed Nicaragua Canal are both active and semi-active volcanoes. At no distance from the route planned, is the volcano of Paraguar, which in 1835 was in a state of eruption. So far as the Panama region is concerned, there are no canoes on or near the proposed route of the canal. It is stated that the members of exploration parties returning from the polar regions are always in poor health, owing to the purity of the air and complete absence of all harmful microbes. In the polar regions bronchitis, laryngitis, influenza and other contagious diseases are said to be unknown.

It is said that 1,500,000 people in France and subside mainly upon food made from chestnut flour. The Russian Government has ordered the installation of the Shaly-Arc system of wireless telegraphy between the stations on the Baltic coast.

Official statistics show that there are 17,000 children in Russia between the ages of six and ten receiving absolutely no education.

During the last century the population of London increased nearly five-fold.

NOTICES.

WESTTOWN BOARDING SCHOOL.—For convenience of persons leaving to Westtown School, the stage will leave for Westtown 7.16 and 8.18 A. M., and 4.40 P. M. Other trains are met when required. Stage fare, fifteen cents; after 7.30 P. M., twenty cents each way. To reach the school by telegraph, West Chester, Phone 114x.

EDWARD G. SMEDLEY, S.

WESTTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in relation to discipline should be addressed to W. F. WICKESHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent. Address, Westtown P. O., Chester Co., Pa.

The Managers of Barclay Home, West Chester, desire to inform that the Home is now complete and through the kindness of its many friends, the debt of the property has been paid. Owing to two recent deaths in the family there are now some vacant rooms for whom a Friend desiring a comfortable home at a moderate rate would find it to her advantage to apply.

A REUNION OF THE WESTTOWN OLD SCHOLARS ASSOCIATION is arranged to be held on Seventh-day, Six 7th, 1902, on the School grounds, and in the large tent.

Besides the entertainments announced last week, speakers are expected to be: "Sixties," Sarah W. Ekin; On behalf of the "Forties," David Scull.

Trains will leave Broad St. Station at 8.10, 9, 9.55 A. M., the last expected to run to Westtown forty minutes, without stop.

The individual invitations will be issued about March 23d.

Friends' Library, 142 N. 16th St. Phila. Open on week-days from 11.30 A. M. to 2 P. M., and 3 P. M. to 6 P. M. New books added, including the following:

BURGESS, J. W.—Reconstruction and the Constitution. BUTTERWORTH, Russell—The Days of Audubon. CURTIS, W. B.—The Days of Thomas Jefferson. DE COCKREY, of Hazzell—Year in a Yawl. GRINNELL, Morton—Neighbors of Field, West Stream. MULLER, F. Max—My Autobiography. SCHWARTZ, G. F.—Forest Trees and Forest Scenery. SHARP, D. L.—Wild Life in the Empire of Germany. TSCHUDI, Clara—Napoleon's Mother.

any who try to escape suffering wrong by wrong, become the worse sufferers.

newness of "the new preaching," when the true preaching, is not its novelty, but newness of the Spirit;" because in each age it is fresh from the Fountain.

only in our sense of the sinfulness of self, we have a sense of its cost to our Saviour; and in a sense of its cost can we further appreciate its sinfulness.

often mistake their personal customs and religion for permanent conditions of salva-

he says a contemporary, and truly. But personal practice sincerely believed to be one by the witness for Truth, becomes religion of salvation for him. His mission should consist in laying it on others also, and it was for him.

with the heart a man believes unto righteousness, his intellect will be drawn as his reads. It will be a valuable servant of truth.

if it is principally with the head or intellect that a man believes, there is not much in his belief, or faith in his heart. His religion of scholarship, but not of science. And while natural reason or science his authority for the spiritual realm, but is unsatisfied, and his intellect much is enriched.

The Blunder of Plunder.

amount of a single metal, calcium, in a body.—three pounds and thirteen ounces quoted as worth about \$18,300. If even at much less a price, were as ready

for the market as are the bones which contain it, our lives would be very unsafe. But it is the labor of extracting the calcium that puts its price at three hundred dollars an ounce. And this labor safeguards it from those who would break through and steal.

Its situation beyond the robber's reach, and not the sacredness of life, protects coveted treasure from being grasped, whether by robber nations or combinations, or by robber men. Individuals are not slow to conform their conscience to their nation's moral code. If they see thousands of foreign skeletons bleaching for harvests of gain expected, and are publicly by press and legislature taught to call all this a process of civilization, in that a mammon end justifies a murderous means; then they with less scruple may push their enterprises at home, to extort the price of blood, to coin the sweat of their neighbor's brow, or to exact their entrance tax at each one's mouth for every pound of meat.

Covetousness, according to the apostles Paul and James, is largely the secret root whence wars and fightings among men come. We dread to think how conquered territory is yet to be parceled out to speculators, and by whose enforced labor worked. What is done at home, under legal forms, is a sign of what unchristian civilization has the heart to do, where bounds to grasping seem melted away by distance and irresponsibility.

"As for me and my house" being responsible for letting "others do as they may," more is involved than we are accustomed to think. It is a home work,—this christianizing our civilization here, that it may be less barbarous in our exploiters there. Right here in our midst, here at each one's door,—nay, into our very heart, can one too much of the missionary come. The Spirit of Christ, God's missionary to each heart of christendom and of man, is christendom's crying need. He alone can qualify emissaries to be trusted with the property and welfare of a subjugated people. If ever a civilized nation blesses natives eastward as much as it has blasted them westward, it will be because the new Christianity has gotten a hold on us as a people—the Christianity of Christ in the heart.

Sad that it should still seem so new. But may we cherish a hope that the comparative honorableness of our nation with China in the

loot-war and extortion of others who have taught her that the tender mercies of the "Christian" are cruel; and towards Cuba, in the fulfilment of our great pledge before the nations, is an earnest of coming benevolence to survivors of our sword elsewhere.

Each individual Friend is a committee of one, whether assigned by a Yearly Meeting to a district or not, to give place to the missionary from on high, the Son and Sent of the Father, for the furtherance of Christ's kingdom in him and through him, to the extent of his field of service. With field thus added to field of influence throughout our borders, we little know how far the national spirit would be leavened, or what a difference would go forth to parts beyond. We know only that we should thus be innocent of the great transgression, and that the kingdom of heaven on earth is like a little leaven which a woman hid in meal. And the leavening influence of a woman, especially if spiritually a Friend, has a far reaching responsibility. Is my or thy measure of the Spirit of Christ rightly dedicated in our hearts and placed in our surroundings, to work from man to man so wide a change? It shall not return void.

FOR "THE FRIEND."

On the Subject of Plainness.

The departure from plainness in appearance and language by so many of the members of the Society of Friends at the present time, has been cause of sorrow to me, knowing as some of us do, that these things were purchased by many of our early Friends at so dear a rate that some of them would have willingly sacrificed their natural lives rather than to have yielded to the cross. I was comforted of late in reading an article in the fortieth number of the present volume of THE FRIEND, over the signature of Cyrus Cooper; and also in the forty-first number, the production and selection of D. H. of Coal Creek, Iowa; all of which I desire may be perused by our dear young Friends in a particular manner. I also feel like inserting here a short extract from the life of that faithful minister of a past generation, J. Griffith, to be found in Friends' Library, Volume 5th, pages 372 and 373.

E. S.

COAL CREEK, IOWA.

EXTRACT.

"I have further to remark, that I have observed a prevailing disposition in some of considerable eminence in society, and in a great many others, to cry up for peace and charity, and the maintenance of unity, and not to press anything very closely, lest the peace of the

Society should thereby be endangered; although perhaps, the things urged cannot well be objected to upon any other principle than groundless fears and a faint heart not yet quite upright to God, nor wholly redeemed from the praise of men; as there is an unwillingness to displease them, though in maintaining the Lord's cause. "For if I yet please men," said Paul, "I should not be the servant of Christ." What makes me take notice of this, is, that I have seen a great snare in it, wrong things being suffered to remain and prevail under it, and the fire of primitive zeal against undue liberty much quenched. We have no such example in the prophets or in Christ and his apostles, of indulgence and winking at wrong things and false ease. They in their concern to testify against such things, had no fear of breaking unity nor disturbing the quiet and peace of any people, let their rank or station be what it may generally exercised in plain dealing and may. Had this noble spirit of ancient zeal been speaking the truth one to another, the mournful declension justly complained of amongst us as a people would not so generally prevail."

And on page 373 he says, "Oh! how doth covetousness, which is idolatry, and an inordinate love of things lawful in themselves, and places, cloak and shelter themselves under a plain appearance in some. Yet plainness is not more to blame for that, than the name disciple or apostle was to blame, because Judas once bore it."

Those Little Hurts.

A thoughtful writer says: "Taking life through and through, the larger part of the sadness and heartache it has known has not come through its great sorrows, but through little, needless hurts and unkindnesses; not so much through the orderings of Providence as through the disorderings of humanity. Look back and you can readily count up the great griefs and bereavements that have rent your heart and changed your life. You know what weary months they darkened. There was a certain sacredness or dignity, like the dignity of a lonely mountain top in their very greatness, and looking back, if not at the time, you can often understand their purpose. But, oh! the days that are spoiled by smaller hurts, spoiled because somebody has a foolish spite, a wicked mood, an unreasonable prejudice that must be gratified and have its way, no matter whose rights, plans, or hearts are hurt by it! There are so many hard places along the road for most of us, made hard needlessly, by human selfishness, human neglect and human obstinacy, that the longing to be kind and tender should grow stronger in us each day."

And then again there are many people in ordinary circumstances who are millionaires of cheerfulness. They make their neighborhood brighter, happier, and a better place to live in by their presence; they raise the value of every lot for blocks around them.

The world is beginning to see that people who can radiate sunshine and carry gladness and good cheer wherever they go, although they may be poor, are of infinitely greater value to society than the millionaire of money who paperizes everybody who comes in contact with him by his close, oppressive methods. Largeness of heart and generosity of soul make millionaires of character, who are

worth more to the world than mere moneyed millionaires. The time will yet come when we shall not have to depend on rich furnishings. Character will become so enriched in the upward growth of the world that the surroundings, however costly, will be considered but a cheap setting of a precious lifestone. Cheerfulness is a potent factor of success.

Doukhobor Notes.

COMPILED BY J. E.

(Continued from page 358.)

While visiting among the colonists J. S. E. found the women in the absence of the men assisting in making a dam breast across a stream, on which a grist mill was to be built. This was another pleasing evidence of prosperity.

In one conference the exactions of some neighbors were introduced, as well as some difficulties about School District Reserves. There had been a mistake in locating the latter, and those in control of these lands were not disposed to make an amicable settlement, J. S. E. adds "There having been very little benefit received from the Public School for the Doukhobor children, they (the Doukhobors), are not prepared to pay taxes,—being suspicious of any law measures."

"The trouble sometimes is that one man does most of the speaking on behalf of the whole company, when we secretly believe there is a diversity of opinion among them."

"One zealous speaker said, (after a prolonged discourse,) 'the brethren don't want me to say any more.' Well, I said, 'I would like to hear some others' afterward he apologized for what he had said; to which I replied when he knew the English language better he would understand us." On another occasion "One of the brethren told me that the chief speaker was foolish in what he said against the Government, and the rest were not allowed to dispute, and they had great trouble among themselves because of their divisions."

Fifth Month 7th, J. S. E. was thrown out of Grandmother Verigen's carriage by the wheel striking a root, and he experienced a narrow escape from injury. He says in reference to this accident, "I may be thankful that not a hair of my head was hurt, as it might have been very different if I had been thrown out upon stones; when strapped up we proceeded, and went through one bad slough, that seemed to test the strength of the horses about to their utmost. The driver was asked if they ever upset carriages in Russia. 'More than often,' was his reply," and the last words Grandmother Verigen said to him were "be very careful of grandfather." This came to mind when her "chariot" was on end and the passengers pitched out in the mud.

Later in the day Robert Buchanan's home proved a veritable haven of rest, and R. E. said it was marvelous that we got here, as he had never seen worse roads, and they were next to impassable."

"Vassili (the driver) told me how he could not sleep last night, thinking of the meeting the evening before, and he felt grieved because of what the speaker said; I told him I had seen such things before, and I went to sleep; but I loved Vassili for his tenderness of feeling, and he had given an interesting account of his experience for three years in a

Russian prison wherein eight persons sometimes crowded into a room only enough for two."

There are some serious difficulties to be adjusted in connection with the land tenure which J. S. E. says, "some of these we doubt settle themselves and be lived on, and some will have to be looked into, but all their perplexities there is a surprising advancement in acquiring the English language, and of enterprise in building, and bribe more and more land under cultivation."

"At Nova Gorielofka we had a pleasant visit. There was not a word of adverse criticism, and something has been done in the line of homesteading."

A horde of men were said to be in waiting ready to pounce upon the improvements the Doukhobors in case they had not taken out patents for their quarter sections by the first of Fifth Month, but the Canadian Government has not permitted this to be.

"The particular hardship hereafter has been that while the authorities had demanded fees for school purposes from the Doukhobors, their children have been refused admission into the public schools."

"The inhabitants of two of the villages—one-half of another, which were in this district, are said to have gone over to the Ambrose district; if taxes are distrained will be all the more oppressive on those who left."

Fifth Month 9th. "Snowing and icy. Our driver said he never knew the roads worse." Some grievances were mentioned because Doukhobor horses had been so unjustly taken for taxes, and the inspection had practically prevented the colonists from fishing.

The Government has extended the time to entry six months. J. S. E. was requested by some of the Doukhobors to ask the Government officials not to insist on the registration of their marriages, births and deaths. I replied "It was very hard to plead for something that (he) did not think was for the best and (he) really thought it was a good thing to have these recorded." A dinner was provided "in first-class Doukhobor style, it might be supposed all the women of the village wanted to have a hand in it."

"Robert Buchanan seemed quite inclined to make up a collection of Doukhobor contributions for the coming exhibition at Winnipeg."

In a certain village near Good Spirit Lake the address was read as usual and no election was taken to its contents. They knew J. S. E. if he would tell them how members of the Society of Friends are married and this he was pleased to do; then they said he would tell him how they got married: "Well," he says, "I was very willing to hear, for I had seen a good deal among them but had not seen a marriage. They said the men asked those about to marry if they loved another, and if they wanted to marry, and if they wished them a good hour, and this is equivalent to a good time. Well, I said, but not the parents testify and send in an account that they saw their children marry? There would be no harm in that. They said once a year was their way to send in an account. Well, I replied, if they would let the people believe they did that, I ex-

government would be satisfied. A pleasuring pervaded the company." Zuzia Negraeva is a very bright woman, the way in which she brought up the incite of my meeting with them at Halifax and the vessel was very touching to me, and I it was good pay for going through the ice."

another village four generations were presented in one house; the great-grandfather might he had seen much of good and evil in

about fifty men were gathered for conferring in this house and they dreaded taking out the homesteads. J. S. E. says in this connection, "When we were told of the deception used in Russia by getting their marks to us which read differently from what was on them, it could not but make them sensible and they do not see why Government should be looking into their marriages, etc. together with the false idea put into heads by evil designing men, acts as a blinding block."

They stated that the school teacher has been amongst them with his gun, shooting dogs, and with his rope thrown around a tree's neck, valued at one hundred and fifty dollars,—he took it for a fine of eight dollars, that considerable poison has been thrown out to kill what it might. I told them I do what I could for them at Yorkton, Winnipeg, Ottawa, and Regina, in the line of things restored."

The fact that their crops the past year were a redeeming feature, and there was considerable reference to the help afforded by the angels, and the pleasure they had in my coming to see them."

An instance of their own generosity, some starving Galicians sent two boys to Doukhor village with a wagon to get things to eat, each householder put a bag of potatoes on the wagon, and when the horses did not pull the load,—they being also starved—the Doukhobors detached the wagon and put one of their own to the wagon and delivered the load, without charge, to the Russians.

On the 11th instant J. S. E. attended their worship, after which two letters from them were read; it was the same that Peter Verigin wrote to his mother. The other physician had been sent among the exiles in Siberia asking where their families were, and liberating such as were over forty years of age.

The movement seems to have followed from the oldest exiles, to the Russian government.

In another letter from the absent ones they mention a few of their brethren had gone over to Greek faith. At first they were told to let their living out of the ground; but on stating that this could not be done, the Russian General allowed them to earn their money where they could.

At a time they had things in common, but they had divided their property, and are suffering from poverty. The writer had lost his and asked for assistance; his brother had two hundred roubles stolen, and another Doukhor had been robbed of two hundred and fifty roubles. The writer had also been eaten with rods for laying down his gun.

There is hope that the older men will be released from exile.

After this meeting "Great grandfather said, 'when it rains it is good to sleep,' and I took him up and laid myself out with my feet against the oven and told the brethren to go on with their talking. They had a song and I had a nap."

"When I awoke I went out to take observation of the weather, and so did the brethren; and it was a very close question to decide about starting out for a thirty mile drive across the prairie. I did not want to insist and I did not want to be cramped for time in Yorkton as to miss the train at Winnipeg on Third-day morning. 'I was told a man would go with us to show us the way. I said that would break Grandmother Verigin's chariot down; but Vasilii said the horses would hold out, and the rig would hold out, and grandmother would hold out; and great-grandfather said to him, 'your Grandfather Verigin was a great man to drive horses and have them to go right on,' and added, 'if your horses stick, two big men could pull them out,' so we took courage and started, and went through some sloughs quite as deep as we wanted, but the water did not get into our carriage although we did get into misery by leaving the trail to obtain information at a certain house. As we approached it through a meadow, down went my side in the mire, until I was wondering if we should have another upset; but as the carriage went axle deep in mud it could not overset, but there was some severe straining for crack went the double tree, and snap went a single tree, and both horses went down; quite a fix, and traces so tight we could not get them loose without loosening from the collar, and then, with the lines in hand, we encouraged the horses to get out of that, and out they went with the yoke stick,—leaving the tongue behind them."

"Three of us tried our strength by lifting the off hind wheel. Next Vasilii's ingenuity was brought into play in getting the horses geared up. He said, 'If the folks could only see us, and know how jolly we are over it, they would be amused; and I was thankful that the ingenuity of my Doukhor companions proved equal to the emergency.'"

They reached Yorkton safely. J. S. E. says, "I was thankful it was light enough to see, when we reached the bridge across White Sand River that had somewhat overflowed its banks, and the approach to it looked rather terrible; at least the horses acted as if they thought that way. We did not dare to stay in the carriage until the bridge was really mounted, but the horses sprang over the missing planks of the bridge, and that Rubicon was passed without disaster."

"It is a high, solemn, almost awful thought for every individual man that his earthly influence, which has had a commencement, will never through all ages, were he the very meaneast of us, have an end."

"God graduates the trials of our life; he allows the lesser to precede the greater. He gives us the opportunity of learning to trust Him in the lighter difficulties, that faith may become strong, and that we may be able to walk to him amid the surge of the ocean."

THE HEROES OF THE ROAD.

We read about the heroes who have faced the guns in battle,

On the ships that plough the waters, in the trenches on the land;

But for bravery that is real and for nerve that is unflinching,

Take the man who rides the engine with the lever in his hand.

As he drives his engine forward, round the curves and through the tunnels,

And the blackness of the night obscures his sight,

Then the metal that is in him proves the hero we have pictured;

For alone he grips the lever as he dashes into night.

We never think to praise him for the courage he exhibits—

We are only filled with rapture at the speeding of his train;

Yet this man, who drives his engine through the storm into the darkness,

Controls the destiny of hundreds by the coolness of his brain.

—Locomotive Engineers' Journal.

Science and Industry.

IN Siberia a winter rainbow sometimes lasts almost all day. It is caused by fine particles of snow suspended in the air.

SOAK a newly purchased tooth brush two hours in water before using it, and thus prevent the complaints of bristles falling out.

THE COWS in Belgium wear earrings. The law decrees that every cow, when it has attained the age of three months, must have in its ear a ring, to which is attached a numbered metal tag.

CATS make a more careful toilet than any animal, excepting some of the opossums. Lions and tigers wash themselves like the cat, wetting the dark, india rubberlike ball of the forefoot and the inner toe, and passing to the face and behind the ears. The foot is thus a face sponge and brush, and the rough tongue combs the rest of the body.

BRAN is recommended as a most efficacious cleansing agent for carpet. The bran should be moistened just sufficiently to hold the particles together and then sprinkled over the floor. The claim is made that the bran not only cleans the carpet but that all the dirt is absorbed by the moist substance. The broom is kept clean and no dust settles on furniture or pictures.

IN Eastern Siberia Dr. Herts states that he discovered a huge mammoth preserved in the ice. The animal had assumed a reclining position with its feet peculiarly bent beneath its body. Dr. Herts inferred that it had fallen down a declivity and had been instantly killed. Grass was found in the mouth of the animal, and food in its stomach. Two thousand years elapsed since that last mouthful of grass had been torn from the sod. The animal was covered with a coat of rather thick, red-brown hair.

THE fire which started in the Fifth Month 3, 1901, in Jacksonville, Florida, and devasta-

ted the city, was under control within seven hours. Yet it has been burning for more than three hundred and sixty-five days. By digging from time to time into a place where grain was stored, red coals have been found, and flames would spring up, though the place had at times been soaked with water by the fire department. Last week the fire was still burning.

THE OYSTER.—The oyster has a mouth with a fringe hanging around it, and teeth, but it has no head and no feet. It is shut up in a shell, and one would naturally think that it would have no means of providing for the necessities of life. To say nothing of our being minus head and feet, if we were to be shut up in a cell all our days, we would find it inconvenient to make a living. However, the Author of Nature attends alike to all his children's wants, and though we human beings think ourselves the most important part of creation, yet as great care has been bestowed by God in fashioning the mantle in which the oyster is wrapped as in constructing our wonderful human bodies.

The food which the oyster eats is, for the greater part, the microscopic plants and animals which swarm the seas. The gills or lungs of the oyster are shaped like four dainty leaves. They are joined to the body only at one end, and when you take a microscope and look carefully at these curious lungs, you see a quantity of hair or cilia. The cilia are always in motion, and the tiny currents which their movements make drive the food into the oyster's mouth. Now the fringe of the oyster's mouth belongs to the gills and helps to keep up the currents, and so the oyster is enabled to eject any particle of food that it does not like.

The oyster leads a queer life. At first the young oysters keep near their mother, and hide at the least signal of danger. But by and by they lead an independent existence, that is, they fix themselves to some solid body and begin to make their shells. This takes three years. The oyster lays two million eggs in a season. The oyster does not fare well in the rough, tempestuous sea. In England there are several oyster banks, and here the most valuable oysters are to be found.

LARGE POWER-TRANSMISSION PLANT.—An electrical plant which will be second only to that at Niagara Falls has been projected in California and is likely to be developed in a short time. In Pulmas County the basins of the Big Meadows and Butte valley are to be converted into reservoirs to store the drainage of the watershed of the Lassen Peak region, which covers an area of about six hundred square miles, a part of which is within the perpetual snow-line. These two reservoirs will contain about ten thousand acres of land and the watershed will furnish through them one hundred and twenty thousand miners' inches of water, with a capacity for generating three hundred thousand horse power. A ten-mile canal, constructed from the reservoirs to the edge of the canon of Mosquito Creek, will give a vertical drop of sixteen hundred feet for the feed-pipe of the power plant. There is at present no water-power plant in existence utilizing such an enormous fall.

From the feed-gate of the San Joaquin Electric Light and Power Company in Fresno County to the discharge nozzle there is a vertical fall of fourteen hundred feet, and that has been hitherto supposed to be the limit of the endurance of metal under high pressure. The primary purpose of the promoters of the enterprise seems to be the generation of electric power for transmission to San Francisco for use in manufacturing. The distance covered by the transmission lines, when the project is carried out, will aggregate two hundred and fifty miles. There are already two electric power plants utilizing Sierran water sources occupying the field and it is not improbable that the new electric power plants opened on the headwaters of the Sacramento River will extend their transmission lines to San Francisco Bay also.

HANGING LAKE.—Hanging Lake is generally known as Dead Horse Lake, a name as inappropriate as it is possible to imagine, for the reason that no kind of a horse could possibly get up into the lake. This lake is situated about one mile from the canon known as Dead Horse Canon, which is opposite Shoshone Station on the Denver and Rio Grande Railroad, eleven miles from Glenwood Springs.

There are trees lying in the lake that are covered with lime, showing every limb, knot or indentation, no matter how small or great the indentation may be. There is no sign of animal life in the lake or anywhere around it. It is very doubtful whether it freezes over in the winter, for it is fed from an immense spring gushing out of the rocks several hundred feet above it. Underneath the lake are several caves that are some twenty feet long and ten feet wide and high enough for a man to walk upright in. But you will certainly receive a free shower bath before you climb over the rocks and get into where it is dry.

From the mouth of the canon to the lake are some very wonderful things. There are parts of petrified trees, broken stalactites of various sizes which have lain there unmolested for centuries, perhaps. There are skeletons of buffalo that have perished or that have been driven over the high cliffs in the midst of a terrible snowstorm long years ago, bunches of leaves that have gathered themselves together by a rock or brush lying in the little stream of lime water and have themselves become rock, and the size and form are as perfect as the leaves that grew on the trees the past summer.—*Glenwood Advance (Colorado).*

INTERESTING ELECTRO-CHEMICAL PROCESSES.—The *Electrical Review*, in the course of an interesting article upon the extent to which electro-chemical processes are entering the industrial field, says: "It was not thought, for example, that the electric furnace would emancipate the silkworm, but such seems to be the case. An interesting new process has been brought out in France for the manufacture of artificial silk from the wood pulp, using electrically made carbon bisulphide as a solvent. The results obtained are most interesting and promising, and it is believed that a large outlet for carbon bisulphide will be found in this new industry. The method is extremely simple. The pulp is prepared in the usual way, as in paper making, and is dis-

solved in bisulphide. The mixture is squirted through glass nozzles of exceed small dimensions, issuing in fine hair threads, which are to all intents and purposes as soon as the volatile solvent has evaporated. These threads are then worked in the usual way and spun into threads for the weaving of fabrics of various kinds.

"The flavor of the vanilla bean was long regarded as one of the most impossible of natural flavorings to counterfeit. Yet to vanillin, which is the essential aromatic principle of the bean, is manufactured in quantities by an electro-chemical process, using with coal-tar products of the anthracene series. Carbon tetrachloride, another product of the electric furnace, promises to take the place of many of the dangerous and inflammable solvents used in the extraction of gums and in a large number of chemical industries. The field for the application of electro-chemistry is so vast that it is impossible to more than a suggestion of the opportunities open for development. The examples given above, however, show what unexpected results have already followed from the application of electricity to chemical processes."

THE VICTORY.—It is told of a Christian man that a friend entered her room and found her with bowed head, as if in prayer or in earnest thought. For a long time the silence was unbroken. At length her friend spoke to her tenderly, knowing that a great sorrow on her heart, and thinking that she was comforted.

"I have been trying to say the Lord's prayer," she answered, "but I cannot through with it."

Her friend was well aware that she knew that precious prayer and had repeated it over, ever since she learned it in infancy at her mother's knee. Her remark seemed strange, therefore, to her. But she explained. She had said the words a thousand times in sunny childhood, in joyous youth, on her wedding day, and then along the gladness that followed, amid songs and flowers, prattling child-voices, and the sweetness unbroken home circle. And they flowed her lips like rippling music all this while, now a great sorrow had come. The blow well-nigh crushed her. Deep were the sorrows. She had been called to take out of her bosom and give to the Great Shepherd most precious and tender of her joys. Now she could not get through the Lord's prayer any more. Since the light had faded from these dear eyes, she had begun a hundred times, "Our Father, who art in heaven, loved be thy name. Thy kingdom come. Thy will be done." But she could not say, "Thy will be done." And it was days before she gained the victory, and before quiet peace came again. But when it came, what deep, blessed peace it was!

"If you incline to the opinion that any persons are good enough for home manners, try to have a home."

UNMIXED sincerity towards God is an excellent sweetener of all the cups we drink the Fountain of Marah.—*S. Fothergill.*

THE THINKER AND THE DOER.

at home, with pale impassive brow,
 at on the eloquence of lifeless letters;
 man's thoughts from mind's first dawn till
 ow,
 When Truth seems, heaven-inspired, to burst her
 fetters.

er plies the force of stalwart limbs,
 ken with sharpened by the whirl of action;
 ight lore no stadions lamp he trims,
 tained and muffled from the world's distraction.

estines—converging to one end,
 glorious issue of all human labor;
 in harmonious union softly blend
 praise of God, the profit of our neighbor.

has his gift—the stamp affixed at birth,
 marks him for the servant of a Master;
 osen steward of his realm of earth;
 shepherd watching for a higher Pastor.

has his crown—of earthly laurels here,
 iced and woven by the hand of mortals;
 hen the Spirit-City's towers appear,
 oped on his brows by angels at its portals.

not which serves his mighty Master best,
 ily thou mightest be true worth's detractor;
 ch obeys his nature's high behest—
 close-pent thinker, and the busy actor.

—Household Words.

Communion and Atonement.

SECTION No. 1.

To following extracts from J. McLeod
 well's "Christ the Bread of Life" are ac-
 ompanied with further observations by David
 to be presented consecutively.—Ed.]
 desire now to conjoin the fourth chapter
 of Gospel of St. John (to the 34th verse)
 the portion of the sixth chapter with
 we have been occupied. In his fourth
 the spiritual and the natural are most
 ctively presented to us, in their distinct-
 and in their parallelism in the thoughts
 of Lord, contrasted first with those of the
 man of Samaria, and then with those of the
 es. As we read we are, so to speak,
 ing our Lord speaking in the higher spiri-
 tual in which man's need as a spiritual
 is visible; while the woman of Samaria
 the disciples are heard speaking in the
 elight of sight and sense.

gain, his disciples, returning with food,
 to eat. To Him, then feeding upon the
 food—that of the Spirit, the proposal
 the difference and superiority of that
 food rather than the acceptableness of
 material food offered to Him, how great
 his present need might be. He said
 them, "I have meat to eat that ye know
 not." Standing without, as well as the
 man of Samaria, in respect of the light in
 the dwelt, they said one to another,
 "Any man brought Him ought to eat?"
 saith unto them, "My meat is to do the
 will of Him that sent me, and to finish his
 work." Most instructive in this record is the
 oneness and patience of true spiritual light
 in the darkness as exhibited in our Lord's
 life; with the woman of Samaria, and with
 the disciples.

"I will wait not to dwell on this. What do
 the words of our Lord, speaking in the light
 of Spirit, teach us concerning the mystery

of spiritual life?—for to that mystery they
 manifestly guide our thoughts. What help do
 they afford to us seeking to know what it is
 to eat the flesh of the Son of man, and drink
 his blood? Much surely. That living water
 which, if she had known the gift of God, He
 said to the woman of Samaria she would have
 asked of Him and He would have given to her
 that water which, he said, would be in him
 that received it a well of water springing up
 into everlasting life, could not be so spoken
 of and not be that of which He spoke in say-
 ing, "Whoso eateth my flesh and drinketh my
 blood hath eternal life." Neither is the intima-
 tion that the true worshippers shall worship
 in spirit and in truth, for that the Father
 seeketh such to worship Him, without help to
 us. To declare the worship which was to be
 was to declare the salvation that was given;
 for worship in spirit and in truth can only be
 rendered by those to whom the gift of God is
 Eternal Life.

"But the most direct light shed by our Lord,
 upon the meaning of eating his flesh and drink-
 ing his blood, is in what He says to his disci-
 ples of his own feeding (on the will of the
 Father)—that meat which He had to eat which
 they knew not of. It was their interest in the
 secret of his spiritual life which caused the
 Lord thus to make that secret known to them.
 For their sakes He spoke it. For their guid-
 ance as the Captain of their salvation does He
 say, "My meat is to do the will of Him that
 sent me, and to finish his work." Our Lord's
 uniform intimation of a parallelism between
 his own relation to the Father and our relation
 to Himself would justify our receiving these
 words as light on the secret of our own spiri-
 tual life, considered simply as they meet us
 here; but they immediately connect themselves
 with his words on that occasion on which He
 spoke directly and fully of our relation to Him
 as the Bread of Life, "As the living Father
 has sent me, and I live by the Father, so he
 that eateth me, even he shall live by me." Meditating on these words we ask ourselves,
 "What conception can we form of our Lord's
 living by the Father?" Yet, unless there be
 some aspect of that relation of our Lord to
 the Father which can be visible to us—unless
 light can shine for us on his living by the
 Father, this reference to it can afford us no
 practical guidance. Wonder and awe and in-
 tense interest so high a reference must awaken.
 But unless we are helped to the understanding
 of that which awakens these feelings, the
 Lord's words will be darkness and not light to
 us; and our sense of the high nature of that
 which they intimate will only increase our
 feeling of darkness. Therefore we welcome
 the light shed on the Lord's living by the Father,
 when He says, "My meat is to do the will of
 Him that sent me, and to finish his work," and
 we feel that, in connection with these words,
 the words—"As the living Father has sent me,
 and I live by the Father, so he that eateth me
 even he shall live by me," are light to us and
 guidance; and we understand that, as to do
 the Father's will was the Lord's meat, so do
 He lived by the Father, so to do the Lord's
 will must be our meat; and thus shall the
 word be accomplished in us, "as the living
 Father hath sent me and I live by the Fa-
 ther, so he that eateth me even he shall

live by me;" even as He says in another
 place, "If ye keep my commandments ye shall
 abide in my love; even as I have kept my Fa-
 ther's commandments and abide in his love."

"While the reference made by our Lord to
 his own living by the Father, illustrated by
 his saying that doing the Father's will was
 his meat, thus sheds light on our living by Him
 as the Bread of Life, it, at the same time, in-
 dicates very clearly both the oneness and the
 difference of his position and ours; the one,
 Eternal Life being in Him a living by the
 Father, in us a living by Him. We must seek
 to apprehend and realize both this oneness and
 this difference—the difference of our Lord's
 position and ours, that we may know our de-
 pendence on Him as to salvation;—the oneness,
 that we may conceive truly of the nature of
 the salvation which we receive through Him.
 For his will, on which we are to feed, and his
 commandments which we are to keep, are none
 else than what, as the Father's will, He fed
 upon, as the Father's commandments, He
 kept.

"In proportion as we realize the oneness of
 the food, on which our Lord fed, and on which
 we feed, that food being the one Eternal Life,
 to Him the Father's will, to us the Father's
 will fulfilled in Him, and so his will, we are
 prepared to recognize the oneness of the pro-
 cess of feeding, in his case doing the Father's
 will, in our case doing his will; and my desire
 is that you should thus see the relation of the
 will to the life of faith, to eating the flesh of
 the Son of Man, and drinking his blood, in the
 clear light of Eternal Life.

"For as is our will, such are we. It is the
 will of God that we are born again; our being
 born again is the formation in us of a will one
 with the will of God. By the will we feed on
 spiritual food; so that whatever is presented
 to us as spiritual food remains outside of us—
 is not yet fed upon—so long as the will shuts
 it out. By the will we feed upon that which
 is death and not life to our spirits—feeding
 upon ashes, a deceived heart leading us astray.
 By the will we feed on the Bread of Life
 which hath come down from heaven, being
 taught of the Father and so drawn to the Son.
 Speaking less strictly, meditation on Christ,
 occupation of heart and mind with his love,
 with his work and its results may be thought
 of as feeding upon Christ; but this they are
 not in themselves. This they imply only in so
 far as they issue in obedience to his Spirit
 which is the result contemplated in the Divine
 purpose and is an event in the will."

GOOD RULES AS TO RUMORS.

If you are tempted to reveal

A tale some one to you has told
 About another, make it pass,

Before you speak, three gates of gold,
 Three narrow gates—first, "Is it true?"

Then, "Is it useful?" In your mind
 Give truthful answer, and the next

Is last and narrowest, "Is it kind?"
 And if to reach your lips at last

It passes through these gateways three,
 Then you may tell the tale, nor fear

What the result of speech may be.

—Selected.

Success is failure if satan gives the success;
 and failure is success if God sends the failure.

JOHN HOWARD.

The following is extracted from a poem of some merit written by a member of the Society of Friends:

Thine was an empire o'er distress
Thy triumph of the mind.
To burst the bonds of wretchedness,
The friend of human kind.
Thy name thro' every future age,
By bard, philanthropist and sage,
In glory shall be shined;

And many mourn that thou shouldst lie
Where Dnieper rolls and raves,
Glad from barbaric realms to fly
And blend with Pontic waves;
A desert bleak—a barren shore
Where mercy never trod before,
A land whose sons were slaves,
Crouching and fettered to the soil
By feudal chains and thankless toil.

But yet, methinks, in future years,
To raise exalted thought
And soften sternest eyes to tears,
Will be thy glorious lot.
And oft the rugged Muscovite,
As spring prepares the pious rite,
Shall tread that holy spot,
And see her offered roses showered
Upon the grave of gentle Howard.

Those roses on their languid stalk
Will fade ere fades the day;
Winter may wither in his walk,
The myrtle and the bay
Which, mingled with the laurel's stem,
Her hands may plant; but not with them
Shall memory pass away,
Nor pity cease the heart to swell;
To thee there can be no farewell.

Philippine Schools.

W. A. Kepner, formerly an instructor at Franklin and Marshall College but now a Government teacher in the Philippines, has written an interesting letter on the educational situation in our new possessions in the Pacific to the Franklin and Marshall *Weekly*. In the opening paragraphs he declares that many writers who have visited the Philippines judge the situation and the operations of many things under American rule by what they have seen in Manila. These, he says, do not indicate truly the actual conditions. He follows this by reviewing the work performed by the Spaniards among the natives, and expresses the belief that the missionaries undertook their labors with good intentions, and endeavored, as honestly as Americans are now doing, to lift them from ignorance. Continuing W. A. Kepner says, in part:

"The American is here now to take up the work of the Spaniard. His intentions are as good as that the old Spaniards had.

"We are not here to free them from the chains of barbarism," but rather to free them from Spanish tyranny. For this task, I believe, the American teacher is an important factor. It is the teacher's work that represents the present and future education of the Philippines.

"Visitors to Manila would have you think that this task is a light one. Nor can I blame them for so being impressed. The Manila schools are a credit to our short stay in these islands. There you no longer find wretched school houses and filthy children. To the

contrary, there are comfortable houses. These are kept clean and well painted. Supplies there are well furnished. And, as to cleanliness, the laws are enforced by able American police. The Manila schools stand as a bright promise to the Philippines for what America shall do for them.

"The great majority of us have found Philippine schools and scholars as the Spanish left them. . . . All that was taught was religious teachings. This was not taught. It was memorized. For it is all written in Spanish and memorized, much as any of us would memorize Juvenal, without looking into a dictionary or grammar. In my school I found two women teaching from these little books. I was not here a week until I found the teachers themselves could not speak Spanish. Their knowledge consisted in the ability correctly to pronounce the Spanish words as they saw them, and no more. This ability they were inspiring into the one hundred and sixty-one girls about them.

"Each girl has a book and in studying the books they read aloud a page and reread it many times, so as to get what they are after, the pronunciation. One hundred and sixty-one girl voices serenaded me for one week with a singing reading of Spanish theology. It soon became unendurable. I then set to work to get them out of this Chinese rut. And now, by yelling about six times a day at them, I can keep the song down. Hereafter I fear I shall never enjoy to hear any one read aloud. This was what I found my pupils studying and their method of studying. I found many of them physically dirty and some ill with mumps or sores. Those with mumps and running sores I have sent home. Time has not come yet when I can order a general cleaning of clothing. Their bodies are cleaner than their clothes. For here we have an excellent river for bathing, and all take advantage of it. They are a very pugnacious set of children. Frequently I have told them that fighting is for dogs and not for girls. And then occur to me my own battles of boyhood.

"I shall leave the children now and let you look at our school house. It is the ground floor of our house. There is one door to the room. This also serves for windows. The wall is formed of woven material, such as chip baskets are made of in the 'States,' and is woven or plated just like a chip basket. Around three sides of the room are logs resting upon bamboo uprights driven into the floor. There is one table about four feet wide and seven feet long. Upon the floor in the centre of the room is a slab five feet wide and six feet long. This serves for a bench for quite a few girls. The floor is at most places dust. At few places water from rains has soaked in and here we have a little mud.

"I wish the people of the United States could see these poor children who crowd into this room anxious to learn English. When all are here at places they sit three deep upon the benches, and the table is just packed like a store counter after a fastidious Lancaster girl has been trying to select that which she does not know exactly is what she wants. To get three deep on the bench of course they sit upon one another's lap. For these one hundred and sixty-one girls I have furnished me twenty-two English primers. One of my

lady teachers, a native, for the last two is being seriously put on trial before the President because a mother complained that daughter had to sit upon a slab in the centre of the floor and did not get bench room.

"I had expected opposition on the part of the native teachers. Instead, I have warmest co-operation from them. To-day principal of schools brought me a Visaya-Spanish dictionary, which he had taken much trouble to get me. He says it will help me Visaya more readily, and thus he will in time get English. With them my suggestions are law. Guyer tells me the same is true his teachers. The children are earnestly interested in our methods. They see they are getting more than mere parrot memorization. I make it a habit of giving them an English sentence to take home for father and mother each day. This they are usually prepared to, and when they do so they translate it Visaya for their parents. A first I gave them words. Now I have a class who go home ask simple questions in English and give answers in English. All this I believe is but a two-fold effect. First, it is teaching children English. Secondly, it is inspiring confidence in the breasts of the parents the American methods. They begin to think that the American is ready to teach them in language, and are not afraid as the Spaniards were to give them a medium by which the lives of the ruling power could be understood.

"Thus in many ways the teacher in the Philippines has great opportunities to help establishment of peace and to enlighten minds of these people, who have been brought down under recent tyranny of Spain. In year or less military affairs will become fewer. Civil affairs must improve. And, with the improvement of civil administration, come better educational advantages.

"Thus in perhaps too many words I have given you the present condition of educational affairs in the Philippines. Except in Manila, Cebu and Iloilo, the education of the natives under Spanish rule and American rule has, up to the present, been very meagre. The native teachers (natives) have no greater learning than a worthless dabbler in Latin, a knowledge of Spanish, the ability to add, subtract, multiply and divide, and a historical and geographical knowledge of the Philippines. A few teachers can boast of the above qualifications. But the material is plastic, and an excellent chance is here for America to accomplish her greatest achievement."

Forming Friendships.

As Christians, as those who have experienced or who aim at experiencing the sanctifying graces of the Spirit, we may regard ourselves as permitted both on natural principles and imitation of the Saviour, to form such personal friendships and attachments as the Providence of God may favor, and his holiness approve. Intimacies and friendships formed purely worldly principles, have no religious value and are often positively evil.

It is important, therefore, to remember that all such friendships should be entirely undisturbed, as they were in the case of our Saviour, to the will of our Heavenly Father.

gh the influence of the life of nature, become inordinate, they are no better any other idols.

is certain there is much in them that is ple and pleasant, that they are authorized e example of our Saviour, and that they e to be even necessary in our present situation like everything else, they must receive signature of Divine approbation, and must tained or abandoned at the call of religi- uly.—*From T. C. Upham's Interior Life.*

The Courtesies of Home.

get worried and over-tired; they re- from the jostling crowd of human life ched, fretful, and are tempted to vent e home circle the irritation which they e been restraining all day. They forget a very sensitive nature has been probably nding with an equal crowd of tiny and ex- ating worries in the home, and has been ing all day on their return as an oppor- of obtaining sympathy and counsel. If long-looked for moment of home-coming in the rasping east wind, instead of the soft west, is it to be wondered at that heartstrings get strained to breaking?

man has no right to be sullen, morose and icy; or to answer wifely questions, even when they do savor of curiosity, with impa- . She is as much a queen as in those hurting days, when he worshipped the and she trod on, the air she breathed. Just because she has given up all other or him, and can turn to no other for a word or look, he is the more bound to at she lacks nothing which might be in- in his solemn promise to love, honor, keep her in sickness and health, till death a them part.

then would treat their wives with as much ay after the wedding day as before, life e be one long courtship; the noblest qual- ould be brought out in the woman of choice, and the home life would be so- iled with the warm radiance of love's dream as to defy winter's icy touch. It dlerful to see how courtesy serves as a pal- which shelters the tender bloom of love e cold, nipping blast, which in so many s fatal.

women must do their part. They must e, and as lovable, when the tint has eom the cheek and the years have left urces in the forehead, as when they d under the first kiss. There are name- oughfulnesses that leap out to greet a man; wifely surprises, lovely gleams of ness like sunlight checkering the wood- lade, some modest charm and grace e reveals itself only to the man she loves. arations that he enjoys, touches in the e that he will appreciate, care of their n money, interest in all that concerns plic life, the art of listening, sympathy ellicit all that he has to tell, the love eeds love half-way, the adoration which e heaven in his love—these are the contribution to the common stock of the

children must do their part. In a dep- n of Jewish life in the middle ages, a or sketches the pure and lovely homes b the hunted race sheltered from the ut that swept around them. He tells us

that the attachment between father and son was almost ideal in its depth and tenacity; but the son always stood in his father's presence, and addressed him with the profoundest respect. If such respect is wanting amongst ourselves, may we not find the reason in the early training we give our boys and girls?

Sometimes a parent will aim to be the companion of his children so absolutely that they lose all respect for him. This is disastrous. However intimate the relationship, there must be respect, reverence, honor, and these high sentiments must be expressed in the tiny courtesies of the home.

That the girls should be served at table before their brothers, that all should wait for the last comer, that none should be seated till the chair has been placed for father and mother, that the boy nearest the door should open it for the mother if she has occasion to leave the sitting-room for nursery or kitchen, that no child should be allowed to address the parent abruptly and without including the sacred name "father" or "mother"—these are elementary rules of home courtesy; but they would do much toward preserving through all coming years the love that is founded on respect.

The little phrases, "Excuse me," "May I have the pleasure?" "Mother dear," "Father," do not take much saying, but they perfume the air with the fragrance of paradise.

Let us turn again to our home life with new endeavor; noble enough to confess the sin and failure of the past; resolved to deny ourselves that we may consider and bear the burdens of others; intent that the sweetest aspects of our character shall be reserved for home, and that we will be no nicer, kinder, nor more genial to the strangers to whom we may happen to be introduced, than to the dear ones with whom we come into daily contact. If our advances are not always reciprocated let us not grow weary in making them; love will conquer finally; and in the meanwhile let us anoint the head and wash the face, that we appear not to men to suffer and be unrequited, and our Father, which seeth in secret will reward us openly.—*F. B. Meyer.*

"It Costs More to Live Now."

"It costs more to live now, than it did years ago." Yes, very likely. It costs more to live in a city, than it did to live in the country; and more to live in a great city than it formerly did to live in a small one.

The marble palace of a swindling bank officer costs more than the neat white cottage where his father lived and thrived. The brown stone mansion of the stock-jobber or speculator, costs more than the old brown cottage with the honey-suckle around it, where he spent the days of his early youth. Brussels carpet costs more now than bare floors did then. The broadcloth of a useless fool costs more than the homespun of a useful farmer; and the "nobby suit" of a delicate counter-jumper costs more than the plain attire of a hard-working mechanic. The false hair, silks and flounces used by a flirt to capture a fool costs more than the genuine hair and comfortable clothing in which her grandmother lived and toiled and won the love of all around her, who prized her for her honest worth. Roast turkey enough to give an alderman the apo-

plexy, costs more than the roast potatoes and milk on which his honest grandfather fed his growing family. Burnt beefsteak of the first quality, for one, costs more than beef soup for a whole family did years ago. Turtle soup costs more now than bean porridge ever did. Oyster suppers cost more than bowls of bread and milk. Plum puddings costs more than hasty pudding, and pound cake is more expensive than Indian Johnny-cake. The finest wheat bread is more expensive than the old brown loaf, that was common before dyspepsia became fashionable. Pianos cost more than churns, and consume more time, and so poor music is more plenty than good butter. Swindling a living out of the ignorant costs more than digging it out of the soil, though the swindling process is deemed more respectable by many. The paper-soled French gaiters for a large family of puny weaklings, cost more than the coarse, stout shoes which rosy, barefooted children put on in autumn and defied the frosts and snows of winter and stamped their way through drifts and storms, to school. It costs women more to pay doctors for their drugs and ailments, than it did their mothers to rear a houseful of healthy children, to be their pride, and comfort and support in old age. It costs more to raise one sickly flirt, or conceited po, in idleness and luxury, than it once did to bring up a dozen children who were taught to pay their way and earn their bread, and be a help to their friends and parents. Champagne and Burgundy made of dye stuff and drugs, costs more now than clear cold water did. It costs more to endorse a spendthrift's note, than it used to be to teach a boy an honest trade. The jewelry and rag-roses for which young women sell their virtue and their souls, cost far more than the modest apparel which their mothers wore, and when they served God and feared sin. Thirty yards of silk made up in a dress by a fashionable dressmaker, and worn in pride and vanity, costs more now than eight yards of calico, made up by a sensible woman, and worn in a Christian way. It costs men more now for religion which makes men idlers in God's vineyard, and leads them on in pride and show and sectarianism, to perdition, than it did once for a religion that made them good men in this world, and gave them a good hope of eternal life in the world to come. Yes, "it costs more to live now" and the exact cost is not known here, nor will it be, till eternity shall strike the awful balance, and solve the mighty problem,—*"What shall it profit a man if he gain the whole world, and lose his own soul; or, what shall a man give in exchange for his soul?"—Common People.*

Your loving epistle has been received by us together with those from the Yearly Meetings within the circle of our correspondence, which we feel have taken much hold of our spirits, also that these tokens of brotherhood are a means in our Heavenly Father's hand of strengthening the bonds of fellowship existing between us, the happy results of which we cannot doubt are conducive to our good. It is our earnest concern that these epistles may be written by that help which cometh from above and that we may be preserved from lapsing into a lifeless form in our epistolary correspondence.—*Iowa to Western Y. M.*

The caution we note in your epistle that the carnal nature and love of ease which we all inherit by our first birth should claim our earnest attention, for it renders us lean and unfruitful in things that pertain to those heavenly treasures; and it is to be feared that cleaving to these things is one of the principal reasons that our once highly favored Society has suffered the sad declension in these latter years. "Love not the world neither the things that are in the world. If any man love the world the love of the Father is not in him." *Iowa Y. M. to Western Y. M.*

SUMMARY OF EVENTS.

UNITED STATES—In the course of the consideration of the bill to establish a civil government in the Philippines, Senator Hoar delivered an impressive speech in the Senate on the 22nd inst., reviewing the conduct and objects of the war which pertains to him as one of "the most foolish and wicked chapters in history." Among his closing sentences are the following: And now what have we to say? Must we engrave on that column, "We repealed the Declaration of Independence? We changed the Monroe Doctrine from a doctrine of eternal righteousness and justice, resting on the consent of the governed, to a doctrine of brutal selfishness, looking only to our advantage. We crushed the only republic in Asia. We made war on the only Christian people in the East. We converted a war of glory to a war of shame. We vulgarized the American flag. We introduced perfidy into the practice of war. We inflicted torture on unarmed men to extort confession. We put children to death. We established reconcentration camps. We devastated provinces. We had the aspirations of a people for liberty." "No, never, never! And other better counsels will yet prevail. The irreparable act is not yet taken." He urged that the United States should withdraw from the islands and permit the people there to erect their own Government, as had been done in Cuba.

A despatch from Washington says in relation to it: "It is an epoch in the history of the United States. Its arguments advanced on such high moral ground that it towered in majestic and sublime strength over all that had been said throughout the long debate. Hardly a phase of the long category of orders, practices, decisions and policies involving the honor of the nation was overlooked; yet with splendid rhetorical mastery, the great facts connected with the presence of the United States in the Philippines were brought straight home to his Republican colleagues for two long hours the awful responsibility of conducting a conquest of an Oriental people by methods that reverse all the principles under which this Government was established in liberty and justice."

A despatch from New Brunswick, N. J., of the 25th. says: In the presence of thousands of persons, many of whom came from distant points in New Jersey and Pennsylvania, the long bridge of the Pennsylvania Railroad spanning the Raritan River at New Brunswick was moved today to a position fifteen feet to the south. The feat was accomplished in less than three minutes, and within eight minutes connections were established sufficiently for the running of trains over the new route. Experienced engineers expressed the opinion that no serious structural damage would be done, and, in fact, in a brief space of time, and admiration is expressed on all sides for the way in which the affair was managed.

A despatch from Chicago of the 20th. says: The temporary injunction asked for by the Government against the members of the so-called packers' combine is now in force. A similar action has been taken in Kansas City and St. Joseph, Mo.

The President has declined to sign the Indian appropriation bill, in consequence of certain leases which do injustice to the Indians contained in it.

In a recent address, T. P. Stevenson, of Philadelphia, has stated that statistics show that there are nine States in the Union in which reading of the Bible in the schools is compulsory; twelve States in which there are decisions of Boards of Education in favor of such reading; sixteen States in which the reading of the Bible rests upon acknowledged usage, and only five States in which there are legal decisions adverse to it.

The General Assembly of the Presbyterian Church has adopted the report of the Committee on Creed Revision making changes in the Confession of Faith. The changes proposed will now go to the various Synods for their consideration. It has proposed to the Presbyteries to append to the Confession of Faith a "declaratory statement," the object of which is to disclaim certain interpretations

which have been put upon the Westminster Confession's statements in the matter of "God's eternal decree," and of "infant salvation," also other changes.

The statistician of the Department of Agriculture has completed his statistics regarding the crop values, etc., in the cereal crops of the United States in 1901, the grand totals being as follows:

	Aeres.	Bushels.	Value.
Corn	91,349,288	1,222,139,881	\$291,555,708
Wheat	48,000,000	1,000,000,000	\$475,000,000
Oats	25,416,760	7,608,726	\$226,657,770
Barley	4,235,741	109,862,924	\$4,765,163
Rye	1,800,000	10,000,000	\$10,000,000
Hay	81,161	15,125,931	\$9,164,368

The salmon in Alaska are said to be more valuable than gold. It is estimated that there are now sixty canning establishments in the Territory, the output of which last year was 4,800,000 pounds of salmon.

The United States Government on the 20th formally relinquished its control of affairs in Cuba, and turned the island over to the Cuban officials.

General Leonard Wood states that "Cuba will be delivered to the Cuban Government with well-organized municipal Governments, elected by the people; nearly four thousand public schools, aside from the high schools and universities, and a good system of charities and hospitals, well equipped with buildings, material and personnel. A new school in it is operating, and new cutters have been repaired, and the service is well organized; an efficient rural guard maintains and has maintained excellent order in the island, beggars are almost unknown now, and idle people are few, and the municipalities are all collecting taxes and bearing the burdens of their own expense."

The Census Bureau has issued a report comprising agricultural statistics of the counties in the United States. It shows that in the number of farms Lancaster County, Pa., leads with 9437; Orangeburg County, S. C., 8408, and St. Lawrence County, N. Y., 8353. Lancaster County, Pa., also leads in the value of farm products, \$12,613,415, and also in the amount of gross income.

Representative Warner, of Ohio, from the House Committee on Labor, reporting favorably the bill creating a commission of five persons, at an annual salary of \$3500 each, to inquire into the condition of the colored people of the United States, after reviewing the purposes of the bill, says: "It is painfully apparent that although nearly forty years have elapsed since the negro race was given its freedom, and although it has long since sided with the white States during all the time since the Civil War, there has been no harmony between the races to-day. There was at the time the negro race was given its freedom."

Almost simultaneously with the latest earthquake disturbances in Central America Texas oil wells have ceased to flow.

There were 468 deaths in this city last week, reported to the Board of Health. This is 72 more than the previous week and 47 more than the corresponding week of 1901. Of the foregoing, 235 were males and 233 females: 57 died of consumption of the lungs; 62 of intestinal diseases of the lungs and surrounding membranes; 12 of diphtheria; 22 of cancer; 17 of apoplexy; 20 of typhoid fever; 3 of scarlet fever and 3 of smallpox.

FOREIGN.—A despatch of the 19th from Kingston says that a volcanic eruption at St. Vincent island has taken place. A thick, smoky cloud overspreads the island, all business is suspended here, the streets are empty and everyone is terror-stricken. The feeling of suspense is painful. People pass their time gazing at the northern sky, where the thunder clouds gather and the mournful roaring of the volcano is heard, and the volcanic pumices are falling slowly in the out districts. The official estimate of the number of persons killed on this island is now 2200.

The number killed on the island of Martinique is officially estimated at 30,000.

On the 20th Mont Pelée on the island of Martinique again became active. An eye-witness says: "There was an inner column of fire that reached perpendicularly into the sky. There was a funnel-shaped mass of ashes and flames burned brightest. Several new craters seemed to have been formed, and from them lava was flowing down to the ocean. As the molten mass joined the water great clouds of steam were raised, and the sinister hissing could be heard amid the roar of the eruption."

Another account says: "For six hours the city of France was literally bombarded by Mont Pelée. Stones, many of them incandescent, were rained upon the city from the clouds. Houses were destroyed and fires were started in many quarters. With the stones fell hot mud and ashes. The air was so filled with volcanic dust that it was barely possible to breathe. At this it seemed as if suffocation

must be the fate of all who could not be taken on of the ships in the harbor."

A large part of the town of St. Pierre has been under ashes and stones cast out from the volcano.

On the 25th it was stated, "The whole top of the volcano appears to have opened for a distance of half miles, forming one vast crater, from which ashes and lava are pouring forth in enormous quantities. The lava is running in great streams from the top of the crater to the sea."

A despatch from Washington of the 22nd says: "The terms Secretary Hay has protested against attempt of the Powers to impoverish China by compelling to pay the indemnity due them, at the existing of exchange. If the Powers insist that China shall in gold in accordance with the rates of exchange it will have to add \$70,000,000 to the bill of indemnity. The value of silver is steadily decreasing, and the gold value is so limited. The Administration claims that the indemnity will attain such huge proportions that the Chinese will be unable to raise the amount required, and that the efforts of the Chinese Government to do it will bring on further riots. The certain effect of a policy of the European Powers is that the anti-foreign sentiment will become stronger, and the position of foreigners in the empire will become perilous."

A despatch of the 23d says: "Secretary Hay and Mexican Ambassador, this afternoon signed a convention providing for the arbitration of the famous 'Plus' case based on the application of the Roman Catholic Church in California for overdue interest on trust funds in the custody of the Mexican Government. The claim involves about \$1,000,000, and is the first case to go before a Hague Tribunal."

The forest areas in European Russia cover 461,540 acres, or 36 per cent. of the whole country.

The negroes from the Tuskegee Institute who engaged in 1900 by the German Government to teach natives of Togoland, German West Africa, how to cotton, it is said, have succeeded in producing cotton which is graded above American middling.

The largest area of new reared silk known line and ground in California, Hungary. It is said to be 550 long, 20 miles broad and 250 feet in thickness.

President Loubet, of France, arrived at Cronkhurst, Russia, on the 20th instant, to pay a visit to the by whom he was cordially welcomed, returning to the 23rd.

Reports to the London Board of Trade show that a passenger service is about to be established on English railways in 1901. In connection with the coming of age of King Alfonso of Spain, a bull fight at Madrid was witnessed by a royal family and 15,000 spectators.

The area of all Syria, including Palestine, is officially calculated at 108,000 square miles, and the population between 3,000,000 and 3,500,000.

The British Funeral Reformers' Association is endeavoring to simplify the present funeral rites. The Association wants "no darkened house, no durable, no special mourning attire, no bricked grave, no unnecessary show, no avoidable expense, and no unusual cost; and drinking."

NOTICES.

WESTWON BOARDING SCHOOL.—For convenience of persons coming to Westwton School, the stage will leave Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met when required. Stage fares, fifteen cents; after 7.30 P. M., twenty cents each way. To reach the school by telegraph, West Chester, Phone 114x.

EDWARD G. SMEDLEY, Secy.

WESTWON BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to W. G. WICKERHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westwton P. O., Chester Co., Pa.

A REUNION OF THE WESTWON OLD SCHOLARS' ASSOCIATION is arranged to be held on Seventh-day, Sept. 7th, 1902, on the School grounds, and in the largest tent.

Besides the entertainments announced last week speakers are expected to be:

On behalf of the "Sixties," Sarah W. Elkinton.

On behalf of the "Forties," David Seull.

Trains will leave Broad St. Station at 8.10, 9.10, 9.55 A. M., the last expected to run to Westwton forty minutes, without stop.

The individual invitations will be issued about the 1st of August.

ALBERT T. B.

Class-work in the School of Christ.

It is regarded as a strong class at school, but it is a small one, which, if the teacher absent himself for a time, would consequently intent on the subject of the lesson. But how morally weak, or uninterested in class, though his popularity has gathered about him one, if his temporary absence should lead to chattering, or scatter it.

It is with those classes in Divine worship who are called meetings. That is a weak class, however large, which will disperse when held together in spiritual worship, if no preacher is absent. That is a strong class, though of two or three, which will hold unto the invisible Teacher and Word of Life, who promised to be in the midst of them. These find his grace sufficient for them, and a month after month no human pastor is needed to appear.

An inward strength for Christians been given by this transfer of attention from the body to the man? from worship to the "service" from communion to the program? from immediate Christ who bought them, to the use of whose talents they have?

Meeting may, indeed, be held in silence, but not being gathered unto Him to whom the silence should be. Nevertheless it is not enough that a congregation is gathered in a place, when it must disperse or would not assemble, in the absence of a special man. This is a system of looking unto a man is a drill in weakness. The test made by a minister's presence proves to whom the gathering of a people, and to Whom it is not.

It would encourage our many silent countenances, to count their ability to hold their ground through all these years, as not a sign

of weakness but of continued strength. Without might by Christ's Spirit in the inner man they could not have been thus preserved. May they be encouraged by this to an absolute surrender to all his requirements, so that no member to whom a word may be given to hand forth, may, by failing to be enriched in all due utterance, be found in the day of account a robber of churches.

The Distemper in the Ministry.

Letter from Robert Jordan, of North Carolina, 1736:

I am often cast down at the evidence of false ministry prevailing in many places, and am weary of contending in spirit against it, though not weary of suffering for the Truth.

It is a clear and incontrovertible fact, that in proportion to the declension of religion in the heart and life, preaching increases—to the lessening the credit and authority of the ministry and rendering it contemptible.

I am confirmed in my judgment, and have been many years, that as the ministry was, and the sincere ministry yet is instrumental to gather the churches, it is now proceeding apace to scatter them, and this through the working of the mystery of iniquity, with the heat and forwardness of man's spirit.

To some, yea to many, that silence and passiveness of mind so essential to the performance of these calm, meek, and deliberate acts of worship, is as strange and irksome, as it is by their conduct rendered useless to the people.

But though we cannot help seeing, we are told we must say nothing; all is revelation, all is perfect, and there is great peace. To put it out of all doubt, we are often told, that they are under a mighty sense of Life and Power, are under heavy burdens and sore exercises. But whether they lay them on themselves or not, I shall not determine;—these find it easier to do, than to suffer till the Master gives directions, and makes way.

Some divine [surmise] a gift, by human art and ecstasy, and while they are full of peace and joy, the Church mourns.

Even prophesying is coming pretty much into practice, several instances of which have proved false and ridiculous.

Some who preach up self-denial and mortification, can hardly bear contradiction, much less reproof, and though they preach up humility, they aspire to the chief seats and uppermost rooms. I believe this ministry has a direct tendency to promote infidelity, by giving ground of suspicion that the noble principle, the holy unction, the light and superadded grace that comes by Jesus Christ, is either uncertain, or dangerous to follow. The nature of men is subject to extremes, being apt

to step out of a state of superstition, into that of unbelief. In short, I may conclude by saying, with John Fothergill, "that the distemper in the ministry is the greatest in the Church."

Doukhorbor Notes.

COMPILED BY J. E.

(Continued from page 363.)

Fifth Month 12th.—J. S. E. says "I felt it was a point gained when James S. Crerar (the Immigration Agent at Yorkton) gave me a letter to read containing (Government) instructions not to enter any homesteads on the Doukhorbor reserve to strangers, until further notice, as also when he told us that this visit through the Colonies had had a good influence. I ought to feel thankful that I was counted worthy to endure all that had to be passed through.

"I had about an hour's talk with Dr. P., who seems opposed to the party in power, and he justified the seizure of goods for taxes when unpaid; I told him my errand to him was to have a stop put to tormenting the Doukhobors, and for the teacher to be instructed that to drive the Doukhobor children out of the school and then demand taxation was direct persecution; and to be seizing private property, as had been done, was no way to get the good will of a people."

A letter from Siberia was read on a certain occasion in which "the writer congratulated his brethren in Canada as being favored; he had evidently heard of the mosquitoes, but, to use his own language 'there was deliverance from them as they had found to be the case in Siberia.'"

Another letter from an exile "gave evidence of Christian experience and a well grounded faith in our Lord Jesus Christ."

"Peter Verigen upbraided his brethren in Canada for being so slow in securing their homes, and for making such an ado about registration."

"We had quite a representation of Eliza Varney's and Nellie Baker's scholars, who appeared in two companies—one of boys and one of girls: the latter seemed inclined to come with a hymn, which I did not include in my invitation, but allowed it to pass. I was right glad to have sight of them."

A full suit of Doukhorbor clothing was exhibited at one village. "The material for the clothing was from sheep raised by the villagers and was made up in a first class way."

J. S. E. arrived at Winnipeg on the 14th of the Fifth Month, en route for the Duck Lake settlement in the Prince Albert district.

The Commissioner of Immigration told him he looked better in health than when he started out on his trip to the colonies a few weeks before.

T. O. Davis, a member of the Dominion Par-

liament, accompanied J. S. E. to his home at Prince Albert, and his opinion was that the Doukhobors would have money to lend to incoming Russians within five years from the present time.

The Molokans are likely to arrive this summer and their delegates, now prospecting for homes in Canada, are men of marked intelligence. T. O. Davis visited the settlements last year with Minister James Smart and found interesting entertainment while among the Doukhobors. He thought the best of them were in the Duck Lake colony, while Hugh Harley considered those in the North Colony were superior; and J. S. E. adds in this connection, "It is good for both districts to have men of influence in public positions interested in the people living in their own districts."

Dr. Patterson, a consulting physician of the hospital in Winnipeg, has a very favorable opinion of the colonists, and quite a number of the Doukhobors had received much benefit at this hospital.

J. S. E. says, as they journeyed westward on the Canadian Pacific Railroad: "The sight of some of the expanses of water crossed by this railroad gives a gravity to the renewed prospect of entering into the work of visiting again, but ten villages are not as many as the forty-two or more that have been visited on this outing, and we cannot live aright without faith."

"Dear John Bellows has finished his course, and I doubt not that he has entered into the joy of his Lord. We can but be thankful for what we had of his company in the evening of his day, and I think it was a satisfaction to himself to have been in America a year ago."

When we recall the invaluable service which our late beloved Friend rendered the Doukhobors and how eagerly we listened to him telling of his thrilling experiences in Russia, when pleading in behalf of this persecuted sect, with those who were high in authority at St. Petersburg and elsewhere in that land of poverty and oppression, we realize what a loss both they and we have sustained by his death.

His catholic spirit and sympathy for all who were in need, physically or spiritually, drew to him many, of varied opinions and experience.

It was the privilege of the present writer to have an intimate acquaintance with him through correspondence, for some years past. The fervent exercise and tenderness of his spirit, in connection with his abundant labors for the afflicted, will long remain as a hallowed memory with those who knew him best.

The prayer he offered after giving an account to the London Meeting for Sufferings of his efforts, in company with Edmund W. Brooks, to obtain the release of the Doukhobors still in Siberian exile, was beautifully comprehensive, and a touching appeal to the Throne of Grace,† and it would have been no

small comfort to him could he have known, as we now have good reason to believe, that his petition is likely to be answered, at least in part, by the release of the older men, thus separated from their families in Canada.

J. S. E. arrived safely at Rosthern on the 16th of Fifth Month, and made arrangements at once to go to the Duck Lake settlement. He says "we had a good road, with the exception of some bouncing in what had been either mud holes or badger holes, for about ten miles. The Saskatchewan was much swollen." At the village Spasofka a warm welcome was given them. The address from Friends in Philadelphia was read in a well attended conference, and printed copies of it circulated among them.

These copies were printed by the Harvard University Press in English and Russian.

The first salutation from the men as they came together was on this wise: "When you were last here you had another man with you; where is he?" and this, J. S. E. adds, "was not the first time that dear Jonathan Rhoads was spoken of or asked for; as he left a good seal in the hearts of the people."

The whole company of men and women stood up to give thanks for the advice and supplies they had received from Friends, "and when the chief speaker said the children loved me, I said, 'Well, then, let some one go out and tell them grandfather wants to see them,' and when a whole troop of them were gathered outside I went out and took each one of them by the hand, and we had a very nice parting. I may say a religious opportunity with both children and parents; the villagers followed us to the end of their town, and eight girls, hand in hand, and nine boys in a similar row, continued on, singing as they came, until we reached a running stream. The whole scene was touching."

J. S. E. says "The village thus left behind seemed to have been remarkably prospered during the past two years, and so nearly rebuilt that I could hardly recognize it. There were eighty cows, and more than a hundred head of cattle altogether, beside fifty-seven work horses; and so many potatoes had been raised they had been feeding some to the cattle."

"I told them it would surely be a great satisfaction to them, after being thus prospered,

cause we had tried to plead, and whom we could still commend to the care of Him who never slumbers nor sleeps, and whose will we pray may be done with respect to them in your distant Canada, and in yonder far-away Siberia; in Petersburg, and here in London. And then I felt it laid on me to ask for this dear Society of Friends on both sides of the Atlantic, a blessing in return for all the love and care and interest it has shown on behalf of these sufferers for the Truth; while yet feeling that notwithstanding this we have in some measure left our first love and our mission as a Society; and to pray that we might be brought back again to our own place; purified from our dross and tin, and especially from our reprobate silver; brought back to our own position as witnesses to men that the Kingdom of God is not in word but in power, and that this power is indeed experienced by those who wait upon Him, who shall and do mount up with wings as eagles; up through all the clouds that hide his face from us; up into the shining blue heaven of his presence, and the continuous light of the Sun of Righteousness."

to have their homesteads secured. To Ivan Prepelkin (the chief speaker) re-
"We want that!"

He then discoursed upon the merits of etarianism.

On the 18th J. S. E. says: "After the early morning devotional exercises were over we had one of the most remarkable opportunities of my life."

"There was the usual expression of thanksgiving and then came the remark, 'we are all at homesteads,' to which I responded 'I know what I want to know, and, if I can report Ottawa that the homesteads are taken by the Doukhobors, it will satisfy those who have been trying to get you properly established. You have shown that the land will produce enough to support you and your cattle, and other animals have increased, and I know that you have secured your land for inheritance will be a great comfort.'"

"I was surprised at the acreage of plowed ground which had been sown. There indeed cause for gratitude and thanksgiving to the Author of all good that there is a field of exercise for those who may be interested for the welfare of this people, in this day and for those who may succeed us."

At the village of Terpenie while "The dress was being read one man called out to his plain and all right;" and another said the Yorkton Doukhobors ought to be ashamed to have no fault to find with the Government. There was an invitation extended to anyone to say what might be on his mind, but no was offered in the line of controversy."

As J. S. E. was about to leave this some twenty boys and thirty girls were gathered in two companies to bid them "farewell" and he says "my principal interpreter was a bright little boy of nine years of age."

The Story of a Conversion.

George Fox has given us a very interesting account of how the Lord met with him in solitary walks and musings; how sometimes in a hollow tree, or in the open fields, God pleased to reveal to him the disease of his nature, to direct him to the precious blood of Jesus, and to lead him to put his trust in Him who are all resting, where we must abide if we would enter heaven, upon our dear Redeemer. He was terribly depressed and cast down, just as most of God's children are when they first arise and go to their Father. He was bewildered, perplexed and afflicted by those from whom he expected light and comfort. He tried to trust where you and I are looked in vain for succor, namely in the arms of flesh and in carnal confidences. He turned to the supposed ministers of Christ, and found them to be miserable comforters. Some of them may have been real ministers of Christ, but they were either in a bad humor or not skilled in dealing with disordered minds; at all events, they were not able to meet peculiarly deep and solemn exercises of singular young men, whose "verities" were as true as other men's oaths, and whose conscience was wounded by matters which were sport to less spiritual minds. He found one of these divines as hollow as an empty cask, and another told him to overcome his disordered mind by smoking tobacco and sinning in psalms. He obtained from a third who

* The average peasant of European Russia subsists on 7½c. per day.

† The following is the substance of the prayer alluded to: "I felt constrained to offer thanks to our Heavenly Father for all the care and love we had been made sensible of on the journey—in the snows of Moscow; on the frozen Neva; and on the slippery palace floors of Petersburg and Gatchina; especially that we had been kept simple in all our efforts on behalf of the dear people whose

st excellent advice to any young man who afford it, the recommendation to get married; another bade him join the volunteers! he that poureth vinegar upon nitre, so is that singeth songs to a sad heart." Poor edies these for a distressed conscience! for the physicians who prescribe tobacco and bleeding as cures for a sin-sick! And yet what can the world do more souls who are under the convincing power of God's spirit? What remedies dost thou of, poor, blind world? Thou canst not the eyes of thine own blind sons and hters; how then canst thou lead the child of light in the way of peace? "One only the pierced hand, can heal the sinner's" Fox, after going to one professor and ner, inquiring as to this and that, at last peace where we too found it, if we have it, namely, from the love of the Jesus. There is one passage in his rnal" which has been quoted thousands mes, but you will not object to hear it it deserves to be printed in letters of gold, ut, as I have forsaken all the priests, so I the separate preachers also, and those the most experienced people; for I saw was none among them all that could to my condition. And when all my n them and in all men was gone so that nothing outwardly to help me, nor could that to do, then oh, then, I heard a voice said, 'There is One, even Christ Jesus, an speak to thy condition.' And when I it, my heart did leap for joy. Then the did let me see why there was none upon that could speak to my condition; that I might give him all the glory. are concluded under sin, and shut up relief as I have been, that Jesus Christ have the pre-eminence, who enlightens es grace and faith and power. Thus doth word who shall let it? And new experimentally. My desires after grew stronger, and zeal in the pure ge of the Lord alone, without the man, book or writing."—C. H. Spur-

Sketch of the Life of John Bellows.

one thing needful is to become ac- with the Spirit of Truth who shines to the soul that seeks Him, guides all truth."

ear and a few days ago John Bellows ad- these words in a printed epistle "To dents of the Friends' Select School in phia." And now an inscription be- the ground of Painswick Cemetery in, gives these words: JOHN BELLOW'S, Fifth of Fifth Month, 1902. Aged

interest aroused by his sojourn one year and about Philadelphia seems to justify lucing of several parts of an account Bellows's career, as found in the *Glow- urnal*. (Note J. S. E.'s letter in number.)

the death of John Bellows of Upton ouchester loses one who was in many her most distinguished citizen. By of heart and mind revealed in charac- attainments of great rarity, his name none known not only throughout the speaking world, but it was also of Eu-

ropean reputation. Known to English and French linguists as the author and publisher of a standard dictionary of the two languages, it is possible that his fame will longest endure by reason of this great work of his life; but being much more than a lexicographer his memory will long be cherished by the persecuted and oppressed communities of other lands who attracted his deepest sympathies and most practical help; as an antiquarian whose researches had recovered so much that was interesting in the early history of our land he will long be held in honorable esteem by the scientific world; and by those who were favored with his friendship or even his slightest acquaintance he will ever be remembered for his cultured and courtly bearing, his sensitive and sympathetic nature, his broad tolerance, his uniform desire to please and to serve—in short, for all those traits which stamped him as one of Nature's true nobility. Quaker though he was, and strong in his attachment to the simplicity of life and conversation traditionally enjoined upon the religious community amongst whom he was born, and despite a natural modesty that was a predominant characteristic throughout his career, he won by his own unadorned name of John Bellows a fame that was far beyond that conferred by titles and dignities, and when it was known that John Bellows was dead, it was felt that a gap had been made that could not be filled.

It had been known that for many months past he had been in failing health, and that of late his condition had been pronounced to be critical. Journeys to Transcaucasia and the Balkan Peninsula when past three score years of age, entailing great physical fatigue, undoubtedly made serious demands on his vitality, and his last illness probably had its origin in the visit which, in company with his wife, he paid to the United States last summer, for the purpose of seeing their son Philip, who had just previously settled in Philadelphia, and of renewing acquaintance with Senator Hoar and other American friends. Unfortunately at the time of their sojourn the States were visited by an unusual heat wave, which prostrated many seasoned Americans and did greater injury to John Bellows' health than was probably recognized at the time.

Before passing from a review, necessarily brief, of his career in an extensive printing business, mention should be made of his characteristic insistence that no work should be undertaken of a nature contrary to his own personal convictions. All orders for theatricals and musical programmes were consistently refused, and so close was his adhesion to the old Quaker disapproval of music that he would not print otherwise unexceptional matter, such as related, for instance, to temperance or adult school gatherings, if there was even the slightest allusion to any singing or instrumental music. This attitude, of course involved the closest personal oversight whilst he was himself in business, for it was scarcely possible for any deputy to fix the limitations of his employer's truly conscientious scruples. On one occasion a duly executed and delivered order had for some reason escaped his personal notice, but subsequently detecting a single offending line, word went forth that nothing was to be charged beyond bare cost price. In other cases, of course, it was

easier for the general public to enter with sympathy into John Bellows' point of view in such matters. It was useless for brewers or wine merchants to take their orders to John Bellows' establishment. A case is also recalled in which the Quaker printer was asked to print some verses addressed to the Virgin Mary in which she was described as the means through which the soul is brought to Christ. A polite refusal led to correspondence, in which John Bellows set out his views with great force, and ended by saying: "No! I dare no more print these false suggestions, even for private reading, than I dare sell arsenic, on the assurance that it is only for use by habitués."

THE POCKET DICTIONARY.

As already stated John Bellows' great accomplishment was the compilation of his French-English and English-French pocket dictionary—a marvel of learning, industry and typographical skill—which was seven years in preparation. For particulars relating to this publication we are partly indebted to an authentic description supplied by John Bassett, evidently with J. Bellows' cognizance, to a trade magazine a few years ago. It was during the sixties that John Bellows while on a journey in Denmark, first conceived the ideas which led to the production of the dictionary. At that time he had no practical knowledge of the French language, but this was a difficulty which he felt he could remove, and he at once set to work. By marvellous industry extending through seven long years, by sustained study, and by the loyal and devoted assistance of linguistic friends, the "Bona Fide Pocket French Dictionary" became at last an accomplished fact. "It is a marvel," says J. Bassett, "that such accuracy has been attained, when it is taken into account that the work was prepared and read during office hours and in the midst of his workmen—both compositors and machinists. Thousands of times has his attention been drawn away from the rendering of a French phrase; sometimes to write an order for 'sorts,' now to correct a handbill or circular, or an order for naper, or to help a compositor in the selection of a display line, and the many trivial details which men will ask as long as they have other heads to think for them. His steady perseverance cannot be too highly commended, with interruptions such as these. A great deal of trouble was experienced in the working, owing to the accents breaking, and from this cause J. Bellows has frequently read the sheet again after he had passed it for press. The imperfections were so minute as to be scarcely discernible in the forms. The type was cast especially for the dictionary by Miller and Richard and it takes eighteen lines to the inch whilst a shilling covers on an average seventy words. The dictionary stands out for its extreme originality in many essential points; for instance to name several of them, the feminine is distinguished by italic; typographic marks or signs in French words to mark the liaison or of the non-liaison; the translation of all words and phrases which have never appeared in any other dictionary; but the most useful of all these is the arrangement of both the French-English and English-French divisions on the same page." John Bellows had the satisfaction of hearing, in less than fourteen days of

its completion, that the first edition was exhausted, and the experience of seeing his name borne by means of it to the four corners of the civilized world. For more than thirty years the development of the little book has been to him a continual source of pleasure and delight, and even within the last week or so of his illness he caused new words to be added to it.

John Bellows was widely known as a Quaker and a philanthropist. "I feel sure it was," says Frederic Sessions, "while reading Isaac Penington's writings, 'that he on one hand entered into that consecrated life of pure purpose and self-denial so conspicuous in after years, while on the other his attainment was at a cost of overstrain to body and mind. This much we may be sure of—it was then he learned those lessons of obedience to what he deemed the Divine intimations which led him to give his time so nobly to the war-victim relief fund immediately after the Franco-German war, and later to the rescue of the Doukhobors from Russian persecution." He was indeed almost unique in the Society of Friends for his adherence to the peculiarities of attire and speech which at one time generally characterized every member of the Quaker community. He was strong in his attachment to the distinguishing principles of the Society of Friends, and it was by reason of the strength of his convictions that at one period—now many years ago—he disassociated himself from the Society on account of certain modifications in the form of worship. Such a severance of a life-long association was naturally a great grief to him as well as to those who had enjoyed his religious fellowship, but in this, as in other cases where public policy or personal conviction demanded separation from others, no breach of friendship was possible to John Bellows. He continued to associate with the members of the Society from which he had resigned membership in all matters that involved no sacrifice of his own convictions. He was granted the use of one of the rooms at Grey Friars, where, with his family and a few friends, he continued on First-day afternoon to meet for public worship according to the usages of the Society, and each mid week a similar meeting was held at Eastgate House, nothing being permitted to hinder his solemn break in the course of business. It was a matter of great satisfaction to members of the Society when, some years later, largely, we believe, as the outcome of the visit to Russia in company with another prominent Friend, Joseph J. Neave, John Bellows found himself able formally to re-enter the Quaker community, of which, indeed, he had not ceased to be a staunch representative in all essential matters relating to its distinguishing views. John Bellows, though occasionally speaking in meetings for worship, was not a "recorded" Minister of the Society, but in later years he held office as an Elder of the Gloucester Meeting, and he also served on the more representative Committee at the headquarters of the Society in London. Some years ago the acquisition of land subject to title led to his suffering restraint upon his property rather than voluntarily pay what he regarded as an unjust charge. The recurrence of this was avoided by the quiet act of some anonymous friends, who commuted the charge. The kindness of

spirit which prompted this was much appreciated by him.

In the last years of his life John Bellows' testimony in regard to war was gravely misunderstood in many quarters, largely owing to the failure to recognize that in his justification politically of the British objective in South Africa, he still retained his own strong abhorrence for all war and an abiding conviction that war was contrary to the Divine will. He recognized, however, that others, the majority of his countrymen, did not share this conviction, and arguing from this he would not say that they were wrong in resisting what he conceived to be the aggression of President Kruger and his Government. The latter portion of the pamphlet was devoted to the presentment of "The Truth About All War." His argument is too long to enter upon here, but in brief it may be said to rest on the contention that all effective protest against the use of force must have its origin in the peaceable disposition of the individual. The pamphlet which was the result of months of careful preparation, had a wide circulation, altered the opinions of more than one of its readers, and was translated in French and German and circulated abroad. The progress of the recent peace negotiations had been watched by him with the deepest sympathy, and he continued as long as strength was spared to ask anxiously for the result. John Bellows frequently took the platform in support of the cause of peace, and in particular he had a warm appreciation for the act of the Czar in issuing his Rescript on armaments which led to the Hague conference of 1899. He spoke more than once at public meetings in commendation of the Czar's motive, and at the time of the conference he visited the Hague as a member of a deputation from the Society of Friends in order to present a memorial to that assembly. He believed thoroughly in the Czar's good intentions, which he regarded as an inheritance from Alexandre III., who, as the result of his experiences in the Franco-Turkish war of 1877, vowed, so it is said, that Russia should enter no other war as long as he lived. J. Bellows himself had had the opportunity of seeing the terrible effects of the Franco-German war, and of hearing on the field of Gravelotte the accounts of eye-witnesses of the awful carnage of that great fight. "He hoped," he said at a meeting in Gloucester early in 1899, "he should never say one word that might in any way increase the war spirit in anyone's mind. 'The thing was so dreadful, so satanic, that he was quite certain that those who had seen what he had would use every exertion in their power to stop the war spirit from spreading among the people.'"

PHILANTHROPIST.

John Bellows' keen sympathies were especially drawn out by the sufferings falling upon the innocent victims of war and by the persecuted and oppressed, of whatever nationality, on account of their religious convictions. In 1870 he visited Alsace-Lorraine to administer relief funds collected by the Society of Friends in England, and at Metz he ran no small risk of small-pox, which was then raging in the city. His experiences in Eastern France—the memories of which were to him ever truly filled with sadness—were published in booklet form under the title of "The Track

of the War Round Metz." "I know," says F. Sessions, "no more powerful—intensely harrowing—pictures of battlefields and fever camps than those he has given us here—for John Bellows was really a master-writer of beautiful English when at his best. With him was a humble-minded man, and when I was once in his company I heard him soundly rebuke some one who had spoken words of personal praise for the self-denying work he had undertaken." His visit to Russia in 1893 with J. J. Neave was in the interests of the persecuted Standists and others. The mission was of a somewhat delicate nature, the endeavor being in the first place to obtain the ear of the Government authorities on behalf of the Russian Dissenters, and in the second place to see that help, sorely needed to secure the bare necessities of life, was directed through reliable channels without fear of misappropriation. At the time of the permission of the present Czar given to the sect of the Doukhobors to emigrate, J. Bellows greatly interested himself in their behalf, and helped to bring the case before the Friends of England and America. As a result of the appeal made by its responsible Committee, sufficient funds were raised to emigrate eleven hundred Doukhobors to Cyprus, where, under the management of the late Wilson Sturge, they were temporarily lodged. J. Bellows took the greatest interest in the Cyprus settlers, and also in the further steps for their removal to Canada, with other of their brethren from the South of Russia. At the present moment there are between seven thousand and eight thousand Doukhobors in the North-West Territories. He continued the last to work for their true welfare under the generous Government of Canada, and at the beginning of this year it was announced that his second daughter, Hannah Bellows, had offered her services for educational work amongst them. He also paid a visit to Sweden in company with E. Wright Brooks, in order to influence the Government there on behalf of those who conscientiously refused to bear arms. His keen sympathy with the suffering and oppressed was elicited to the full by the persecuted Armenians, and in company with his wife he undertook a second journey to the East four or five years ago, organizing relief in the Balkan provinces affected.

The late John Bellows was a man of scientific attainment and a most cultivated mind; and his death has caused a gap in a certain learned and antiquarian circles which will be difficult to fill. He was one of the most eminent authorities on the subject of the Roman occupation of England, his researches on the question being of a most profound and painstaking description. He probably was better informed than any of his contemporaries on all matters relating to the Roman history of Gloucester, and his services as a collector were repeatedly in request when visitors desired to be shown the many archaeological treasures of that interesting period, in which the city abounds. At the time of the British Archaeological Society's visit some of the leading authorities in Britain were glad to have him as guide to the Roman history of Gloucester, and its neighborhood. The event which gave him his first inspiration in the direction of archaeological research occurred in 1872, when, in erecting his new printing works

Eastgate House, the excavations led to the discovery of the Roman wall of Gloucester; and on investigation this proved to be what is believed to be the oldest piece of Roman masonry in the British Isles, dating as it did from about the year 45 to 50 of the Christian Era. Close to the scene of this important discovery J. Bellows found what Professor Rolleston has described as the largest heap of Roman remains ever unearthed in one spot in the United Kingdom. He was formerly a member of the Bristol Archaeological Society, but here again his extreme conscientiousness and his own religious convictions shut him off from what would otherwise have been an interesting archaeological study, that of ecclesiastical architecture, and he had ceased membership of that body for some years. The *Cheltenham Examiner* says of him, in the course of an appreciative obituary notice: "It is no exaggeration to say that to him we owe more of our knowledge of Roman Gloucestershire than we owe to all other historians combined. Occasionally John Bellows' enthusiasm over his pet study made him the subject of gentle oke. 'Friend John,' said a Friend to him once, 'considering that thou art a man of peace, it is astonishing that thou should'st now so much of the arts of war.' And it has been said by more than one of his friends, that so great was his knowledge of war tactics that had he not been a Quaker he would have been an army general."

John Bellows was of a modest and even retiring disposition; he disliked intensely anything in the nature of ostentation. Yet it was only natural that one so endowed with rare intellectual gifts, of high attainments, and of pleasing personal traits should have become the object of much love and esteem. His society and intercourse were cultivated and esteemed a privilege by many distinguished contemporaries. Senator George F. Hoar, of Worcester, Massachusetts, who is descended from a Sheriff of Gloucester in early Stuart days, was a guest of J. Bellows at Upton Hall some years ago when investigating the history of his family in this city, and the two were exchanged in correspondence must have been contributory to a good understanding between the two branches of the Anglo-Saxon race, as for instance at the time of the Venezuelan boundary dispute, and in regard to American sentiment on the Boer war. In the course of their American visit last year J. Bellows and wife were in turn the guests of Senator Hoar, and it was at this time that the degree of M. A. was conferred on John Bellows, *honoris causa*, by Harvard University. The honor was quite unexpected by him, and announcement of the intention only being made shortly before arriving at the scene of the ceremony where he expected to be nothing more than an interested spectator. He was then presented to the audience: "John Bellows, English Quaker; authority on Roman antiquities in Britain; delightful essayist; learned lexicographer." It is interesting to note that at the same ceremony Vice-President Roosevelt, now President of the United States, received the honorary degree of LL.D. J. Bellows on behalf of the oppressed in Russia elsewhere brought him into contact with Count Leo Tolstoi, whom he visited more than once. The French dictionary brought

him the friendship of the late Prince Louis Lucien Bonaparte. His correspondence with the late Oliver Wendell Holmes lasted for a quarter of a century; and the beautiful letters from the poet were amongst his greatest treasures. "Are you not sorry, dear Mr. Bellows," he wrote in 1888, "that my eyes are getting dim, and that this beautiful nature which you paint so poetically in your letter, is fading away from me?" Professor Blackie he knew, and Sidney Dobell, and James Anthony Froude; he quickly grasped where sterling character lay, and his best friends were men worth knowing. The friendship of the late Professor Max Muller and of William Lucy he treasured, as also that of Senator George F. Hoar, whom he knew with ever-deepening affection.

John Bellows leaves a widow, to whom he was married in 1869, and a family of four sons and five daughters.

Now the tongue is silent and the hand is still for ever. Peacefully will he lie among the quiet hills he knew. In lifetime he did know of the Redeemer's love; of that peace which passeth understanding; of that eternal and ever-present Light which he tried through pain, through joy, to follow. In death he reached his reward.

Success of American Industry.

A PARTICULARLY interesting portion of Consul Boyle's report is that wherein he places the American and the British workman side by side, in a comparison which places the American far to the fore, English manufacturers, he says, find it almost impossible to get the same amount of product from machines as is obtained in America. There are two reasons for this, says Boyle. First, the average British workman is not as adaptable as the American, and does not so readily get command of new appliances and, second, that it is not the custom of the country for an Englishman, whether mechanic, clerk or laborer, to work as hard as an American. Then, too, states the Consul, the English workman is inclined to split very fine hairs; he will often refuse to do anything outside a certain line rigidly laid down by the custom of his craft generally, and by his trade union, in particular. As an example of this trait, the Consul cites a number of instances when strikes have been brought on by such an apparently trivial dispute as to whether engineers or shipwrights should place an electric dynamo in position. Quite recently, in a seaside town, there was a strike of teamsters, because their employer refused to discharge an enterprising driver who had whipped up his horses and made a journey to a neighboring town three hours quicker than they themselves had been accustomed to "do" the distance.

The small extent to which up-to-date labor saving machinery is used in Great Britain, as compared with American, and even Germany, Consul Boyle says, is just now a fruitful topic of discussion. English manufacturers, he says, are handicapped by reason of the employment of antiquated plants. The rule in England, says the Consul, is for a plant or machine not to be replaced until it is absolutely worn out. The question is, he says "Will it do?" not, "Can it be improved?"

WRITTEN OF RACHEL GRELLER.

Twelfth Month 11th, 1894.

Not until the evening sunlight
Gilded her life's closing day,
And the weight of long experience
Measured all she had to say,
And the thought of heaven was chiefest,
With the loved in its embrace,
Were we privileged her acquaintance,
Or a look at her dear face.

Then within her room, made sacred
By the presence of her Lord—
For upon his strength she rested
And did feast upon his word,—
We beheld the pure example
Of her love to parents dear,
Such sincere, and pure devotion
To their memory, year by year.

If companionship in earth-life
With our loved ones, is so dear,
What must be the wondrous fulness
Of this foretaste we have here?
When with powers of mind and vision,
And of thought, all glorified,
And with Christ, and in his likeness,
Forever we are satisfied?

E. P. TERRELL.

Communion and Atonement.

SECTION II.

The foregoing passages constitute, in my opinion, a very exact and spiritual analysis of what it essentially is to feed upon Christ.

The words examined being those of Christ Himself, the authority and instruction they contain for us must be of the highest. The teaching, however, which McLeod Campbell finds in them, does not agree with the prevailing view of the Church. In that view, feeding upon Christ is regarded as "occupation of heart and mind with his love—with his work and its results."

Yet we are justified in believing, that whatever there is of value in such meditation, in connection with the "Communion" service, (and we cannot doubt that real benefit is received by many, though the attractive but misleading element of mystery often has too much place), yet whatever real feeding and spiritual nourishment is thus known, it must, whether so recognized by the participant or not, have as its basis an honest attitude of the will towards the acceptance of the government of Christ's spirit. Without this there can be no vital communion, which must mean union of will with life.

Such union is possible only as there is a harmony of will and in proportion to such harmony. "How can two walk together except they be agreed." When, instead of this loyal attitude of will, spiritual benefit is hoped for through some mystical efficacy with which religious thought of the past has largely clothed the "communion," especially that form of it called the "Mass," when this is the case, such ceremony often becomes, as McLeod Campbell says, an actual "rival of the true feeding upon Christ."

Notwithstanding my high estimate of the value of the teaching I have quoted, I do not feel satisfied to present it alone, and apart

* The "Word" mentioned here, refers not alone to the Bible, which is the written words of God; but also, as we have assurance to believe, refers to the precious promises, counsels and comforts, given by the immediate operation of the Holy Spirit upon the soul.—E. P. T.

from that setting in Gospel light and truth which I know McLeod Campbell would claim for it. Taken by itself that teaching addresses us as simply one of the many calls the Scriptures make to the obedience of faith,—to the acceptance of the Divine will as our highest good; calls which we accept and to which we desire to respond, while feeling our inability to do so, and our need of help through agencies beyond and above ourselves.

Therefore, I believe that the true feeding upon Christ means for us in this period of the Gospel Dispensation, not simply obedience, blessed as that obedience always is—but obedience in the light of the cross, obedience consciously and intelligently in the light of the Cross.

I emphasize the words consciously and intelligently; for distinct is the difference both in its influence upon the individual life, and in the testimony of that life before the world, between the results of simple obedience to Christ,—that is, to the Divine will—and the same measure of obedience when exercised “consciously and intelligently” in the light of that deeper and richer meaning of the Incarnation, Suffering and Death of Christ, which is being brought to view through the advancing revelation of Himself and his relation to men, which God is still making. There also is much reason to believe, that many bow in sincere prostration of spirit at the foot of the Cross, who yet have not had their eyes opened, fully opened, to the light of the Divine love in which they stand. Many are alive in Christ, and have known the joy of forgiven sin, and reconciliation with God through the atoning sacrifice of Christ, who yet fail to realize that “life more abundant,” which Christ said He came to bring, and to which the forgiveness of sin is but the introduction. We rightly associate growth and progress of some kind with life. And of all life, this characteristic of growth should apply with special force to that which is life in its highest sense,—the life of God in the soul of man. This is the real, the true man, the crown of creation.

To Him dominion was given over all things, and He was endowed with capabilities to lay hold of the Infinite. Growth then and progress, even though slow, should be predicated of every child of God. And this is realized, in proportion to obedience to the light of Christ in the heart, jointly with perception of the high purpose of love and the teaching of that love as revealed in the light of the Cross. There is much reason for the fear, that in many cases the joy of conscious pardon for sin becomes somewhat weakened by familiarity therewith. Thus it loses to some extent its power to stimulate the spiritual life and that life becomes stunted. Obedience having been valued merely because of its evidencing a vital faith, and as a result of that faith and of grateful love for the forgiveness of sin, the value of obedience purely *per se* has not been realized. Too low an estimate has come to be placed upon that experience which is called “the girding of the loins,” the spiritual loins. This familiar figure clearly conveys its meaning. Instead of the impulse of love it expresses rather the calm, deliberate, purposeful preparation for strife; for the overcoming of obstacles, especially those foes of our best life which have their fortress in our hearts.

“The Kingdom of Heaven suffereth violence, and the violent take it by force.”

It is difficult, I realize, thus to refer to this feature of the spiritual course, without appearing to lay too much stress upon its importance. And I would myself promptly acknowledge my conviction that love is finally the most effective agency in lifting the life into its true relation with God. This difficulty as to relative importance seems unavoidable when dwelling upon either one of two influences, both of which have their place, and in that place have their essential importance. I feel, however, I am supported in what I have said by the teaching of our Saviour, who not only declared, “If any man love me he will keep my commandments,” but also “if ye keep my commandments ye shall abide in my love.”

And what, we may ask, is the fuller light of the Cross which has been alluded to,—that richer meaning of the Incarnation, Suffering and Death of Christ, which characterizes the best thought of the present day, and makes more possible to earnest lives a fruitful response to the teaching of Christ, of which obedience to his Spirit must ever be the central feature.

In endeavoring to answer this question, I avail myself of an article by Ambrose Bennett, which appeared in an English periodical, upon the subject of the “forgiveness of sin.”

In presenting the thought of that writer I condense it as well as I can, consistent with clearness.

Sin, he says, is its own penalty. Its punishment is self-executing and lies primarily in the sense of estrangement from God which it creates. The full effect of this estrangement is not seized, until we realize what it has compelled us to think concerning God and his relations to us. It compels us to think of Him as unable to enter into communion with us, in other words, that it is impossible for Him to forgive our sin. This is the severest part of our punishment, that we are reduced to an inability to believe in the Divine mercy to us.

This inner consequence of sin is a constant element in Christian experience. When Peter in the first moment of his new-born conviction of sin cried out, “Depart from me, for I am a sinful man, O Lord!” it was because he saw the distance between himself and his sinless Lord, and could not conceive how across that distance communion was possible. The sense of his unworthiness obliged him to disbelieve in the possibility of forgiveness. This is no singular phenomenon but a normal feature of Christian experience, as proved by the persistence, in its successive forms, of the doctrine of the Atonement. The various theories of satisfaction whereby it has been sought in past ages to estimate the conditions making it possible for God to forgive, do but reflect under changing intellectual conditions, that unchanging experience of the soul, wherein it is made powerless, because of the oppression of its sin, to conceive of the freedom of the Divine mercy. It loses its certainty of the love of God.

Thus forgiveness, the consciousness of forgiveness of sin, is the central factor in determining the religious life. When, therefore, the certainty of God’s mercy and love has been brought home to the consciousness of

the soul under conviction of sin and laboring beneath the intolerable burden of inability to conceive the existence of that mercy and love, it is like the recovery of sight to the blind and the resurrection of the dead.

Selected.

Catharine Burling.

Catharine Burling, daughter of John and Ann Burling, of the city of New York, in America, was taken ill of a slow fever, which weakened her gradually, so that, to use her own expression, she was reduced step by step; all means used for her help proving ineffectual. When she was brought low and her recovery appeared doubtful, she was for a time under great exercise of mind concerning her future state, and prayed to the Lord for a little more time, and that she might witness a better state; which he was graciously pleased to answer, not long after, she saying her mind was changed. She came to witness the child’s state, filled with innocence, abounding in love; often saying, “My mind is like a little child’s.” Her heart came to be filled with the love of God, and in the abounding there, for several weeks before her departure, she was at times enabled to declare of the Lord’s goodness to her in a wonderful manner and also, to exhort many who came to visit her to amendment of life, that when she came to lie on a sick bed they might enjoy that peace she was then made a partaker of often saying she felt his peace flow in her mind as a gentle stream, and that her cup ran over. . .

Many were the expressions which this young woman uttered, some of which, as nearly as could be remembered, are as follows, viz:

“Many wearisome nights have I got through, and have watered my pillow with tears. I was long in doubt of my eternal happiness, and in the time of greatest distress cried to the Lord that he would be pleased to lengthen my time a little longer, that I might be more fully prepared. And He was graciously pleased to hear and grant my request, and now He has been graciously pleased to grant me a full assurance of it and to lengthen my time that I might speak of his goodness to others and tell what He hath done for my soul. O praises, praises, praises, be given his great and glorious name. My tongue too short, by far; O, if I had the tongue of an angel I could not sufficiently express my gratitude to that gracious God who has been pleased to favor me in so eminent a manner.”

“My disorder is very changeable; very trying it would be to some but it does not bother me. I am resigned to the Lord’s will, and Him do just as best pleaseth Him with all his poor frail creature. A few days ago when I thought I was just launching into eternity, that boundless ocean of eternity, I prayed to the Lord that He would be pleased to give me a little longer time, and He was graciously pleased to hear and grant my request. The work of regeneration is a great work. I know it now experimentally. I am become a new creature, new thoughts, new desires, my passions set on things above. I have a new life written in the Lamb’s book of life, and the white stone is given to me!”

She at the same time advised her brothers and sisters to plainness of speech and at

ng, "Remember our blessed Lord, that
it pattern of plainness, who when on earth
up and down doing good, and wore a gar-
ment without a seam. He was crucified, He
nailed to the cross for our sins, for my;
O love inexpressible!"

During the last five weeks of her illness she
frequently speaking of the Lord's good-
ness to her, being favored in an extraordinary
manner; often saying, "I have nothing to do
in this world, O let my time be employed in
singing the Lord, and telling of his gracious
things with my soul!"

One evening as her father was sitting by
her bedside, she said to him, "Thou art my
father, but now I have another father; I have
a heavenly Father. I love thee dearly, but I
love Him much more. Oh! He is the chiefest
of thousands!"

He would often say, "I am thankful to the
Lord for all his favors conferred on me, and
yet I do not speak I am thankful in my
heart, and that is more than words. The Lord
does not require lip-honor, but when my heart
is filled I cannot help speaking." . . . "Many
the changes and vicissitudes I experience,
but what may come next none of us know;
I am resigned and thankful for all his
mercies, his poor frail creature; He must do
with me just as He pleases. We should be
thankful for all the Lord's favors. I hope and
trust that I may be kept thankful and humble,
and low, before Him, waiting for my
portion, and a happy change it will be for

the morning as her mother and sisters were
dressing on her clothes, she desired them to
do so and then expressed herself to this effect:
"How no longer wonder that the martyrs
singing in the flames. I could do the
same. I think I could go through burning
trials, if required, for the love of Christ.
(It is inexpressible)" and spoke much
more, and then prayed in an extraordinary
manner.

Another time she spoke as follows:
"Now I know how precious the soul is. O that
I could prize their time, and prepare
their health is granted them. I bless the
Lord I am prepared; if He is pleased to call
me the next moment I am ready. But I am
thankful for the little time He has granted me
to be with you; but O how shocking, how
horribly shocking must it be for such poor
souls who are unprepared and deprived of
the senses at such a time as this!"

He often exhorted many young people at
different times, against reading romances and
novels, saying, "It has been the greatest
evil and exercise of mind to me, more than
anything I have done. It has cost me many a
sleepless night, and many a bitter tear,
which I have read but a few, and those that
I deemed the most harmless. I know there
are some who deem them innocent amuse-
ments, and say these books are instructive,
where there are good morals in them. But, O!
we go to those books for good morals?
The Scriptures, which are the best of all
books."

One who followed the sea, coming into the
port and standing by her bedside, after a few
minutes she spoke to him to this import: "Thou
sayest that saileth on the great waters, and
that thou mayest see God's wonders in the

great deeps; and thou art much in company
with sailors and such like men, and I know
they are light and frothy in their conversa-
tion. I desire thee to keep thy mind watchful
and near the Lord, which if thou doest, thou
wilt be preserved in his fear."

After a severe turn of illness, one evening
she called her little brothers to her and kissed
them in a very loving manner; and then being
removed to the bedside, as she sat thereon
she said, "O I am full of love! I feel a degree
of Divine love." A neighbor being in the
room, noticing how easy and composed her
countenance was, she answered, "How can my
countenance be sad when my mind is at
peace?" The neighbor answering, "Which
the world cannot give," she returned, "No,
nor take it away!"

Two neighbors, not of our Society, coming
into the room, she spoke to one of them, say-
ing, "Thou seest me very weak and low, but
my mind is at peace, sweet heavenly peace of
mind. I hope and pray that thou mayest feel
the same when thou comest to lie on thy sick
bed."

The last day before her departure she said,
"I am resigned, patiently waiting and quietly
hoping for my happy change."

A little before her departure she told her
father she was not afraid to die. "I feel as
if I am going to paradise." About noon the
same day she desired her mother to tell a
friend present that she should go easy and to
rest.

She departed this life the 10th day of the
Fourth Month, 1764, in the eighteenth year
of her age.

Science and Industry.

COST OF OCEAN CABLES.—From an "authori-
tative" article in the *Century* we take this note
apropos of Marconi's work in wireless tele-
graphy:

"Marconi also believes that his system may
become a formidable competitor against the
ocean cables. To do so on land is not so easy,
as the lines there cost only one hundred dol-
lars a mile, whereas the cables cost one thou-
sand dollars a mile, and require extensive
steamers to repair and maintain them. A
transatlantic cable represents an initial out-
lay of at least three million dollars, besides the
cost of its maintenance. A Marconi station
can be built for sixty thousand dollars. Three
of these, bringing the two worlds into contact
will cost one hundred and eighty thousand dol-
lars, while their maintenance should be insignif-
icant. What his success will mean can be
best grasped by considering the extent of the
property which would be displaced thereby,
although it is only since Eighth Month 5,
1858, forty-three years ago that the first At-
lantic laid along the Atlantic bed, and in the
whole world seventeen hundred and sixty-nine
telegraph cables of various sizes, with a total
length of almost one hundred and eighty-nine
thousand nautical miles, enough to girdle the
earth seven times. These require a great
number of ocean-going cable steamers for their
laying and repairs, and while the total value
of the cables cannot be easily computed, it is
known to be a fact that British capitalists
have one hundred million dollars invested in
cable stocks.

The number of oleomargarine factories in
the United States is only twenty-four, but
their annual output sells for more than thirty
million dollars. There go into it twenty-three
million pounds of milk, and cream, thirty-
three million pounds of beef fat oleo, thirty-
seven million pounds of neutral lard and eleven
million pounds of cotton-seed oil. The amount
of oleomargarine made in the Netherlands is
greater, and that made in Germany double that
produced in the United States.

The vice of camphor-smoking, which is said
to be on the increase abroad, soon enslaves
those who indulge in it. While the results of
its use are not so dire as those of cocaine
either or morphine, apathy, muscular weakness
and sleeplessness are always experienced.

VANADIUM does not melt in a heat of less
than two thousand degrees Fahrenheit, is not
affected by any acid, and increasing, as it
does, the ductility of copper, it is very valu-
able to the makers of electrical appliances; but
the price being six hundred dollars a pound,
it is almost prohibitive.

The fastest train in the world is now that
between Paris and Calais, connecting with the
channel boats to England. It is scheduled to
cover the distance of one hundred and eighty-
four and a half miles in three hours, with a
four minute stop and slow speed while passing
through Calais.

The Falls of Glomen, in Norway, are to be
utilized for the operation of an electrical gen-
erating plant almost as large as the one at
Niagara.

MUSTARD and salt water, with a little soda
added, or an active emetic, may be given in
cases of emergency, so as to produce vomit-
ing, and eject any poison from the stomach.
Nothing is more alarming than to have a case
of accidental poisoning. For poison from al-
kalies, lead or mushrooms use oil and vinegar.
It should be given freely. For external poi-
sons, such as poison ivy or plant poison bathe
the affected parts with a strong solution of
borax water and apply a poultice of tansy
leaves, moistened with sweet cream, and keep
the system in good condition by taking some
cooling, simple medicine.

Items Concerning the Society.

By request of his family, the London *Friend* re-
frains from publishing any portrait of the late
John Bellows.

NUMBER OF DAYS IN THE MONTHS, as I was taught
them.—H. M.

"The Fourth, Eleventh, Ninth and Sixth,
We thirty days for each affix.

All the rest have thirty-one.

Except the Second Month alone.

To which we twenty-eight assign

Till 'leap year' gives it twenty-nine."

In their visit to Burlington and Bucks Quarterly
Meeting the Yearly Meeting's Committee appointed
a public meeting for Divine worship to be held in
the meeting-house in Burlington on Fifth-day even-
ing, Sixth Month 5th, and others at Trenton, N.
J., and Falls, Pa., to be announced later.

Evidences are multiplying that the modes of gathering which we have been thought behind the times in not adopting, are now in some places scattering rather than gathering.

A visitor to our recent Yearly Meeting returning to his distant home, came to a city, where he writes that "the meeting under the present pastor has gone off from the principles of Truth. The last First-day when the pastor administered bread and wine to a number of kneeling recipients around the railing. A First-day before one bearing a minute from a 'Friends' church' spoke approvingly of Calvin's teaching of predestination, and of the second coming of Jesus being in the near future." Another informed us of her home meeting under the new methods being torn to pieces and laid down. From another Yearly Meeting one writes, "In our own Monthly Meeting two of our Preparative Meetings were laid down last year, and these had adopted modern methods, such as employing a pastor, and one of these meetings was discontinued entirely, the other was "indulged." These were old established meetings and not those newly set up. In our Quarterly Meeting there are several meetings which simply depend on their hired preacher, and when he is not there they are wholly at a loss, seeming to know nothing of the Quaker idea that "God is a Spirit, and they that worship Him must worship Him in spirit and in truth." Their service consists of a set program, in which the principal features are the singing of a number of hymns selected and practised for the occasion, and frequently accompanied by the organ and the delivery of a sermon prepared for the meeting.

"It is strikingly true," he continues, speaking of his "improved" or pastorate Yearly Meeting, "that 'the old, solid, concerned Friends who have set the type and standard for years are passing away, and their places are not being filled. It is too generally the case that those who come forward to take the places of those who have given stability and character to our Society, know almost nothing of its principles and doctrines. It is getting to be the case that to be a member of the Friends means no more than to be a Methodist, Baptist, or to belong to no branch of the church. I fear that if Philadelphia Yearly Meeting drifts into the popular current, that real Quakerism will be a thing of the past, except as it is manifested in individual lives. Of course activity in the life and power of the Spirit of our Saviour is all right, and will build up; but mere fleshly activity can only result in confusion."

Joseph Elkinton (son of Joseph S. Elkinton), proposes to start early in next week for a visit among the Doukhobors in Manitoba. Helen Morland, who has come from England to teach among the Doukhobors, and Eliza H. Varney, who accompanies her for her better introduction to them, may be met on the way by Joseph Elkinton and assisted through their journey.

SUMMARY OF EVENTS.

UNITED STATES.—The House of Representatives has lately passed a bill to regulate immigration. It also contains a prohibition of the sale of intoxicants at immigration stations. An amendment prohibiting the sale of intoxicants in the capital at Washington was inserted and carried.

The President has signed the Indian appropriation bill after promises had been made to him that legislation would be passed correcting certain objectionable features contained in it.

In speaking of the Philippines, President Roosevelt in a public address said it could not be decided "whether they are to exist independently of us or be knit to us by ties of common friendship and interest" until they have shown their capacity for self-government.

In the anthracite coal region in Pennsylvania 3200 men have been assigned as a police force and distributed in the neighborhood of different villages by the Reading Coal and Iron Company. Efforts are being made to end the strike, but it is stated both strikers and mine operators are making preparations for a protracted siege. Business in the anthracite region is stagnant.

In consequence of strikes in Chicago, a meat famine is imminent in that city.

An order has been issued from the War Department, by direction of the President, by which the numerical strength of the army is reduced from 77,287 enlisted men to 66,497, a reduction of 10,790.

President Roosevelt has lately publicly said: "What we need most in this republic is not special genius, not unusual brilliancy, but the honest and upright adherence on the part of the mass of the citizens and of their representatives to the fundamental laws of private and public morality, which are now what they have been during recorded history, and we shall succeed or fail in making this republic what it should be made—I will go a little further than that—what it shall and must be made—according to the manner in which we seriously and resolutely set ourselves to do the task of citizenship, which consists of doing the duties, public and private, which in the aggregate make it up."

A company has been formed at Seattle for mining platinum in the Tulameen river and Granite creek deposits.

The largest flowing oil well in Ohio, near the town of Findlay, has lately been producing at the rate of 1000 barrels daily.

Dr. H. C. McCook, in an article on "Insects and Civilization," gives some statistics as to the amount of destruction annually in the United States by insects of various sorts. The chinch bug caused a loss of \$30,000,000 in 1871, upwards of \$100,000,000 in 1874, and in 1887, \$600,000,000. The Rocky Mountain locust or grasshopper, in 1874 destroyed \$100,000,000 of the crops of Kansas, Missouri, Nebraska and Iowa, and the indirect loss was probably as much more. For many years the cotton caterpillar caused an annual average loss in the Southern States of \$15,000,000, while in 1888 and 1873 the loss reached \$30,000,000. The fly weevil, our most destructive enemy to stored grains, particularly throughout the South, inflicts an annual loss in the whole country of \$40,000,000. Other entomologists have estimated the annual loss from \$300,000,000 to \$400,000,000.

A telescope has lately been obtained for the observatory of the Central High School in this city, the object glass of which is fifteen inches in diameter and is in this country. It is said to be an excellent instrument.

Judge P. S. Grosscup, of the United States Circuit Court in Chicago, has issued the temporary injunction asked for by the Government against the "Beef Trust." The packers are forbidden to act in combination, either by directing or requiring their respective purchasing agents not to bid against each other, or by artificially raising or lowering prices or fixing uniform prices, or by curtailing the quantity of meat shipped, or by establishing uniform rules for giving credit to dealers, or by imposing uniform charges for cartage or delivery of meat to dealers and consumers. The injunction also prohibits the packers from accepting rebates from the railroads.

There were 445 deaths in this city last week, reported to the Board of Health. This is 23 less than the previous week and 73 more than the corresponding week of 1901. Of the foregoing, 232 were males and 213 females; 59 died of consumption of the lungs; 60 of inflammation of the lungs and surrounding membranes; 5 of diphtheria; 18 of cancer; 21 of apoplexy; 5 of typhoid fever; 6 of scarlet fever and 5 of smallpox.

FOREIGN.—A despatch of the 27th ult. from Fort de France, Martinique, says: "The volcano was all but completely quiescent yesterday, and the internal rumblings were infrequent. This state continued until half-past eight o'clock last night, when an explosion of terrible force occurred. Immediately but mud began pouring into the sea from every side of the mountain. Flames shot skyward, and ashes floated out in great clouds. The outbreak was accompanied by an electrical display that was the worst seen here since the trouble began."

On the 28th it was stated, during one of the explosions this morning, great quantities of gaseous smoke were ejected by the volcano. It is feared that should such a gas settle over the island there would be danger of a repetition of the disaster which destroyed St. Pierre. The exodus of inhabitants continues, and if confidence is not restored soon the island will be entirely depopulated. Prof. Robert T. Hill, U. S. Government geologist has lately visited Martinique, and states there is indisputable evidence of the explosive oxidation of the gases after they left the crater. This is a most important observation and explains, in part, the awful catastrophe. This phenomenon is entirely new in volcanic history.

The Deputy Mayor of Fort de France has stated "that the French navy has 9400 men in the city of Fort de France who are regularly drawing rations from the relief stores. That means that nearly one-third of the entire population of the city, which is the seat of government, is dependent for the time being upon outside aid. Through-

out the entire island of Martinique it is no exaggeration to say that 25,000 are now drawing sustenance from stores of provisions so generously sent to our dozing brethren in eruption on the 30th ult."

The volcano Soufriere on the island of St. Vincent has been declared between Great Britain and the Boers. A document containing the terms of a peace proposed by the Boers, and signed at Pretoria, South Africa, on the 11th ult. by the representatives of the Boers and General Buller and Kitchener on behalf of the British. The terms of the war is stated to have been over one thousand dollars. The number of the killed on the 1st of Second Month is said to have been 25,305 of the Boers; the number of Boers has not been definitely stated.

Cold coffee is said to be gradually displacing hot German factories as a beverage during working hours. Sweden's last census records the lowest death rate attained by a civilized nation. During the last ten years it only averaged 16.49 per 1000.

During 1901 14 immigrants came to the United States and it is estimated that during 1902 30,000 immigrants will leave for America.

The temperature of the higher parts of the atmosphere has been tested by means of rubber balloons, with automatic registers, for recording phenomena in the high altitudes, where they finally explode through gas pressure. After the explosion a parachute safely lands the apparatus. In experiments lately made with the balloons registered an altitude of 20,000 metres, the highest attained by a balloon. The temperature was 50 degrees (fahrenheit) below zero.

NOTICES.

RADIONIDAL QUARTERLY MEETING is to be held at Mount Laurel, Sixth Mo. 12th, at 10 A. M. Arrangements have been made for Stages to take Friends of the various districts to the meeting. Friends from Mt. Pleasant and Mount Laurel, leaving East Moretown station at 8.50, on arrival of train leaving Market St., Philadelphia at 8.20; and to leave the Meeting House, Moorestown at 9 o'clock, to take those going by trolley from Camden, leaving the Ferry, Market street, Camden, not later than 8.03 A. M.

A REUNION OF THE WESTTOWN OLD SCHOLARS' ASSOCIATION is arranged to be held on Seventh-day, Sixth Mo. 7th, 1902, on the School grounds, and in the large tent.

Besides the entertainments announced last week speakers are expected to be:—

On behalf of the "Sixties," Sarah W. Elkinton

On behalf of the "Forties," David Seal.

Trains will leave Broad St. Station at 8.10, 9.10 and 9.55 A. M.—the last expected to run to Westtown in forty minutes, without stop.

The individual invitations will be issued about the 10th 23d.

ALBERT T. BE

WESTTOWN BOARDING SCHOOL.—For convenience of persons coming to Westtown School, the stage will leave Philadelphia 7.16 and 8.15 A. M., and 9.42 A. M. Other trains are met near Westtown. Stage fares, fifteen cents; after 7.30 P. M., twenty cents each way. To reach the school by telegraph to West Chester, Phone 114x.

EDWARD G. SMEDLEY, Su

WESTTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to WILLIAM F. WICKESHAM, Principal.

Payments on account of board and tuition, and communications in regard to business should be forwarded to EDWARD G. SMEDLEY, Superintendent.

Address, Westtown P. O., Chester Co., Pa.

DIED, at the residence of Eliza Hoyle, her sister at Whittier, Iowa, Second Month 16th, 1901; in the 81st year of her age, HANNAH A. HAMPTON, of occupation. A member of Springville Monthly and Partisan Meetings of Friends. Blessed and holy are they that have part in the first resurrection.

At Imperial, Nebraska, Fifth Month 10th, 1901, SMITH, in his eightieth year. He was a life-long member of the Society of Friends, and died in the triumph of a living faith.

THE FRIEND.

Westtown.

thousand and more members and guests of the Old Scholars' Association of Westtown, Pa., who assembled on the school grounds for the seventh instant, had occasion to be thankful for the loveliness of the weather, inaugurating a brief rain to lay the dust just in time, and for the well ordered arrangements throughout. An excellent spirit pervaded the exercises, which were delivered beneath the canopy of canvas, where the listening multitude felt that they were fed with earnest truth, with enlightening suggestions, and with material for devout reflection.

A distinctively educational address presented by Sarah W. Elkinton, being directed especially to the management and policy of the school, may be left generally to the care and thought of those who are in charge. The maintenance of a wise conservatism by judicious progress seemed to be the keynote;—and a discernment was put forth lest progressive forthrightness, by being pent up too long, at some sweep down with an irresistible rush, ending as by a revolution the wise conservatism of the unwise. Evidently the management has not been blind to this tendency in educational affairs. The supremacy of radical influences was pronounced undesirable. For when changes come too rapidly for comfortable adjustment, they precipitate a revolution which is temporary chaos. Several special lines of progress were then marked out, and will doubtless be duly considered.

The religious side of the human mind and understanding was dwelt upon in the next paper—that of David Scull. Its sentiments being more general in character, are deemed suitable for a larger audience. We were en-

abled, in the brief time permitted, to copy extracts as follows:

"We turn from the many memories which rise to view, to that which is the peculiar heritage of Westtown,—the volume of godly life and exercise which has surrounded it, through the committee in charge of the school and those placed by them in direct authority over the students.

"In its unbroken duration and in its high level of devoted service,—that company of faithful men and women including its present representatives, has constituted a real aristocracy of embodied truth. It is safe to say that so long, and detailed and faithful a care over the important interests of youth, is almost unique in the history of large institutions of learning. If equalled, it has certainly never been surpassed. In view of such faithful service and its permanent wide-spread blessing we are reminded of the lines,

"Oh may I join the choir invisible, of those immortal dead
Who live again in minds made better by their presence,
The choir invisible, whose music is the gladness of the world."

"What is the secret of the attraction which has existed in the type of religious life, both individual and family, and which we associate in thought with Westtown?

"If I may answer my own question I would say, that the explanation is found in the fact, that that from which the attraction springs is itself the very essence of immortality! It is a relation of cause and effect in the spiritual sphere. The cause is the presence and power of the Divine life expressing itself through the transformed human life, as light and love, and sweetness and truth. The effect is the responsive witness of the Spirit in other lives, including even the unregenerate, attesting the fact that these beautiful spiritual virtues whose influence is felt by all, appeal to the innate, often unrecognized, longings of the immortal soul, for that which does really satisfy. Whether or not such resolutions of the life and light of Christ in his followers have the permanent influence upon others which they should have, we cannot know; yet this does not effect the fact, that the soul does intuitively apprehend that which has the quality of immortality."

In remarking upon "right living and high thinking" as an aim of those in charge he continued:—

"By high thinking I mean earnest thought upon those revelations which God has made in the past and is yet making, whereby a knowledge may be obtained of the Divine nature and ways, and man's relation thereto. This is in harmony with the most defensible statement of the distinctive truth of Quakerism:—the

truth of the divinely endowed capacity of man to apprehend *directly* that which God reveals to him not only for guidance in conduct, but also for illumination of the life.

"High thinking apart from right living could not attract me. On the contrary it can be attractive to *any*, only when the will and the affections have already in a good degree been centered upon Christ. Then high thinking becomes the noblest exercise of the mind, . . . High thinking reacts helpfully on right living, and imparts thereto its own peculiar quality.

"I have said that there is no high thinking apart from right living. There is, however, right living without high thinking. Salvation, I know, does not depend upon high thinking. On the contrary I rejoice in the truth of which there is so much evidence, that the way to the kingdom of heaven is plain, and not dependent upon intellectual discernment:—"The way-faring men, though fools, shall not err therein." Yet, viewing salvation not merely as safety and continuity of life beyond the grave, but as the exalted experience for this life declared by the Apostles, for *this* high thinking when added to right living is valuable.

"A spiritually intelligent apprehension of truth becomes a divinely intended corrective of those conceptions of God which naturally arise in the human mind, concerning the relation of finite weakness to infinite holiness. Even after the peace of consciously forgiven sin may have been experienced, an earnestly conscientious soul, under the illuminating influence of the Holy Spirit, easily becomes abnormally sensitive to the requirements of the high standard of regenerated life upon which it has entered. Fearful of over-confidence in so important a matter, it views its failures, its—humanly speaking—unavoidable failures, to live up to that Divine standard, only in the continuing light of its own severe judgment upon itself. Thus, the refined teachings of the gospel often become as compulsions of the law instead of being, as they really are, the drawings of a fatherly love into the blessings of a closer union with itself."

MISTAKES IN MEETINGS.—Richard Jordan arose to preach, at the same time an English woman Friend knelt in prayer. Richard felt it very keenly. After meeting he went home with Jane Peirce, who being an Elder, said to him, "How is it Richard that there was such a mistake in meeting to-day?" He asked, "What did they think of it?" Her reply was, "A farmer had good bounds, excellent on the scent; some one asked him how he trained them so well; the answer was—If the young dog lost his scent I give him a severe whipping, but should an old dog lose his scent I would kill him." Richard patted his friend Jane on the shoulder saying, "It is enough!"

FOR "THE FRIEND."

Let Thine Eye be Single.

"The eyes of the Lord run to and fro throughout the whole earth, to show himself strong in the behalf of them whose heart is perfect toward Him" (2 Chr. xvi. 9).

So spoke the prophet unto Asa the king, when he had gone for help against his enemies to an arm of flesh.

So also is the language applicable to us, when we forsake the perfect way of the Lord, when we seek peace in any way but in Truth, or pursue a harmony to avoid trouble. "Seek peace and pursue it" applies to the condition between the soul and its maker—peace with God in performing his will with a perfect heart. Such know of the Lord fighting all their battles and making a lasting peace, because eternal. "When a man's ways please the Lord He maketh even his enemies to be at peace with him."

The great dragon which could not effect the overthrow with his jaws of destruction, in his deceitfulness coming in his plausibleness backward, so as to appear not to be coming or to hurt, sweeps down "a third part of the stars of the firmament."

In the pure Truth nothing can be compromised. The plumb line of judgment does not deceive, but strikes straight and clear. If the course is changed somewhat, if the erection is allowed to lean a little, it affects all, and all partake of it. Blindness in part occurs, however much we may deny. In comparing structures while standing in a leaning one, especially while riding in the cars which lean, how at times unthinkingly have the observers questioned the erect positions of other buildings because of the position of that in which they were.

So is it in spirituals, and more so. How needful that we should be brought to the plumb line of the Lord, else we are biased.

The Lord's Israel of to-day is in a jeopardy, there is a confederacy amidst it not of the Truth, and the further language of the prophet may be applicable, "Thou hast done foolishly."

How very important for the true Israel to dwell lowly in their tent, going not forth in any wise, either journeying or assisting or seeking assistance, neither in their own strength defending the cause so dear to them, but as Israel of old like two little flocks of kids before the host, relying in the Lord alone, who is able, and saveth not by many but by the few; thus illustrating that it is He and his power. For it is "not by might, nor by strength, but by my Spirit saith the Lord." O, may we truly lean on Him.

The deep exercise of some may not be understood by all. We read of George Fox that the weight of the chuchas was upon him, and as he diligently endeavored to perform that that rested upon him as a burden from time to time, which could not be otherwise relieved, he could say in the end, "Now I am clear, fully clear,"—not diligent in striving to change, but to support plain Truth.

We may change the discipline, an outward rule, and the ancient order of things, and still we have but followed our *ignis fatuus* which will lead us deeper and deeper into the dark and mixture. But does it increase the Life in the silence? Oh may the true Israel

of God stand upon the watch, with eyes anointed, and not let judgment be affected by here-ay and there-say, but by the feeling which the Lord gives, in great inwardness and single eye unto Him, and Him alone, though we may feel at times as the speckled bird upon the house top.

CYRUS COOPER.

THE UNNOTICED BOUND.

When, passing southward, I may cross the line
Between the Arctic and Atlantic Ocean,
I may not know by any test of mine,

By any startling sign or strange commotion

Across my track :

But, as the days grow brighter, one by one,
And e'en the icebergs melt their hardened faces,
And sailors linger, basking in the sun,

I know I must have made the change of places

Some distance back.

When, answering timidly my Master's call,

I passed the bourne of life in coming to Him—

When, in my love for Him, I gave up all,

The very moment that I thought I knew Him,

I cannot tell ;

But as increasingly I feel his love,

As this cold heart is melted to o'erflowing,

And now so clear the light comes from above,

I wonder at the change, and move on, knowing

That all is well !

—W. R. Cochrane.

Determined to Succeed.

The following is one of the traditions of a manufacturing firm in Glasgow, Scotland: Thirty years ago a barefooted, ragged urchin presented himself before the desk of the principal partner and asked for work as an errand boy.

"There's a deal o' running to be done," said — Blank; jestingly, affecting a broad Scotch accent. "Your qualification 'ud be a pair 'o' shoon."

The boy with a grave nod disappeared. He lived by doing odd jobs in the market and slept under one of the stalls. Two months passed before he had saved enough to buy the shoes.

Then he presented himself before Mr. Blank one morning and held out a package.

"I have the shoon, sir," he said quietly.

"Oh!" — Blank with difficulty recalled the circumstances. "You want the place? Not in those rags my lad. You would disgrace the house."

The boy hesitated a moment and then went out without a word. Six months passed before he returned decently clothed in coarse, but new garments. — Blank's interest was aroused. For the first time he looked at the boy attentively. His thin, bloodless face showed that he had stinted himself of food for months in order to buy those clothes. The manufacturer now questioned the boy carefully, and found to his regret that he could neither read nor write.

"It is necessary that you should do both before we could employ you in carrying home packages," he said. "We have no place for you."

The lad's face grew paler; but without a word of complaint he disappeared. He now went fifteen miles into the country, and found work in stables near to a night school. At the end of the year, he again presented himself before — Blank.

"I can read and write," he said briefly.

"I gave him the place," the employer said, years afterward, "with the conviction that,

in process of time, he would take mine chose to do it. Men rise slowly in business houses, but he is our chief for — *Western Record.*

Communion and Atonement.

SECTION III.

The author next inquires, by what can this assurance of God's mercy and love be conveyed. It is evident from what has been said, that before this assurance can be conveyed, a great impediment must be removed. This impediment is the sinner's conviction that forgiveness is impossible, or to deal more closely, that it is impossible for him who has transgressed against infinite holiness to enter into communion with the Holy One. Now, what is required, is to convince the sinner that the impossible has become possible. How can this be accomplished? Clearly some assurance is required as extraordinary in its character as the obstacle to be removed is extraordinary. It could not be brought about by persuasive words or argument. It could not be effected by the mere proclamation that God forgives sin, that He is a Father; since it is precisely these statements that the sinner cannot credit, and we do but mock him in his malady, by the useless repetition of a truth which he is too sick to make his own. The parable of the Prodigal Son on a sheet of paper would do it. No mere telling of the possibility of redemption will redeem, or correct those impressions which are self suggested, regarding the relation of the finite creature to the infinitely holy Creator, a relation seen by the sinner only in the condemning light of his own consciousness of sin, and his self-reproach from holiness.

One thing and one only will avail: Forness must be meditated and become incarnate that it may effect the assurance of forgiveness. There must be the actual spectacle in history of that very association of holiness with sin which was thought impossible. That in the hour of estrangement from God it is believed could never occur has occurred. In this very earth we tread, Holiness enters into association with sin; a holy one made himself the companion of sinners, sought and found them, lived and died for their sins. The impossible took place.

Christ has revealed what holiness is; righteousness of God becomes to us a reality in Him. But in Him the mercy of God also comes a reality to us, inasmuch as we are conjoined with holiness a love of sinners allowing unto death and triumphing over death. This it is that rids us of our hesitation to believe that the Divine mercy can co-exist with the Divine Righteousness, and so, as St. Paul said, "Christ Jesus was made unto us wisdom from God, and righteousness, and sanctification, and redemption." It is the living truth of Christ's appearance in the realm of sin that his Spirit uses, to convey to us the assurance of the forgiveness of sin.

It is not, however, the historical person that by itself does this for us; the whole range of effects that have issued from Him play their part in the work. No fact is more certain than that those in whom our Lord has not nearly lived again, are the people who have possessed at once the deepest sense of the gravity of sin and the intensest love and

the sinner. Their Christianity has flow-
 in nothing so royally as in their passion
 deem the dead in trespasses and sins. In
 though in fainter outline, the original
 acle is repeated, and again and again in
 ives of the choicest spirits of Christen-
 we have seen Holiness and Love go hand
 and down the "via dolorosa" in search of
 st. We may say, therefore, that it is all
 things, together with the source whence
 flow regarded as a totality, that con-
 to us the assurance of the forgiveness of

the structure of the article, the thought
 which I am trying to present, the writer
 ives first, as we have just seen, what
 s in the consciousness of the forgiven.
 He turns to the Mediator or revealer of
 forgiveness, and reverently seeks to un-
 and what is involved in his experience.
 e writer finds light upon this in the rela-
 tion between man and man. This light is
 valuable and the case most nearly paral-
 the high relation under notice, when
 ly developed and sensitive nature has
 ously wounded a fellow man, perhaps his
 l, also of high character. The injurer
 s forgiveness; he craves the assurance
 on. How is his craving to be satisfied?
 an well understand that the mere words
 on formally and coldly expressed, in
 use to his acknowledgment of wrong and
 st for pardon, could not satisfy him. He
 is satisfied and relieved of his distress of
 just in proportion as he feels assured
 e of whom he asks pardon, understands
 eaning of his request, and the need that
 he must make it. It must be made
 the burdened conscience that the for-
 understands the weight of the burden,
 izes the painful condition from which
 was sought.

ve realize the pain of another only
 we have made, or tried to make, it is
 only so, are we in position to help in its
 al. Any source or consolation becomes
 l just in proportion as we have sought
 ke real in our own consciousness the
 we would lighten. It is not otherwise
 the Forgiveness of Sin; except that in
 igh region of experience, there is vastly
 r need for that intelligent sympathy on
 art of the infinite Forgiver which has
 wel upon, and also the need of such a
 of the manifestation of this requisite for
 s shall bring assurance of its exercise
 e consciousness of the penitent.

as he who would lighten the grief of
 r must grieve with him, so he would
 the burden from another's conscience
 eel the sense of the burden as though it
 d upon his own. As, therefore, every
 for forgiveness springs from the pres-
 of an inner distress, so every response
 orgiver, if effectual must issue from
 whom that distress has been realized
 ared. The Divine Forgiver therefore
 s the Divine Sufferer.

as been explained that the greatest pain
 accompanies the conviction of sin is
 nse of estrangement from God, the
 of faith in his love. He then, who
 ease us of this pain must share it with
 st realize in himself in some degree the
 nt anguish of alienation from the living

God. The disease must be understood ere the
 healing can begin.

Furthermore, the healer is he who per-
 ceives the true virulence of the disease; if this
 is hidden from him his healing work is im-
 perfect. Now, men cannot simply of themselves
 gauge the full extent of the seriousness of
 their sin; they cannot realize the whole mean-
 ing of that separation from Divine Holiness
 which it involves.

For this reason, no man, relying upon him-
 self alone, could ever perfectly convey the as-
 surance of forgiveness to another. Who,
 then, can perfectly convey it? Obviously, he
 who perfectly understands the need and the
 source whence it springs. And this can only
 be one in whom perfect holiness and perfect
 love are met together. For it is only perfect
 holiness that understands the fulness of un-
 ion with God and only perfect love that can
 penetrate to the utter need of the unholly who
 miss that union. Only perfect holiness and
 perfect love can register in its own bosom the
 stripes whereby they are healed. He who
 knows no sin is made sin on their behalf, that
 they may become the righteousness of God in
 Him.

Christian faith has ever truly associated
 the Cross of Christ with the forgiveness of
 sin. There it has seen the climax and epitome
 of those "many things" which it behoved
 Christ to suffer ere He entered into his glory.
 The primary significance of the Cross is not
 that it purchases our forgiveness, but that it
 reveals to us what forgiveness cost the For-
 giver. The Holy One, perfect in love, cannot
 enter into association with sinners except at
 the price of suffering. For immediately, his
 love divines their state of alienation and
 prompts him to deliver them from it; but he
 cannot deliver them until he has so far iden-
 tified himself with them that He feels their
 state as his own. He must feel their burden
 weighing upon his own shoulders. He must
 know, by the power of a measureless sym-
 pathy, all that is involved in the sense of es-
 trangement from God, so that he shall even
 cry in the moment of its perception, "My God,
 my God, why hast Thou forsaken me?" This
 is, indeed, the essential death-hour of the
 Holy One, the consummation of his sacrifice.
 For in making his own this sense of alienation
 He parts with that sense of union which is
 the very life of his holiness.

He parts with it that He may take it again
 and bring within it those on whose behalf it
 was laid down. They know that He was not
 forsaken, though for their sakes it behoved
 him to realize that experience. They know
 that He did not rest in death, but rose again,
 bringing life and immortality to light.

The suffering of Christ is the sovereign
 means of conveying the assurance of the for-
 giveness of sin, because it is the most perfect
 means of bringing home to us what forgive-
 ness costs. The Cross is the revelation of the
 price at which every redemption is secured.
 In its light the heart of the Father discloses
 out of what depths are born his unspeakable
 mercies.

Do we not see that effectual feeding upon
 Christ, by doing his will, should be promoted
 by intelligent apprehension of the deeper
 meaning of the Cross as brought to our view in
 the article from which I have quoted. For it

is in this light of the Cross, that we perceive
 the attractive possibilities as well as the real-
 ity of that oneness with Christ, which is the
 privilege of our high calling in Him.

Only through this light and a growing on-
 eness of will with Christ, could we expect to
 share in some sense and however imperfectly,
 the exalted joy of Christ, to which our human
 thought would forbid us to aspire, were it not
 that we have been invited thereto by the
 prayer of our Divine Master when parting
 with his disciples, "that they might have my
 joy fulfilled in themselves;" a prayer not only
 for those then near to Him, but for all who
 should believe on Him through their word,
 which includes the present readers.

Nor need this high aspiration be chilled by
 the thought of the difference between our
 Lord and ourselves. His joy was not only
 unbroken, but it is also true, that in it there
 could not have been any element arising
 from the sense of forgiven sin. It is other-
 wise with us. Even those we have known, who
 have most truly illustrated Christ before our
 eyes, would have said, that in the pure light
 of love, they see so much to mourn over in
 unfaithful stewardship,—if not for sins com-
 mitted,—that they never get far away from
 the Cross, often going again to Bethel where
 the Lord met with them in the beginning.

This mingled experience is but a form of
 evidence of the fact, that the real God-man is
 yet in the process of creation. The finite is,
 and increasingly knows that it is, in touch
 with the Infinite. The human is being leav-
 ened by the Divine, and is growing into that
 likeness. Man, in the individual and as to the
 race, is progressing on the upward path.
 The entrance upon this path is simply the con-
 scious removal of the self-imposed barrier
 which unforgiven sin has raised between the
 soul and God, while the possibilities and higher
 levels in this "highway of holiness," are
 pointed to by Paul in his wonderful prayer for
 his Ephesian converts, "That ye might be
 filled with all the fulness of God."

Only in that fuller light of the Cross do we
 see, that the Atonement, without losing its
 place and value and tendering influence in our
 thought, takes on the larger meaning of At-
 one-ment with God, the essence of which must,
 it is evident, be a more or less complete on-
 eness of will with Him. At-one-ment bears to
 "Atonement," as usually understood, the re-
 lation which the temple bears to the vestibule
 by which it is entered. We therefore fall
 short of realizing an important part of the
 Gospel purpose for us, and therefore of the
 Gospel blessing, if we fail to know a positive
 uplifting and outreaching spiritual growth;
 a growth not only in the love of Christ, but also
 in the possession, which the apostle urges us
 to seek, of "the mind which was in Christ
 Jesus," regarding "mind," not simply as
 meaning purpose or intention, but "mind" as
 the spirit-filled intelligence, part of whose
 birthright in Christ, are those treasures of
 wisdom and knowledge which are declared to
 be hid in Him. It is only in this more ad-
 vanced stage of Sonship that, as intelligent
 children in the Father's house, we can enter
 sympathetically, and, according to our mea-
 sure, with understanding, into the deeper as-
 pects of the Divine nature and government in
 its relation to men, and meditate upon those

wonders of redeeming love which it is said the angels "desire to look into."

I would introduce in this connection an impressive thought of another which should help us to see the inner significance of the inspired truth that Christ is our elder brother, He who "was the first born among many brethren."

It is the thought of Henry Van Dyke of New York, a thought worthy of a prophet of the Most High. Though so comprehensive, it is embraced in only seven words, I might say the inspired words, "Christ is the human form of God." This expresses concretely much of the truth which animates the changed spiritual outlook of the present time and could only have originated in recent years. It is a deep truth of far-reaching significance to enter consciously into which is to obtain that knowledge of God and of Jesus Christ whom He had sent, which is life eternal."

Finally in this effort to trace some of the lines of connection between the deeper teachings of the Cross, and an added ability thereby to accept the Divine will in Christ, do we not learn in this light as we could in no other way, that the character of the infinite love by whose suffering priceless blessings have been brought within our reach, is the very same in kind as that love which appeals to us so tenderly in human relation,—the suffering love of a godly mother for her son.

We have seen in the article from which I have quoted, that the persuasive and effective influence of the Sacrifice of Christ lies in the evidence thus afforded, that an innocent and holy one has entered into the suffering of the penitent sinner, and so has made the punishment essentially his own. Thus, that which is most human appearing in the Divine tragedy of the Cross, is one in nature with that, which by common consent is recognized as the most nearly Divine feature of human life—the mother's love to which I have just now referred. In both cases are seen the expiation and vicarious suffering of love. It is the penalty which, by a law of its nature, both the Divine and the human love must bear on account of the suffering object of its exercise..

It is narrated of Schamyl, a leader in the Caucasus, that finding bribery and corruption increasing around him, he ordered that one hundred lashes should be administered in any case discovered. Soon a culprit was brought before him. It was his own mother. He shut himself up in his tent for two days without food or water. On the third day he gathered the people, and pale as a corpse commanded the executioner to inflict the punishment, which was begun. But at the fifth stroke, he called "Halt," had his mother removed, bared his own back, and ordered the official to lay on him the other ninety-five with the severest threats if he did not give the full weight of the blow.

This is most truly an object lesson in an unexpected quarter of the deeper meaning of the Cross. Does it not point to the source, the God-derived character of the best possibilities of our human nature when moved upon by Divine grace?

In it is illustrated the persuasive influence of self-sacrifice even on the level of our earthly life. Vastly more is this true when exhibited in that higher region, where it becomes as a bridge of love and peace resting on founda-

tations of mercy and justice, connecting the finite with the infinite.

In this lies the power of the Cross over those who respond to its influence: the power to be separated from the spirit of the world which is "enmity with God," and to lead into a dedication of life to the service of Him who has bought them at such a price, and who would, through a progressive union of their wills with his own, feed them with living bread and water, and make their earthly lives in a very real sense a close walk with God.

"I, if I be lifted up, will draw all men unto me."

O saddest, sweetest bond! and can it be

That through his sorrow joy is come to me,

That thus his glorious beauty I shall see?

O eyes! for whom such vision is in store,

Keep ye to all things pure forevermore,

Till ye shall close beside Death's shadowed door,

Be lighted from within by unseen guest,

Sent out warm rays of love to all distressed,

And by your shining lure them into rest.

A RICH MAN'S DEATH SCENE.—A striking incident was communicated to the New York Press a few years ago by a deeply humble minister. One of the leading members of his church was greatly distressed in his last sickness on reviewing his mode of living and reflecting upon his family and the comparatively small sum he had given to the Lord's cause. In every way the pastor endeavored to comfort him. He spoke of his having given cheerfully and as much as others did. He reminded him that the best of us are unprofitable servants, and must look to the mercy of God in Christ as our only hope. The troubled man found no peace or comfort, but grew more and more uneasy, distressed and agonized as the end drew near. At last, taking the hand of his pastor, he said: "Brother I am going to the Judge unprepared to meet Him, because you have been unfaithful to me. For years I have lived, and taught my family to live, largely for this world. We have denied ourselves nothing, but spent thousands on personal comforts. When I gave hundreds to Christ and his Church it should have been thousands. My business, energy, and time and money, have been mostly devoted to self-pleasing and gratification, and how can I meet my Judge and give an account of my stewardship? I am beyond recovery. Do what you can to save other professors who are in the current of worldly self-indulgence and extravagance, which is sweeping them to destruction.—*Mutlock.*

THERE are many holes in the earth which are a mile or more in depth. Some are mines, as in Michigan, where a well populated community exists more than a mile below the surface. Others are deep wells, which have been sunk in search of gas, oil, water and even salt, which is found a mile below the surface of Silesia. In Cornwall a zinc mine three thousand feet deep extends out under the bed of the ocean nearly a mile from shore. In fact, men are crawling towards the centre of the earth at the rate of several hundred feet a year. The greatest progress thus far has been made at Paruschowitz, in Silesia, where the deepest artificial hole is already seven thousand feet.—*World's Work.*

"I shall not pass this way again"—William I.

Right words and shrewd, good William I.

I shall not pass this way again.

My long way and the winding track
Which I pursue will not bend back.

I go—beyond my widest ken—

But shall not pass this way again.

So, as I go and cannot stay

And nevermore shall pass this way,

I hope to sow the way with deeds

Whose seed shall bloom like May-time meads

And flood my onward path with words

That thrill the day like singing birds;

That other travelers following on

May find a gleam and not a gloom,

May find their path a pleasant way,

A trail of music and of bloom.

Strew gladness on the paths of men—

You will not pass this way again.

—Walter Foss, in *Human Face*.

The Phenomena of Volcanoes.

In a forthcoming book entitled "The Earth's Beginnings," the Lowndean professor of astronomy and geometry in the University of Cambridge, Sir Robert Stawell Ball, has undertaken to set forth the recent results of scientific speculation upon the evolution of the earth, the sun, and the planets from the primeval fire mist. In one chapter of the book he has taken up the phenomena of volcanoes and earthquakes, and pointed out the agencies which they permit concerning the internal make-up of the earth and the development it is going through. The following passages are here reproduced:

"We have already explained that a very high temperature must be found at the centre of even a small fraction of the earth's radius, and we have pointed out that the excessive high pressure characteristic of the earth's interior must be borne in mind in any consideration as to the condition of the matter there found.

"Let us take, for instance, that primary question in terrestrial physics, as to whether the interior of the earth is liquid or solid. If we were to judge merely from the temperatures reasonably believed to exist at a depth of some twenty miles, and if we might overlook the question of pressure, we should certainly say that the earth's interior must be a fluid state. It seems at least certain that the temperatures to be found at depths of a score miles, and still more at greater depths, must be so high that the most refractory solids, whether metals or minerals, would not yield if we could subject them to such temperatures in our laboratories. . . . But none of our laboratory experiments can tell us whether, under the pressure of thousands of tons on the square inch, the application of heat whatever would be adequate to transform solids into liquids. It may, indeed, be reasonably doubted whether the terms solid, liquid, and gas are applicable, in the sense in which we understand them, to the materials for the interior of the earth. . . .

"A principle, already well known in the arts, is that many, if not all, solids may be made to flow like liquids if only adequate pressure be applied. The making of lead tubes is a well-known practical illustration of this principle, for these tubes are simply formed by forcing solid lead by the hydraulic

slight shift in the rocks on each side of a crack, or fault, at a depth of ten miles. It must be remembered that the pressure ten miles down would be about thirty-five tons to the square inch. Even a slight displacement of one extensive surface over another, the sides being pressed together with a force of thirty-five tons on the square inch, would be an operation necessarily accompanied by violence greatly exceeding that which we might expect from so small a displacement if the forces concerned had been only of more ordinary magnitude. On account of this great multiplication of the intensity of the phenomenon, merely a small rearrangement of the rocks in the crust of the earth, in pursuance of the necessary work of accommodating its volume to the perpetual shrinkage, might produce an excessively violent shock, extending far and wide. The effect of such a shock would be propagated in the form of waves through the globe just as a violent blow given at one end of a bar of iron by a hammer is propagated through the bar in the form of waves. When the effect of this internal adjustment reaches the earth's surface, it will sometimes be great enough to be perceptible in the shaking it gives that surface. The shaking may be so violent that buildings may not be able to withstand it. Such is the phenomenon of an earthquake. . . .

CAUSES OF EARTHQUAKES.

As to the immediate cause of earthquakes, there is no doubt considerable difference of opinion. But I think it will not be doubted that an earthquake is one of the consequences, perhaps a remote one, of the gradual increase of internal heat from the earth. As this internal heat is gradually declining, it follows from the law that we have already so had occasion to use that the bulk of the earth must be shrinking. No doubt the diminution in the earth's diameter due to the loss at must be excessively small, even in a period of time. The cause, however, is equally in operation and, accordingly, the effect of the earth has, from time to time, to be accommodated to the fact that the whole is lessening. The circumference of our earth at the equator must be gradually declining at certain length in that circumference is each year. We may admit that loss to be a very far too small to be measured by any variations as yet obtainable, but, nevertheless, it is productive of phenomena so important that it cannot be overlooked.

It follows from these considerations that the rocks which form the earth's crust over the surface of the continents and the islands, beneath the beds of ocean, must have a sinking acreage year by year. These rocks therefore submit to compression either slowly or from time to time, and the steady yielding of the rocks will in general place in those regions where the materials of the earth's crust happen to have comparatively small powers of resistance. The action of compression will often, and perhaps generally, not proceed with uniformity, but with small successive shifts, and even the displacements of the rocks in these shifts are actually very small, yet the pressures which the rocks are subjected are so vast that a very small shift may correspond to a great terrestrial disturbance.

suppose, for instance, that there is a

slight shift in the rocks on each side of a crack, or fault, at a depth of ten miles. It must be remembered that the pressure ten miles down would be about thirty-five tons to the square inch. Even a slight displacement of one extensive surface over another, the sides being pressed together with a force of thirty-five tons on the square inch, would be an operation necessarily accompanied by violence greatly exceeding that which we might expect from so small a displacement if the forces concerned had been only of more ordinary magnitude. On account of this great multiplication of the intensity of the phenomenon, merely a small rearrangement of the rocks in the crust of the earth, in pursuance of the necessary work of accommodating its volume to the perpetual shrinkage, might produce an excessively violent shock, extending far and wide. The effect of such a shock would be propagated in the form of waves through the globe just as a violent blow given at one end of a bar of iron by a hammer is propagated through the bar in the form of waves. When the effect of this internal adjustment reaches the earth's surface, it will sometimes be great enough to be perceptible in the shaking it gives that surface. The shaking may be so violent that buildings may not be able to withstand it. Such is the phenomenon of an earthquake. . . .

THE RADIUS OF DISTURBANCE.

"When our earth is shaken by one of those occasional adjustments of the crust which I have described, the wave that spreads like a pulsation from the center of agitation extends all over our globe and is transmitted right through it. At the surface lying immediately over the center of disturbance there will be a violent shock. In the surrounding country, and often over great distances, the earthquake may also be powerful enough to produce destructive effects. The convulsion may also be maintained over a far larger area of country in a way which makes the shock to be felt though the damage wrought may not be appreciable. But beyond a limited distance from the center of the agitation the earthquake will produce no destructive effects upon buildings, and will not even cause vibrations that would be appreciable to ordinary observation.

"In each locality in which earthquakes are chronic it would seem as if there must be some particularly weak spot in the earth some miles below the surface. A shrinkage of the earth in the course of the incessant adjustment between the interior and the exterior, will take place by occasional little jumps at this particular center. The fact that there is this weak spot at which small adjustments are possible may provide, as it were, a safety-valve for other places in the same part of the world. Instead of a general shrinking, the materials would be sufficiently elastic and flexible to allow the shrinking for a very large area to be done at this particular locality. In this way we may explain the fact that immense tracts on the earth are practically free from earthquakes of a serious character, while in the less fortunate regions the earthquakes are more or less perennial. . . .

TRANSMISSION OF VIBRATIONS.

"Now, suppose an earthquake takes place at Japan, it originates a series of vibrations through our globe. We must here distinguish

between the rocks—I might almost say the comparatively pliant rocks—which form the earth's crust, and those which form the intensely rigid core of the interior of our globe. The vibrations which carry the tidings of the earthquake spread through the rocks on the surface, from the center of the disturbance, in gradually enlarging circles. We may liken the spread of these vibrations to the ripples in a pool of water which diverge from the spot where a raindrop has fallen. . . . The vibrations transmitted by the rocks on the surface, or on the floor of the ocean, will carry the message all over the earth. As these rocks are flexible, at all events by comparison with the earth's interior, the vibrations will be correspondingly large, and will travel with vigor over land and under sea. In due time they reach, say the Isle of Wight, where they set the pencil of the seismometer at work. But there are different ways round the earth from Japan to the Isle of Wight, the most direct route being across Asia and Europe; and the route across the Pacific, America and the Atlantic. The vibrations will travel by both routes, and the former is the shorter of the two. . . .

THE ERUPTION OF KRAKATOA.

"There has been much difference of opinion as to the immediate cause of volcanic action, but there can be little doubt that the energy which is manifested in a volcanic eruption has been originally derived in some way from the contraction of the primeval nebula. The extraordinary vehemence that a volcanic eruption sometimes attains may be specially illustrated by the case of the great eruption of Krakatoa. It is, indeed, believed that in the annals of our earth there has been no record of a volcanic eruption so vast as that which bears the name of this little island in far eastern seas, ten thousand miles from our shores.

"Until the year 1883 few had ever heard of Krakatoa. It was unknown to fame, as are hundreds of other gems of glorious vegetation set in tropical waters. It was not inhabited, but the natives from the surrounding shores of Sumatra and Java used occasionally to draw their canoes up on its beach, while they roamed through the jungle in search of the wild fruits that there abounded. It was known to the mariner who navigated the Straits of Sunda, for it was marked on his charts as one of the perils of the intricate navigation in those waters. It was no doubt recorded that the locality had been once, or more than once, the seat of an active volcano. In fact, the island seemed to owe its existence to some frightful eruption of bygone days; but for a couple of centuries there had been no fresh outbreak. It almost seemed as if Krakatoa might be regarded as a volcano that had become extinct. In this respect it would only be like many other similar objects all over the globe, or the countless extinct volcanoes all over the moon. . . .

"As the summer of 1883 advanced the vigor of Krakatoa, which had sprung into notoriety at the beginning of the year, steadily increased, the noises became more and more vehement; these were presently audible on shores ten miles distant, and then twenty miles distant; and still those noises waxed louder and louder, until the great thunders of the volcano, now so rapidly developing, aston-

ished the inhabitants that dwelt over an area at least as large as Great Britain. And there were other symptoms of the approaching catastrophe. With each successive convulsion a quantity of fine dust was projected aloft into the clouds. The wind could not carry this dust away as rapidly as it was hurled upwards by Krakatoa, and accordingly the atmosphere became heavily charged with suspended particles. A pall of darkness thus hung over the adjoining seas and islands. Such was the thickness and the density of these atmospheric volumes of Krakatoa dust that, for a hundred miles around, the darkness of midnight prevailed at midday. Then the awful tragedy of Krakatoa took place. Many thousand of the unfortunate inhabitants of the adjacent shores of Sumatra and Java were destined never to behold the sun again. They were presently swept away to destruction in an invasion of the shore by the tremendous waves with which the seas surrounding Krakatoa were agitated. . . .

"As the days of August passed by the spasms of Krakatoa waxed more and more vehement. By the middle of that month the panic was widespread, for the supreme catastrophe was at hand. On the night of Sunday, August 26, 1883, the blackness of the dust-clouds, now much thicker than ever in the straits of Sunda and adjacent parts of Sumatra and Java, was only occasionally illumined by lurid flashes from the volcano. . . . At the town of Batavia a hundred miles distant, there was no quiet that night. The houses trembled with the subterranean violence, and the windows rattled as if heavy artillery were being discharged in the streets. And still these efforts seemed to be only rehearsing for the supreme display. By ten o'clock on the morning of Monday, August 27, 1883, the rehearsals were over, and the performance began. An overture consisting of two or three introductory explosions, was succeeded by a frightful convulsion which tore away a large part of the island of Krakatoa and scattered it to the winds of heaven. In that final effort all records of previous explosions on this earth were completely broken.

"This supreme effort it was which produced the mightiest noise that, so far as we can ascertain has ever been heard on this globe. It must have been indeed a loud noise which could travel from Krakatoa to Batavia and preserve its vehemence over so great a distance; but we should form a very inadequate conception of the energy of the eruption of Krakatoa if we thought that its sounds were heard by those merely a hundred miles off. This would be little indeed compared with what is recorded on testimony which it is impossible to doubt. . . .

"Westward from Krakatoa stretches the wide expanse of the Indian Ocean. On the opposite side from the Straits of Sunda lies the island of Rodriguez, the distance from Krakatoa being almost three thousand miles. It has been proved by evidence which cannot be doubted that the thunders of the great volcano attracted the attention of an intelligent coast guard on Rodriguez, who carefully noted the character of the sounds and the time of their occurrence. He had heard them just four hours after the actual explosion for this is the time the sound occupied on its journey.

A CONSTANT WIND.

"This mighty incident at Krakatoa has taught us other lessons on the constitution of our atmosphere. We previously knew little, or I might say almost nothing, as to the conditions prevailing above the height of ten miles overhead. It was Krakatoa which first gave us a little information which was greatly wanted. How could we learn what winds were blowing at a height four times as great as the loftiest mountain on the earth, and twice as great as the loftiest altitude to which a balloon has ever soared? No doubt a straw will show which way the wind blows, but there are no straws up there. There was nothing to render the winds perceptible until Krakatoa came to our aid. Krakatoa drove into those winds prodigious quantities of dust. Hundreds of cubic miles of air were thus deprived of that invisibility which they had hitherto maintained. . . .

"With eyes full of astonishment men watched those vast volumes of Krakatoa dust on a tremendous journey. Of course every one knows the so-called trade-winds on our earth's surface, which blow steadily in fixed directions, and which are of such service to the mariner. But there is yet another constant wind. . . . It was first disclosed by Krakatoa. Before the occurrence of that eruption, no one had the slightest suspicion that far up aloft, twenty miles over our heads, a mighty tempest is incessantly hurrying, with a speed much greater than that of the awful hurricane which once laid so large a part of Calcutta on the ground and slew so many of its inhabitants. Fortunately for humanity, this new trade-wind does not come within less than twenty miles of the earth's surface. We are thus preserved from the fearful destruction that its unintermittent blasts would produce, blasts against which no tree could stand, and which would, in ten minutes, do as much damage to a city as would the most violent earthquake. When this great wind had become charged with the dust of Krakatoa, then, for the first, and I may add, for the only time, it stood revealed to human vision. Then it was seen that this wind circled round the earth in the vicinity of the equator, and completed its circuit in about thirteen days. . . .

A LARGE PILE OF DUST.

"The dust manufactured by the supreme convulsion was whirled round the earth in the mighty atmospheric current into which the volcano discharged it. As the dust-cloud was swept along by this incomparable hurricane it showed its presence in the most glorious manner by decking the sun and the moon in hues of unaccustomed splendor and beauty. The blue color in the sky under ordinary circumstances is due to particles in the air, and when the ordinary notes of the sunbeam were reinforced by the introduction of the myriads of notes produced by Krakatoa, even the sun itself sometimes showed a blue tint. Thus the progress of the great dust-cloud was traced out by the extraordinary sky effects it produced, and from the progress of the dust-cloud we inferred the movements of the invisible air current which carried it along. Nor need it be thought that the quantity of material projected from Krakatoa should have been inadequate to produce effects of this world-wide description. Imagine that the material which

was blown to the winds of heaven by the preme convulsions of Krakatoa could be covered and swept into one vast heap. In line that the heap were to have its bulk measured by a vessel consisting of a cube one long, one mile broad, and one mile deep has been estimated that even this prodigious vessel would have to be filled to the brim at least ten times before all the products of Krakatoa had been measured."—N. Y. *Evening Post*.

FRUITFUL.

We scatter seeds with careless hand
And dream we ne'er shall see them more,
But for a thousand years
Their fruit appears,
In weeds that mar the land
Or helpful store.

The deeds we do, the words we say,
Into still air they seem to fleet;
We count them ever past,
But they shall last
To the dread judgment day,
And we shall meet.

I charge thee by the years gone by,
For the love's sake of brethren dear,
Keep thou the one true way,
In work and play,
Lest in that world their cry
Of woe thou hear.

—Keh.

For "THE FRIEND"

Reminiscences.

(Continued from page 356.)

The long and useful life of Joseph Scat-good was now evidently drawing towards close. He was a man of unusual mental capacity, of indefatigable industry and devotion to the welfare of the poor Indian. His integrity of character and unspotted life gave a trustworthy evidence of his submission to the teachings and leadings of the Divine Spirit. About this time (Third Month, 1877) at a solicitation, and with the approval of several Friends, he was released from several appointments which required considerable attendance from him and by which he felt relieved much care. At the meeting of the Meeting for Sufferings held Third Month 17th, 1877 he acted as its Clerk for the last time; afterwards remaining to meet a committee he became much exhausted. It now became obvious that he could no longer bear the exercise of mental and physical exertion inseparable from such stations but which he was willing to endeavor to perform, so long as strength permitted.

In the early part of the Fourth Month he left the city for a sojourn at the seashore, but the result of this journey satisfied himself as well as others that he would be entirely unable to attend the Yearly Meeting, then rapidly approaching. Previous to this he had not apparently relinquished the hope that he might be able to be present at the first sitting, to act as its Clerk, and then relieve the meeting from the embarrassment of appointing a Friend to act until the representatives should meet and propose a clerk and assistant in a regular manner. As this was now found impracticable he had an earnest desire that his friend, Clarkson Sheppard would be willing to act in this capacity, if it should be deemed proper by his friends; and he requested to have an interview with him during the week previous to the meeting of the Yearly Meeting.

encourage him to do so. This interdict not take place until the Seventeenth instant. On the day previous to Clarkson had been named by the Meeting Sufferings, to take charge of the patients, in accordance with the direction of the line in such a case; in order that the ass of the Yearly Meeting might not be disturbed by the absence of the Clerk. On the morning of that day, he went to his son, Mr. at West Chester.

The 24th Ebenezer Worth, who was deep-seated in his welfare and with whom he was closely united in religious fellowship and at that for the Indians in New York, took him carriage to visit Ann, widow of Samuel Worth, where they remained but a short time. It has been alluded to by members of the family, as having been very acceptable. * Fourth-day the 25th of Fourth Month, Scattergood returned to the city in the morning, expecting to attend his Monthly Meeting occurring the next day and intending to bring his long and closely associated friend and partner, John Carter, then lying in bed and apparently dying near to the end of life; but from increasing feebleness he was obliged to return to West Chester not having accomplished either of these things.

On the 5th of the Fifth Month he said, "I have been an eventful day, I don't want to feel too anxious. I have not seen the face of this, it is hidden from me."

On Joseph then said, "Father, we want to resign to the Divine will. Dost thou feel comfortable in thy mind?" He replied in affectionate nod, "More so than I expect. I feel as if I had been an unwilling servant, if a servant at all." On he said, "It is a solemn thing to be so near the eternal world. I have thought of the expression of Samuel Johnson, 'The invisible world—how awful!' I have not been able to see the result of this, but have a comfortable hope that I have loved with resignation. I desire that connected with me may not be too anxious to leave all with Him who knows what is best for us better than we possibly can."

W. P. T.

to those who seek earth's riches roam—

My wealth is heaven-sent;
Strong right arm and love at home
And in my heart content."

Unexpected testimony to the value of a life was lately related to the writer in substance as follows by a Friend of Delaware County, when on a visit to the vicinity of Tunneshaw, with a stranger to whom he imparted the relation that he was going to visit his friend Ebenezer Worth, then residing there. The stranger appeared to be acquainted with E. W. and he inquired, "Have you many more men like your part of the country?" I think the reply in the negative, which was the very truth. The stranger then added that the influence of E. W. was felt for ten miles around his residence and he wished they had more such men thus fulfilling the declaration of George that "one honest Quaker would shake the earth for ten miles around him."

Science and Industry.

THE largest mass of pure rock salt in the world is under the ground of Galicia, Hungary. It is known to be five hundred and fifty miles long, twenty miles broad, and two hundred and fifty feet in thickness.

THE English skylark has inspired several of the most beautiful poems in our language, and its migrations are of a character which, it would seem, might appeal to English poets only less effectively than its song does. In violation of the general rule that birds move southward in the autumn, immense numbers of skylarks which have summered in Central Europe, arrive in England in the Ninth and Tenth months to pass the winter in the British Isles. In the Tenth Month an entirely distinct immigration of skylarks enters Great Britain from Scandinavia, while all through the autumn British-bred skylarks emigrate southward, many of them going to the Continent for the winter. Yet others remain in England all the year round.

SCIENTISTS ADVISE LESS MEAT IN DIET, AND MORE CEREALS.—It is not alone the high price of beef that has aroused the public to appreciate the fact that a change in food habits is desirable. Scientists have been pointing out for a long time that eating has been wholly diverted from its primary purpose (which is to sustain life) by systematically overloading the stomach and thus causing much of the modern ill health.

The sudden increase in the cost of meat was merely the match that set fire to the train of powder already prepared in the minds of the people. It led them to ask if it would not be wise to restrict the quantity of meat they were using and to supply its place with lighter foods.

Professor W. H. Wiley, chief chemist of the Department of Agriculture, advocates a more general use of cereals as food and a decreased use of flesh. "It is well known that men nourished extensively on cereals are capable of the hardest and most enduring manual labor," he said recently in a discussion called forth by the present high price of beef. "Meats are quickly digested and furnish an abundance of energy soon after consumption, but it is not retained in the digestive organism long enough to sustain permanent muscular exertion. Cereal foods, on the other hand, are more slowly digested, and furnish the energy necessary to digestion and the vital functions in a more uniform manner. They are thus better adapted to sustain hard manual labor for a long period of time. Everything necessary to supply the waste of the body and to give heat and energy to the system is supplied by the cereals. The workmen of this country should consider this point, and should learn more and more the value of cereals as food. When cereals are properly prepared and served they are as palatable and nutritious as meat, and their judicious use would gradually diminish the undue craving for meat."

Professor Wiley does not believe that the price of meat will ever be lowered, but he would not exclude it entirely from the diet.

WHENCE COMES ELECTRICITY?—At a time

when electricity is rapidly transforming the face of the globe, when it has already in great measure annihilated distance, and bids fair to abolish darkness for us, it is curious to notice how completely ignorant "the plain man" remains as to the later developments of electrical theory. Some recent correspondence has led me to think that a vague notion that electricity is a fluid which in some mysterious way flows through a telegraph wire like water through a pipe is about as far as he has got; and if we add to this some knowledge of what he calls "electric shocks," we should probably exhaust his ideas on the subject. Yet this is not to be wondered at. Even the most instructed physicists can do nothing but guess as to what electricity is, and the only point on which they agree is as to what it is not. There is, in fact, a perfect consensus of opinion among scientific writers that it is not a fluid, i. e., a continuous stream of ponderable matter, as is a liquid or gas; and that it is not a form of energy as is heat. Outside this limit the scientific imagination is at liberty to roam where it listeth, and although it has used this liberty to a considerable extent, no definite result has followed up to the present time.—*The Academy.*

GOOD SECURITY.—"Mister, do you lend money here?" asked an earnest young voice at the office door.

The lawyer turned away from his desk, confronted a clear-eyed, poorly-dressed lad of twelve years, and studied him keenly for a minute. "Sometimes we do—on good security," he said.

The little fellow explained that he had a chance "to buy out a boy that's cryin' pappers." He had half the money required, but he needed to borrow the other fifteen cents.

"What security can you offer?" asked the lawyer.

The boy's brown hand sought his pocket and drew out a paper, carefully folded in a bit of oil calico. It was a cheaply printed pledge against the use of intoxicating liquor and tobacco.

As respectfully as if it had been the deed to a farm the lawyer examined it, accepted it, and handed over the required sum.

A friend who had watched the transaction with silent amusement laughed as the young borrower departed.

"You think I know nothing about him," smiled the lawyer. "I know that he came manfully, in what he supposed to be a business way, and tried to negotiate a loan instead of begging the money. I know that he has been under good influences or he would not have signed that pledge; and that he does not hold it lightly or he would not have cared for it so carefully, I agree with him that the one who keeps himself from such things has a character to offer as a security."—*Christian Observer.*

Items Concerning the Society.

THE COLLEGE PARK ASSOCIATION OF FRIENDS, California, held its twenty-sixth semi-annual meeting on Seventh-day, Fifth Month 3d. Trains from Oakland and San Francisco brought the usual visitors. Meeting for worship began at 10 A. M., at which time the house was nearly filled. After a season of profound stillness, which pervaded the meeting, Dr. Augustus Taber spoke of the preciousness and value of silent worship. He was followed

by Hannah E. Bean, Pliny E. Goddard and Joel Bean; and by Ruth S. Murray in prayer.

Following this devotional meeting was a business session devoted to reading the minutes of last meeting and reports of committees. In the afternoon, after a lunch had been partaken, an address on Practical Philanthropy was given by Ernest Fox, on behalf of an association which furnishes meals and a reading room in opposition to the saloon; and the exercises were closed by the reading of an original poem by Joel Bean, and by remarks by Hannah E. Bean and others. "A hush of stillness, like that of the morning, again settled over the meeting, which the audience seemed reluctant to break."

As regards this organization of College Park Association of Friends, a writer in the *Intelligencer* remarks: "It is incorporated under that name and the laws of the State, thereby enabling them to own property, etc. And while, for good reasons, it is not subordinated to any other meeting, either Monthly, Quarterly or Yearly, the First-day meetings are conducted in strict accordance with Friends' views." The "Waiting at Jerusalem" until endowed with power from on High, that "It may be both tongue and utterance," is faithfully adhered to, and while the meetings are small in numbers, they seem to be held in the Life. Generally two and three, in their comforting ministry give out words of cheer, and holding forth the great hopes we wish to realize in the life to come."

The appointed meeting held last week at Burlington, N. J., on the evening of the 5th instant, under the care of the Yearly Meeting's committee, was felt to be crowned, near its close, with the preciousness of a heavenly silence. Three clergymen of the town were present, one of whom came forward, after the meeting rose, to greet the members of the committee, and to tell them that the Friends' basis of silence for public worship was the true one. The truest worship could not be where the outward ear is diverted. He acknowledged that the usual church arrangements for worship are contrivances "How not to do it."

J. Shoher Kimber, of Newport, R. I., was baptized with water by Thomas Hodgkin recently in Greensboro, N. C., where they have been working together. Thomas Hodgkin himself has withdrawn from Friends and is organizing a new religious body, to be called (we are informed) "The Independent Holiness Church," which starts in Greensboro with about fifty members. Perhaps Friends will sometime realize that it is well to teach our views on these subjects with clearness.—*American Friend*.

Charles C. Cresson's valuable collection of old Friends' books was recently sold at auction in Philadelphia. "Many old pamphlets brought from five to eight dollars apiece, and some went as high as eighteen dollars. An edition of Sewall's History sold for thirty-eight dollars. Thomas Ellwood's and George Bishop's pamphlets brought the highest prices." Friends seemed very little in evidence as showing interest in this sale. One member, however, showed us a bill of over six hundred dollars which he had run up at the sale.

SUMMARY OF EVENTS.

UNITED STATES.—After a debate upon the bill to establish a civil government in the Philippines lasting more than seven weeks, the Senate has passed it by a vote of 45 to 30. The House, on the 14th inst., of Massachusetts, Mason of Illinois, and Wellington of Maryland, voted with the minority against it, which with these exceptions was composed of Democrats. It must now be considered in the House of Representatives.

President Roosevelt, it is said, is carefully watching the coal strike. "It is not improbable a case may in some form go to the Attorney General, as it is stated there is already a simple evidence gathered by the United States government to show that a combination of the roads handling anthracite coal exists for the purpose of controlling the price and output.

Coal companies continue to lose engineers, firemen

and pumpmen, many of the men quitting work through fear of bodily harm.

Operators have in several instances, it is said, made concessions to engineers, firemen and pumpmen to save their property.

Judge Chester of the Supreme Court of New York, has granted an injunction restraining certain beef packing companies of the West from carrying on business in that State, in violation of the provisions of the Donnelly Antitrust law.

Serious rioting for some days was continued in Chicago in connection with the strike of teamsters engaged in delivering supplies of meat in that city. An agreement was reached on the 4th instant between the strikers and representatives of the packing houses which has ended the strike.

The United States Department of Agriculture now has well equipped laboratories for the investigation of diseases of plants in Washington City, Florida and California. There are also fifty experiment stations, where plant diseases are studied, and in perhaps half that number of colleges practical courses on plant life are given.

A despatch from New York says: "The signing of contracts within a few days for the purchase for the School of Practical Agriculture of 415 acres of land near Poughkeepsie marks the beginning of a movement for the permanent establishment near New York of what the people of the East regard as the most important educational institutions in the country." In this school the practice as well as the theory of farming is to be taught.

In Cortland, Neb., on the 5th instant, twelve inches of rain fell in three hours, and a great amount of damage was done in that town and adjoining neighborhood. Heavy rains fell in South Dakota and Central Iowa near the same time, in some places washing out railroad embankments, etc.

Thomas A. Edison announces that he has just perfected a light, cheap storage battery which will drive automobiles for one hundred miles with a single charge and will be adaptable not only to automobiles, but also to street cars, launches and yachts. Delivery wagons and trucks can be driven with little loss of time and a comparatively small outlay of money.

The City Council of Baltimore to appropriate \$15,000 by the City Councils of Baltimore to endeavor to exterminate mosquitoes in that city by the use of kerosene.

Mount Blackburn in Southeastern Alaska is reported to have discharged on the eleventh of Fourth Month a cloud of ashes and smoke which covered the country for miles around it. It was not known before to have been a volcano. The Redoubt volcano in the southern part of Alaska, was observed to emit smoke and flames on the eighth of Fifth Month.

In a recent paper read by Dr. S. A. Knopf on "What shall we do with the Consumptive Poor," he stated that in only rare instances was tuberculosis transmitted from generation to generation, and said it was not infectious. It can be cured, Dr. Knopf asserted, and that without travelling long distances to other climates. He said that special sanitariums should be built for the treatment of tuberculosis alone, and the consumptive poor should be removed to these institutions. Fresh air, unlimited sunshine, good food and sanitary surroundings were the necessary treatment. He made a strong plea for millionaires and philanthropists to stop endowing colleges and buying libraries, and instead to devote some of their wealth to the erection of these sanitariums.

The ultra-violet rays of the spectrum are believed to have the power of destroying bacteria, and are believed to be remarkably effective in curing surface sores. A machine has lately been used by Dr. Wm. H. King to demonstrate their efficiency in the Flower Hospital, New York City.

The Civil Service Commission has decided that no person shall be reinstated in the Government service who is a legal resident of a State which at the time has rejected at least 100 per cent. of the appointments to which it is entitled under the appointment regulations.

There were 398 deaths in this city last week, reported to the Board of Health. This is 47 less than the previous week and 12 less than the corresponding week of 1901. Of the foregoing, 208 were males and 190 females; 47 died of consumption of the lungs; 4 of inflammation of the lungs and surrounding membranes; 7 of diphtheria; 13 of cancer; 15 of palsy; 7 of typhoid fever; 4 of scarlet fever and 2 of smallpox.

FOREIGN.—The declaration of peace with the Boers has been made the subject of popular demonstrations of rejoicing in London and elsewhere, and thanksgiving services were held on the 8th inst. throughout the empire. Dr. Prof. Hoffmann, who has been in the city of Martinique, reports that its eruption on the 8th of Fifth Month was "unique in that it resulted in the greatest destruction of life and property ever known by direct

agency of a volcano. The phenomenon of the eruption of flaming gases is probably new, but a careful observations is necessary before an opinion can be formed. The electrical phenomena are also new. The only dead play the chief role in the destruction of the city was developed by and aided the fact that I have specimens which show the effect of the lightning. The latter were small and intense atracted within the houses of the city. For reaction and for lives destroyed, Mont Pelée has record among volcanoes."

Mont Pelée was again in eruption on the 6th inst. at St. Vincent, on the island of St. Vincent. The 4th says: "The eruptions at Martinique and St. Vincent volcano materially. Connection between the two volcanoes is indisputable, as evidenced in Martinique is accompanied by corresponding seismic and atmospheric disturbances here.

Judge Taft has been sent to Rome to negotiate a sale of the lands in the Philippines under the control of the Roman Catholic orders. Among the instructions given by the United States authorities to be observed in the negotiations are the following: "One of the ruling principles of our Government is the complete separation of Church and State, with the entire freedom of each from any control or interference by the other. This principle is imperative wherever American jurisdiction extends, and no modification or shading thereof is the subject of discussion."

"It is the wish of our Government, in case it shall grant authority, that the titles of the religious orders to the large tracts of agricultural lands which now hold shall be extinguished, but that full compensation shall be made therefor."

Among the terms upon which peace has been negotiated between Great Britain and the Boers are the following:

The burghers forces to lay down their arms and surrender all their rifles, guns and ammunition of war in possession or under their control.

All prisoners are to be brought back as soon as possible to South Africa, without loss of liberty or property.

No action is to be taken against prisoners, except they are guilty of breaches of the rules of war.

There is to be no tax on the Transvaal to pay of the war.

The sum of \$15,000,000 is to be provided for the Boers' farms.

Ninety per cent. of the 128,000,000 people of the Russian Empire are farmers.

Human remains were unearthed at Gidge, in Egypt, consisting of a continuous series of extending back at least 8000 years. The bodies are well preserved, owing to the dryness of the atmosphere in the region.

The plague is still raging in the East and it is estimated that it causes tens of thousands of deaths every year in India.

The number of lepers in the Philippine Islands estimated at about 12,000.

Reports have been received from the Island of Java indicating that its volcanoes are showing marked unusual activity.

Japan has an avenue of trees nearly fifty miles long. The trees are quite straight, from 130 to 150 feet in height and twelve to fifteen feet in circumference. The avenue extends from the town of Namanda to Niigata.

NOTICES.

WESTTOWN BOARDING SCHOOL.—For convenience of persons coming to Westtown School, the stage was on trains leaving Philadelphia 7.16 and 8.18 A. M., and 4.32 P. M. Other trains are met when requested at Stage fare, fifteen cents; after 7.30 P. M., twenty cents each way. To reach the school by telegraph, West Chester, Phone 1144.

EDWARD G. SWEEDLEY, Principal.

WESTTOWN BOARDING SCHOOL.—Applications for admission of pupils to the school, and letters in regard to instruction and discipline should be addressed to:

F. WICKESHAM, Principal.
Payments on account of board and tuition, and communications in regard to business should be forwarded to:

EDWARD G. SWEEDLEY, Superintendent.
Address, Westtown P. O., Chester Co., Pa.

DIED, at his residence in Germantown, Philadelphia, Fifth Month 30th, 1902, CHARLES JONES, in the sixth year of his age. A member of Germantown and Frankfort Monthly Meetings of Friends. He died of consumption of the lungs. Buried in the Sixth Month 3rd, 1902, HANNAH FRANKS, a new member Chester Monthly Meeting, in the seventy-fifth year of age.

THE FRIEND.

No. 140 N. SIXTEENTH STREET, PHILA.

as second-class matter at Philadelphia P. O.

E.—Manuscripts and letters for the editor should now, during the summer months, be addressed to WEST FALMOUTH, MASS.

public wars are now generally tired and bushed, and the hearts of the people are strangers to the Peace, from which on earth comes. After this, in time eternity, the judgment. The past was the awfullest remains. The wrath of will be overruled to praise God, but for business, until the books are opened, the only thing that will praise man.

building Word, and a Sound Conscience.

who by his word put into nature a and light, Himself shines into human as their spiritual light. The entering hat Word gives his light to every man comes into the world. The Word's life 's light. In due time made incarnate season, now manifest as spirit and life e might be incarnations of the same, s in our heart and in our mouth, He who Word is the inspiration of every good and work of ours,—the commencement

for every right thing to do, or to say. word of his grace He commends us. It to build us up. It speaks to our higher rom the highest Life; and it speaks to ver life saying "Come up higher." It is a constructive, up-building; disregard of ys destructive, degrading. Its force is ry creative energy itself, both life and e. All-penetrating, it lights up the finest mination between thoughts and intents, bare to the conscience our motives, and search-light to every secret corner of ilt or good.

pro could tell us of other words of an-culture; which is not another, if hand-to the Highest. "For other engage-

ments of mind" said he, "are not such as belong to all times, and ages and places. But literary studies afford nurture for youth, delight for age, adornment for prosperity, refuge and solace for adversity, good-cheer for home-life, away from home don't hamper us; they are companions of our nights, of our journeys, of our summerings in the country."

Infinitely more than this could be said of the Word which "liveth and abideth forever." Ciceroian effects and accomplishments of scholarship are very inviting and admirable in their place. They are of the luxuries of culture, and as possibly embellishments of a high service in life, as on the other hand an indulgence of the veriest selfishness. They carry their own improvements, among which redemption is not included. Cecil Rhodes and Jay Gould are said to have found them all that Cicero said. So much the better for them, where-insoever classics did not take the place of still Better. But we look deeper than the abiding companionship of literary habitude, for the living society of the Word that can speak to our condition, find us out, and build us up, not merely in word but in power, and that too, of an endless life.

Near then as Grecian culture may be to the mind as varnish to the wood, or graining stained on; yet Christian culture wants its beauty bred in all the inward fibre, so that the rubbing up, the tribulation, and the polishing simply expose the conformations and groupings of a beauty all glorious within—the beauty of character which can take a polish, rather than the beauty of a varnish which covers up character. We may live briefly in what is put on, but eternally by what is put in.

By the character-building word we mean the Divine intelligence of right and wrong which comes to the heart and conscience of every man and woman, speaking to their condition, and which a good conscience will interpret truly. And even the poor and distorted consciences will learn to interpret the Divine light truly, as they persevere to admit it and to follow out its discoveries. But as a rule, he that does evil hates the light, will not let it in, and his bad and crooked conscience fails (unless an eye-opener like an earthquake breaks him up) to get rectified—and sometimes even then may refuse correction. But for all consciences, good ones and impaired ones, the rule of their betterment

is the rule of the Word—"He that followeth me shall not walk in darkness, but shall have the light of life."

Conscience, I say,—thy own and not another's—and especially not some corporate conscience, which has no soul. Such is not a conscience towards God, but a consensus with the set we belong to, or would keep in with, what we 's sometimes observe as a class-conscience, and not an individual conscience.

In due time it becomes a mercy in the training for life to break up a class conscience into so many emancipated and individual consciences. About to disembark from more protected homes or schools into a country and into times whose people seem, through recent movements, increasingly taught to be merging private conscience into the public tide, may our youth not drift indiscriminately with the current, but keep a single eye to the witness for Truth in their single hearts. Let us stand by what is shown to be Truth, though the world in passing by the Truth, pass us by with it. One's character perhaps this very day needs to choose a new start, a commencement on the basis of the witness in its own conscience towards its own Master, Christ in it the hope of its glory.

It is of the root of atheism to say, "My country right or wrong," and not "God only." It is of treason to say, "My party right or wrong," and not "my country's good alone." It is of paganism to say, "My church right or wrong" and "not Christ only, the head over all things to his church and me."

The word's progress never had a prophet or a leader while his conscience swerved from its individual ideal, though all men for a season forsook him. And the world never got atrocious or diabolical work done, where men, serving on sale to operate it, did not consent to lose individual consciences in their crowd, or in the state, or sometimes in such system of things as they thought to be the church. That is not what churches are ordained for. They are for the individual allegiance of members to their holy Head; who said, "for this cause was I born, for this cause I came into the world that I might bear witness for the Truth. Every one that is of the Truth heareth my voice."

To-day, then, "if ye will hear his voice, harden not your heart," but in hearing that Witness and following Him let us tender,

sweeten, sanctify our hearts, and re-commence to-day.

For in this day and time, to adapt to our use words lately written, "foundations are laid for a better time to come. In this day influences are going abroad through all worlds of highest moment. In this day that may be done in us and through us which affects remote ages. All of beauty and of truth lie within our reach, if we take the healthy view of life, and cast from us all those diseased thoughts that poison the spring of reflection and feeling at their source. Robust and growing views of man's place in the universe, and God's immanence, seem about to blossom like the wondrous century tree that after long upbuilding of hidden resources puts forth a flower."

Thomas Williamson.

Selected.

Thomas Williamson of Bannerig, Westmoreland, was born about the latter end of the Fourth Month, 1633, of honest parents of good report, and educated according to the manner of the Church of England.

He was naturally of a free and cheerful disposition, inclining in his youth to the vanities and pastimes in which too many spent their precious time, though at that time he was very circumspect in observing those outward performances which he esteemed religious duties. But in the year 1670 it pleased the Lord to visit him with some affliction of body, and to open his understanding to see the emptiness of all his former formal profession, and the vanities of his past life; and sorrow and distress took hold upon him for it, and cries and breathings were raised in him to the Lord, that he would show him his way, and he would walk in it.

It pleased the Lord to answer his desire, and to convince him of the blessed Truth, which he received with joy and gladness, before he had been at any meeting of the people called Quakers; and he gave up thereto according to his understanding.

About the year 1673, his month was opened in a public testimony to declare the goodness of the Lord to him, and to encourage all to faithfulness; in which he was a good example, and a considerable sufferer for his testimony, both by imprisonment and spoiling of goods. In the year 1678 he was imprisoned three months for preaching Truth in a steeple-house, and most of his goods were taken from him by some justices, on the Conventicle Act. He was not only fined for himself but ten pounds laid on him for being present at a meeting held at Bonwass, the 15th of the Seventh Month 1678.

His testimony he delivered in much plainness and simplicity. He was tender to the good in all, though sharp in rebuking that which was evil. He was a man who feared God, sincerely loved Truth, and hated hypocrisy and deceit; sound in judgment, of a good conversation and just and honest toward all men; undaunted in suffering, rejoicing that the Lord had counted him worthy to suffer for his name's sake. He was zealous in his testimony against the payment of tithes, and those called church rates, for which he

was a constant sufferer, and an encourager of others also to faithfulness therein; diligent in attending of meetings for the worship of God, until by age and infirmity of body he was deprived of that privilege. He often said, "The worship of God, and the good of the Church ought to be preferred before our business." He truly confided in the Lord, and gave this testimony on his dying bed, that God had dealt bountifully with his soul, and had given him all he had need of, and that he had peace with the Lord, and his soul was returning into rest.

He died the 22nd of the Tenth Month, 1715, aged about eighty-two, and a minister about forty years.

How John Bellows Was Led, and Further Notes.

In the account presented to our readers recently, John Bellows' turn to a distinctive embracing of the doctrines and testimonies of our religious Society was attributed by a writer largely to his reading of the works of Isaac Pennington. This no doubt had a large place in ministering to the deep spirituality of his Christian culture. But as regards the embracing of the distinctive testimonies of our profession, it is due to truth that John Bellows' own account of himself, as written to the editor of the *British Friend* should now be given. It is as follows:—

It is difficult, I am aware, to give from abridged notes the exact words used by those who have spoken in such gatherings as that of the Yearly Meeting: but there are two or three verbal changes made in what I said about the Hague Conference, as reported in thy issue for Sixth Month, which I will ask thy leave to correct.

I did not describe the President as "M." de Staal, but as "Baron" de Staal: nor did I say "Mr." Andrew Whyte, in speaking of the United States Envoy: or refer to Fifth-day as "Thursday." Slight as are these differences in the form of expression, they would in my case imply the abandonment of a practice of nearly fifty years, which I desire to retain; not, certainly with any covert idea of hinting it as a rule for others, but because the reason I can give for it will carry weight with every person whether in or out of the Society of Friends, whose opinion I value.

Brought up in the Society by parents who had become Friends from conviction, I had taken for granted that its teachings were pure Christianity—that is, in theory,—until at twenty years of age I was brought face to face with the tremendous realities which sooner or later confront every human soul. My take-it-easy Quakerism went to pieces in the storm, and at this critical moment, under the influence of a clergyman of the Church of England, I had very nearly built up in its place a traditional belief in the opposite doctrines of the sacraments and water-baptism, and such system of worship as fits with their observance. It was, however, made clear to me that before making the important change this would involve, I was bound to do what I had never yet done, and that was to examine for myself, with all the light I could obtain, and with all the earnestness of one newly awakened to a consciousness of the powers of the world to come, the foundations of the

doctrines held by the Society of Friends. I read Barclay's arguments especially, and then the texts both of the New and the Old Testament which he cites, till, after anxious days and nights the light shone then steadily and brightly as the sun in a cloudless sky, and I was made as sure of the truth of what the world calls Quakerism as of my own existence. For some days the power of this conviction was so great that I had no room for any other thought than of the goodness and love of God. When this was sufficiently to admit another thought occurred, "Now that I know and am certain that this is the Truth, shall I be as free to profess it openly to everyone with whom I come in contact?" I felt there could be no alternative. I was bound in honor to speak it; it was a case of *noblesse oblige*. I believe that no one who reads these pages will be able to doubt that if he or she had gone through the same experience, would have come to any other conclusion.

I had no human being to consult with in this matter, as I was far from home among strangers; and I may be that the course I took was not the most rationally the wisest. But as I pondered the position and remembered that the work had come to associate certain peculiarities of speech with the profession of "Quakerism," I appeared to me a simple way of letting the world know that I was not ashamed of my peculiarities, "a Quaker," if I adopted their peculiarities. What there might be in this I did not stay to enquire: nor was I able to or wish to work out a rule of apportionment between the tithe-value of land, and anise and cummin, as against the weightier matters of the law. There was no rule and no law in "Quakerism" that I was of, but that of striving after reality; no principles but the one eternal principle that we should love the Lord our God with all our heart, and our neighbor as ourselves; and we can only do by abiding in, and being continually guided by his Spirit. I was certain that what is usually called the "plain language" stamped me with the stigma of being a Quaker, and therefore I adopted it. I had on I sometimes found it involved suffering, but even that suffering was of no mean value in it the meaning of the words became that "Things which are despised hath chosen, yea and things which are not, to bring to nought things that are."

I am thy Friend,

JOHN BELLOW.

Sixth Month 24, 1899.

We may add that Count Tolstoy's expression in regard to his acquaintance with John Bellows, beginning with his visit to the mine-stricken districts of Russia, may be seen in an interview of Andrew D. White with the former, recounted in McClure's Magazine for Fourth Month, 1901. But we forbear to quote laudatory expressions which might be personal or not referred to the Divine. Oliver Wendell Holmes could attribute to our friend was to Divine grace, in the words "We thanked God that there are such sensitive, intelligent, receptive natures."

A few weeks before his death, in a letter to a Russian lady John Bellows wrote as follows:—

"This life cannot last much longer."

te that must follow it is full of uncertainty notwithstanding any efforts I may have made in time past to be ready for the trial to it. But there is a time for all and I believe that this very feeling of uncertainty as to what is to follow in another life of existence, is at present, best for me, for it is not the will of God that we should do anything but, or on anything short of continued revelation of his own Divine will to our souls. If we relied on the revelation of some past revelation of it, we would evade some of that effort that we have to use in seeking Him anew . . . There is stagnant water in the river of Life that has never over from his presence . . . At this time I cannot get farther than the cry of the Chief on the Cross 'Lord remember me when thou comest into thy kingdom!'—nor so far as he in the promise that followed Him who forms the light and creates the seas knows that both are necessary for the perfecting of his work in the soul."

Following, nearly in the words of a letter to a son, seems to us entitled to be the property: "Perhaps thou art not able to realize as we can that my father's life was which the calm surface of the pathway was often, very often, disturbed by storms which his faithfulness to duty, or in exposing hypocrisy or that which he maketh a lie, or in any way standing for the honor of truth, often incurred. Therefore we look back with great pleasure to his visit to America last summer, when we met with nothing but love and joy. I certainly have often thought that as the crowning period to his life, at the Philadelphia Friends he was loved and esteemed and he reciprocated in measure. In New England he appreciated good will extended him."

His form lies in a beautiful spot on the hills about six miles from Gloucester in the country as Middletown in the north. The funeral was very large and for such an out-of-the-way place, a number of clergy of the established church being conspicuous for their presence, Dean of Gloucester, and others. Deceased, vocal expression was given to the power of my father's life, of waiting upon the feeling of the power of Immortality in the fleshness of the soul."

HUNTINGDON.—Lady Huntingdon, with some of only twelve hundred pounds a year, lived much for the cause of religion. She inclined the college she had erected, at her expense; she built chapels in most parts of the kingdom, and she supported ministers and sent to preach in various parts of the world.

Minister of the gospel and a person from the country once called on her. When they were in the country man turned his eyes toward the house, and after a short pause said, "a lesson!" Can a person of her noble mind, nursed in the lap of grandeur, live in a simple house, so meekly furnished, and shall a tradesman be surrounded with luxury and ease? From this moment I shall hate my own furniture and myself, for spending time for God, and so much for myself in

"ART THOU WEARY?"

Art thou weary, art thou languid?

Art thou sore distressed?

"Come to me," saith one "and coming
Be at rest!"

Hath He marks to lead me to Him,

If He be my guide?

"In his feet and hands are wound-prints,
And his side."

Hath He diadem as monarch

That his brow adorns?

"Yea, a crown in very surety,
But of thorns."

If I find Him, if I follow,

What his guerdon here?

"Many a sorrow, many a labor,
Many a tear."

If I hold closely to Him,

What hath He at last?

"Sorrow vanquished, labor ended,
Jordan past."

If I ask Him to receive me,

Will He say me nay?

"Not till earth, and not till Heaven
Pass away."

Finding, following, keeping, struggling,

Is He sure to bless?

"Angels, martyrs, prophets, virgins,
Answer, yes."

—Adapted from the Greek by John Mason Neale.

FOR "THE FRIEND."

A Mammoth in Cold Storage.

The recent remarkable discovery by Dr. Herz of the body of a huge mammoth in a bed of glacier ice in Eastern Siberia has again revived among scientific thinkers, the discussion of the quadrupeds fed in lands of abundant pasture where snows and ice have held sway for thousands of years. A mammoth locked in glacier ice has seemed to be an enigma difficult to solve and in this case we have one peculiarly hard to solve as linked to existing causes, and all manner of suggestions wise or otherwise, have been put forth to aid in the longed-for solution.

As far back as the summer of 1799 a mammoth was found by Dr. Adams frozen in a glacier of clear ice, which abutted against the beach at the mouth of the Lena River in Northern Siberia. The skeleton of this animal, I believe, is mounted in the museum of St. Petersburg. It was so well preserved in the matrix of ice that Curver, after close review of the accompanying conditions declared that the animal was suddenly killed and immediately buried in a frost grave and that it had remained in that condition from the day it was overtaken by some catastrophe. Since that time many of these animals have been found in the Arctic world. Some of them are remarkably well preserved. Their flesh kept for thousands of years in cold storage, was in some cases so fresh that it was untainted as though but yesterday slain and sealed away in ice. The Lena mammoth afforded food for wolves and bears for years as it gradually melted from the great ice wall and fell from a height of forty feet to the beach. The woolly rhinoceros was associated in life with the arctic mammoth, and in the stomach of one of these, was food undigested and even in the month was found the remains of food partly masticated.

Such things as these necessarily led to the conclusion that the animals thus involved were overtaken on the spot and immediately encased in ice. It is said that the brain and blood corpuscles in some cases showed no sign of decay. The very pupil of the eye was undecayed, and the general condition of the body showed no disturbance since the ice closed in around it. There appears to have been a general distribution of the mammoth and his compeers over the frozen belt of the arctic world. Many of them have been found in Alaskan ice, where they have been dug up by gold seekers in many parts of that country. The Indians and Eskimos use the tallow rendered to burn in lamps and candles, and there are to-day samples of this rendered mammoth tallow in the Smithsonian Museum at Washington.

It seems that Dr. Herz's mammoth has afforded some very striking features. In addition to the undigested food in the stomach, which the animal had put there the day he perished there was a tuft of grass in the animal's mouth, which the trunk had gathered to thrust there just before its death, which plainly shows that suddenness is the word we can use as a correct epitaph of this great Arctic graveyard.

Many theories have been advanced to account for these remarkable phenomena of the frozen world. With our present knowledge we cannot understand how a comparatively warm region can so suddenly become a frozen land, and yet this seems to be testimony of the witnesses that crowd in to testify. Some have claimed that the earth's center of gravity became shifted which tilted its axis and sent a wave from other lands to the poles. This theory failed to take root from various reasons, chiefly because men could not be made to believe that a shifting of the earth's gravity could tilt the axis. For it could make no difference where the center of gravity be placed, the hemispheres on either side of it would weigh the same from the very nature of the problem. Besides it would seem impossible for the poles to swing suddenly out of position even if they could become tilted. And further, if they could suddenly throw an ocean about the pole by a change of gravity and axis tilting, how could that bury the mammoth under vast masses of snow, for they are to-day locked down in glacier ice and glacier ice is packed and solidified snow.

Another theory that found favor for a while was that a change occurred in the direction of oceanic currents. A warm current running toward the Arctic would temper the climate as the Gulf Stream to-day affects the climate of the British Isles. A change by which a cold current would supplant a warm one, would certainly bring about colder and it may be frigid conditions; but these currents could not possibly change positions suddenly, and even if they could do so, they could not pile snows so rapidly over the mammoth herds feeding in their pastures, that they could not be allowed time to digest their food, nor even to masticate and swallow it after it was put in the mouth, before death occurred.

Dr. Herz says that his mammoth must have been foraging on the brink of a precipice, and after taking a tuft of hay into its mouth, suddenly fell and was instantly killed. But here

again we are confronted by the fact that even if instantly killed with mouth and stomach filled, it is impossible to contrive how the body froze up so quickly as to not allow the food to decay or ferment. Did the animal fall from a precipice whose top was covered with grass into a bank of snow at its base?

From the Doctor's description of the position in which the animal was found with his legs partly bent under him, it would seem that he was killed in a bed of snow. But how are we to reconcile the snow bank at the foot of a precipice in a climate sufficiently mild to afford him pasturage on the precipice top? Then again it is a little out of order for a mammoth to feed on top of a precipice or crag.

It seems very likely that the Arctic world was subject to a climate somewhat wintery, as those animals are covered with a thick coat of hair to adapt them to their environment.

Another theory very generally advocated is the elevation of the Arctic regions so high as to place it in the region of eternal snow; but here again the philosopher says continents cannot be suddenly elevated. Doubtless a great elevation will bring about a cold climate, but it is again said to be impossible to cover a continent with snow by freezing it. Snow-forming is work requiring an expenditure of heat. So said the immortal Tyndall. To make a continent cold is to take the fires from the engine and stop its works. Heat is needed to form vapor and snow will not form without it.

It seems that a theory is needed that can account for a warm climate affording provender all over the Arctic world where once the mammoth luxuriated, and which continued warm for a vast length of time to allow such herds of mammals to breed and occupy that region. Then, too, the same theory must account for a sudden desolating fall of snow upon a land of abounding life. There is such a theory being advocated by some which seems, in a very satisfactory way to account for both of these North-world conditions. I will present it as I understand it:*

The Annular Theory asks us to believe that some of the earth's primitive watery vapors lingered about this planet till very late in geological times, even down to the advent of man. These vapors it is supposed revolved about the earth as a world-canopy, just as similar vapors revolve about the planets Jupiter and Saturn to-day. Such a canopy it is claimed, would be competent to modify the climate of the whole earth, even causing a temperate climate about the poles and ample pasturage for the mammoth and his cognegens.

Now, astronomers say that Jupiter, is at times, dropping portions of his canopy or watery envelope at his poles. If this be true, and if law presides universally in the evolution of worlds, we are asked to admit that earth's canopy of lingering vapors, competent during its existence to make a warm climate, was also competent in its fall in the polar regions to desolate a land of exuberant life. Certainly

*This theory was published in pamphlet form when the writer was a teacher at Westtown in 1874. Late discoveries have led such men as the younger N. H. Winchell to write: "Geologists will have to admit that the earth's primitive vapors lingered much later than has been supposed."

we can place no moles and bounds to such avalanches of world-snows, nor can we put any estimate upon its suddenness. Such snow-falls may have covered polar pastures and their feeding herds hundreds of feet deep in a single day or in an hour.

There seems to be nothing unnatural or improbable in this Canopy Theory, and through it, we escape the alternative of making the earth cold in order to cover it with snows. For here we cover it with snows to make it cold, just as Tyndall demanded a quarter of a century ago. Ther, too, if this theory be true, we have an all-competent cause for all the "Glacial Epochs" and all the "Deluges" the earth ever saw. It would appear then that Dr. Herz's mammoth is a "Moabite Stone" in the path of the Geologist. For if some of the primitive vapors lingered about the earth till the mammoth died, then some of them may have fallen in grand instalments through all the "Ages," in fact the ages may have been more or less modified and regulated by them, and the Geologist may find the Canopy's impress all through the past from Mona to Man.

FOR "THE FRIEND."

"AS A LITTLE CHILD."

A vane revolving to the sky,
An angel of the earth,
With prowess faint, but import high,
Is every man at birth.

Small foothold, his, on earthly things,
As in his face we trace
What heavenly breeze its current flings
Upon his place and race.

As wakes the individual will
To its terrene support,
The fatal fear of being still
Its movement may distort.

Then as each base surrounding saith
Belike he thinks to know,
And grows into the world by faith,
A faith in things below,

So turns he only with the world,
By self-sufficient pride
From individual freedom hurled,
With all the self-allied.

Be our dependence placed above,
Upon that breath Divine
By which are all allied in love
Who in its freedom shine!

Then in obedience our faith
Shall end as it begun,
And worship while the God-head saith,
"Be one, as We are One!"

R. R.

THE INDIAN CONVERT.—Among the converts to the Christian faith among our Indian tribes, was one whom they distinguished by the title of "Good Peter," and who, with truly apostolic spirit, used to preach the gospel to his poor heathen brothers. Once he addressed them in language to this effect:—"My brothers, the Good Spirit loves all his creatures. He loved them so much that He sent his own Son to bring them home to Him. But this Son was so bright, brighter my brothers, than yonder sun, that we could not look at Him; therefore He wrapt Himself in a mantle of flesh [wrapping his blanket around him] that He might live with us, and we might see Him. The Good Saviour has shown us the way to his Father; and lest we should lose the path, He marked it with his blood."

Mosaics from India.*

This is the title of a book of "Talks from India, its Peoples, Religions and Customs," much of which is the personal experience observation of the author, Margaret B. King, for many years, with her husband resident among the interesting people whom she writes.

The work is both entertaining and instructive, and cannot fail to produce in its readers feelings of interest in the people of India, particularly the women—and of pity for child-widows.

Three extracts will only indicate a few of the many interesting things in the book.

"It is hard to realize the utter helplessness of the Hindu widow. Many stories are written by those who go about in high-caste homes and see the poor shaven heads and little figures hiding in corners or behind doors. I always single them out for kind words of notice but they are almost too timid to respond. Before I knew much about this sort of lot I used ignorantly to ask in regard to one of these crouching, timid figures: 'What is that?' No one ever told me her name or relationship. Simply pointing the thumb of the shoulder (she was sure to be in the background) and giving a contemptuous jerk of the chin, the answer was: 'Only a Jew.' One dear little girl in Ramabai's school received word that as she was now twelve and old, it was time for her to break off her armlets and have her head shaved. She then came home for these degrading things to be done and the father thought they would bring her at home to wash and cook and do the housework. The child was nearly frantic. She begged to be sent back, but Ramabai was powerless. But the father never came for the child. Ramabai's words: 'He meant to come and make her back to misery, but he died.'"

"What more wonderful story of betterment than that of Sooboo Nagam Ammal? She belonged to a proud, high-caste family in Madras. Her father was a judge in the High Court and her husband was in Government employ. She was a pet and indulged favorite at home, for her husband had never taken her to his home, as she was one of a pair of twins and born on a Friday; so her coming would bring misfortune to his house. She was considered as a married woman, however, and her position count in India as elsewhere. Her was entrusted the worship of the goddess and in all ceremonies and rights she was as proficient. Her desire to become pious, all these caused her to long for the accomplishment of reading, as then she could read the sacred Vedas and know more about the will of the gods. No one could be found who would teach her except the Zenana Mission workers. This greatly disturbed her parents. 'Yes, they will teach you to read, but they will also teach you this new religion of Jesus.' 'No, no,' Sooboo told them. 'Let them teach me about that will go in and out the other.' The lessons of this new and purer religion did not go out, however, but sank into an earnest and inquiring soul for the haughty Brahmin bowed at the feet of the lowly man of Nazareth, and learned of Him. Her hope was that she might re-

*Fleming H. Revell Co., Chicago, New York & London. Pp. 296, illustrated. Price \$1.25.

er home and teach her relatives and friends. But this, in an orthodox Hindu house, is almost impossible. Persuasions, caresses, coldness, and finally persecution followed. A plot was set on foot by which they intended to spirit her away to a temple in Bangalore and there dedicate her to the god of the temple. When Sooboo heard this she fled at once to the missionaries' bungalow. Here her friends and relatives followed to persuade her to return; but she had chosen the true God, Jesus, whom He had sent to redeem men. Persuasion and threats all failed, her only remedy an effigy of Sooboo which they carried through the streets, wailing out: 'Sooboo is dead! Sooboo is dead!' As she listened to this she found it almost unbearable. Finally she took her fingers from her ears, crying that Sooboo, the once proud, 'twice-Brahmin Sooboo, was indeed dead; but she was alive again in Christ who can do all things. The effigy was burned on the bonfire and Sooboo's old mother went forth that house of wealth to beg her way on to the sacred Ganges, where she scattered ashes of the image of her daughter, hoping to expiate her sin. Sooboo is now 'dead' in a way that none of our loved dead become. On the day she was baptized, she stepped forward and sang in Tamil:

'Jesus, I my cross have taken,
All to leave and follow thee;
Naked, poor, despised, forsaken,
Thou from hence my all shall be.'

Like all girls of the better classes or castes in India, Runabai was married at a child. Little did she realize as she was toddling about the beautiful rooms of her mother's bungalow that her whole life was mined for her. The bungalow, as fine as any are called in India, was a very nice one, lovely plants adorned the verandas and grounds. All about were signs of comfort and luxury. Her parents loved her, although they were very sorry that she was not a boy. In India are always sorry to have little girls, and often they will try to hide the fact. For little Runabai was an affectionate child while in her own home, did not realize she was not welcome. A few years of peace were soon over; for when she was eleven years of age the parents of her husband, whom she had never seen and of whom she knew nothing, sent for her. They intended to train her up properly for their son. This is the usual fate of Hindu girls—to be given to their mothers and given over to the hands of strangers. Little appreciated in her family, you can imagine the very sad lot she must have among those who care very little for her than her parents do. The fault is severely corrected for fear her beauty may cause the death of the precious and only son of the family. When Runabai arrived, for her father bought her many rich garments and fine jewels and sent her away with twelve hand-maidens who were to attend upon her in the wealthy home of her husband.

But alas! for some reason the husband failed to please her new relatives. Her friends were taken from her almost immediately, and she herself was compelled to work much harder for her years. They put away the silk and muslin saris and most of her pret-

ty bracelets and other jewelry. Nothing the child did seemed to please anyone in the family, and her life grew harder and harder. It appeared as though they wished to get rid of her and so be able to procure another wife for the son. Before a year had gone by her food was limited to only one meal a day and that only of rice and chillies (red peppers). She became very thin and looked like a shadow of the bright little girl who came so gaily to this home so short a time before. One sad day as she was cleaning the house, she saw some bread on a table. Her hunger was even greater than her fear, and snatching up a piece, she ran off to eat it. Her cruel mother-in-law saw her, and picking up a stick, ran after the poor girl. She took the bread from the trembling fingers and pushed it down poor Runabai's throat with the stick. The suffering of the child was terrible. When she next visited her own father's house, she begged not to be sent back any more to be so cruelly treated. 'But oh! the disgrace to our family!' the father said. 'No, go back, dear Runabai, we weep for you and our hearts are pained over your sad lot. When we sit down to our good food, we shed tears as we think of our poor starving Runabai. But what can we do? If we keep you here our caste will be broken and the gods will be displeased. Go back, and if you die, it will be honorable.' So the little martyr to caste and false religion went back and in two months more was dead."

"HIS LOVE TO ME."—To an invalid friend, who was a trembling, doubting believer, a minister once said: "When I leave you I shall go to my own residence if the Lord will; and when there the first thing that I expect to do is to call for a baby that is in the house. I expect to place her on my knee, and look down into her sweet eyes, and listen to her charming prattle; and, tired as I am, her presence will rest me, for I love that child with an unutterable tenderness."

"But the fact is she does not love me; or to say the most for her, she loves me very little. If my heart were breaking under a burden of crushing sorrow it would not disturb her sleep. If my body were racked with excruciating pain it would not interrupt her play with her toys. If I were dead she would be amused in watching my pale face and closed eyes. If my friends came to remove the corpse to the place of burial she would probably clap her hands in glee, and in two or three days totally forget her papa. Besides this she has never brought me in a penny, but has been a constant expense on my hands ever since she was born. Yet, although I am not rich in this world's possessions, there is not money enough in this world to buy my baby. How is it? Does she love me or do I love her? Do I withhold my love until I know she loves me? Am I waiting for her to do something worthy of my love before extending it to her?"

"Oh, I see it!" said the sick man, while the tears ran down his cheeks. "I see it clearly; it is not my love to God, but God's love to me I ought to be thinking about; and I do love Him now as I never loved Him before."

From that time his peace was like a river. "We love Him because He first loved us."—*Lights and Shadows.*

FOR "THE FRIEND."
THE LIGHT OF CONSCIENCE.

Do the right and fear no thought
That another may express;
They your conscience have not taught
And your lives may never bless,
Do what conscience says is right,
Then life's safest rule is yours;
And you follow in the light
That forevermore endures.

Men will differ and may change;
And if man you seek to please,
You may often think it strange,
That it is no path of ease;
For no matter what you do,
Some will think it is not right,
So to your own souls be true.
Then you'll follow God's own light.

MARTHA SHEPARD LIPPINCOTT.

MOORESTOWN, N. J.

First Interior, Then Exterior.

True virtue must come to man from within first, and then spread to the exterior. It is the same with grace for the soul, as with food for the body. A man who tried to feed his arms and legs by applying to them externally the most nourishing substances, would never fatten them at all; everything must begin from within where all food must first be digested by the stomach, and then become chyle, and blood, and at last actual flesh. It is from the deepest interior that nourishment is distributed to the exterior.

Prayer is, as the stomach is, the instrument for all digestion. It is love which digests everything, which makes everything its own, and incorporates with itself all that it receives; it is the hidden love of the soul which nourishes the entire exterior for the practice of virtue. As the stomach makes flesh and blood and strength for the arms, the hands, the legs, and feet, so the love of God in prayer renews the spirit of life in our whole conduct. It creates patience, gentleness, humility, chastity, temperance, disinterestedness, sincerity, and in general as many other virtues as are necessary to repair the daily exhaustion of our souls.

If you attempt to apply the virtues to the soul from without, you create nothing but an external symmetry, which will but constrain the soul within,—a superstitious arrangement, an accumulation of legal and Judaical dead works; it may be a masterpiece outwardly, but it has no life. It is a whitened sepulchre: the exterior is a magnificent structure of marble, on which all the virtues are sculptured in bas-relief; but within are nothing but dead men's bones and all uncleanness. The interior is lifeless; there is nothing but a skeleton there; everything there is dry and withered up for want of the dew and unction of the Holy Spirit.

It is no use then to try and put love into our souls by means of a multitude of exterior practices, scrupulously piled one upon another; but, on the contrary, it is the interior principle of the love of God, cultivated by prayer, and nourished by a familiar remembrance of the presence of God during the day, which will carry food from the centre of the soul to all the exterior members, and make us exercise on every occasion, with ease and simplicity, every virtue that is suitable for that moment.—*Francis Fenelon.*

For "THE FRIEND."

LOVE.

"God is love," and they that dwell in God dwell in love. Our worthy forefathers and mothers in the Truth surely had this love, for they were willing to suffer for the Truth and did suffer, many of them giving up their natural lives for Truth's sake; and they were willing to suffer one for another, as some of them offered to take the places of some who had suffered in foul prisons, thus fulfilling the statement of the Dear Master "Greater love hath no man than this, than that a man should lay down his life for his friends." At that time hundreds were raised up in the Power and Spirit of God to preach his unsearchable riches to a dying world, and to testify of the goodness of their Heavenly Father. And the language then went forth even by the worldly people, "Behold how these people love one another." But we must admit that the gold has become dim, and the fine gold changed. The enemy has wrought havoc amongst us. A spirit of the world has crept in amongst us and caused contention and strife; yea, the carnal mind has listened to the voice of the enemy. Some he has enticed into a love of worldly goods, some into a love of honor, some into a love of pleasure, some into a love of themselves, and to some the language could be said "The zeal of thine house has eaten thee up."

Some have made the outward form too much their God, and some have gone again into the beryllary elements which Friends were called out of. These failures, dear friends, are the work of the enemy; and it is in getting off of the watch and not being obedient to Him who hath called us to be a people. "Obedience is better than sacrifice and to hearken than the fat of rams." Some have been very zealous as to their dress and address, yet the furniture in their houses is just the same as of the people of the world, and their manner of living the same. Now these are inconsistencies that exist amongst us, in which some have erred on one hand, others have erred on the other hand. And these departures from the simplicity of the gospel have all been, as it were, stumbling blocks, and this should be avoided. The apostle says, "Let us not judge one another any more, but judge this rather, that no man put a stumbling block in his brother's way."

It has also been with us, that one says "I am of Paul, and another I am of Apollos." Some have so much given way to follow man, that they have been led away by man, some one way and some in another way; which has caused many rends in our Society. Does it not show, dear ones, that it is dangerous to follow man, however he may have been favored? for these, too, have the old enemy to contend with.

Seeing then the enemy has made inroads amongst us, let us cease from man whose breath is in his nostrils, and who hath power only to kill the body. "But rather fear Him who hath power to cast both soul and body into hell." Oh that we might crave to know nothing as it were, but Jesus Christ, and Him crucified, having our conversation in heaven and heavenly things. Then all these inconsistencies would disappear, and our beloved Society would shine forth in its anointed purity and again come forth "fair as the moon, clear

as the sun, and terrible as an army with banners."

In enumerating the inconsistencies amongst us, which we all must acknowledge do exist, we should not give way to discouragement, for the Truth yet remains, and may we not feel that there are many living witnesses yet heralding it forth, to a frowning world? Let us not conclude with Elijah of old, that all "the prophets have been slain and that I only am left." Did not the Lord show Elijah that He had thousands which had not bowed to Baal or kissed his image? so I am well assured it is at the present day, — many are casting out devils in the Master's name. Let us not forbid it, because they follow not us; did not the dear Master tell his disciples that "they that are not against us are for us? Forbid them not." One of the apostles says, "Brethren, try the spirits whether they be of God;" and that "every spirit that confesseth not that Jesus Christ is come in the flesh, is a spirit of Antichrist; and every spirit that confesseth that Jesus came in the flesh is of God." And another apostle says, "Who art thou that judgest another man's servant? To his own master he standeth or falleth." And does not the apostle say, "One is your Master, even Christ, and all ye are brethren?" Our dear Saviour was found fault with because He ate with publicans and sinners. But He came to call sinners (not the righteous) to repentance. Cannot we, dear friends, believe that his love is yet to the sinner and that his power is above every other power, and that there will be no end to his kingdom? and while the enemy has sown many tares in the wheat, yet the humble children of God can rejoice that when the harvest is come they may be gathered into the heavenly garner. But we must be as clay in his hands. We must love Him with all our mind, might, and strength, and our neighbors as ourselves and keep away and apart from the world. For we are told that "Pure and undefiled religion is to visit the widow and fatherless in their affliction, and keep ourselves unspotted from the world." "If ye love the world the love of the Father is not in you." The Scripture declaration is, "It hath been showed thee, Oh man what is good, — to deal justly, love mercy, and walk humbly with thy God." To Him we must bow, to Him we must confess either in mercy or in judgment. If we love Him He will love us, and manifest Himself so that we shall not be deceived. Our dear Saviour said, "If ye love me keep my commandments." And his commandments are not grievous. They that love Him are led to speak to each other. "They that feared the Lord spake often one to another and a book of remembrance was kept for them that feared the Lord and that thought upon his name, and these shall be mine, saith the Lord." Oh that we may not be deceived. W. T.

MONTIC, Iowa, Fifth Month 11, 1902.

FOR "THE FRIEND."

WHEN drawing towards the close of life [Elizabeth Evans] gave expression to her feelings in the following impressive language: — "I have not a wish to be elevated one step above the condition of a true and sincere beggar at the footstool of mercy and the throne of grace; for I believe it is the only safe place, for the immortal soul that is still clogged with

the shackles of mortality, and beset with temptations and buffetings of an unwearied adversary. How good and how sustaining to remember that we have an High Priest, Jesus Christ, the eternal Son and sent of the Father, who is touched with a feeling of our infirmities, who was tempted in all points unto us, yet without sin, who is able and willing to succor all them that are tempted. He is an advocate with the Father." — *Promoted, Vol. 5, page 336.*

Distillery-Struck Jacob.

Somewhere about 1785 or 1790 Jacob, born in a Massachusetts country town where he lived and passed through the real experience that I am about to write there he died. There are living even a few people who remember him.

He belonged to a respectable family and inherited considerable property, marrying a worthy young woman who had also money of her own right. They began life in their pleasant home living comfortably and happily. They were both industrious, he being a bricklayer, and his services much demanded.

Somewhere about 1810 or 1812 he was engaged to make some repairs or to put in chimneys in a distillery in the neighborhood and went with reluctance as he was a stainer and doubted the advisability of much liquor making or drinking as was the custom.

While there he was urged into tasting the liquor, was overcome by its influence from that time on for years was never the same. He lived an idle, wandering life, going one distillery to another, and from one town to another, for in those days before there were railroads, accommodations for man and horse could be found in every hamlet and crossroads about the country side, and at all these public houses liquor was sold, and wherever it was sold, "Distillery-struck Jacob" as he came to be called, was a familiar visitor.

The change in him was complete. He squandered his money, and spent his time drinking, smoking and swearing, choosing his associates the lowest and most vicious within the radius of a dozen miles or more. He nearly lost his mind, his limbs were totally paralyzed, and no one would have been surprised at any time to hear that his useless life had come to an end in some bar or by the wayside.

His wife never ceased to pray for him, he seemed to realize the fact, although he would not listen to a word of exhortation from her or from any one. In his moods he treated her with some consideration and was proud of her, often speaking of her as a good, pious woman, and of their daughter and two sons as smart children.

One sultry night in midsummer 1822 he came home from one of his drunken trips and went to bed and to sleep, which was a mercy, as often he raved like a madman for the whole night, not articulating words, but barking or howling like a dog or demon. On this occasion he arose in the morning a new man. He bathed, combed his hair and beard, and willingly dressed himself in clean clothing. To the surprise of the family he sat down to the breakfast table

and after the meal was over instead of digging his pipe he found the Bible that he had not opened for years and sat down under the tree in the yard and read it all the morning, and the day passed without his seeking his companions or trying to obtain liquor or tobacco.

He made no reference to the change that came over him, but for several months most of his time in reading the Bible was meditation. His regular habits began to change him physically so that he was indeed a new man bodily, mentally and spiritually. For a half year or more he began to talk freely upon religious topics, and with his new Bible made his old rounds telling his companions and every one whom he knew of his Saviour's love.

One day he had confidence in him, his old companions jeered at him, his friends called him a hypocrite. He refused to accept him to their parish, but he was not discouraged. "It is strange," he would say. "They do not know that I am saved by the love of Christ. I do not complain of unkind treatment, and I do not so. I know Him; I love Him; I follow Him for I have seen Him."

One day, very humbly, he told how on that night the Saviour had appeared to him pure, lovely and loving. He did not say but the poor sinner saw himself as he had and the sight of the Saviour's face as he had that there was hope. Having seen the Saviour he desired nothing else. The love of God filled his life from that moment to the day of his death, thirty-five years later. As he passed many trials and sorrows came to him but they did not affect his faith. He was a Bible almost constantly, wearing out many copies. At length he became blind, and he had the solace of recalling the life he had read over and over. He told all his family, he became poor but despondent, sorrowful or complaining. He came from a distance to see the old man and to hear his wonderful story, and his faith strengthened the faith of many so they were also helped to see Jesus.—*San Francisco Safeguard.*

Science and Industry.

PRODUCT OF THE HERETOFORE UNPRODUCTIVE State of Utah is a kind of watermelon, which ripens in Tenth Month. The melon ripens when it is picked, and reaches maturity near the end of the year. The seeds were imported from Khiva, Turkistan.

PLOWING WITH MACHINERY.—In no locality in the world is steam farming machinery been applied with such effectiveness as upon the grain lands in Southern California. On one ranch the engine used to draw the machinery is of great power, and has drive wheels eight feet high. It consumes twelve barrels of oil a day, and in its operation requires the services of seven men. In plowing, fifty-five acres are turned over at one time, covering a width of forty feet. Eight horses are needed to guide the machine supplied with water wheels. The best record so far made in plowing is seventy-five acres in four hours and five minutes. The field was five miles long, and the great engine a straightaway, with few turns, in making the record.

In operating this plow to the best advantage a water station is maintained at one corner of the field, from which the engine is supplied as needed. The average capacity of the machine is the plowing of one hundred and ten acres per day.

The use of this machine is not an experiment. Last year six thousand acres were harvested by it. On a ranch of one thousand acres it is an economic investment, but a smaller acreage would not warrant the outlay. Last season a combined harvester was drawn by the engine, and averaged over one thousand acres of wheat in a day, cutting, thrashing and sacking the crop. One of these great field engines is at work this season near Covina, displacing seventy mules.

THE CLOTHES MOTH.—If you will examine their mandible under a microscope you will see they are scaly plates, very much like scissors, ending in a point, and with these they cut and tear the wool till they have it to the right size, and then they join it to their little cloak. At first this is only done at one end, but as they grow, both ends are treated. The writer then gives some observations of the naturalist Reamur, who made a study of these little insects. While he was watching one of them he was surprised to see the head come out at the wrong end of the sheath, and the idea suggested itself to him, can they have two heads? He continued his watch, and saw it putting its head out first at one end and then at the other with such rapidity that he determined to see what happened, so he cut a piece of the sheath away, leaving only about one-third of the body covered. The little insect set to work at once to repair its cloak, and did so much work in the next twenty-four hours that it had repaired it most effectually; but during that time Reamur saw it turn its head from one end to the other, doubling itself back with wonderful dexterity. As the insect grows, the cloak becomes too narrow for it, and then it starts letting it out. The silkworm and other caterpillars change their skins when they get too tight for them, but not so the clothes moth. It apparently has the true tailor instinct, for it proceeds to let it out. First, it splits open its sheath, then it inserts a new piece, and this it does in no less than four places, two on each side, thus distributing the room all round, at the same time avoiding all unnecessary exposure to its body. When it begins to cut the slit it starts at the middle and works to each end and the cut is as clean as the best scissors could make it.—*London Telegraph.*

THE TIMBER USED.—In the United States four million feet of pine lumber is used every year for matches, or the equivalent of the product of four hundred acres of good virgin forest. About six hundred and twenty million cross ties are now laid on American railroads, and ninety million new ties are required annually for renewals. The amount of timber used every year for ties alone is equivalent to three billion feet of lumber. There are now standing nearly seven million five hundred thousand telegraph poles. The average life of a telegraph pole is about ten years, so that nearly seven hundred and fifty thousand new poles are required every year for renewals. These

figures do not include telephone poles and the poles required on new railway lines. The annual consumption of timber for ties and poles is equivalent to the amount of timber grown on one hundred thousand acres of good virgin forest. For making shoe pegs the amount of wood used in a single year is equal to the product of fully thirty-five hundred acres of good second growth hardwood land. Lasts and boot trees require at least five hundred thousand cords more. Most newspaper and packing paper is made from wood. Although this industry has been developed only within the last forty years, yet the amount of wood consumed for paper during that time has been enormous. The total annual consumption of wood for paper pulp is equivalent to over eight hundred million board feet of timber, for which it would be necessary, were the trees all growing together, to cut some eighty thousand acres of prime woods. And so it would be possible to go through the list and give figures which in every case are astonishing. We are now using for the lumber and paper trade about forty billion feet of lumber a year, which is equivalent to the product of about four million acres of good virgin forest—an area equal to Rhode Island and Connecticut combined—and yet this does not include the wood used for fuel, which is four and one-half times more. *Yale Review.*

FRANCE'S DEPOPULATION.—In French families there are more bereavements than joyous births. France has lost twenty-six thousand lives. Not that the marriages have diminished, for they reached a total during 1900 exceeding that of any of the ten years preceding, viz.: three hundred thousand. Divorces also augmented, the figures being seven thousand. This means that of two hundred unions five have been dissolved by the fault or consent of the contracting parties. In France, at any rate, divorce seems to be an active factor of her depopulation. The increase in the number of persons inhabiting Paris does not arise from the prolific conditions of Parisian families, for the century ended with an excess of thirteen hundred deaths. In the Rhone department things are still worse, the excess of deaths being thirty-two hundred in a population four times less than that of the Seine. The same remark applies to the Bouches-du-Rhone, where the excess of deaths is fourteen hundred in a population six times less than that of the Seine. Normandy is visibly becoming less populous. The four departments of that province lost seventy-five hundred inhabitants in 1900. The precept "increase and multiply" is not followed by the French race, which, however, as in Canada, remains prolific outside the mother country. For centuries France was preponderant in the world because her population was the most dense. Now she is losing ground, not only with other nations, but with her past self.—*London News.*

"NOBODY'S CHILD."—A lady visiting an asylum for Friendless Orphan Children lately watched the little ones go through their daily drill, superintended by the matron, a firm honest woman, to whom her duty had evidently become a mechanical task. One little toddler hurt her foot, and the visitor, who had children

of her own took her on her knee, petted her, made her laugh, and kissed her before she put her down. The other children stared in wonder.

"What is the matter? Does nobody ever kiss you?" asked the astonished visitor.

"No. That isn't in the rules, ma'am," was the answer.

A gentleman in the same city who one morning stopped to buy a newspaper from a wizened, shrieking newsboy at the station, found the boy following him every day thereafter with a wistful face, brushing the spots from his clothes, calling a car for him, etc.

"Do you know me?" he asked him at last. The wretched little Arab laughed. "No. But you called me 'my child' one day. I'd like to do something for you, sir. I thought before that that I was nobody's child."

Christian men and women are too apt to feel, when they subscribe to organized charities that they have done their duty to the great army of homeless and friendless waifs around them. A touch, a kiss, a kind word, may do much towards saving the neglected little one who feels it is "nobody's child," teaching it as no money can do, that we are all children of one Father.

When Christ would heal or help the poor outcast He did not send him money; but He came close and touched him.—*Selected.*

Items Concerning the Society.

We learn by current report that some of the Yearly Meeting's Committee, attended, after public notice, the meeting for worship held at Fallington last First-day morning, and that appointed meetings were held on the same day at Langhorne, Ercildown and Coatesville.

The above meetings were probably distinguishable from those in which one of our members copied down, as it was spoken, the following announcement delivered in a distant part of our country:

"On behalf of the committee of the Quarterly Meeting having charge of the services, I would announce that this service will be in charge of [Blank] and others. The service this evening will be in charge of D — and others. My subject will be [topic name]. Text: John [with chapter and verse]."

SUMMARY OF EVENTS.

UNITED STATES.—President Roosevelt on the 13th inst. sent a message to Congress urging the passage of legislation respecting Cuban affairs, in which he said: "I most earnestly ask your attention to the wisdom, indeed to the vital need, of providing for a substantial reduction in the tariff duties on Cuban imports into the United States. Cuba has in her Constitution affirmed what we desired, in international matters, in closer and more friendly relations with us than with any other power; and we are bound by every consideration of honor and expediency to pass commercial measures in the interest of her material well-being." "Some of our citizens oppose the lowering of the tariff on Cuban products, just as three years ago they opposed the admission of the Hawaiian Islands, lest free trade with them might ruin certain of our interests here. In the actual event their fears proved baseless as regards Hawaii, and their apprehensions as to the damage to any industry of our own because of the proposed measure of reciprocity with Cuba seems to me equally baseless. In my judgment no American industry will be hurt, and many American industries will be benefited, by the proposed action. It is to our advantage as a nation that the growing Cuban market should be controlled by American producers."

An Irrigation bill has passed both Houses, which creates a reclamation fund from the sale of public lands in sixteen States and Territories—Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Utah, Washington and Wyoming—for the construction and maintenance of irrigation works. Lands

reclaimed by irrigation are to be opened to settlement in tracts not smaller than 40 acres, nor greater than 160 acres, by homesteaders, who must live on them and cultivate them five years before getting a patent. They must also, in ten annual payments, refund the cost of the irrigation work done under the provisions of the bill. Notwithstanding the efforts of the strike leaders to keep their men from committing acts of violence in the anthracite coal region, there continues to be disorder.

President Roosevelt is reported to favor publicity of all the facts in relation to the strike and the causes leading up to it, the responsibility of the coal combinations and Miners' Union, respectively, and to that end is preparing a bill on legislation.

The strike among soft coal miners ordered to begin on the 7th instant, has not been responded to as was expected.

Judge Samuel W. Penneyacker of Philadelphia has been nominated by the Republican party in Pennsylvania as their candidate for Governor.

H. C. Denning of the United States Geological Survey says: "During the past month I have taken at various places in Pennsylvania, in my geological work, a number of elevations above sea level, and I have found in every case where elevations had been taken previously that the present figures show higher elevations than before. It is possible that this is due to the seismic disturbances in the Martinique and other islands southeastward from the United States. I found the water level to be from two inches to more than twenty-four, on comparing them with older records at Honey Brook, Chester County; Columbia, Lancaster County; Gettysburg, Adams County; Newville, Cumberland County; and Harrisburg, Dauphin County."

The Public Ledger of this city says: "Secretary Hay has won a notable diplomatic triumph and obtained justice for China by his intervention in securing a pro rata reduction of the claims of the Powers against China in settlement of the damages arising from the Boxer uprising of 1900. It appears that some of the European Powers were disposed to collect excessive claims. The total would have been ten times more than the demands of the Powers, \$33,000,000, which China had agreed to meet by the final protocol. The United States scaled her claim to the extent of \$1,000,000, upon condition that the United States would stand above the fray. The President this initiative have agreed to reduce their demands on a pro rata proportion. Secretary Hay is also endeavoring to fix the exchange rate on the indemnities at the rate existing in 1901, when the protocol was signed. This action will save a large sum for China, the value of silver having greatly depreciated in the meantime. This is a notable triumph for China and for justice. The President Hay will doubtless improve our relations with China by his praiseworthy course."

The Pennsylvania Rail Road has established a train between New York and Chicago, a distance of 912 miles, which is to perform the journey in 18 hours, maintaining an average speed of about 45 miles an hour, including stops.

Petroleum of a high grade has been found at Jamestown, Tennessee, at a depth of 225 feet.

A destructive tornado on the 10th inst., through northern and central Illinois caused damages estimated at millions of dollars and several deaths.

G. Stanley Hall, of Clark University, has been studying the almost total absence of insanity among negroes. He believes it is because, being newer to civilization, the race has not run through any different and crucial experiences as the white race.

The production of aluminum in the United States during 1901 amounted to 7,150,000 pounds.

It is stated that stimulated by the high prices of beef, cattle raising has considerably increased in Pennsylvania.

On the 2nd inst. the volcano Kilauoa on Hawaii had shown increased amount of smoke from the crater. There had also been slight earthquakes but no eruptions of lava or ashes had taken place.

There were 412 deaths in this city last week, reported to the Board of Health. This is 14 more than the previous week and 32 more than the corresponding week of 1901. Of the foregoing, 233 were males and 179 females: 51 died of consumption of the lungs; 36 of inflammation of the lungs and surrounding membranes; 17 of cancer; 14 of apoplexy; 6 of typhoid fever, and 6 of scarlet fever.

FOREIGN.—The volcano Soufriere on the island of St. Vincent and Mont Pelee on Martinique on the 6th inst. were simultaneously more or less active.

The return of settlers to the devastated area in St. Vincent is discouraged by Professor Jagger, who is of the opinion that the crater, continuing active, may emit poisonous gases at any time, causing more deaths, and cause the death of many people from asphyxiation.

Gueyran, a mud volcano, near the village of Kobi, Caucasus, is said to have been lately in eruption.

The Japanese Minister to China has received intimation from his Government to accept the pro rata return of Japan's war claims against China, which proposed in order to effect a settlement of the question in dispute regarding the indemnity.

The Premier of Canada has lately said, "I hope to see the day when England, to devise some plan of the greatest encouragement of emigration to C. Emigration from the United States, I am glad to see increasing every year. Fully 50,000 have gone this country across the border during the last three and will be glad to have all the fifty thousands more can send."

The earthquake of the 15th from Syracuse, Sicily. Strong earthquake shocks, accompanied by a sea and underground rumblings, were experienced here last. The inhabitants of Syracuse became panic-stricken, disturbances did not effect any damage.

For several days past the sky over Sicily has overcast, and the heat has been overwhelming. The earthquake is reported from other parts of the island of Sicily.

A voyage from New York to Plymouth, England lately been made by the German Lloyd Steamer *prinz*, in five days, eleven hours and thirty-two minutes to the Eldstone Light, which is the shortest time record.

A meteorite has lately been found in Mexico 95 miles from the port of Columbia. Prof. H. W. of Chicago, which is over 13 feet in length, 6 1/2 inches, 5 feet in width and weighed about 50 tons.

From phenomena accompanying the passage of a lens through the air, it is estimated that the upper of the atmosphere cannot be less than 500 miles from the earth's surface.

There is a Christian printing company in Yokohama, Japan, which issues the Scriptures not only in Japanese, but in Chinese, Tibetan, Korean and two dialects of the Philippines. Last year there were circulated in Japan over 138,000 copies.

It is stated that there is in use in many Belgian a smoke consumer of new pattern. The smoke is by a fan into a filter of porous material, over porous material, and then into a filter of petroleum. The filter is of great heating power, and the material filter becomes a good fuel.

It is estimated that Canadian forests will furnish for the pulp industry for 840 years. The forests of Norway and Sweden, which furnished the material for European paper makers for many years have been exhausted, and the United States has about exhausted supply.

A despatch from Guayaquil, Ecuador, says that earthquakes have been felt there the last three at Tulcan, a town near the Colombian frontier.

A person in Paris can now speak by telephone to Berlin, but only by way of Berlin, a distance of 1000 miles.

Recent experiments with kites have shown that electricity is usually noticed on the wire controller with kite exceeds an altitude of 1,700 feet. By flying from vessels at sea, it is said, sudden squalls can be told even when the barometer fails to indicate the approach.

A YOUNG WOMAN Friend desires a position as cook or mother's helper, for the summer months.

Address "M.," Office of The Friend.

WESTTOWN BOARDING SCHOOL.—The fall term school begins on Third-day, Ninth Month 9th. Early application should be made for admission of desiring to enter at that time, if the matter has ready received attention.

WM. F. WICKESHAM, Printer.

Friends' Library, 142 N. 16th St., Phila. During the Seventh and Eighth Months the Library is open on Second and Fifth-days from 3 p. m. to 5 p. m. We note the following books among the recent additions to the Library:

- ADAMS, Jane.—Democracy and Social Ethics.
- BARBOCK, M. D.—Letters from Egypt and Palestine.
- CONANT, C. A.—Alexander Hamilton.
- GIFFORD, John.—Practical Forestry.
- LOGG, C. P.—Native Studies and Western History.
- HUE, M. A. S.—Spanish People.
- KIND, Benjamin.—Principles of Modern Civilization.
- MORFILL, W. R.—History of Russia.
- WALKER, J. W. G.—Ocean to Ocean.
- WILSON, R. R.—Rambles in Colonial Byways (2 vols.).

Reminiscences.

(Continued from page 356)

No. 43 of the present volume of THE FRIEND occurred the statement "The land containing about seven hundred thirty acres located on the west bank of Schuylkill River in Warren County, Pennsylvania, was given, by the Commonwealth of Pennsylvania, to Corn Planter." Following is quoted from a History of Cats County, viz: "His lands in Pennsylvania were granted to him in recognition of his services in exerting his (then) powerful influence to prevent the tribes from engaging Western Indians in hostilities against the United States; although at an earlier period during the Revolutionary War, he had been engaged in a warfare against the Govern-

ment." The following characteristic letter from his friend and former partner, John Carter, received during his late illness by Joseph Scattergood. It was dated Philadelphia, 4th 27, 1877:

Friend Joseph Scattergood:—I have remembered with satisfaction the long friendship of our business connection, during which we enjoyed mutual esteem and confidence in each other, so that neither partner entertained the suspicion that the other did not fully perform his share of the duty assigned him in the division of labor. . . . Time rolls on; thou art now quite an old man and I a very aged man, having entered my seventy-seventh year. I have heard of sorrow and sincere sympathy of thy occasional great oppression and suffering. I have seen thee so extremely feeble, that for more than five weeks I have been unable to leave thy bed, except for an hour or two each day. However, mercifully spared from all acute suffering and have only the weariness and soreness of old age from such long inaction, to suffer. I am thankful to say that I have the great blessing of a mind at peace, and in unmerited

mercy am enabled in patience and resignation to look towards the future, with a degree of humble hope and confidence that He who has kept and preserved me to this day will yet be with me.

Doctor S. thinks there is so much vitality remaining that I will gather strength enough to get down stairs and be on my feet again, at least for a few months; this is a matter that I desired to leave to the Great Dispenser of events, knowing that his holy will is always for the best.

We may probably never meet again, but I trust that we shall, through redeeming love and mercy, be both permitted to enter into the abode of purity, peace and love.

To show that my hand is still firm and steady and that I can write legibly for a short time I will affix my well known signature.

Farewell, my dear friend,

JOHN CARTER.

John Carter never after left his chamber, but gradually grew weaker and weaker until he quietly expired on the evening of First-day, Sixth Month 3rd, 1877.

On the 24th of Fifth Month, 1877, as all his children were sitting quietly around his bedside, Joseph Scattergood looked calmly upon them, and observed "I love you all, I am too weak to say much." After a time he said "The more we realize the truth of that precious saying of his: 'Without me ye can do nothing' the more we shall be helped in his cause." "Dear son, Joseph, if the Lord has intrusted thee with a gift in the ministry, I want thee to exercise it in all humility; don't be exalted by popularity. There is no other safe place for the minister. I want you to bury me plainly, consistently with our profession." Later on in the day, in reply to the inquiry if he felt anything in his way, he replied, "No, I do not, my mind is very peaceful, more so than I could expect. I have tried to love Him who can make an easy death-bed, and if all should do that, you will experience it, I have no doubt."

In reference to bringing up children he said, "You cannot bring them up in the way that they should go without coming under religious concern yourselves. It has been my experience, and I believe all who have such care. It won't do to set the children one example and instruct them in another. If you want to bring them up in the Truth they must be restrained." On the 25th he remarked to Dr. Jacob Price, his attending physician at West Chester, "I am a firm believer in the immortality of the soul. It is an awful thing to die. Samuel Emlen, a devoted minister who had devoted himself from early youth to what he thought was right in the service of his Redeemer when brought to a dying bed said, 'The invisible world how awful,' and I feel it to be so."

During the early part of the night of the 25th he was very much exhausted, and said, "What extreme weakness! I cannot last very long! O Lord help." Later, he said, "Such extreme weakness; I cannot last much longer; O Lord help me! O merciful, Heavenly Father, now, now!" At another time he said, "Bless the Lord, O my soul; and all that is within me bless his Holy name. Bless my household; bless the Church. I bless his name who has been with me all my life long. I have been unfaithful in many respects. Have mercy! oh have mercy." At intervals during the night he was engaged in mental supplication. To an inquiry as to what he wanted, he replied "Patience."

Some details of the last days of Joseph Scattergood have been omitted in this narrative, but portions which have been retained, are offered in the belief and hope that they may be instructive and comforting to survivors, and as was stated in the commencement of these reminiscences of J. S., they have been selected and compiled by one, one who is in no way connected with the family.

On the 4th of Sixth Month, upon communicating to him the information that our friend John Carter had deceased the preceding evening, he whispered in reply, "He was a just man."

On the morning of Sixth Month 9th, 1879, while two of his sons and their mother were engaged in endeavoring to relieve the pains from which he was suffering, his head was observed to fall back, and the pallor of death to overspread his countenance. Other members of the family were immediately called, but in a few minutes his purified spirit had taken its flight.

Ebenezer Worth was strongly attached to his friend Joseph Scattergood and was in the habit of calling to inquire for him during his illness. A few days before his death, he himself became ill and died on the 17th of the Sixth Month. His funeral took place one week after that of J. S. Upon three consecutive Fourth days the remains of John Carter, Joseph Scattergood and Ebenezer Worth were interred.

W. P. T.

SILENT WORSHIP being the most sublime part of our religious performances, how important it is not to interrupt the silent travail, or conclude our meetings before experienced minds have time to dig to the spring of life in themselves, and witness the gradual arising thereof as high as the great Feeder and Waterer of his people designs. This she [Mary Griffin] had a deep sense of, and her public appearances in the meeting to which she belonged were not generally lengthy nor very frequent; sitting generally in silence when ministers from abroad were present, preferring others to herself, speaking lightly of none, and very tender

towards the young or inexperienced; careful not to stir up or awake her beloved until He pleased, nor rise above or go beyond the pure leading of Truth. Her language was correct and copious, well adapted to her subject. Her matter was plain to be understood by all, no unnecessary branching out into words, but kept to the life and marrow of things, tending to center the minds of hearers in the love and fear of God.—*Joseph Talcott.*

FOR "THE FRIEND."

THE MASTER'S QUEST.

Shall I find faith when I return to earth?
Yes Lord! thou shalt, if I am here,
Did I not turn from muddled mania mirth,
When thou didst greet me with thy lofty cheer?

Ten thousand signs of thee I daily see,
These from thy portal to thy presence high,
O lengthened vision when I seek for thee
O glad possession when I claim thee nigh!
Doth not thy sea roll up in morning song,
And thunder round the cliff when storms are out,
While stars come through the dark and wondrous
throng,
Claiming the homage of the least devout?

Do I not wait upon the silent shore,
And gaze upon the moving moonlit sea?
Doth thou not bring of life the largest store,
And fill the inner depth with sight of thee?
Come with Thy wind and fill my flimsy sail,
Stand by the watch and stay me with Thy power!
With thee I weather out the final gale,
And rise to dwell where never storm clouds lower.

H. T. MILLER.

BEAMSVILLE, Ont.

The Brahmo Somaj of India.

The following "open letter" was recently addressed by P. C. Mozoomdar, leader of the Brahmo Somaj in India to Bishop Weldon of Calcutta. We reproduce it as information, without adopting every phrase, and find comfort in its general trend towards the spiritual doctrine which we profess:

"The Christianization of India," on which you have boldly and earnestly spoken in England has, as you are aware, excited widespread attention in this country, and given rise to varied criticism, not a little of which is unpleasant. You will not need the assurance that many of your admirers, both in and outside of the Indian Christian community, have unshaken confidence in your motives and impulses, heightened, perhaps, by the passing clamor of unpopularity. The misunderstanding is probably natural under the circumstances. Men do not like to be disturbed in their self-settlement, and what stirs in some cases also annoys. Your kind cordiality and habitual courtesy to those who do not see eye to eye with you in all things will, it is hoped, overlook what is disagreeable in the comments of your critics who are candid, if not uniformly judicious or charitable. If frankness calls for frankness, it need not necessarily obscure the question at issue, but may help to clear the ground for wise and well-directed action in future.

"The Christianization of India" is not an unfamiliar subject with certain classes of educated Hindus, and by no means an indifferent and undesirable one. Raja Ram Mohan Roy was the father of educated India, and the pioneer of every kind of wholesome reform. In the last document which he ever drew up he

discusses the future of his country, and amidst five things which he says must make for that future he enumerates the Christianization of India as a principal one. Keshub Chunder Sen who, in more recent times, represented educated Hindus as few ever did, often spoke of "the Church of Christ in India," and pointed out to his vast audiences that "they had already accepted Christ in their hearts though they did not know it." It all depends, my lord, upon how you define the Christianization of India. If it is wholesale acceptance of the mediæval theology, or a partial and unavowed modification of it, which usually goes by the name of popular Christianity, a theology from which very large sections of Christians hotly and irreconcilably differ, India will never accept it. If, again, the Christianity which your lordship presents for our acceptance is identified with an ecclesiastical government, which disowns and excludes those hundreds of thousands who do not adopt its authoritative creeds and ordinances, there is not the least chance of educated India submitting to what the great Nonconformist communities abjure. But if the Church of India mean the progressive brotherhood who accept with love and honor the spirit and personality of Jesus Christ as the Son of God, the revelation of God's nature and purpose, the centre of all human nature, then such a Church, though unseen is every day gaining strength and stature, and the Christianization of India is a moral certainty. If the Church of Christ in India means an independent, self-governing organization for common worship and mutual edification, for mutual example and co-operation, for mutual help and practical sympathy, in the name and for the glory of God, the great Father of us all, in the spirit of the love of Jesus Christ, the great Brother of us all, ignoring differences of opinion in unessential matters, then such a Christianization of India is only a question of time. I do not decry theology, ordinance or Church authority as the necessary results of men's faith and experience; they must come and go. They must be changeable and tentative, they must be subordinated to the spiritual needs of men, to the external verities which make the basis of the expanding relations of God with the souls of men as well as the growing relations of the sons of God with each other.

Such an organization, brotherhood or Church call it as you may, shall not be unfaithful to the principles of the religious evolution of this land and people, but shall embody in itself the spiritual philosophies, the profound insights, the devotional ecstasies, the ascetic disciplines, for which the sages and saints of ancient India were reputed. Indeed, my lord, if I willingly admit that India shall be Christianized, I cannot but assert in the same breath as I have often done, that Christianity, at all events the Church of Christ in India, shall be "Hinduized." Nobody need take offense at this suggestion. Was not Christianity Hellenized by the early fathers at the time of Clement and Origen, was not Christianity Latinized at the time of Ambrose and Augustine? Has it not been Germanized, Anglicized, and Russianized in turn according as it has passed through different races and environments? It must be either held that this ancient country and people have never had any

spiritual life or history, and that all its oreed past should be blotted out of the records of the world, or that such wisdom, inspirations, experiences and advancements of forefathers achieved must be incorporated in the future religion of India. As the philosophy of Plato, the logic of Aristotle, and idealism of Philo were incorporated in archaic Christianity of the West, so much wisdom of Sankara, the humanity of Buddha, the fervors of Chaitanya and Nanak were incorporated in the new Christianity of the East.

The spirit of Western religion which Christian propagandists, mainly within the last century, have introduced into this country, am glad to admit, considerably educated better classes. It has unconsciously infused itself into our public schools and colleges, however neutral in their teaching, are in source and influence, directly or indirectly Christian. That cannot but in the long tell. In the education of intelligent classes such influences, I submit, are really more efficacious than direct religious education which has to be more or less aggressive. They have heightened the moral tone of educated men: they have inculcated into a noble public spirit which has borne fruit in many social and patriotic activities; they have even leavened the torpid lump of orthodox Hinduism, and created a seething ferment of Hindu revivals in all directions. What will resolve into remains to be seen, but I never it be in its name and form, I am convinced that the religion of Christ shall permeate it, and determine its essential character. It is not easy to differentiate the moral principles of Christ's religion from the present practices of the Christian Church. Christianity without Christ means a little as Christ without Christianity. Nevertheless, my lord, in the application of universal truth, what is spiritual must sometimes be discriminated from the local and historical order that the spirit may be established in the letter conformed to the spirit. And I beg leave to point out that European Christianity is so very systematic, tradition-bound, deficient in warmth and adaptability that I must be excused for saying that Christ's universal spirit life is obscured, if not lost, in formal exactitude that is superimposed on lofty standard of personal purity and obedience to the will of a holy God, is the force which magnetizes men, more even than the wonderful apostolic fervor of Christian missionaries all over the world. But I feel that it would be dishonest to conceal that the intellectual, legal, and historical complexities in Western Christianity, together with its hopeless internal differences, have appeal to the simple sentimentality of the Hindu mind. So much so is this the case even the Divine personality of Christ himself assumes a harsh theological significance, much more indeed of the sweetness, simplicity and gracious reasonableness that invite and soothe all men. I am sure European missionaries are not conscious of this—they know that their religion is fully universal—but they present to us an Occidental and Oriental Christ. The same thing, I beg to be permitted to observe, characterizes the religion of the Godhead, the nature of the future

ayer, repentance, and remission of sin in almost every important doctrine of religion.

doubt the everlasting elements of religion underlie them, but these have to be angled and re-embodied in native forms acceptable and assimilable to the people. They cannot be the work of a day. I did more for the preliminary principle the perfected achievement. Oftentimes tempted by fine phrases about an Indian Church, but only a little close inquiry out the fact that such a Church is to more than the old ecclesiastical rule, or Roman Catholic or Anglo-Catholic, national factors being only the name and face of the people, a submission on their part that is ordained by the authorities.

A great national Church, like every form of national life, must be an un-growth of the higher nature of a people ing to its own laws, towards the real-God as revealed in the life of Christ. A national Church, I humbly claim, has founded amongst us, and is growing not recognized. We feel sure we are the work of Christ, and helping the con-fid of India to be the religion of the Spirit, is destined to be the religion of all man-

ng ventured to write so far, may I now to say a few words on what may be ted to supplement some of the deficien-cies above? You, my lord, need not that if the study of the Bible was upon every public school in the coun-d, a course of Christian dogmatics was hereto, may even if every Hindu was d, and become as thoroughly loyal to tish Government as you say all native ans are; if they signed a solemn protocol g themselves never to massacre the in population during the British feel too o govern India, it would be useless to that our youthful population could be o any genuine religious life except by e and guidance of the Spirit of God wells in the heart. What is the value

Scripture, or Sacrament, or Church ment, or any external form of religion er when the Spirit is absent in a man? d to see so much treasure and toil e given to foreign missions, and so ne to awaken the mind of the uncon-to the presence and power of the Spirit Jesus of Nazareth prophesied that in r future the Spirit should be worship-rit and truth; He did not prophesy e Himself should be worshipped. He e the Spirit in every event of his life; his unfinished work, and his helples s in the hands of the Spirit, when He s sad departure from them. But to-honor and worship, all self-consecra-d life-service, Christendom has prac-erved for Christ, while the Spirit is ed to the background, to be referred to ical intervals rather as a theological ab-on than a great personal Being. To all ls and to none more than the Hindus, ality of the Spirit is a besetting on-ess, and the Spirit's worship "in spirit h" is the only worship we know. To n Hindu of the Brahmo Samaj is the rit who has revealed to us the Christ,

interpreted the Bible, and manifested his work in the history of the Christian Church, and we feel fully convinced that if India is to be re-claimed from the dead waste of polytheism and idolatry, it will not be by a violent insistence on the Mosaic decalogue, and modern creeds and confessions, but by such spiritual awaken-ing as must come from her own history. India's ancient atheism, interpreted by her own teachers in the light of the Christian revela-tion and modern science, will unlock her des-tiny for her. As Paul interpreted the Gospel of the Greeks by quoting from the Greek poets, as Peter interpreted Christ to the Jews by citing Hebrew prophecies, as Roman Catholic missionaries like Xavier and De Nobilis in Southern India were not ashamed to adopt the forms of life and thought from the people themselves, so I submit that our modern Christian teachers should sympathetically study and interpret, not underestimate, Indian scriptures and the lives of Indian saints, associate them with their own Scriptures and prophets, and thus convince and convert the country.

Immediate communion with the Spirit of God is our supremest need at the present mo-ment. We do not undervalue revelation, therefore, but there are different kinds of re-velation. All that is, is the revealed form and shadow of the Eternal. His higher, holier form, his more glorious revelation of purpose, heart, and character, is in the countenance of Divine humanity, multiform and many-sided culminating in Christ, the Son of God and man. But the most glorious revelation is that of the Spirit in the soul. The beauty and joy, the sanctity and wisdom, the intimations and mysteries, in which the East abounds, are the results of the revelation of the Spirit in the soul. The inspirations, insights, prophecies, raptures, the original readings of life, pene-trate into death and immortality, the whole imaginativeness, impulsiveness, and glorious consciousness of God, are results of this in-tense and absorbed communion of the Spirit. When He as the Indweller, as the Soul of souls, reveals Himself, He kindles experiences, unseals realities, rouses aspirations, interprets the enigmas of life, illumines the Scriptures, revives the prophets and creates a new earth and new heaven altogether. The beauty, glory, life, and wisdom of the world, all circle round the soul when God's throne is established therein. The voices in the sky and earth are then meaningful, the dispensations and dra-mas of history are then played out in sober truth, the distinction between the secular and sacred ceases, all men are transformed into the sons of God, humanity becomes Divine, and Divinity becomes human.

I have already borne testimony to the im-mense moral results, direct or indirect, which the advent of Christianity in this country has produced. Naturally we all wish these results were completed and matured not into mere morality, but into faith and spiritual life. The Christian communities are civilized and powerful. But the dis-service that the non-Christian world complains of is the tremen-dous shortcoming between profession and practice. This wild militarism, these ruinous armaments, these cruel wars between Christ-ian and heathen, alas, between Christian and Christian, these plots and counterplots of all sorts freely practised under the plea of political

necessity and national interest, all these per-sonal excesses and lawlessness committed by hordes of Christians of all creeds in all parts of the world, in China, or Russia, or South Africa or India, or the Islands of the Pacific, have a very far-reaching influence in neutral-izing the effects of Christian precepts, and undermining the claims of moral and spiritual superiority preferred by Christian propagand-ists. It is not so much the doctrines of the Christian religion as the real and practical im-itation of Christ that will impress upon non-Christian races the real causes of the vigor and triumph of the nations of the West. The humiliations and griefs of the Son of God, his services unto death so strangely unrequited, his renunciations and abasements, his forgiv-ing love and redeeming grace will then change our hearts. These are the source of the peace and progress and victory of his true fol-lowers, and as his cross was his crown, and his defeat was his victory, so must it be in the case of all those men and nations who after Christ are called to be the sons of God. Deal-ings and details of the personal life of Chris-tians, Christian examples and Christian princi-ples will then convert our minds, always so slow to believe, so unwilling to obey. In this prevailing rage of imperialism both civil and religious, who will shorten the distance be-tween profession and morals, who will bridge the gulf between claims and credentials? Do but let all Christians in India be men of Christ and see if that will not christianize the whole land from end to end.

These, my lord, are the words of a some-what hesitant appeal I have ventured to ad-dress to your lordship in an impulse of my ear-nest sympathy for your aims and efforts on behalf of my country. It is impossible to ex-pect that you will agree with all that I have said. The difference between my religious position and yours will, perhaps, be judged too vast for anything like a ready response to my sentiments. I am aware of the humbleness of my place and powers, and if in excess of my zeal I have said anything to shock or displease you, I beg to be forgiven. But, my lord, I and my fellow-workers, who have devoted our-selves to do what we can to help the great future of India's conversion to a better faith—there is some common ground at least in that—claim that our attitude towards Christ and his religion is that of the devoutest re-ference and tenderness, we feel in our heart and conscience we are doing the work which Christ would do if He came on earth again. We would prize it as a privilege, if under Di-vine guidance and grace, both we and our Christian brethren of all classes could find and utilize any and every opportunity that was sent from above to bless India with a pure re-ligion and a Christlike standard of religious life. If that is not possible under present cir-cumstances there is no use in forcing men's minds, let us at least cherish goodwill and con-fidence for each other.—I remain my lord yours very respectfully."

PROTAB CHUNDER MOZOOMDAR.

Dr. Welldon's reply:—"That India is under-going a rapid intellectual change is a truth which will, I think, be admitted by everybody who has spent even six months in India. The existence of your own enlightened Society is

witness to the capacity of cultivated Indian gentlemen for entertaining large and liberal ideas. While I do not agree with the doctrines of the Brahmo Somaj, I have frankly acknowledged its wonderful emancipation from the ancient traditions and prejudices of India. It is to me a strong conviction that India is called by God to a higher destiny than has been hers in past ages. I look forward to the time when she will take her stand intellectually and spiritually among the leading nations of the world. It is difficult to overestimate the value of such services as Indian thought may render to theology, when once it has broken through the bounds which have for so long a time cramped its energy. No doubt, I believe, that India will never take her true place in the world's economy until she has assimilated the doctrines and practices of Christianity. It is a favorite thought of mine that if the Brahmo Somaj had become a distinctively Christian Society, it would have been the centre of such a Hinduized Christendom as you contemplate in India."

CHRISTIANITY AND BEAUTY.—When Hiram Munger was once giving a somewhat unfaithful Christian a pretty thorough scolding, among other things he said:

"You are ugly, and cross, and homely!"

"But I'm not to blame for being homely," pleaded the victim.

"Yes you are," said he, "You look well enough when you've got the grace of God in your heart."

Solomon said, "A man's wisdom maketh his face to shine." And we know that that beautifying and illuminating wisdom has "the fear of the Lord" as its "beginning."

On the contrary sin, anger, vice and ignorance, rob the face of its beauty, and cover the fairest countenance with ugliness and shame. Many a man wears the record of his sins upon his forehead.

Speaking of the gospel among the Indian tribes, Carpenter declares that the effects of Christianity were visible not only in the habits of some of the Indian tribes, but in their very faces.

A writer in *The Times*, makes some remarks on some photographs of the races of India, published by the government:

"A few plates at the end of the volume are devoted to Malays, Burmese and Karens. Of the last there is one group, a family of Karens, who have become converts of Christianity, who in their intelligent faces, neat dress, and generally orderly appearance, present a marked contrast to those of their kinsfolk who are still either Buddhists or Pagans. Were it not that photographs are necessarily faithful, the change would seem almost too great to be entirely credited."

There is nothing incredible in this to those who believe that man was made in the image of his Maker, and defaced by sin and transgression, and who know what it is to be created anew, in Christ Jesus.

The countenance of the converted man or woman is a faithful index of the Divine power that works within. And while fops and flirts are busied with their paints, and jewels, and tricks of adornment, true Christians whose hearts are filled with peace of God have no need of these outward attractions; they look

well enough without them; and their best adorning is "that ornament of a meek and quiet spirit, which is in the sight of God of great price."—*Common People*.

UNDER THE LEAVES.

Fresh green leaves, from the soft brown earth,
Happy springtime hath called them forth;
First faint promise of summer's bloom,
Breathed from their fragrant sweet perfume
Under the leaves.

Lift them! what wondrous beauty lies
Hidden beneath our thoughtless eyes!
May flowers rosy, or purest white,
Lift their cups to the sudden light,
Under the leaves.

Are there no lives, whose holy deeds,
Seen by no eye, save His who reads,
Motive and action in silence grow
Into rare beauty, and bud and blow,
Under the leaves?

Fair white flowers of faith and trust
Springing from spirits bruised and crushed,
Blossoms of love, rose tinted and bright
Touched and painted by Heaven's own light,
Under the leaves.

Full fresh clusters of duty borne,
Fairest of all in that shadow grown;
Wondrous the fragrance that sweet and rare,
Comes from the flower cups hidden there
Under the leaves.

Though unseen by our vision dim,
Bud and blossom are known to Him;
Wait we content for his heavenly ray,
Wait, till our Master himself one day,
Lifteth the leaves.

A SONG OF TRUST.

I cannot always see the way that leads
To heights above;
I sometimes quite forget He leads me on
With band of love;
But yet I know the path must lead me to
Immanuel's land,
And when I reach life's summit I shall know
And understand.

I cannot always trace the onward course
My ship must take;
But looking backward, I behold afar
Its shining wake
Illumined with God's light of love, and so
I onward go.

In purest trust that He who holds the helm
The course must know.

I cannot always see the plan on which
He builds my life,
For oft the sound of hammers, blow on blow,
The noise of strife,
Confuse me, till I quite forget He knows
And oversees,
And that in all details, with His good plan
My life agrees.

I cannot always know and understand
The Master's rule;
I cannot always do the tasks He gives
In life's hard school;
But I am learning, with His help, to solve
Them, one by one,
And when I cannot understand, to say,
"Thy will be done."

If any meeting should nominate or appoint any of its members without due regard to their spiritual qualifications I shall write in the fear that such would lead into the form, without the power of Truth.—*Joseph Pike*.

Lorenzo Dow and the Cobbler.

Lorenzo Dow, an eccentric circuit-preacher widely known through New England and South, eighty years ago, lives in tradition chiefly for his oddities; but he was a man of strong character, who loved his work and loved the souls of men.

His sermons and his way of doing good were peculiarly his own, but they were often surprisingly effectual—not merely because he was singular, but because he was sincere. One aged lady whose father's large farmhouse was one of L. Dow's favorite stopping places in Rhode Island, related some years ago the following story of him from her earliest recollection:

One winter afternoon my father visited the eccentric preacher on his way to fulfill an engagement and took him into his wagon.

"I am glad to ride," said Dow, "for this is a thaw coming, and one of my boots is sprung a leak."

As they went on my father suggested a way to repair the damage. "A cobbler lives at that little red house yonder," he said. "He is poor, lame, crabbed and cross, but a good workman."

"Just the place for me," said Dow, jumping off and going into the little shop. He sat down silently in front of a few brands splintering upon the hearth and, pulling off his boot, handed it to the cobbler. The man looked at the leak and swore.

"I am afraid you are not a Christian, my friend," said Dow, quietly.

"There are no Christians," retorted the cobbler. "There are plenty who pretend to be," and he waxed his thread with an jerk that seemed to emphasize what he said.

"Your room is so cold that your work is hard. Shall I put more wood on the fire?" said the preacher.

"I work to keep warm," was the shoemaker's curt reply, as he pushed a last into the boot and adjusted his clamp. "I've the enough wood cut, and no one to cut more, so this lame leg won't allow me to do for myself."

Dow removed his long capped cloak, put his foot into an old shoe lying near, and, going to the shed, found an axe and went to work. Before the boot was ready he had cut and carried in all the wood in the shed, piled neatly in a corner, and made a blazing fire of the chips.

When the boot was done he put it on, and for the work, and, taking his cloak, said to himself, "Thank you, my friend: you have proved yourself a workman that needeth not be ashamed."

The reply came this time with real conviction. "I'm much obliged to you. I shouldn't wonder if there was some Christians in the village—and you one of 'em."

"I try to be one; good-bye," and Dow went off, leaving the astonished cobbler saying to himself, "Wal, ef he's tryin', he don't take it out in talk. He never preached at me so much as a word."

That evening Dow, who often picked up his text on his way to meeting, spoke from words that had come to him in the shop of Timothy, ii: 15: "Study to shew thyself approved unto God, a workman that needeth not be ashamed." He had a large audience, and he preached practical religion to them.

being in his original way the truth that everywhere there were poor and unfortunate people for Christians to look after, and this risk must be done "if we expect the world to live in our Christianity."

Dow spent that night with us, and the next morning one of my father's teams left a load of wood at the lame cobbler's door. Passing a shop on his way to his next appointment, I looked in and said:

"Good morning, my friend. I would saw wood for you, but there are duties awaiting me further on. I think there must be Christians enough in this community to look for a useful citizen like you."

Before the cobbler had recovered from his astonishment at being called a "useful citizen" or three schoolboys came to have little work of cobbling done, and while they waited I acted on the hint given by Dow in his manner and worked at the wood-pile.

From that time little kindnesses done to the lame became so common that he quite lost crabbed temper. His neighbors gave him use for it.

"Everybody seems to be helping me," he said. "If I'm a 'useful citizen' I ought to be able to help somebody myself."

The next time Dow came to our neighborhood he was told:

The cobbler has given up his cider and, he sings hymns instead of foolish songs, reads the Bible to a blind neighbor." Dow replied, "A little heaven leaveneth the lump—and a little good example goes great way."

Whatever Lorenzo Dow's singularities were understood the religion of the New Testament. He knew that a Christian is at his best when he makes himself an object-lesson in doctrine.—*Youth's Companion*.

ACHIEVEMENT of the church is born in acts where unofficial, unordained, unnoticed prayer.—*Collins*.

THE OFFICE OF WISDOM.—It belongs to wisdom to determine when to act and when to wait—when to reveal, and when to conceal a secret—when to speak, and when to keep silence—when to give, and when to receive; in order to regulate the measure of all things, as to determine the end and provide the means of obtaining the end pursued in every separate course of action. Every particular faculty or skill, besides, needs to be derived from this; they are all quite incapable of directing themselves. The art of navigation, for instance, will teach us to steer across the ocean, but it will never teach us what occasions it is proper to take advantage of. The art of husbandry is to sow and to mature the precious fruits of the earth; it belongs to another skill to regulate consumption, by a regard to our health, and other circumstances. In short, no faculty we can exert, no species of service we can apply, but requires a superintending principle, as it were, to some end or principle, as a maid to her mistress for action, and this universal superintending principle is wisdom.

Every other quality is subordinate and inferior to wisdom, in the same sense as the mortar who lays the bricks and stones in a

building is inferior to the architect who drew the plan and superintends the work. The former executes only what the latter contrives and directs. Now it is the prerogative of wisdom to preside over every inferior principle, to regulate the exercise of every power, and limit the indulgence of every appetite, as shall best conduce to one great end. It being the providence of wisdom to preside, it sits as umpire on every difficulty and so gives the final direction and control to all the powers of our nature. Hence it is entitled to be considered as the summit of perfection. R. HALL.

The British Museum.

This is the birthday of the British Museum. Standing here, in sight of the most priceless collection of treasures in the world, the Englishman may say in the words of Chas. Kingsley: "Whatever my coat or my purse, I am an Englishman, and therefore have a right to be here." And it is no mean place to be in. Nowhere else in the world is so much treasure to be found in so little space. Where else can a man stand and see the illustrated history of the world from the days of Joseph and his brethren? Where else can a man gaze on so many portraits in stone of men who were making history before Julius Cæsar set foot on the shores of England? Where else can a man stand, as it were, with his finger on the pulse of all the ages?

The British Museum, indeed, may be regarded as an epitome of the history of the human race. The world can almost be seen advancing within its walls. It is a fact of some significance, too, likely to interest the pessimist, that the demand on its space was never so great as now. Three miles of newspapers and thirty-nine miles of books occupy only corners of the museum, and the papers and books are growing at an almost incredible rate. In one year there arrived at the museum thirty-eight thousand three hundred and seventy-eight books and pamphlets, sixty-one thousand nine hundred and seventeen parts of volumes and periodical publications, five thousand three hundred and sixteen pieces of music, three thousand three hundred and sixty-five Parliamentary papers and miscellaneous documents, two thousand eight hundred and twenty-eight British newspapers, and four hundred and forty sets of colonial and foreign papers. Every sixteen years the home newspapers fill up a mile of new shelving, and the tax on the resources of the museum is excessive.

All the time the real treasures of the museum are growing more and more. Somewhere in a glass case at Bloomsbury is what is stated to be a fragment of the crown of thorns and in another room is a single book which is valued at half a million sterling. It is the "Codex Alexandrinus," one of the three great codices of the world. Another book quite cheap in contrast with the Codex, is the "Mainz Psalter," which, being the second book printed that bears a date, is worth five thousand pounds. A hundred Caxton's would realize something from fifty to a hundred thousand pounds at an auction and there are collections of prints and books at Bloomsbury which not even Pierpont Morgan could buy. And what of the Elgin marbles? The Government gave Lord Elgin thirty-five thousand pounds for them, but the figure of The-

seus alone is worth three times that sum to-day, and the collection has been valued at anything from one to three millions sterling.

The romance of the British Museum must be an inexhaustible subject. When it is written we shall know the true story of the gift of George the Fourth, who was publicly thanked by Lord Liverpool's Government for presenting to the nation a magnificent library of books. In the museum to-day is a tablet on which the gift is set forth, and there is no doubt that the king derived some popularity from the report of his generosity. But the gift if we are to believe another story, was entirely a sham. Fifty years ago it was stated—and the story has not been contradicted—that George IV., being in great need of money, offered to sell his books to the Czar of Russia, and the matter came to the ears of a scholar, who protested to the Government against such a valuable collection being allowed to leave England. The Government, if the story is to be believed, offered the king seven times the sum the Czar was to pay him, with the result that the books remained in England, and were transferred from the Palace to the British Museum, as the king's "gift to the nation." Can anybody say, one wonders, which of the conflicting stories is true?

One of the quietest and most comfortable places in London is the reading room of the British Museum, where any Englishman may consult any book printed in England. It has its glamor of mystery, too, as well as its air of luxury. From day to day, from year to year the same faces may be seen, and there are seats which, though open to all who will, nobody would think of taking from the patient and laborious students who have sat in them every day for many years. There is a crutch which has become a part of the British Museum itself, and the reading room will be sad when the morning comes on which her chair is vacant. Perhaps the best literary workshop in London, the reading room is the haunt of a group of strange characters who pursue their daily callings there. It is at once the best and cheapest office in the metropolis, and its tenants pay no rent. They come from all the world over, and embrace famous men in every field, from the millionaire and the statesman to the unhappy man who is starving on a shilling a day.

It is a strange and cosmopolitan group which spends its day there searching for pearls in the great ocean of literature. You may learn, if you care to ask, the story of the old man from San Francisco who came back to the reading-room a year or two ago and looked with curious interest at a particular desk. There, forty years ago, he had met a woman who afterwards became his wife, and together they went back to San Francisco and made their home. "Being in London again, I was curious to see the place once more," the old man said. "Poor woman, she's been dead for years now, but many a time she assured me she wished she'd never seen me or the British Museum either. I've nothing to keep me here now, so I guess I'll go." He was one of the little group which comes from the end of the world and goes to the end of the world, passing through the reading room on its way.—*St. James Gazette*.

LEAD, KINDLY LIGHT.

Lead, kindly Light, amid the encircling gloom,
Lead Thou me on!
The night is dark, and I am far from home,
Lead Thou me on!
Keep Thou my feet! I do not ask to see
The distant scene; one step enough for me.

I was not ever thus, nor prayed that Thou
Should'st lead me on;
I loved to choose and see my path; but now
Lead Thou me on!
I loved the garish day; and, spite of fears,
Pride ruled my will: remember not past years.
So long Thy power has blest me, sure it still
Will lead me on,
O'er moor and fen, o'er crag and torrent, till
The night is gone;
And with the morn those angel faces smile,
Which I have loved long since, and lost awhile.

—Newman.

To Remain Young.

It is not long since I received an interesting letter from a gentleman for whom I have a high esteem. I think few men know the American people better or can judge of our people more precisely. He wrote to me about the journal which he conducts. For he wanted me to write him an article or a series of articles on growing old; how a man or woman should keep the powers of manhood or womanhood as life goes on, so as to enjoy life, and make use of it, for the benefit of the world.

I was glad to do this. Of course I was pleased that he thought I knew anything about it, and that I could write the articles. Of course I was pleased that he was willing to distribute them through this nation and other nations so that perhaps a million people more or less, should have a chance to read what I said. And I agreed to do what he asked.

I said that this soul is the child of God, that He is the Power that makes for righteousness. I said that each soul inherits a share of God's own nature. I said, therefore, in answer to the question submitted to me that through life every man had for its business to keep the body in good working order, as a man keeps his bicycle in order or his tool box. Every man had to keep his mind in order in the same way; his powers of memory, of imagination, of reasoning, of expression. I gave some results of my own experiments in this line, in matters of mental education or physical education.

Then I said that mind and body were simply tools of the child of God. I said it was clear enough for the matter we had in hand that the soul, master of mind and body, must get its resources at first hand. A man would not fill his pitcher by polishing it or embossing it.

If he wanted his pitcher full, he must take it to the fountain. Or, without a figure of speech, that a man is when he chooses, a partaker of the Divine nature he must use his godly power; not his mechanical power nor his merely intellectual power. Simply, he is to borrow from Omnipotence. For the business he has in hand, he is omnipotent, if he will ask God to help him through. I said, and this was the culmination of the article, that any man who would seek God with all his soul, heart and mind and strength, would certainly find Him. He would be a fool if he did not do this. Having infinite power at command, he would be a fool if he satisfied himself with

finite power. It was not a hard article to write, when you believe what I believe, and when you know what I know.

Observe now, that my friend's request to me had come without conditions. He had not asked me to write for boys and girls, or for doubters or for wise men, for Buddhists or Brahmins. I had white paper. I was writing for everybody.

I was a good deal surprised, therefore, when after a month's consideration, he wrote me that he could not print the article. He owned that he ought to print it. What touched me a good deal was that he said his wife said that he ought to print it. He wished that he dared print it. But he did not dare. I was a good deal pained by this.

Simply, the square statement as a practical rule of life that the living God helps a working man in his daily duty, was a statement so entirely outside the convictions of a large part of his readers that he did not dare to print it. His journal was not called a religious journal. And so many of his readers would regard this as extravagant and quite outside of what men call business, or practice, that he thought he must not print it. It would be worse than printing a passage from Tennyson in the price current. I say that his letter pained me. I did not for a moment suppose that I was in the wrong. That was not the reason why I was pained. I was pained to find that an educated man, a man very much above the average of men, believed that a large proportion of the reading people of this country do not think it a practical thing to ally themselves with God; that they do not rely upon his power. I do not say the majority of people. He did not say that. But that a considerable portion of reading people have no intention of using the infinite powers in human concerns, this was a hard rebuff.

To the readers of this column, I need not say that the editor of this paper has no fear of publishing any such statement. But the sum and substance of the statement which an old man who has had my experience would make to younger men and to younger women, is easily stated in a few words.

Dr. James Jackson was for many years the Nestor of the medical profession in Boston. When he was nearly eighty years old, respected and loved by every one, he said to me that the prime of life was at sixty-three years of age or thereabouts, the age given by the physiologists of the dark ages when they talked of the grand climacteric. With his pencil he drew a semicircle and said "this semicircle is the line of physical life. It begins at nothing, it ends at ninety years." Then putting his pencil at the centre, he swept it up across the paper, always quite in an ascending curve, and said, "this is the curve of intellectual progress. A man knows every year more than he knew the year before, and this will increase forever. The line of intellectual improvement, as you see, crosses the declining line of physical strength about the year sixty-three."

That is to say, a man has not so much strength at sixty-three as he had at forty-five, but he knows so much more that he is better fitted for the work God has for him to do. Dr. Jackson's advice then to any man was that after he was sixty-three he should use

his mental power more and rely on his physical power less. This I am sure is a good working rule. As Dr. Jackson says, a man should not drive himself up to his duty. I said that a physician, after he was sixty-three should employ himself in consultation at his own chambers, and not go out at night, wherever physical fatigue was involved.

So much for the tools. Now with regard to the man himself. Here he is. He knows that. Here is a good God. Most of us know that. If he seeks the good God with all heart and soul, and strength he will find him. That is the statement of Moses and the statement of all people who have fairly tried the experiment. This good God is his faith. This is the statement of Jesus Christ. It means that man the child, for the purpose, earthly life, shares the powers of God if he seeks them and use them; as the Apostle Paul says, "We are partakers of the Divine nature." He must live as he supposes an immortal would live, not a great deal better by the few minutes more or less, and take into his view the infinite, the eternal relation of his life. His intelligence is wide enough for him to look out upon the farthest speck of the universe. His heart is large enough for him to sympathize with the thoughts and sorrows of all sorts and conditions of men. He can lead a large life and need not be satisfied with a small life.

If a man wants to continue young he must go on these certainties. First he will seek God with all his heart and soul and mind and strength. Second, to take Jeremy Taylor's fine phrase, "He had better live in the presence of the presence of God." Third, he had better study God's work in all its forms which are open to him for study not only to try to find how God walks on the whirlwind and rain in the storm but try to find out how he makes one grain of wheat bring forth an hundred-fold. And this means that he will work with his fellow men and will be a fellow workman together with God.—E. E. Hale in *The Christian*.

IMPRATICABLE MEN.—This world in the opinion of some would move on very smoothly if it were not for certain impracticable men who seem out of joint with their surroundings, and who mar and hinder the things which would otherwise go very smoothly. Among these impracticables may be numbered men who will not lie to hide their own fault, nor to benefit their employers, nor to defend their party, nor to justify their sin, nor to cover up anything which is wrong or disreputable; men who will not bow down to rich rascals, nor bend the knee to cowards, whose only recommendation is their wealth and influence; men who will not consent to wrong though all the world may prove it; men who will stand for the right though they stand alone; men who cannot be hoodwinked by schemers, who see through shams at a glance, and who would not pass a counterfeit man than they would a counterfeit shilling; men who are not false to any man or any party at any price whatever; men who are valiant for the truth, who are wrong whether in kings or beggars, and who honor them that fear the Lord, though they may be dishonored and disgraced in this world; men who will not steal, nor stand still at

ers do it; men who fear God and no one else. Such men as these have always been an impatient and unmanageable set. Among them might be named Daniel, Shadrach, Meshach, Abed-Nego, Elijah, John the Baptist, and others of whom this world was not worthy.—*The Christian*.

The Famous Maelstrom.

We sailed through the famous maelstrom, which the ancients believed guards the entrance to the sublime beauty of the fjords to the Lofoden Islands, and has furnished so much material for the imagination of the authors of Norwegian legendary and modern novels. It is a reality—not one, but several maelstroms actually exist, and any of them answer the descriptions given by Victor Hugo, Jules Verne, Edgar A. Poe, and writers of lesser fame. The chief and most dangerous is an extraordinary whirlpool between the islands of Moskene and Roest, near the southern extremity of the Lofoden Archipelago. It is called the Mosknaes-Stromen. Another, by the island of Vaero, called the Saelstrom, is just as dangerous. There are many narrow channels between the mountains where great masses of water, coming from opposite directions, meet as the tide flows in and out, forming temporary whirlpools twice a day, during the spring tides, or when the natural currents are accelerated by heavy west-gales, passage is impossible. No vessel can survive them. Even whales have been caught and whirled around until they were killed. Between times these channels look innocent enough. Even small boats can pass through them at the proper time and the departure of the mail boats is delayed accordingly, but they have caused the loss of many lives. Boats have actually appeared, being sucked into the vortex and sent to the bottom to whirl and whirl until wrecks are tired and flow away, carrying with them the bodies of the dead with them on the undercurrent, to emerge miles distant. It is not strange that the ignorant and suspicious sailors in the Middle Ages attributed this mighty and mysterious action of waters to supernatural power, and their native minds, always creating monsters and miracles out of natural phenomena which cannot understand, placed in them an occult, whose awful arms were always extended to snare unwary marines who were so unfortunate as to come within his reach. Later writers and more intelligent represented the maelstrom as a vast caldron in which the waves revolve with terrific speed, their centrifugal force extending a long distance, and finally drawing toward the centre all who are within their power. The mariners' tales and shriek in vain. The monster is terrible and when the crisis comes the vessels are hurled down into the vortex, while shrieks of terror and despair are drowned in the rushing of the hungry torrent and the howling of winds.

These straits are very dangerous, and all vessels are warned to keep out of them. The charts issued by the Norwegian Hydrographic Office say that "when the

wind is steady at flood and ebb tide each day the whirlpool is still for half an hour or more, when boats may then pass through; but half way between flood and ebb tide the passage becomes dangerous, although it can be used by steamers and large vessels, when there is no wind, for several hours a day. Toward the height of the tide, or when a gale is blowing, the water revolves with a speed of twenty-six miles an hour in mighty whirlpools, in which the largest steamers would be helpless.—*Chicago Record-Herald*.

"Auld Lang Syne."

It singeth low in every heart,
We hear it each and all—
A song of those who answer not,
However we may call;
They throng the silence of the breast,
We see them as of yore—
The kind, the brave, the true, the sweet,
Who walk with us no more.

'Tis hard to take the burden up,
When these have laid it down;
They brightened all the joy of life,
They softened every frown;
But, oh, 'tis good to think of them,
When we are troubled sore!
Thanks be to God that such have been,
Although they are no more!

More homelike seems the vast unknown,
Since they have entered there;
To follow them were not so hard,
Wherever they may fare;
They cannot be where God is not,
On any sea or shore;
What'er betides, Thy love abides,
Our God, for evermore.

—*John W. Chadwick*.

John Exham.

John Exham, of Charleville, Ireland, was convinced of the principles of Friends while a soldier, about the year 1658, and yielding obedience to the manifestations of the grace of our Lord Jesus Christ in the soul he received a gift in the ministry of the gospel of life and salvation, and was zealously engaged in visiting the small gatherings of Friends at that early period of the Society; and though he labored under natural defects which impeded in measure the exercise of his gift, yet he often delivered profound and wholesome doctrine to the people. About the year 1667 he proclaimed the necessity of repentance and amendment of life through the streets of Cork, having his head covered with hair-cloth and ashes, for which he suffered imprisonment, and was under a like concern in the same city in the year 1698. In 1710, being the 81st year of his age, and when almost blind, he gave a singular proof of the fervor and constancy of his love to the brethren and the cause of Christ, by performing a religious visit to the greater part of the families of Friends in Ireland, in which service it was evident to those who were witnesses of it that he had the spirit of discernment, often speaking very pertinently to the condition of persons, without having received any information respecting them. He was a man of innocent life and conversation, just in his dealings, merciful to the poor and well beloved by his neighbors and friends. He continued his residence at Charleville during the war through many difficulties and hazards, and often took opportu-

nities of counselling those who needed the care of their Friends. He was remarkable for his love of meditation, spending a portion of each day in retirement. He was esteemed as having a prophetic gift, of which his religious service gave many proofs. While he was performing a family visit, he told one company there was among them a youth upon whom the Lord would pour forth his Spirit, and he should visit several nations, which was accomplished; a young man then present afterwards received a gift in the ministry, which he exercised to the edification of the churches both at home and abroad. Another instance in which he was called to declare the word of the Lord, was at a time when a great company were convened at the house of the Earl of Ossory at Charleville, then a splendid edifice, spending their time in feasting and mirth. He felt a religious concern to go to the house and call the people there met to repentance, which he accordingly did, a crowd following him, and denounced the Lord's judgments and woe to that great house, that it should be destroyed, and become an habitation for the fowls of the air. Hereupon the earl's servants attempted to drive him away, but the earl commanded them to let the honest man speak. Having delivered his message he went away, but in a little time turned back and called for the earl and said to him, "Because thou hast been kind and loving to the servant of the Lord, the evil shall not be in thy days." The event answered the prediction, for the great-house in the time of the wars, after the decease of the earl, was destroyed by fire and visibly became an habitation for the fowls of the air, which built their nests in it. John Exham died in the ninety-second year of his age, having been a minister sixty years, and retained his zeal and integrity to the end.

Copied at Woodland, N. C., Sixth mo. 12, 1902.

Items Concerning the Society.

There are those about us who use the old labels, but the articles are not the same.—*Spurgeon*.

John Bellow's deep concern for the persecuted Russian peasants was an interesting example of Friends' methods of finding out their own line of work under the direction of the Spirit of the Lord, and not merely imitating others.—*H. S. Newman, in London Yearly Meeting*.

Eastern Quarterly Meeting, North Carolina, recently adopted a minute recording its prevailing judgment as adverse to the adoption of the proposed "Uniform Discipline."

The total membership of London Yearly Meeting is now 17,476, an increase of 130 for the year. The number added by "convincement" during the year is 321, also 75 minors. The gain over all losses has been 233. Deaths exceeded births by 78.

Beginning with last Seventh-day, the 21st inst., most of the days of the present week, in Sandwich, Massachusetts, have been mostly devoted by descendants of the ancient Wing family from all parts of our country, to a general reunion of their "tribes." Over two hundred and fifty years ago the Wings of Sandwich were convinced by the ministry of Christopher Holder and John Copeland, in 1657, and gathered into the Society of thirteen families which was in that year formed. The number increased in not many years, to sixty families in that Monthly Meeting, beginning in

1657 or '8, and supposed to be the oldest on this continent. Descendants of these Quaker Wings have spread to distant parts of the country, and representatives have assembled from various regions, and have been visiting from day to day spots of historic interest or collecting in assemblies to listen to appropriate addresses. One of these was given by our friend Henry N. Hoxie (now of a Philadelphia meeting), tracing the history of "The Wings as Friends." A large interest in the reunion is taken by our friend Asa S. Wing, of Philadelphia, though unable to be present. His paternal homestead and farm by the beautiful Shawnee Lake is daily visited by pilgrims, some of them anxious to take photographs of the ancient home, with his aged mother in her Quaker garb at the gateway.

Another Friend from Philadelphia felt concerned in the ministry to attend the meeting for worship in the old Sandwich meeting-house, to which an unexpected number of the visitors flocked. Most of them had never seen a Friends' Meeting before, and it was held simply as a Friends' Meeting, according to the ancient order and it was believed, covered with the wing of ancient goodness. Associations of earlier days, combined with the precious solemnity attending and following the testimony of Truth delivered, hushed all hearts in a profound and living silence, moved many to tears; and after separating, the general acknowledgment of strangers was, "It has been good to be here."

Mary S. Allen of Friends' Library has prepared further information than that contained in our last number, concerning the sale of Charles C. Cresson's books, as follows:

The following Libraries were represented at the Cresson sale of Friends' books:	
Library of Congress, Washington,	
Boston Public Library,	
Columbia University Library,	
Cornell University Library,	
Swarthmore College Library,	
Friends' Free Library, Germantown,	
Friends' Library, Philadelphia.

SUMMARY OF EVENTS.

UNITED STATES.—By a vote of 42 to 24 the Senate has passed a bill favoring the Panama route for a canal across the isthmus. The House had previously passed a bill approving of the Nicaraguan route. A committee of conference will consider the two bills.

The President has signed the Immigration bill. It is stated that under its provisions at least \$150,000,000 of the proceeds of the sales of public lands will be available in the next thirty years for irrigation works without further appropriations. The receipts from public lands for

the last fiscal year, as well as the present, aggregating \$6,000,000, are immediately available, and from this time on an amount of \$3,000,000 per annum will be available, which sum will be constantly increased as the lands are redeemed and sales are made.

John Mitchell, President of the United Mine Workers says: "The total number of persons employed in and around the anthracite coal mines is 147,500; they are employed never to exceed 200 days in any one year, and they receive as compensation for their services an average of \$1.42 for a ten hour work-day. It will be thus noted that they earn annually less than \$200." A statement issued by the operators reads: "We now believe in the policy of fewer men, steadier work and higher earnings for them. When the strike is over, work will not be resumed at every mine in the region, but at only a few; the number will then be gradually increased."

Eight large shipbuilding concerns have united to organize the United States Shipbuilding Company. Each member of the combination is to be paid for which it is best adapted, and so "greatly increase the efficiency of the combined yards."

A jury in a case in Blair County, Pa., has lately declared that boric acid used in preserving oysters is injurious to health. It is claimed that this conviction will have a far reaching effect, inasmuch as the Meat Trust process is covered with boric acid, and will now have to keep out of this State.

Thirty years ago there were four plants in the whole country for the manufacture of ice, and they were all located in the Southern States. In 1900 the number had increased to 787 (not counting concerns which manufacture ice for their own use exclusively), and only about one-half of them are located in the South.

Rioting has lately taken place in Paterson, N. J. On the 18th, 5,000 strikers, largely Italians, incited by Anarchists, wrought destruction to life and property. Troops were sent and extra policemen were brought into service. An official call for a National Convention of the United Mine Workers of America has been issued to meet in Indianapolis on the 17th of next month, to determine whether the soft coal miners of the country shall go on a strike to assist the striking anthracite miners of Pennsylvania.

Patrick Gilday, President of the miners' union for the Central Pennsylvania district, has issued an order that the output of bituminous coal must be restricted. He, therefore, directs that the men shall work not more than four days a week. This action is taken because it is alleged that bituminous coal is being shipped East in larger quantities than usual, to aid in breaking the strike in the anthracite region.

The Philadelphia and Reading Coal and Iron Company has decided to start mining operations in the Schuylkill Valley within a few days.

A despatch from Milwaukee says: "Bishop Nicholson, of the Protestant Episcopal diocese, has created a mild sensation among the priests and laity of the diocese by issuing a sort of pronouncement against the use of tobacco. The bishop maintains that there is not one trace of spiritual help or physical gain from the use of tobacco, but untold evils have resulted from its use."

A pair of tusks from a mammoth have been received at the American Museum of Natural History from Victoria, Texas, where they were found in an old river-bed deposit. The tusks are 18 inches long, the diameter of the curve, is thirteen feet and some inches in length.

Of the 14,000 citizens of the Creek Nation who are entitled to a quota of the tribal lands, 5,000 are negroes. The Creeks formerly owned slaves, but later gave them the rights of citizenship, and since then there has been a considerable mingling of the races.

A newspaper called *The Philadelphia Current* has lately been issued, which is owned and edited by colored people of this city, and devoted to the interests of the colored race.

Further reports from the Island of Hawaii indicate that the eruption of Kilanea is continuing. At last accounts the eruption did not amount to more than a rise of lava with sheets of flame from the smaller crater of Halemau-manu.

In response to the Senate resolution calling for information as to the cost of the Philippine war, Secretary Root reports that the total date is \$170,326,586. This amount covers four years.

In Great Bay and Tuckerton Bay on the New Jersey coast, the beds of oysters have been much injured by drumfish. It is stated that recently there were fully twenty millions of the drum fish in Great Bay drifting up and down with the tides. The finny invaders are so densely packed together that their large bodies are plainly visible, and the sight of the solid mass of fish was something entirely new. In the meantime all kinds of oysters were consumed in immense quantities.

There is a demand for thousands of harvest hands in Kansas and other Western States, and there are thousands of unemployed men in the East.

Dr. Grave, of the United States Fish Commission, has recently been studying the islands found in St. Lawrence river and Beaufort harbor, in North Carolina. The islands, which are in various stages of growth, are shown to be built up of generations upon generations of oysters, and appear to grow in very much the same way as the islands of the Pacific.

Recent experiments seem to show that petroleum is best for the generation of steam more cheaply than coal at present prices and with better results.

There were 432 deaths in this city last week, reported to the Board of Health. This is 20 more than the previous week and 22 more than the corresponding week of 1901. Of the foregoing, 244 were males and 188 females. Died of consumption of the lungs; 24 of inflammation of the lungs and surrounding membranes; 9 of diphtheria; 20 of cancer; 11 of apoplexy; 8 of typhoid fever; of scarlet fever, and 8 of small pox.

FOREIGN.—A despatch from Perpignan in France of the 17th says: "It has been snowing steadily here four days." From St. Petersburg it is stated that the winter has been remarkably prolonged in European Russia. Cold and rainy weather is reported from all parts of Central Asia, and from the heavy storm winds of Germany, Austria and Belgium, with great damage to property and crops. Intense cold prevails through Austria, and the vineyards and fruit trees there have been damaged. There was a heavy snowfall on the 14th in the Italian Alps.

A school for crippled children has been established in London, and others are to be opened sufficient to provide for thousands of children in this class. They are furnished with chairs and settees upon which they recline while receiving instruction. This movement has received an impetus by an investigation which showed that 600 crippled children in London were not sent to school, 64 per cent. of whom were unable to read in a number of cases their physical infirmities required special arrangements for getting them to school, and caring for them while there.

Le Revue Economique of Bordeaux publishes a paper showing the difference in prices for a number of goods in London and Paris. For about 40 of such articles it is calculated that the price in Paris is \$21.22, against \$16.21 in London.

President Palma of Cuba has lately stated in a dispatch that the economic situation is steadily bad, and that of a great deal of demand throughout the island for the poorer people for work. At the same time, I find every evidence of the people's patience under great suffering, and am conscious of their confidence in the Government and of their determination to assist my administration through this exceedingly difficult period. I believe Americans will give us the relief necessary to our prosperity.

The volcano of Mont Pelee was again in eruption on the 17th instant. There were intermittent detonations at the summit of the volcano was completely obscured by clouds of steam and ashes. Where before the outbreak of La Soufriere and Mont Pelee there existed solid lava, now deep water, as yet unsonded, which extends to a base of high cliffs, bare and vertical, formerly so stable and firm.

Another dispatch says: "A column of slime 100 feet high has been ejected from the volcano of Mont Pelee, and has fallen on Basse Pointe, enveloping the whole portion of the town and completely raising twenty houses. No loss of life has been reported. The volcano continues to throw forth clinders on the northern part of the island, which has been rendered uninhabitable." Australia has had a succession of droughts during the last eight years. In consequence of which the number of sheep has dwindled from over 120,000,000 to under 100,000,000 in the last decade. The losses of cattle are also great as great in proportion.

The management of the Prussian State railways has decided to introduce special railroad cars, provided with all possible comforts, for the care of sick people.

NOTICES.

WESTWORTH BOARDING SCHOOL.—The fall term of school begins on Thursday, Ninth Month 9th, 1902. Early application should be made for admission of pupils desiring to enter at that time, if the matter has not already received attention.

A Goodly and a Godly Heritage.

As descendants of an early Friends' family of two hundred and fifty years standing, assembled last week in the meeting-house of perhaps the oldest Monthly Meeting on this continent, their general appearance was such as to account for some of the pride which families, though now far removed from the protection of Friends, still retain in a Quaker ancestry. Traits and virtues which have preserved families in soundness of bodily constitution and have continued as foundations of success in life, cling often beyond the third or fourth generation of those who have been planted in the Truth. And no better heritage can be extended to our children, though we cannot give Divine grace to them, than those man habits which are of the culture of Truth in the inward parts, and in the hidden depths to know wisdom by watching daily at the gate.

Our Friends sometimes love to look back and acknowledge "we have a goodly heritage." It is also a heritage of men possessed of man infirmities. And the very staunchness of positiveness which men may acquire in their uncompromising testimonies for Truth is right as against error, when applied to personal infirmities which few are devoid of, emphasize them also, and show us the danger of having any wrong side or infirmities of flesh and spirit, for our positiveness to make us odious.

And here comes in the weak excuse which they rest themselves under, to plead that their failings in character and habit are not their own, but a visitation upon them by inheritance. Our fathers have eaten sour grapes, and

therefore it is that our own teeth are set on edge." And so, where too much is made of hereditary, children are weakly subsiding under that excuse, and not rising to shine when their light is come, to walk in the light so as to find the blood of Jesus Christ to cleanse them from all sin.

The heritage of goodly ancestors is a goodly heritage, but there is a better heritage than theirs, even a godly heritage. We are the off-spring of God in a higher sense than of men, and that heritage is stronger than that of men to cleanse us from secret faults, derived as we may say, through human infirmity. "It is God that worketh in us, to will and to do of his own good pleasure." There is the light of Christ "that lighteth every man that cometh into the world." "A measure and manifestation of the Spirit of God hath been given to all men" for their profiting.—"the grace of God which bringeth salvation and hath appeared to all men," teaching us how we ought to live. And so on, there is precept upon precept to show that, though compassed with natural infirmities by descent, even though from Adam down, we are without excuse under the true light which now shineth, and the free gift which has come upon all men unto justification of life, and because our heredity from an Almighty Father though so basely tarnished by sin ought to be allowed to be mightier in us than human heredity.

But it is through faith in Jesus Christ that we are especially made sons of God, and through obedience to his Spirit that we are born of the Spirit, and born "from above." The new heredity of regeneration is offered at the door of every heart—to be born again—not of corruptible seed but by the Word and power of God. Thus are we made sons of God through Christ, "and it does not yet appear what we shall be, but when He shall appear, we shall be like Him. And every man that hath this hope set on him purifieth himself, even as He is pure."

Homage to Success.

The month just passed, like the same month every year, has been marked by the passing out of thousands from college life towards their further share of the world's work, and by the conferring of special honors not only upon the successful graduates, but upon many older men who have won public distinction by open suc-

cess in their several careers. Reference is not now made to those certificates of past work called diplomas, but to vocal plaudits delivered to persons present in reunions and celebrations which follow. The mind of a hearer who is concerned with heavenly valuations, is left oppressed with a sense of the swelling of the human vanity ministered by these eulogies and compliments.

Public adulation, much of it doubtless just, but still heaped upon a youth or a man in his presence, seems one of the severest blows whereby the virtue by which he may have risen could be wounded or spoiled. There is a right service for commendation and encouragement by one towards another, but the extent to which on these public occasions it is carried, must be felt as burdensome to the right-minded and as dissipating, wherever the public prints carry it, to the best life of the people at large.

"Honor to whom honor is due" will come and should be felt for the honorable. But the thrusting of it in his face is that which hurts, and it puffs up more minds than it humiliates. It helps bring into dominion the pagan motive for good work, the motive which was practically the religion of nations before the Christian era, and still prevails where that mind is not in men "which was in Christ Jesus." That motive was the selfish one of personal fame. "How can ye believe," said He, (or be Christians), "who receive honor one of another, and not the honor which cometh from God only?" That strenuous life is ignoble whose object is human honor, even though it be marked by deeds of self-sacrifice—for self is still its goal and aim. It is not self-sacrifice until it is not for self, but for others, or is devotion to a higher principle. It is a crime to a man to divert that devotion for a moment towards himself. Honor him, but allow him to continue honorable, self-forgetful, faithful to his higher calling. He may be shown at times enough of the good accomplished to encourage him onward, so only that it is not himself that is shown up to himself to admire. The moment we turn one's eye that has been single to a good cause or service unto the admiration of his own glory, that moment we degrade him from serving the living God, unto dead works.

A love of the "well done, good and faithful servant," is doubtless divinely implanted in the human heart, as an incitement for seeking the

Divine approval. Unto them "Who by patient continuance in well doing seek for glory, honor and immortality," is promised "eternal life." But this quest is not to be from "man, whose breath is in his nostrils," but from the living God. And yet in human society we are so made members one of another, that some regard of our fellow beings' approval is a lawful part of our constitution. An utter disregard of it may mark a man as intensely selfish as would an absorbing idolatry of glory or fame. The love of each other's approval is good within its Divine limitations. We would look in others' eyes sometimes for a reflection of the Divine approval, because it is his we crave and not theirs. And so a love of approval *through* man is rightly ordained. Do we seek to be right ministers of it?

There are blossoms of grace which we might oftener sprinkle in each other's pathway as a word in season to him who is weary. Our weary wives or our weary husbands, or other servants in their daily drudgery are surely something more than the beasts that perish, under the yoke for our comfort! And yet even our pack-horses we would pat on the shoulder for their encouragement, and would say "good fellow" to a faithful dog. Let us have grace whereby we may hand a cup of cold water in the name of a disciple. Sometimes a burdened laborer may be a stammering minister of the Lord. Sometimes one may be a pupil naturally dull, sometimes one may be of unattractive appearance. Why should only the brilliant and the pretty, who need it least, receive our commendation? Or only the exalted, our exaltation?

And yet it is the conspicuous success in life, —this "having men's persons in admiration because of advantage,"—that the admiration-factories of the month have been laureling. And while we make no doubt that a truer honor was earned than popular or academic breath could blow, yet we esteem the puffing, as a rule, pernicious to best life, and a diversion from the pattern shown to each of us in the mount. "Whom the Lord commendeth is approved," and "there are last which shall be first." Let these unappreciated, lowly and hidden drudges of duty continue to look up to the source of their endurance, —even to the witness of Christ in them. In due time they shall reap, and rejoice that no man by human applause took their crown.

It has been a relief, as not out of harmony with the view just expressed and as an offset to any unfair imputation on a college reunion spirit to see in Professor Shaler's poem delivered at Cambridge last week before the Phi Beta Kappa Society, the following lines on Valor, which received the sympathy of his audience:—

"Let us give o'er that folly, yea that shame
Of claiming valor prize for men at arms,
And battle at the altar where our Lord
Would have his sacrifice.

"Now in the plain man's heart our treasure bides
For he is man, Know ye God's valor goes
On two legs of a man and that his heart
Is ark to hold the covenants that seal
His right as man. We'll keep those noble lights
Of [heroes, martyrs], Christ set in the sky
So that our eyes look up. But let us heed
Those others of this earth who prove our kind
Kin to those stars, and stumbling on the way
That leadeth to their place. Let not our eyes
Be blinded by war's flame, nor be our eyes
Dulled by its drums and trumpets till forgot
Is the plain lesson of our peaceful days.
Of what is fellow-man who knows not war,
Who faithful does his tasks with faithful heart
And so gains valor for all fields we win.
Dear comrades ye who ever hide with us
But tell us not of valor save in deeds
That show its tasks forever; how came ye
By your immortal part? Was it in arms
In battle's rage or in the fevered camp
Where ye in vain fought death? Nay, it needs not;
Ye silent speak; we read it in your lives.
True, faithful, toiling lives; in field and shop,
In student's closets and by firesides
Kept as faith's altars clean. 'Twas there ye won
The crowns ye hurled beyond those battled lines
The crowns that bless our day. Ay, so they make
Their silent answers to all time with deeds.
Such as ennoble time."

CHEERFULNESS AT THE TABLE.—An old lady who looked as though she might have belonged to the "Sunshine Society" all her life, was asked by a friend for the secret of her never-failing cheerfulness. Her answer contains a suggestive lesson for parents. "I think it is because we were taught in our family to be cheerful at the table. My father was a lawyer with a large criminal practice. His mind was harassed with difficult problems all the day long, yet he always came to the table with a smile and a pleasant greeting for everyone, and exerted himself to make the table-hour delightful. All his powers to charm were freely given to entertain his family. Three times a day we felt his genial influence, and the effect was marvelous. If a child came to the table with cross looks, he or she was quietly sent away to find a good boy or girl, for only such were allowed to come within that loving circle. We were taught that all petty grievances and jealousies must be forgotten when mealtime came, and the habit of being cheerful three times a day, under all circumstances, had its effect on even the most sullen temper. Grateful as I am for all the training received in my childhood home, I look back upon the table influence as among the best of my life."

Much is said and written these days about "table manners." Children (in well-bred families) are drilled in a knowledge of "good form" as to the use of the fork and napkin; proper methods of eating the various courses are descanted upon; but training in the most important grace or habit a child should have, that of cheerfulness at the table, is too often neglected.

The Orientals had no family ties of affection until they began to eat at a common table. Let the gathering at mealtime be made the most happy hour of the day and the influence on the children may be beyond estimation.—*Table Talk.*

Doukhobor Notes.

ROSTHERN, Saskatchewan, Canada,
Sixth Month 12th, 1902.

WM. EVANS, Philad'a.

RESPECTED FRIEND:

Your honored friend and minister, Jose S. Elkinton, has given us the privilege of visit on Fifth Month 19th, 20th, and also 23rd. I followed him to five settlements, and had pleasure of his kind and enlightened company. I and my wife felt it a privilege to entertain him in our house, where he rested a short while. In remembrance of the Friends' kind feelings and help, we called our farm "God will," and pray the Lord would make it a witness of his kingdom of Peace and goodwill to men. I have duly received thy note of Fifth Month 13th, and feel grateful for thy kindly words. This letter was followed with enclosure of addresses of builders of wagons and agricultural implements. From what I can judge it will probably pay to get plows and some other implements from the States, but it requires much wisdom from God, as it is possible that one could meet with difficulties springing from the competition of Canadian manufacturers. As to these wagons, it would seem that it pays better to purchase Canadian make owing to the high rate of freight. I am glad to say that it is owing to thy kind advice that I succeeded to have our Doukhobors order larger quantity of wagons, plows, harrows, etc., straight from Winnipeg, for cash. They saved thus \$212.50 on one shipment in winter, which amount would have otherwise increased the profit of the Rosthern dealers.

I send enclosed the translation of a letter of acknowledgment, which the Gorelov Doukhobors desire to send to the Friends in Philadelphia. Gorelovka is a settlement where the Doukhobors showed much hospitality and readiness to listen to the message of J. S. Elkinton.

This settlement is composed of about 25 souls, and I believe they and the Terpen people will be foremost for showing their sympathy with the school work. However, the condition is that it will take time until the people will see their need of building for themselves a school. It is already much, that they do not show any prejudice against the work. Shortly spoken, one must not expect that the Doukhobors here would build at school premises or any such building. Those of them who want the school are afraid of being hated by their brethren, should they be energetic about starting such a work, because they know that the majority would not give even a day's work towards erecting a building.

I received both volumes of Friends' Tracts and am glad now that through thy letter know whom to thank for taking the trouble of sending them to me. I had most of them unbound, sent previously, but it is a valuable acquisition to get them thus bound up in volumes, as I study them, and when I have the occasion I read them (in Russian translation) to our Russian settlers; I feel grateful for all these tokens of brotherly sympathy, which cheer us up in our solitude and show us that our brethren in Philadelphia do not forget us. The school work finished as soon as the plowing and sowing began, we will begin in the fall when the children and lads will be disengaged from helping their parents, or watch

of the cows and sheep, etc. I endeavor every Sunday and holiday to visit the villagers to talk or read to them God's word or some religious books, and I am happy whenever harvest is shown by them for Divine things. I have much pleasure in saying that there is a case, of a man who is disliked by his fellow-laborers for several reasons, who shows an earnest, inquiring spirit to listen to God's word, and he tells us his earnest desire is to be Christ and to turn from unrighteousness. He often comes to see us, to my great satisfaction, and he spoke several times with us of his difficulties as to brethren. It gives my wife and me pleasure whenever some of them come under a sense of affliction and pour out their hearts to us. They confess themselves, that they come short of the faithful, righteous life that their grandfathers possessed, and our earnest prayer is that there may be a greater thirst for God's word among them. My time is now much taken up by my daily work in the garden, yard and fields, but when I have time I may send a few translations of the hymns or prayers which the Doukhobors recite. Some of them witness to a sacred fire of Christian devotedness, which burned on the altar of their spiritual worship. Sometimes it is an allegorical song; sometimes a prayer; sometimes a psalm of David, with a few additions; sometimes a beautiful teaching given by a real God's servant, that the Russian Church had, a century ago; sometimes it is the Slavonic rendering of that beautiful name of Saint Ambrosius of Mediolanum, "Teum Laudamus"—(Thee we praise, O God!) sometimes it can be a letter full of Christian teaching and warning written by some elder Christian friend to another; sometimes it can even, (and in such cases one needs Christian circumspection and tact), a prayer, where, beside God the Virgin Mary and the Guardian Angel are invoked. With all this, one cannot help saying that the Doukhobors are worthy, and are interesting for an inquiring Christian student of Church history. One can even say that their form of worship is petrified, and that they have not been taught to sit in silence on God for the prompting of the Spirit as the Friends, and also some other churches of Christ's body. However, there is no land to be possessed in the portion allotted to God's people, and the Doukhobors are excluded.

I will be happy of keeping thee informed of my work and welfare. It is a privilege to be permitted to abide in communion with all of us. I am very humbly

Thy friend,

MICHAEL SHERBININ.

It is worth while saying that sometimes the Saskatchewan river rises so high that the access of the horses to the ferry is rendered impossible, and therefore only people on foot can cross it in a boat. Last week our boy returned from town, where he bought some provisions, because we were run short of almost everything. Our boy had to cross in a boat, and he partly walked, partly drove to the town. He stayed some time in the town because of the First-day. He bought the provisions, hired a team and arrived at last at the ferry. The loads were bad, (and are still bad to-day) and our boy brought at last the provisions home, crossing in a boat, being absent eight days

from home. This state of things is certainly inconvenient, but there will be a day when the railway will come closer to the place we live in.

TO THE SOCIETY OF FRIENDS OF PHILADELPHIA.

Dear Friends:—We have received your letter which was delivered to us by Joseph Elkinton. We have listened with attention to it, and have with grateful feeling accepted all the kind words which you wrote in your letter. Besides, the dear Elder, Elkinton, gave us many good advices during his visit to our village, although he spent a very short time with us. He advised us, above all, to keep in purity the laws of the Lord Jesus Christ. We, being Christians, ought certainly to receive such advices as a gift from God, and we are grateful to God for his sending to us such messengers, full of love, who address to us such good words pertaining to the kingdom of heaven, as well as to our material welfare.

We value greatly such visits, not being used to the conditions of life in this new country. Although for a Christian a foreign land is like one's own country, and one's own country is like a foreign land; however, it is not possible to get used at once to all the new conditions of life.

Elder Elkinton tells us, and you write us in your letter, to comply with the Canadian laws and to take up land in individual ownership. We indeed were willing, from the very time we arrived in Canada, to take up land. We tell this, not in reference to all our people but to our village. But even in our settlement there was a minority of people who would not hold land in individual ownership, but now they have all taken up their land. They thought formerly that a Christian is not entitled to own any property, but this ought to be considered in another sense: although we have taken up land in individual ownership, we ought as Christians to look upon all we possess as belonging to God.

We desire to utter a few words of gratefulness: We glorify God and thank you as our brethren near akin, for all the gifts which we have received. May God bless you for all your great love to us. Now by God's mercy we have begun to acquire our property. God has sent us bread and all kinds of vegetables; we are able to support ourselves, and the money we earn is being used for increasing our stock and our farming implements. We thank you also that you have helped Michael A. Sherbinin, with wife and children, to settle among us for giving us school instruction, of which we are much in need. From our settlement nobody began learning, but this is because our village is far from the village where Sherbinin lives. However, we hope that according to God's will we will make some better arrangements, in order to be able to partake in the benefit of school learning.

We would also thank you for sending us a nurse, who with God's help cures us of many diseases; she is a very good woman.

We are fully assured that you reckon us as your brethren. We are very glad of it, and we desire to be your brethren; we ask you to continue writing us letters, in which we see many useful things.

We send you our love.

(Signed): Theodor Hoodiakof, Alexis Negreyeff, Gregory Laphinoff, Vassili Pervezoff and Saveli Hoodiakoff,

Members of the Christian Society of the Universal Brotherhood in Gorelovka.

Gorelovka, Rosthern, Saskatchewan, Canada.

Sixth Month 11th, 1902.

'Tis weary watching wave on wave,
And yet the tide weighs onward,
We build like corals—grave on grave,
But pave a pathway sunward.
We're beaten back in many a fray,
Yet newer strength we borrow,
And where the vanguard rests to-day
The rear shall camp to-morrow.
Tho' hearts brood o'er the bitter past,
Our eyes with smiling futures glisten
For, lo! our day bursts up the skies,
Lean out your souls and listen.

Science and Industry.

THE BRILLIANT FISH OF THE WEST INDIES.

—The clear, limpid waters that surround Bermuda and the West Indies, lie above coral reefs covered with plants and animals, many of which are brilliant in color as a rainbow. They look like glimpses of fairyland, and as your eye wanders from one wonder to another you catch yourself striving to peek just around some corner into a strange nook, half hoping to see a bevy of mermen and mermaids sporting and playing within the crannies. Here is a patch of pale-green sea-lettuce; there a group of great purple sea-fans; yonder some golden corals standing out like a shelf or branching like a tree; while among them all swim lovely fishes that take the place of the fairies that should dwell in this magic land, and fascinate you by their gorgeous colors and their graceful, wavy motions.

There is a great green "parrot-fish," as brilliant in color as his namesake, the bird, showing himself boldly, and swimming along slowly, secure from any assault. His scales are green as the fresh grass of springtime and each one is bordered by a pale-brown line. His fins are pink, and the end of the tail is banded with nearly every color of the rainbow. He is showy, but this showiness serves him good purpose. His flesh is bitter and poisonous to man, and probably so to other fishes as well, and they let him well alone, for they can recognize him afar off, thanks to his gaudy dress.

Underneath the parrot, lying on the bottom, is a "pink hind." You notice him, and as the parrot passes over him he suddenly changes to bright scarlet, and as quickly resumes his former faint color. Had the parrot been looking for his dinner, and thought the hind would make a good first course, this sudden change of color might have scared him off, just as the sudden bristling of a cat makes a dog change his mind. When the hind is disturbed at night he gives out flashes of light to startle the intruder, and send him away in a fright.—C. L. Bristol, in *St. Nicholas*.

WHAT THE ATMOSPHERE IS MADE OF.—The first rude shock to the prevailing ideas concerning the atmosphere was given in 1774, when Priestley discovered in it the very active element, oxygen. Two years later he added to this the passive element, nitrogen, and the two main constituents of the invisible air became captives of science. To these new elements the old ideas clung for a time. Oxygen was named by its discoverer dephlogisticated air. It lacked phlogiston the fancied fire element,

and sought it with eager appetite in whatever it touched. Nitrogen was called phlogisticated air. It was believed to be saturated with phlogiston, and, therefore, fatal to flame. While oxygen combined briskly with almost all the elements, nitrogen refused to combine at all, except under great provocation. Though intimately mingled in the atmosphere, these elements were as unlike in character as two substances well could be.

No long time passed before a third substance was found in the atmosphere, this time not a chemical element, but the compound gas carbonic acid. While not great in quantity it proved to be indispensable in quality since all the world of the living things is dependent upon it for existence. Inimical as it is, when in large quantity to animal life, without it there could be no life at all, and the earth would be a dead and barren expanse. For the plant world gains from this gas its foundation element of carbon, and is thus enabled to lay up those stores of food upon which the animal world depends.—*Charles Morris.*

SMOKE AND PUBLIC HEALTH.—Probably one of the chief reasons for the indifference to the reform of the smoke nuisance is that most people think of the matter, not as one of health, but of esthetics. Manufactories are so necessary, it is thought that the ugliness of a smoky city can be endured because of the utility of the results of coal burning. But nothing is easier than to prove that the smoke-cloud over a manufacturing city tremendously increases the mortality. The inhabitants of a large city are sufficiently handicapped by the weight of the aggregation. Finely ground stable manure is the principal abnormal constituent of the air of the streets, and compared with ocean air that over a large city has 13,000 times as many bacteria in it. It has been calculated that in such a city a man inhales 37,000,000 germs in ten hours, and besides this some 10,000,000 dust particles, as compared with 31,000 of mountain air. The case against smoke, however, rests chiefly with another factor, the increase it causes of the carbon dioxide in the air. In the country there are about three parts of carbon dioxide to 10,000 in the air, and the limit for health in rooms is six, or, at most, ten. During fogs the amount is greatly increased, sometimes rising as high as fourteen and probably higher. The chief cause of fogs is the matter suspended in the atmosphere, but chiefly from coal smoke particles. When Pittsburg burned natural gas it was free from dense and dark fogs. The great fog of 1880 in London increased the average mortality 2994 in three weeks, and that of 1892 caused an excess of 1484 deaths in one week.—*American Medicine.*

SOLAR AND SEISMIC ACTIVITY.—The eminent English astronomer, Sir Norman Lockyer in an interesting letter to the *London Times*, adduces striking evidences of the truth of the theory first suggested by Wolf a century ago, of the close connection between solar and seismic activity. He says that he has used the most recently compiled tables complete for the last seventy years, and has considered seismic disturbances within that period. He finds that the most disastrous volcanic eruptions and earthquakes generally occur, like the

rain pulses in India, round the dates of the sun spot maximum and minimum. More than this, the thirty-five year solar period established by Dr. Lockyer, which corresponds approximately with Bruckner's meteorological cycle can also be obviously traced, indicating that recent seismic phenomena are but repetitions of those during the minimum period of 1867. Then Mauna Loa, South America, Formosa and Vesuvius were among the regions involved; in the West Indies it was the turn of St. Thomas. The many announcements of earthquakes in the present year before the catastrophe of St. Pierre will be fresh in everybody's recollection. In the maximum period between 1871-72, to name only West Indian stations, there were manifestations first at Martinique and then at St. Vincent. In the next maximum, in 1883, came Krakatoa. At Tokio, in a country where the most perfect seismological observatories exist, it is notable that at periods near both sun spot maxima and minima the greatest number of disturbances have been recorded. "The work of the Indian Meteorological Department enables us," says Sir Norman, "to associate the solar changes with pressures in the tropics, and obviously these pressures have to be taken into account and carefully studied."—*New York Evening Post.*

THE CRESCENT CITY.—If you picture in your mind an enormous sickle, having a handle also at the hooked end, you will have the Mississippi river as it flows in yellow swiftness past the city of New Orleans. A hundred miles to the southward it pours out through its many mouths into the broad blue gulf. In the crescent of this sickle, which gives to the city its name, lies New Orleans, and no sharp blade in the hand of the husbandman thrust into the ripening grain was ever sure of its destructiveness than would be this vast crescent of the Mississippi when once it should be given way. Sometimes when the river is at flood its surface will rise twenty feet above the level of the city's streets. In the centre of the stream it will then be nearly 200 feet deep, with a powerful current, which, were it not for the protecting levee about the city, must sweep everything before it. This giant river which has made this city possible, drains an enormous basin, its water shed being greater in area than that of any other river on the globe. The volume of water which flows past this city is equal to 150,000,000 cubic yards.

There are now nearly 1500 miles of levees on the lower Mississippi, and Louisiana alone has spent since the Civil War nearly \$30,000,000 on the river, while it costs the State a million dollars annually to maintain its levees. Strange as it may seem, the deadliest enemies of these great earthen embankments are the insignificant crawfish and the muskrats; for, once the slightest hole is made in the levee by either of them, the relentless river finds its way through and vast loss ensues.—*Ainslee's.*

LAWYERS will hardly find wireless telegraphy so productive of fees as was the telephone, litigation over which put millions into their pockets. Professor Bell had a strenuous time. He took the first working model of his instrument to John A. Logan, and offered him a half interest for \$2500, saying that it would do away with the telegraph, and that there

would be millions in it. Logan replied, dare say your machine works perfectly, I who would want to talk through such a thing as that, anyway? I advise you to save your money, young man." Bell then offered a ten interest to an examiner in the Patent Office for \$100 in cash. It was refused. That ten interest was worth \$1,600,000 in fifteen years. The intellect that refused it is still examining patents.—*New York Press.*

FOR "THE FRIEND."

Limiting the Acquisition of Riches.

A great deal of prominence is now being given to the attainments of that class of business men, eminently successful in a monetary sense, who have come to be spoken of as "captains of industry." The beneficent things that may be accomplished through the bestowment of superabundant riches, supplies the text of many an eloquent discourse, while it remains true that such bestowment of honestly acquired wealth, where it seeks God's blessing and loyalty to his glory, will find its just reward upon the who "trust [not] in uncertain riches, but in the living God." Hence a great deal of care and discrimination are called for in applying the life lessons for the instruction of the young.

Discouraging upon the exaggerated importance placed upon worldly success, *The Presbyterian* observes: "Fame and money, a public favor, though there is about them much that is reprehensible. On this account, many of our young men attempt hazardous undertakings in the hope of gaining prominence in the political or in the social world. But it is source of encouragement that there are still those who are old-fashioned enough to prize character before success, and who exalt principle and have regard to it in all that they do and say. They may not become so wealthy or so prominent in certain circles, but they make their mark as individual and public factors, and serve as standing protests to wrong doing. Their number should be multiplied. It is for Christian parents to raise up those who stand for religious convictions first and always, and who shall give a distinctly more impress to their times. The rising generation should early be taught to love righteousness and to make success in the world subordinate to truth and rectitude. A nation trained in this idea will effect changes in all the relations of life that will command the Divine approval and advance human welfare. When the molding forces in business, in politics and in society are of a strong moral kind, sociological problems will receive their best and truest solution."

The late John M. Whittall, in a narrative of his business career, tells us that after relinquishing a sea-faring life, in which he had witnessed many evidences of the Divine over-sight and blessing, he entered into a mercantile pursuit—that of dealing in dry goods—in Philadelphia, but after continuing therein for seven years, he "Heard the gentle caution of the Good Spirit to stop buying goods," called his creditors together while his assets nearly sufficed to pay his liabilities, and so escaped the great financial crash of 1837. The unsettled balance was paid some years later with interest added. Seriously reflecting on this episode, he says: "Heretofore in all my conclusions, on asking of the Lord his guid-

He was mercifully pleased to grant my request, but in this dry-goods affair I appeared left to myself; yet, he adds, "it may have been permitted to humble and keep me

experience of the late William Evans, during the Divine arrest when tempted to pursue a moderate business of dealing in drugs which he was engaged, may pertinently be added to the foregoing. The incident happened to the narrator was only twenty-six years of age.

He says in his Journal (pages 29-31): "I was a dealer in dry-goods, and a partner, I concluded to join him as was the way [of 1812-15 with England] was at that time, and made arrangements to raise a sum of money, which with that employed by him, was deemed a sufficient capital. The prospect of the connection, and engaging business that looked likely to be profitable, animating and pleasant; and from the pages of my mind I thought I had given the matter ample consideration. We entered upon the preparatory steps, which brought us frequently together, and to converse upon business and the manner of conducting it. As I went into a knowledge of the course and in that line, scruples occasionally arose in my mind, which I attributed to fear produced by the novelty of my situation. Self-doubts which I should not be easy to wear, and commend others to wear, presented some question of difficulty, but I concluded these doubts to be dispensed with, and the business still to be engaged; or perhaps when I became engaged, these feelings would wear off. I thought the thought of entering into a business which I did not understand, and the conclusion which I should find myself were my removal by death. This circumstance would not occur, and endeavored to suppress my apprehensions with the belief that experience would soon render me familiar with my new employment. In his desire to help way for our union and future operation my relative told me that besides the loss of our capital, which was borrowed, it would be necessary to purchase on credit quantities of certain articles, the payment for which would be provided for in the proceeds of our sales. This was a further increase of the responsibilities we were about to assume upon us, and which raised fresh doubts and fears."

The anxiety of William Evans to come to a decision was augmented as there pressed upon him the consideration, that "If all [the] energies are enlisted in the concerns of war, and their pressure is as great as is capable of bearing, the all-important of religion must be neglected." And being brought to "a full stop," this business scheme was abandoned, much to the subsequence and future relief, spiritual and moral—subsequent events amply confirming wisdom of the choice he had made, and the way by which he had been led. Later, the example and the testimony therefore I doubt not have proved, and will continue to prove, a boon to many placed in some similar straits in the choice of a non-lying line of business, whether with the use that it be quite lucrative, or of humbler proportions. "They may not"—repeating words of *The Presbyterian*—"Become so

wealthy, or so prominent in certain circles, but they make their mark as individual and public factors, and serve as standing protests to wrong doing."

While the writer does not wish to question the motives of some who have acquired very large estates and have declared their purposes of philanthropy thereabout, yet he believes this acquisition to be attended with no little danger. He has noted the assured blessing (subjectively and objectively) which has followed the timely declination to continue in the active pursuit of still greater possessions, while time and thought have been variously and freely bestowed in dedicated endeavors for the general good.

JOSIAH W. LEEDS.

WHAT YOU CAN DO.—"I think a Christian can go anywhere," said a young woman who was defending her continued attendance at some very doubtful places of amusement.

"Certainly she can," rejoined her friend; "but I am reminded of a little incident that happened last summer when I went with a party of friends to explore a coal mine. One of the young women appeared dressed in a dainty white gown. When her friends remonstrated with her she appealed to the old miner who was to act as guide of the party.

"Can't I wear a white dress down into the mine?" she asked petulantly.

"Yes'm," returned the old man. "There's nothin' to keep you from wearin' a white frock down there, but there'll be considerable to keep you from wearin' one back."

There is nothing to prevent the Christian wearing his white garments when he seeks the fellowship of that which is unclean, but there is a good deal to prevent him from wearing white garments afterwards.—*The Lookout*.

HELPS TO PATIENCE.—A woman, whose life has been long chequered with many reverses said lately: "Nothing has given me more courage to face every day's duties and troubles than a few words spoken to me when I was a child by my old father. He was the village doctor. I came into his office, where he was compounding medicine one day, looking cross and ready to cry.

"What is the matter, Mary?"

"I'm tired! I've been making beds and washing dishes all day and every day, and what good does it all do? To-morrow the beds will be to make and the dishes to wash over again."

"Look, my child," he said, "do you see these empty vials? They are all insignificant, cheap things, of no value in themselves, but in one I put a deadly poison, in another a sweet perfume, in a third a healing medicine."

"Nobody cares for the vial; it is that which they carry which kills or cures. Your daily work, the dishes washed, or unwashed, or the floors swept, are homely things, and count for nothing in themselves; but it is the anger, or the sweet patience, or zeal, or high thoughts that you put into them that shall last. These make your life."

No strain is harder upon the young than to be forced to do work which they feel is beneath their faculties, yet no discipline is more helpful. "The wise builder," says Boston, "watches not the bricks which his journeyman lays, but the manner in which he lays them."

FOR "THE FRIEND."

At the close of the term of the school under the care of Friends at Tunesassa, in the Third Month 1902, the plan of giving the certificate of the school to those students who had completed the prescribed course of study, went into operation for the first time. One scholar, Felix H. Scott, a young man of exemplary conduct, who had spent several years at the School was the only one prepared at that time to receive the certificate, who on this occasion read an essay to his fellow school-mates and others present, which it is thought will be interesting to the readers of *THE FRIEND*. It is entitled:

The Outlook for the Indian.

At the present time our people are intensely interested in the question of citizenship. Some of us favor it, believing that we are able to place ourselves by the side of the white man; that we are as strong and are able to do everything that he does under the same conditions. We long to have a right to vote, and to take part in the destiny of the greatest nation of the world. And some of us believe that we are not able to be placed on the same footing with the white man; that we are not educated enough to see the facts and truth of everything, and that it is impossible to break off from the idea that we are free, and have been placed here independent, absolutely independent, by the Creator.

A time is coming when we will be made citizens of the United States, when we will be made to depend on ourselves. It may not come this year, and it may not come the next year, but it will come sooner or later. Even nature is working to bring all tribes and nations of the world together, to speak the same language, to have the same mode of thought, life and customs, as they had in the beginning.

It is believed that ages ago people gradually wandered away in all directions from some central region and made homes for themselves in the various parts of the world. The climates and surroundings in which these people made homes for themselves were very different from each other. Their descendants gradually adapted themselves to the changing conditions of life, and on account of the difference in intensity of the sun's rays, and the different conditions of the atmosphere in which they lived, the color of their skin became different. It is believed that this starting place was some part of Southwestern Asia. Those who went to Africa became black, because they made their homes in the hottest part of the world. Those who went East, to India, did not become so dark.

It is thought that our ancestors came from Asia and crossed Bering Straits, on boats, rafts, or canoes, for it is only sixty miles wide. They might have come before the water formed a passage between North America and Asia, as we have some proofs that some parts of the earth are rising and other parts are sinking. It is possible that they came across on land.

When our ancestors came to this continent they dispersed to all parts of America and formed different tribes, and each tribe spoke a language of its own as the people in the old country did. Some of these tribes became civilized to some extent. They cultivated some crops, mined and worked gold and other

metals. How wealthy they were if they had only known it! They had possession of the whole continent with all its forests, and fertile fields, and its rich mines beneath.

Since the white man came across the ocean we have been slowly adopting his ways. We put our skin garments and blankets to one side. At first we wore the rougher clothing and kept changing for better, until now some Indians wear as fine clothes as the white people. Our thoughts, mode of life, and customs, have become somewhat similar to our white brothers. Our health and bodily strength have deteriorated until we are no stronger than they. None of our people is able to run eighty miles a day now, or overtake a deer (if he should see one), both of which were easy to our forefathers. So we see that the two races are much more alike than they were at first.

But it seems impossible that the Indians should ever make such inventions as the white men make. They have not yet made such inventions as the telegraph, telephone and automobile, but with the advantages of education, we may sometime astonish the world with something almost as wonderful. In many ways we still differ from the white people. As a general thing, we do not possess the determination that they do. When we begin anything and find it harder than we expected, we are very willing to leave it. It is not because we lack energy or the faculty of the mind, but simply because we lack determination. Now when a white man decides to do a thing, he is going to do it, no matter how much time it takes, or what obstacles, defeats or failures come in the way. This may not be the case with every one. I believe that we are rapidly changing in this respect.

The majority of the foreigners that come into our country to make a living have nothing to begin with. They come with hardly any more than the clothes they have on. In a few years many of them own nice and comfortable homes. It is because they have determined to have something of their own. Many of them receive but small daily wages, but they stick to their employment and save all their earnings.

It seems that a time will come when we, the Indians, will be like those who come into our country to make homes for themselves among the people of the United States. Our possessions have been decreasing since the white man came across the ocean. At first they took only what we let them have, but when their number increased they took possession of large tracts of land by force, and drove our people to parts less desirable. If I were to enumerate all the wrongs the white men have inflicted on the Indians, it would make a long record of inhumanity, and of course, with some acts of revenge from our people.

There was a treaty made that the Indians should live on the small tracts of land left them without disturbance. "As long as the sun shines and the streams run," but the sun and streams of this treaty have now vanished and we must pay for our lands. If we should take up arms and fight against the government of the United States for our lands, how long do you think it would take to destroy us?

The only thing left for us to do that we may live happily in the years to come, is to prepare ourselves so that we can live as the white

people, and adopt as our motto, "We must educate, we must educate, or we must perish."

I would encourage each individual of my schoolmates to stick to his studies. The one, the two or the three years spent in school will be of more use to you in after years, than as much time spent in wandering and doing little work at different places. I suppose you sometimes have a feeling of discontent with this school because students of other schools are better qualified to do a certain thing or because they speak the language better than we do. It is true that this school is not conducted on such a scale, as some, but there is no school in the United States, or any other place, in which we can be educated without working for it ourselves, and there is no sum of money with which we can pay for an education, without studying very hard.

I shall often think of you, and will be glad when I hear that some of you are taking the examinations and graduating from this school. To the officers of this school I would say, I thank you for what you have done for me. I appreciate very much the kindness I have received while here.

CONSERVATION.

REBECCA NICHOLSON TAYLOR.

Tho' the rain may fall and the wind be blowing,

And cold and chill is the wintry blast,

Tho' the cloudy sky is still cloudier growing,

And the dead leaves tell the summer is past;

My face I hold to the stormy heaven,

My heart is as calm as the summer sea;

Glad to receive what my God has given,

Whatever it be.

When I feel cold, I can say, "He sends it,"

And his wind blows blessings, I surely know;

For I've never a want, but He attends it,

And my heart beats warm, tho' the winds may blow.

The soft sweet summer was warm and glowing,

Bright were the blossoms on every bough;

I trusted Him when the roses were blowing,

I trust Him now.

Small were my faith should it weakly falter,

Now that the roses have ceased to blow,

Frail were the trust that now should alter,

Doubting his love when the storm clouds grow!

If I trust Him once, I must trust Him ever;

And his way is best, tho' I stand or fall,

Through wind or storm He will leave me never.

He sends it all.

Why should my heart be faint and fearing?

Mighty He rules above the storm;

Even the wintry blast is cheering,

Showing his power to keep me warm.

Never a care on my heart is pressing;

Never a care can disturb my breast;

Everything that He sends is blessing,

For He knows best.

WHEN SILENCE IS LEADEN.—Silence is not always golden. In fact we cannot think of any metal sufficiently dull and useless to stand as a symbol for the sulky, depressing silence in which some young people indulge whenever anything goes wrong.

Some of you have the sort of tempers which flash like powder. You are always making an effort to count ten before you speak, but all too often your impulse is quicker than your thought. There is just a chance that those others of you whose temptation is in this line of sullenness rather than impatience, pride yourself on your superiority in this respect,

You tell yourselves, with a good deal of fact, that you never say what you are for a moment later.

We do not hesitate to tell you that you have no reason to congratulate yourself. There is no more unpleasant member family than the person who makes a practice of indulging in the sulks. A hasty, ill-natured speech is no worse than an ill-natured silence, and the latter does not have the advantage being soon over. The girl who comes to breakfast with the "glum air" more oppressive than words, who sits through meal without making a remark, except in answer in monosyllables when asked a question, has no reason to pride herself on her superiority to somebody else who snarls and scolds and is sorry.

Do not confuse that golden silence, the result of tact and consideration and sympathy with this other commoner sort whose selfishness, and which casts the shadow of unhappiness wherever it grows.—*Parish Editor.*

Rachel Chandler.

Rachel Chandler, formerly Penfold was born in Guilford in the County of Surry. Her mother dying when she was young, subjected her to many inconveniences; but being favored with an early visitation of Divine grace she was preserved from the grosser pollutions of the age. By gradually submitting to the sanctifying operation of the Spirit of Truth she was fitted for the work of the ministry, and diligently laboring to improve the time committed to her trust, in due time became an able minister of the gospel, sound in doctrine, rightly dividing the word of Truth. Her ministry was attended with a lively demonstration of the spring from whence it flowed, and she was often favored with near access to the throne of grace in fervent supplication for the restoration of Zion to her primitive purity and beauty; and in commemoration of the Lord's goodness to her through the various dispensations of his providence, would frequently exhort the youth to remember the Creator in the days of their youth, and to imitate the prime of their days to his service.

She was long afflicted with a sore distemper, which rendered her incapable of traveling a considerable time, but she constantly attended her own meeting, and when her infirmity increased, the meeting was held at her house, where she frequently appeared in public testimony, under a living sense that the Lord had not forsaken her in this time of her affliction. . . . At one time, being in great pain, she said, "Oh! if I had my pain to make now, what should I do! It is enough to bear the infirmities of the body, with the load of a guilty conscience." She said her pain was often very strong, yet at times she witnessed great sweetness, which supported and enabled her to bear her affliction, adding, a little of the balm of Gilead was comfort to her, and that she longed for the time to come when she might drink the draughts of water from the well of life. She was several months confined to her bed, and bore her affliction with remarkable patience and resignation, departing this life the Eleventh of the Fifth Month, 1765, aged forty-two, and a minister sixteen years.

rief memorial of the Lord's gracious
s with Rachel Chandler, written by her-
few months before her decease and
particular request communicated to
—"When I consider the praise that is
the Lord on account of his gracious and
dealings to my soul, I am inclined to
much on his behalf to let mankind
that He of his own free mercy first vis-
soul, when it was gone very far astray
the right path, and at about the seven-
year of my age, laid the axe to the
the corrupt tree, and shook my sandy
tion; so that my feeble building, ground-
profession and name, was made to tot-
I to cry out in the anguish of my
"What shall I do to become what I
be, but that so might obtain favor and
with God?"

ch was my sorrow night and day that I
wished I had never been born, or that
ied very young, before I had a knowl-
of good and evil; for now that the book
law was opened, the commandment
sin revived that had been hid and cov-
th a fig-leaf covering, and I died; and
sensible of the Lord, I often cried, "O
ed creature that I am, who shall de-
e from the body of sin and death?"
s went I secretly mourning on my way
long time, while my adversary laid many
my way to catch my unwary feet; yet
er I yielded to the forcible power of
ion, though in ever so trivial things, I
peace.

as I had gone a great way from the
s house, so I had a great way to come
and it took up much time for there was a
bar between the house of Saul and the
of David; but blessed be God, the
and Fountain of life, the house of Da-
w stronger as the house of Saul grew
so that in time my enemies were dis-
and what I had seen and heard in
at the bottom of Jordan and in the
of the sea was I required to proclaim
the housetop.

is was so weighty an engagement that it
much time to be fitted for, lest not
rightly prepared I should be drawn in a
I zeal to do that which was not required
as poor Uzza did, or being rightly an-
yet through a forward mind to be do-
could hastily be drawn to offer sacrifi-
re Samuel came. After repeated man-
ons, and convincing circumstances had
forded, yet the confirming evidence be-
tating, I durst not appear in public tes-
for God, until Gideon like I had tried
ce every way, by which the long for-
ce of the Lord was discovered to me-
who knew my withholding was not from
to rebellion but through fear of taking
on me which I was not called to, and
y desire in doing his work was that I
be his servant, and answering the in-
r which I was made, that rightly im-
y my talent, I might at last have an en-
into the joy of my Lord . . .

length I gave up in great weakness and
ng to speak a few words in meetings
twenty-sixth year of my age, and had
peace in so doing. Although I have
been called to much service, yet, having
ent committed to my trust, I have found

an absolute necessity to improve the small
portion of grace received, and also to watch
and guard against temptations, which I have
had my share of many ways, but find none
more dangerous nor subtle than self, the most
cruel foe of which I am more free to speak in
order to inform others, that they may beware
and not attribute that honor to self which be-
longs to God. I have seen it in many shapes
had many a combat with it and do rejoice in
this, to see it under foot and the Lord to be
uppermost. There self is of no reputation;
and that I may still witness this, that as my
eye has been steadily fixed on my good guide,
who first found me out when alone in a desert
land, and a concern hath been raised to follow
Him only in the way of his leadings, so He also
may have the glory and praise in conducting
me safely thus far on my journey through
many difficulties and straits, which only to
look back upon makes me shudder, inasmuch
that death appears a pleasant release from a
world of trials and besetments, which while
here we are liable to. I am ready to conclude,
my work is almost done, my day nearly at an
end, my sun high setting, in which the curtain
of night will be drawn over my earthly taber-
nacle; so that I suppose what I do, I had need
to do quickly, for no device or work can be
done when the spirit is departed. Therefore,
having love to my fellow-citizens, as well as
good will to strangers, I am willing for their
encouragement to leave this small hint of the
goodness of God to a poor worm, who am far
from being able to speak one-half of what
hath been done for me only that men may glo-
rify God when they find my footsteps, and
consider that, as weak as I have been, yet the
great condescension of Divine wisdom and om-
nipotence is such, that now being confined a
prisoner at home by my incurable malady in
the flesh, my spirit is at liberty to praise God,
and give glory to Him, under a renewed sense
that I have so far fought the good fight and
have been hitherto helped to keep the faith.
I feel peace to be my reward, which makes
ample amends for all my sorrows, yea, and the
present pain. Hallelujah to God on high,
peace on earth and good will to men, saith my
soul. O let all cleave to Him as to a sure
and certain guide who will not leave his people
comfortless, blessed be his holy name! but
will come again and cause them to rejoice,
and their joy shall exceed the joy of harvest.

RACHEL CHANDLER.

HASTENING TO GET RICH.—Just following
the close of the great stock panic Bishop Law-
rence deprecated and sharply condemned the
prevailing passion to get rich on the instant.
Evidently having stock speculation in view,
he described it as "vicious gambling" and as
"the symptom of a spirit pervading the com-
munity," the spirit of "unreadiness to work
steadily for the legitimate reward of labor,
unrest at the moderate and fair returns of
capital, and making haste to get rich."

The bishop's attitude on this question is
said to be most highly commended. If, as is
said by one newspaper, it is "an assault on
the impulse that drives society ahead," con-
sidering that the "impulse" is not one that
leads to happiness, or to high ideas, or to
contentment, but on the contrary induces
greed, with consequent unrest and impairment

of spiritual conditions, it is clearly contrary
to the whole spirit of the Scriptures from
Genesis to Revelation. And not only is this
haste to acquire sudden riches condemned by
the prophets and by the Prophet and King of
us all, but the experience of mankind proves
that the slow way of accumulating a compe-
tency, if happily you can secure it, is far
safer than the speculative way, the spas-
modic way, the gambling way; indeed, the
small returns obtainable from the best securi-
ties of the world over supply practical demon-
stration of the soundness of the principle as
attested by the experience of mankind.

The mad rush after wealth involves the
setting up of a false standard, the plunging into
temptation, if not the disintegration of the
entire moral nature. Perhaps the finest test
that can be made of character is the use of
wealth gained, but not earned. While many
would doubtless eagerly accept the bestowal
and lightly assume the responsibilities, the
prayer of Agur still holds good in this twentieth
century as when uttered over twenty-five hun-
dred years ago—"Give me neither poverty
nor riches: feed me with the food that is
sufficient for me, lest I be full and deny thee,
and say who is the Lord? or lest I be poor
and steal, and use profanely the name of my
God."—*Christian Work*.

WHAT THE FLOODERS ACCOMPLISH.—If we
were to examine a list of the men who have
left their mark on the world, we should find
that, as a rule, it is not composed of those who
were brilliant in youth, or who gave great
promise at the outset of their careers, but
rather of the plodding young men who, if they
have not dazzled by their brilliancy, have had
the power of a day's work in them, who could
stay by a task until it was done, and well done;
who have had grit, persistence, common sense,
and honesty.

It is the steady exercise of these ordinary,
homely virtues, united with average ability,
rather than a deceptive display of more showy
qualities in youth, that enables a man to achieve
greatly and honorably. So, if we were to at-
tempt to make a forecast of the successful men
of the future, we should not look for them
among the ranks of the "smart" boys, those
who think they "know it all" and are anxious
to win by a short route.—*Success*.

Items Concerning the Society.

A portion of the sub-committee of the Yearly
Meeting set apart for service in the limits of Caln
Quarterly Meeting proposes being at West Caln
Meeting on First-day, the sixth of Seventh Month,
at 10 A. M., and at an appointed meeting in Coates-
ville, in the Methodist house of worship, at 7.45
P. M. of the same day.

The writer observes that in his item in our last
week's number that the reunion of the Wing family
in Sandwich, Mass., and the Friends' meeting
whereby the tribes went up on First-day, the word
"testimony" is printed where it was intended to
be "testimonies." He would be far from credit-
ing the solemn covering of the meeting to any one
"testimony of Truth" then delivered, or to any-
thing lower than the spirit of the Master of As-
semblies.

Notes From Others.

Christianity cannot be pronounced a failure in
modern society till the whole gospel has been ap-
plied for social healing.

President Roosevelt says that every thinking man realizes that the teachings of the Bible are so interwoven and intertwined with our whole civic and social life that it would be literally impossible for us to figure to ourselves what life would be if these teachings were removed.

President Faunce, of Brown University says: "Every branch of the Christian Church in our Eastern States ought to have the moral courage to decline to recognize non-collegiate men as publicly authorized teachers of religion."—Not so Christ.

We make a mistake in thinking of self-sacrifice as something exceptional, as something which occurs at the crisis of our lives, of something for which we need to be long training ourselves, so that we may be all prepared for it when it once comes. It is the very moral air we breathe. Society could not go on without it for an hour. It is the very substance of our lives, and that is precisely what makes us reverence it so.

Are there parents in this room who have engaged in this act of self-sacrifice? Have they pinched themselves at home in order that their boys might come here? Again and again this is the case. And yet when we see these things, if the question is asked why they are done, should we not be obliged to answer that there is no why? Once summon the noble man to an opportunity of self-sacrifice, and he does not need a why.

I suppose we should recognize that self-culture and self-sacrifice are in reality antagonistic. When you see one pursuing culture, though we may approve we do not adore. I think we must see that the two processes are directly the reverse. The man of self-culture starts with himself as empty, and he seeks to be filled. The man of self-sacrifice starts with himself as full and seeks to empty himself. The man of self-culture says, "Yes, I have gathered this much of what I would acquire. Still I am poor, I need more, let me go gathering." But the man of self-sacrifice says, "I have been gaining, only gain in order that I may give to others. Let me pour it out."

Of course, it sometimes comes about that the self-sacrificer often finds himself richer at the end than at the beginning, but this is never contemplated by him.—Prof. Palmer, on *Self Sacrifice*.

SUMMARY OF EVENTS

UNITED STATES—A bill has passed the Senate authorizing the purchase by the Government, at a cost not exceeding \$10,000,000, of 4,000,000 acres of forest land in the timbered region in the States of North and South Carolina, Tennessee, Virginia, West Virginia, Georgia and Alabama, as a forest reserve. The proposed reserve will be about 150 miles in length and of varying breadth, situated far above the sea level and forming an enormous "sponge for the absorption, retention and distribution of the rainfall," which ranges from 60 to 100 inches a year, and is not exceeded anywhere else in the United States.

The bill for providing a civil government in the Philippines has passed the House by a vote of 97 to 97. The bill proposed by the Democrats providing for the withdrawal of the United States from the archipelago in four years, was defeated by a vote of 136 to 75. An amendment to prohibit slavery was also defeated.

A Conference Report on the Isthmian Canal Bill has been adopted by both Houses of Congress, and has been signed by the President. It authorizes the President to acquire a title to the Panama route, and to undertake the construction of a canal across the Isthmus of Darien. Authority is given to acquire from the Republic of Colombia exclusive and perpetual control of a strip of land, not less than six miles wide, from ocean to ocean, the right to operate and protect the canal, and the right to maintain and operate the Panama Railroad, if a controlling interest in the road has been acquired by the United States. Should the President be unable to secure a satisfactory title to the Panama route he may proceed with the construction of a canal along the Nicaragua route.

A contract has been made by the Postal Telegraph Co. for the use of the Pennsylvania Railroad Co's right of way under which for fifteen years the Postal Co. acquires

the exclusive right to transact commercial business on the lines belonging to the Pennsylvania east of Pittsburgh and Erie, and to string wires on the railroad company's poles. Lately this exclusive right has been held by the Western Union Telegraph Co. The Postal has at present 15,000 offices, 52,751 miles of line, 552,699 miles of wire, 13,159 miles of ocean cable, not including the Pacific cable (8000 miles), which is now being manufactured. The Democratic Convention has nominated Ex-Governor Robert E. Pattison, of Philadelphia, as its present candidate for Governor. The platform of principles declares for a clean Administration; the banishment of the lobbyist, bribe giver and franchise robber; and consent to capital its right to the utmost protection guaranteed by the Constitution and the laws, and declares that labor also has the right to that protection which comes through organization and union.

The president of the Michigan District of the United Mine Workers has lately declared: "This strike of the anthracite mine workers has grown into large proportions and has come to mean to all of us the very existence of the United Mine Workers of America. The life of our organization is now the question before us all in every district of the State. We will take any step to save it from destruction, even to the point of abrogating our agreements, for if the Union is destroyed there can hereafter be no agreements in any of the States. If the Union is preserved, it will not be long until all the mine workers of the United States are working under agreements with the operators."

Officials of several large coal companies state that men are applying to them daily for employment of any kind.

A dispatch of the 26th from Pittsburgh, says: An order issued to close the mines in the Central District has been disregarded, and the effort to restrict buttumous coal production in Western Pennsylvania will fall of its own weight.

The mine operators say: "All signs point to a complete break up of the strike. The managers and superintendents of mines in all parts of the region are daily in receipt of so many applications for work from those who left when the strike was declared that they now believe they could readily operate two-thirds of their collieries if the men were afforded proper protection."

It is stated that there was sent out from California this year 26,000 carloads of oranges and lemons, 700 cars of English walnuts, 400 cars of almonds and 1300 of dried fruits.

The volcano Kilaeue has manifested unusual manifestations of activity, indicating that the display of force is increasing.

In consequence of repairs now being made to the White House in Washington, the residence of the President has been removed temporarily to No. 22 Lafayette Place. In that city, where the Cabinet is to meet, and official business is to be transacted.

On the 25th ult. great and widespread damage was done by storms in Ohio, Indiana, Iowa and South Dakota, attended with some loss of life. In some places the wind had a velocity of from 70 to 90 miles an hour.

The Finlanders are coming to this country in larger numbers than ever before, their annual immigration having been 224,248 farmers in 1906, 10,000 in three years. They are industrious and highly productive, and are likely to remain here permanently, in view of the rigorous Russian policy in Finland. Nearly all of them go to the copper mines of Michigan and Montana, but it is said many of those who have been here some years are now leaving the mines to become farmers.

The recent census in Pennsylvania showed that there were 224,248 farmers in this State yielding a gross annual income of nearly \$151,000,000, or 14 per cent on the investment of the farmers' capital. The net yield is not stated.

On the 25th ult. snow fell among the mountains, near Leadville, Colo. On the same day the thermometer registered 111 degrees in Laredo, Texas.

The War Department has stated that the entire Philippine archipelago will be placed under the control of the civil authorities on the fourth of Seventh Month.

There were 443 deaths in this city last week, reported to the Board of Health. This is 11 more than the previous week and 15 more than the corresponding week of 1901. Of the foregoing, 230 were males and 213 females: 63 died of consumption of the lungs; 24 of inflammation of the lungs and surrounding organs; 6 of diphtheria; 13 of cancer; 11 of apoplexy; 4 of typhoid fever; 4 of scarlet fever, and 1 of small pox.

FOREIGN.—King Edward VII has recently been stricken with a serious inflammation requiring a surgical operation for appendicitis, to which he submitted on the 24th ult., and from which it is now believed he may recover. The preparations for his coronation, which was to have

taken place on the 26th were abandoned, and gloom pervaded the community, which has since come to a feeling of hopefulness. A dispatch from London of the 28th says: "Seldom have a people experienced rapid and violent changes of emotion as Londoners this week. They began with exuberant anticipations a magnificent series of national rejoicings. The crushing depression and gloom, however, there is no doubt, which the public is ready to burst into the wildest jubilation."

A despatch from Washington says: "In the effort to make the payment of the Boxer indemnity easy for the United States stands alone. Minister Conger cabled the State Department from Peking that all the Powers are opposed to the United States' proposition that the payments should be made on the basis of the silver at the time the peace protocol was signed means that China will have to pay at least \$700 more than was expected of her when the aggregate of the Powers for damages sustained in the Boxer rising footed up 450,000,000 taels, or \$630,000,000. Increase is estimated in the figure to which silver depreciated at the present time, and inasmuch as it appears to be no condition which will halt such action, the increase of China's burden will continue each payment will be really larger than the one before."

Official figures showing the emigration to Siberia and the return of former emigrants to Russia for the year 1901 are published. The total ment to Siberia is given roundly as 128,700, composed of 84,000 emigrants, 25,000 pioneers of settlement, and 9000 persons seeking work. There returned persons, including 31,000 emigrants, 18,000 pioneers, 6,000 workmen. The return movement is at least that it was in 1900.

President Palma and the Cuban Cabinet have chosen a plan which they hope will relieve the economic situation in Cuba, by distributing \$5,500,000 among sugar growers and cattle raisers. The money is to be loaned to the producers to help them over the season.

It is said that there are in the island of Cuba 200,000 children attending the public schools and receiving instruction as good as or better than that offered the average public school in the United States.

Women teachers in Prussian schools get it besides free dwelling, only \$175 a year to begin with. This is raised to \$390 after thirty years of service.

The population of Cuba is about a million and a quarter, of which a little over thirty per cent. are negroes. There are four classes—the whites, the colored, the blacks and the Chinese. The whites include the Spaniards, Cubans and foreigners, and among these are a considerable number of Canary Islanders, who are farm laborers.

In the Philippines cases of cholera are as follows: Manila, 1807 cases and 1281 deaths; provinces of Cebu and 6272 deaths.

Governor Milner of Cape Colony has now become a member of the Orange River Colony, formerly the Orange Free State, and also of the Vaal River Colony, formerly the Transvaal Republic. Both the Boer republics are formally under British rule and parts of the British Empire. The Boers are a long race, of Dutch descent. Desegry and Balthazard, two French inventors, suggest that sodium peroxide be used to increase the amount of oxygen in rooms not easily ventilated, and places filled with noxious gases. By dropping ball of sodium peroxide into water, decomposition of the water takes place and oxygen is liberated.

RECEIPTS.

Unless otherwise specified, two dollars have been received from each person, paying for vol. 78.

David S. Brown, Pa., and for J. Morton Brown, A. Egle Haines, N. J.; Wm. M. Cuffy, Idaho, \$4, 2; Harry Alger for Elizabeth B. Alger, R. I.; E. H. Johnson, N. J.; Joel Bean, Cal.

Remittances received after Third-day noon will appear in the Receipts until the following week.

NOTICES.

WANTED.—A matron at a Public Institution. Address "Superintendent of the Pennsylvania State Prison, Harrisburg, Pa."

WESTWON BOARDING SCHOOL.—The fall term of school begins on Third-day, Ninth Month 9th. Early application should be made for admission of those desiring to enter at that time, if the matter has already received attention.

Reminiscences.

(Continued from page 391.)

MARGARET AND ABIGAIL HUTCHINSON.

Margaret Hutchinson was born in Scotland 1733, and was educated in the principles of Presbyterianism. She came to this country her parents in 1775. About the twentieth year of her age she began to attend the meetings of Friends, and about her twenty-first year applied to become a member among them and was received. In her twenty-fourth year she was married to John Hutchinson (a Quaker man) who had been received into membership before their acquaintance with each other, and about the same time. Near her close she uttered many weighty expressions. "This is the last I have believed in for many years, and I wish, within, the hope of glory." "My soul magnify the Lord and my spirit rejoice in him, O Saviour. Oh Lord help me! Oh be with me; thy poor unworthy creature." And soon added "Death is shorn of its terrors; the sting of death is sin—what I render unto thee?" Her close appearance to be near, she ejaculated, "Oh Father of the living," and a little after, "They rest from their labors and their works do follow them." "Thanksgiving and praise ascend! I feel I am almost through and the door is open." A pause ensued when she added, "Lord, release me;" which were her last audible words.

The following is from the memorandum of a friend who was present at her death bed: Margaret Hutchinson broke forth this thing in a very brief manner—"Blessed is he that has part in the first resurrection."

On the 23rd, 1849.—"Our dear friend Margaret Hutchinson deceased about three o'clock to-day in the eighty-sixth year of her age. She was taken sick on last Sixth-day. There can be no doubt she has gone to everlasting rest, there to reap the reward of life of dedication. She was engaged to the latest breath in praising Him who had done all things for her."

A Friend writes, Twelfth Month 31st, 1854: "We had a great meeting this morning, William Evans was favored in testimony, and Abigail Hutchinson followed in prayers also seemed more than usually favored."

Third Month 15th, 1855.—"Yesterday in meeting had much trouble to become gathered, but life came into dominion. William Evans delivered a weighty communication. After he took his seat a precious feeling overspread. Abigail Hutchinson rose soon after. On seeing her get up I felt a little tried, thinking there was no room for words; but found I had misjudged, for what she said rather increased the feeling that was over the meeting."

First Month 17th, 1866.—"To-day in the forepart of the meeting Abigail Hutchinson was quite favored, speaking in an encouraging way to those who were experiencing wave after wave of affliction to pass over them. They would not be forgotten."

Second Month 20th, 1868.—"Evening meeting at Arch street. After others had spoken Abigail Hutchinson was very sweetly engaged (in testimony) commencing with the words "Thou who hast been the stay of all generations," and finishing with the expression of a desire that we might, when done with time, be prepared to enter into that city whose walls are salvation and whose gates are praise."

Twelfth Month 20th, 1878.—"Abigail Hutchinson was acceptably engaged in supplication in meeting this morning. She had not been out at meeting for several weeks. It is very gratifying as she rises from her attacks of sickness, to find she can come out so fresh and lively."

Tenth Month 27th, 1884.—"Our Select Preparative Meeting, all the members (10) being present, we sat a considerable time in comparative weakness, but Abigail Hutchinson seemed to be instrumental in turning the battle to the gate, in testimony, commencing with "Who shall roll away the stone from the door of the sepulchre?"

In the ninety-first year of her age she wrote to a friend as follows: "Mary Kite has been removed from works to rewards. How many have been taken of latter time; but He who raised up and qualified faithful laborers to be pillars in the Church is able now as ever He was to raise up and qualify others to fill up these vacant places. There are among our young friends some who, if faithful, will have to take up the cross and show themselves more openly on the Lord's side. The main concern is to be ready to render my account with joy and not with grief."

"How ready is the man to go
Whom God hath never sent;
How timorous, diffident and slow
His chosen instrument."

—Robert Carr Brackenbury,
a lay Methodist preacher.

Selected.

Thomas Busbey.

Thomas Busbey, of Banbury, in Oxfordshire, was one whom the Lord ended with the knowledge of the Truth in his youthful days, to which, through the operation of his holy Spirit, he was made willing to give up in faithful obedience. In the time of his last illness through the renewed visitations and fresh influences of Divine love, he dropped many precious and comfortable expressions . . .

"Though I have near and dear things to leave behind me, as wife and children, to whom I would have been a shepherd a little longer if the Lord had seen meet,—but his will be done,—I shall leave and commit them to Him, who hath been as a tender father to me from the time that He first visited my soul unto this day. Oh! what shall I say of his goodness and matchless love?"

At another time, to a friend that came to visit him after having spoken a great deal of the love and goodness of the Lord to him in the time of his youth, in turning his feet from the paths of vanity into the narrow way that leads to eternal rest, he said, "Oh! that our young friends would come to seek the Lord in their early years. He would be assuredly found of them; my soul is a witness of what I now speak. When I was but a lad, I had secret desires after Him, inasmuch that I thought I could be content to mourn out my days in a cave of the earth, so that I might have an assurance of a dwelling with Him, when time here should be no more. So strong were the desires that the Lord had raised in me, that nothing short of this would satisfy, which caused me many times, I might say years, to go mourning and seeking the Lord, till at length He was pleased to appear by his inspeaking word in the secret of my heart, saying, 'Thou art mine, wait thou on me and I will protect thee.' Oh! how has He made good his promise; yea, He has done more for me, both inwardly and outwardly than at any time ever entered my heart to desire or expect; the which causes adoration and praise to ascend from me, who am but a worm before Him."

At another time, he being as it were overcome by the love of God, and in a tender frame of mind, said, "One taste of my Father's love is better than all the doctor's cordials. Oh! it is this that supports my drooping spirits. I thank Thee, O Father, that Thou hast not forgotten me in this low condition."

Speaking to some young friends that came to see him, some of his expressions were these: "Keep in the narrow way spoken of by our Saviour, Christ, in whatsoever company you may be. Keep to an inward exercise of mind, and to the teaching of the Holy Spirit in yourselves, that you may be thereby prepared, and ready for whatsoever work and service the Lord may be pleased to call you to; for He

worketh in whom He pleaseth, and how He pleaseth. Time will fail and strength will fail; therefore improve your time, and prepare yourselves while ye have time. My dear friends, my love is to you, and remember my love to friends, for I shall depart hence ere it be long. Blessed be the Lord, I am strengthened in Spirit beyond what I expected." . . .

At another time, in sweet composure of mind speaking to his wife, he said, "Oh! my dear, what manner of love is this, wherewith the Lord hath loved my soul, that I am, as it were, overcome therewith, so that I am ready to shout aloud for joy, and to go beyond my strength, for I see no end of praising Him for his many mercies and visitations of love? Surely it is as a brook by the way to confirm my faith and hope in Him, which is as an anchor sure and steadfast, that all tempests and contrary winds have never been able to shake or overturn, because it was built on the invincible rock, the rock of ages and foundations of all the righteous. My soul shall sing eternal praises unto it, because I have tasted of the streams that issue therefrom, at this time as well as at many other times. Glory be to God and the Lamb for ever and forever more." Speaking of that power whereby the soul is renewed and made alive to God: "Oh!" said he, "that we may all keep to it, is it this which will give us the victory over the many things that would draw away our minds from Him, and from a faithful dependence upon Him. My soul is a witness for the pure God, that if we keep to the power, in that, we are made more than conquerors by Him who hath loved us, and shed his most precious blood for us. Though I am weak, and my outward man decays yet my faith and hope are renewed in Him, so that I know whose I am, and whom I serve, and nothing shall be able to pluck me out of his hands, for it is by this power I have been upheld to this day. Though the archers shot at me, my bow abode in strength so that with the patriarch I can say, the arms of my hands have been made strong, by the hands of the mighty God of Jacob, who has preserved me; endless glory be given to Him." . . .

A friend asking him how he was, he answered, "All is well, except the poor body, and that is sorely afflicted, but the Lord has graciously supported me under it beyond expectation." After having been a little in silence, he broke forth into prayer, and returned praises to the Lord for his wonderful loving-kindness, in affording him his comforting presence in a time of great exercises, and his strengthening power and supporting arm, under such great pains and long and sore afflictions of body." . . . Some friends who had tarried all night, in the morning asked him how he was, he answered, "I was in hopes I was going once in the night; I am very desirous to be released from this great affliction of body I am under, if it please the Lord; but his will be done."

About two hours after, the said friends being about to take their leave of him, he, though very weak, being then near his end, raised himself up in the bed being strengthened beyond expectation, and in the aboundings of Divine goodness supplicated the Lord to this effect, viz: that the Lord would be pleased to strengthen and uphold all the weak, comfort all the afflicted whether in body or mind; and that the

Lord according to his heavenly will, and Divine wisdom, would raise up a powerful and living ministry of the young people among Friends; and that He would graciously vouchsafe of his favor to his people, to endure the present ministry with a larger demonstration of the Spirit, so that nothing might appear among them but the pure streams and current of life; that those who were lately convinced, might be preserved and attain to an establishment in the Truth, and persevere to the end; and that the youth among us in general, might be favored with a fresh visitation of the love of God, to draw their affections from the pleasure and vain fashions of the world, to an earnest seeking of the Lord, and thereby to a possession and enjoyment in themselves of the power and excellency of Truth which will afford them comfort in a time of trouble and afflictions, strength under exercises and weakness, and peace in an hour when all the world, and the glory thereof will avail nothing.

Towards his end, being weak in bed, a friend speaking of the state of things, and the liberty some of the professors of Truth took to revile the innocent, he said, "Dear friend, be not discouraged. Though there is darkness in Egypt, there is light in Goshen; yea it is such darkness as may be felt. My soul hath travelled under the weight of it many times; and though it is so, and hath been so, the Lord will have regard to his own seed. He knows who they are and where they are. I could say a great deal but am much spent, having had a large morning sacrifice with some of my friends that are gone away to-day. Oh! glory to God! Do not distrust his goodness He never fails those who have a true dependence upon Him; my soul is a living witness of it. Although I have been under so long and sore affliction of body, yet the enemy has never been suffered to tempt me to despair, or doubt of my future happiness."

He left it as a charge with his family, that nothing of mourning apparel, or anything that had the least appearance thereof, might be worn on the account of him after his decease. Many more excellent sayings which he delivered, worthy of memorial, might have been here inserted for the benefit and encouragement of others, to follow the ways of piety and virtue, had it been possible to retain them exactly in mind.

He departed this life the 13th day of the Eighth Month, 1726, aged about sixty years.

THE PERFECT RULE.—When Thomas Paine resided in Bordentown, New Jersey, he was one day passing the residence of Dr. Staughton, when the latter was sitting at the door. Paine stopped and after some remarks of a general character, observed, "Dr. Staughton, what a pity it is that a man has not some comprehensive and perfect rule for the government of his life." The doctor replied, "Mr. Paine there is such a rule." "What is that?" Paine inquired. Dr. S. repeated the passage, "Thou shalt love the Lord thy God with all thy heart, and thy neighbor as thyself." Abashed and confounded, Paine replied, "Oh, that is your Bible," and immediately walked away.

TROUBLE and perplexity drive us to prayer, and prayer driveth away trouble and perplexity.—*Melancthon.*

Doukhorob Notes.

En Route ROSTHERN TO WINNY
Sixth Month 24th, 1902.

MY DEAR FRIEND:

The past week has been one of the eventful in my life. A Mennonite kindly Michael Sherbinen and myself to ride in comfortable carriage from Rosthern to Saskatchewan. The prairie was clothed in verdure, and the vastness of its bound, fenceless stretches was very impressive. The sloughs still contain some water, and badger holes have not all been filled up by the road inspector,—a remote prospect. It is such a fascination in the freedom and fertility of this land and I do not wonder being settled rapidly, even with the drawback of a short season and the mosquitoes.

As we approached the valley of the Saskatchewan we passed Herman Fast (who accompanied John Bellows and Joseph J. Fawcett during their Russian journey), at his place with two oxen. The black soil is turned over in such even furrows we drove across sections of ploughed land, without much inconvenience.

The river was twenty feet higher than usual, and running rapidly. Thou may recall the beauty of this large stream, eleven hundred and fifty feet wide, with banks two hundred or more feet high. The Mennonites occupy the eastern and southern shores, while the more Doukhorob villages are on the opposite bank.

The weather was all we could desire, the picturesqueness of the rope ferry, crossing the team across the stream with its depths boiling up under us, cannot easily be portrayed. A group of Doukhorobs, men, girls and women, stood hand in hand on top of the hill, awaiting our arrival. The river had overflowed its banks and left standing pools in the bushes, through which we passed on the level meadow before ascending the hill. Into these we plunged—quite over the hubs of the wheels, and with great difficulty were pulled up the precipitous bank.

I have written an appeal to all the Doukhorob men of five villages suggesting that this approach be improved at once, as one of the women passengers was perilously nearly thrown out, head foremost, into the water mud. One of the wagons in our train got stuck, and the women were carried on the backs of their companions to dry land. After crossing I stood with my camera ready to "snap" the on-coming teams—three oxen abreast—in a farm wagon full of our baggage. I wish I could enclose the "developed picture." As we walked up the hill the girls came down to us chanting their plaintive Russian hymns, and we had a hearty welcome.

I cannot easily forget the scene as we stood surrounded by these picturesquely attired peasants of the village of Petrofka, as we looked the magnificent valley of the Saskatchewan—where thanksgiving was expressed upon the bended knee for the manifold mercies we had experienced.

After this meeting we went to the home of our dear friends, Michael and Bridget Sherbinen. Their house is admirably located in order to secure a commanding view of the river, and I am deeply impressed with

ability of building a school house near his to accommodate fifty scholars, part of might board with the Sherbinen house-

Michael and Bridget accompanied me in a five villages in this colony and we had satisfying conference in each on the of sending their children to school. thou would have been deeply interested u had been with us last Seventh-day g when eighty were assembled and con- standing until 11.30 p. m. in order to that was said.

close a letter which was written by the two villages after our visit and it con- expressed desires of four out of the lages we visited.

is very apparent that there is an in- appreciation of the interest Friends taken in these worthy children of Russia, are talked over the whole situation very ly with the Sherbinen family and with sult, that if a house could be built this r forty by forty feet, that would accom- the children from neighboring villa- of them ten miles distant, Michael men will give four or five acres of his Philadelphia Friends, upon which it ere erected. He was compelled to go ut to hut last winter, with scarcely a light coming through the small win- enable him to see the printed pages, injured his eyesight.

very reliable builder with whom we con- at Rosthern last evening, one who built ublic school house at Rosthern last au- said to me that he would be very willing ly an estimate, without charge for his is in the building, as he is deeply inter- in the welfare of the Doukhobors, and as he was able would contribute to the work of Friends.

also had a conference with the repre- ves of Lord Strathcona, who is on the ith us, and the Government Land Agent, Ens, with one or more men who have this settlement; and they very much aged the enterprise, because it would e Doukhobor children for teaching a- their own people. These colonists are dy for Government schools, but when ined how Friends have conducted their y they seemed very willing to send their n to Michael Sherbinen and he is fitted o work he has begun.

ow the London Friends have sent him and that they have this matter of edu- largely in their hands, but their work somewhat concentrated at Good Spirit or a time. Helen Morland and Nurse are now going to Winnipeg with Michael self, where they will remain for a week, ing themselves and possibly waiting for H. Varney, while Michael and I press ough the Yorkton settlements. He is ble as an interpreter in this work of ing the advantages of education to ukhobors. The openness that was man- all the villages was very encouraging and the head men of the conference at they would build their own school as soon as they were able. Michael e thinks a frame building would be warmer than one made of logs and the ional effect which the building of such

a house would have upon the Doukhobors would be salutary. There is another aspect of the case which may well claim our serious consideration, and that is the effort which the Second Adventists are making to introduce their teachings among the Doukhobors at this place.

Michael S. (who sits at my side and to whom I have read the foregoing lines), says these "Sabbath" keeping Baptists have come to him requesting him to interpret for them, and he said he could not conscientiously do so, if their peculiar views were to be presented. He thinks Friends can have control of the settlement, if it is understood that we have a school on our own ground.

Herman Fast who is himself a Baptist, came quite a distance and crossed the river on First-day last to dine with us, because he had a great concern that the Doukhobors should not be "spoiled" by these Adventists; for he had said to them that Friends had the precedence, and he very much hoped we would continue to have the chief place and influence among the Doukhobors in all their colonies. His love for John Bellows was great, and he gave me a photograph of J. B., J. J. Neave and himself, taken when in the Caucasus. Now I must conclude. Thy friend,

J. E.

From "Fenelon; his Friends and Enemies."

There were some who came to him who found it hard to face all that he asked of them, and to these the strong severity that underlay his gentleness was manifest. "You fear to feel the yoke," wrote he to one, "and therein lies the real root of a certain unbelief that you urge upon yourself. You wish to persuade yourself that you are not yet sufficiently convinced, and that, in this condition of doubt, you can make no advance towards religion without doing it rashly, and with the wish of speedily relapsing. You persuade yourself that you doubt, to avoid having to yield yourself and sacrifice a miserable freedom which self-love cherishes. Honestly, what have you that is real and substantial, to urge against the truth of religion? Nothing but the fear of being made uncomfortable and of leading a life that is laborious and sad; nothing but the fear of being further towards perfection than you desire. It is only because you grasp religion, because you feel its sovereign power, because you see all the sacrifices that it requires, that you fear it and will not yield yourself to it. But let me tell you that you do not yet know how sweet and pleasant it is. You see what it takes from you, but you do not see what it gives. You exaggerate the sacrifice, without picturing the consolation. God teaches you, waits for you, prepares you, makes you willing before He commands you. If He thwarts your evil desires, He gives you, by his love, a longing for truth and goodness which will be stronger than all your other disordered longings. What are you waiting for? That He should work miracles to convince you? No miracle would rid you of the vacillations of a self-esteem that dreads exposure. What do you desire? Unending arguments,—when all the while you realize in the bottom of your heart that while God has the right to claim of you? You deserve that God should abandon you, as a pun-

ishment for such prolonged resistance; but He loves you more than you know how to love yourself. In his mercy he pursues you, and troubles your heart that He may win it."

Again: "I pray that God Himself will speak to you, and that you will follow faithfully what He says to you. Listen to the inward whisper of his Spirit and follow it—that is enough; but to listen one must be silent, and to follow one must yield."

And again: "Learn to seek God within yourself; it is there you will find his kingdom. You must confide your weakness and your wants to Him; you cannot do it too simply. Prayer is but love, and love tells all to God, for we need only to speak to our well beloved to tell Him all our love. And having spoken, we must listen. What may He not tell us if we do?"

With the toleration for the delusions of others which experience had taught him, he wrote: "One can only be doubtful of the greatest good when one sees it imperfectly. Superficial knowledge degrades it to the level of benefits which are infinitely inferior. Then the shadows that obscure it, and the distance that divides us from it, seem to equalize it with the finite things which we teach and know. It is this false equality which allows man to hesitate and choose, and exert his freedom of selection between advantages that cannot really be compared. But if the greatest good should suddenly become evident, its infinitely powerful enchantment would overwhelm all desire of free-will, and every other attraction would disappear as the shadows of night disappear before the light of day. We know that most of the delights of this life are so unsatisfactory in themselves, or so insecure, that we can easily draw comparisons. As we compare, we weigh them that we may choose; and as we weigh them our inmost consciousness tells us that we are free to choose, because the claim of those things is never so strong as to destroy all balance, and absolutely force our will. It is this balancing that free-will is exercised. Take away free-will and you take away all vice, all virtue and all merit."

"The best things become the most polluted because the abuse of them is worse than the abuse of that which is less good." Such, observes the editor, was Fenelon's reply to those who urged the evil of the system of direction prevailing in the Roman Church.

"Never speak lightly. It is thus that one falls unconsciously into the weakness of saying what is not completely true."—P. 316-7.

"The man who is worth hearing is he who only uses words as the expression of thought. There is nothing more contemptible than the professional speaker who uses words as a charlatan uses his remedies."—Page 347.

"Never give extra lessons as a punishment."

ONLY one thing exceeds the loss—the love. That lives on, affording me such new experiences as make me understand the growth of a religion better than ever before.—G. S. Merriam.

THE more wicked men grow, the less ashamed they are of themselves, and the more holy men grow the more they abhor themselves.—Berridge.

For "THE FRIEND."

THE SIGNAL CALL.

Come with muffled oar,
Over the silent sea;
Gently touch the shore,
Thy signal let me see.

Thy coming is benign,
Thy purpose standeth true,
Firm is thy great design,
To form the heart anew.

How still the realm of might,
How silent is Thy way;
Alike to Thee is night,
Or golden light of day.

Didst Thou not come at first,
In silence and alone?
With cup to quench my thirst,
A sign to make for home?

Long years have passed since then,
The outlook still is bright,
How oft I look again,
With strong and steady sight.

I wander on the beach,
Stretched to horizon's rim,
Craving no sound or speech,
Singing my silent hymn.

Surely my Lord doth come,
Sweeping the peaceful tide,
A signal call for home,
Forever at his side.

H. T. M.

BEAMSVILLE, Ont.

Some Strange Bird Ways.

"Do you never think what wondrous beings these
Whose household words are songs in many keys."

The more closely we study birds the more we appreciate the depth of our ignorance in regard to their lives and habits. We are constantly confronted with unexpected developments, signs of intelligence—even of reasoning, evidence of personal tastes; instances of departure from family custom; indeed, so many individual idiosyncrasies that a conscientious observer hesitates to affirm any settled habit of any particular species. It is hardly safer to say, for example, that all robins build nests of mud and other material in trees, than to say that all Englishmen build houses of brick in long rows, for we frequently find variations from this habit. According to general experiences of the birds of our own country, it would seem tolerably safe to affirm that the female bird makes her own nest, sometimes allowing her mate to assist, sometimes preferring to do it alone. Yet some bird families are known in which she departs from the ways of her sisters, and allows her mate to make all the preparations for her long sitting. A well known hawk—the everglade kite—contents herself with looking on while her mate collects and arranges the twigs which form the nest, occasionally stopping in his work long enough to feed my lady a few delectable snails. Another defection from common bird ways is made by the phainopepla of California, a fine singer and interesting bird, whose peculiar habits have been noted and described by Florence Merriam. This gallant spouse does all the work of gathering materials and weaving them into a neat felt-like structure, always welcoming her to the post of looker-on, but never permitting her to touch the sacred cradle till it is entirely finished, and so happy in his occupation that he sings as he goes about.

It is confidently asserted, and generally believed, that the orchard oriole—a rather crusty cousin of our black and gold neighbor of the elms and willow—slings her graceful cup between the upright twigs of a tree, apple preferred. But in Florida,

"Where the bannered mosses gray
In the breezes gently sway,"

she is known to build in the tempting material, not of it for she cannot give up the wiry grass beloved of her family. Selecting a thick bunch of the moss she works out a cavity in it, and there places the pretty green cradle, which turning yellow as it dries, makes one of the daintiest scar colored structures.

Again, it is a well established fact, in books as well as in popular opinion, that bird families, though never so social in their way, at nesting time prefer to separate themselves a little from their fellows, each pair having its individual nest and conducting its own domestic affairs. Even among the social sea bird, who have what we may call bird cities, where nests are as thick as human habitations in our cities, where many thousands of a species congregate, even there each pair is supposed to have its own nook and its own family. But here again is a family with individual idiosyncrasies. It belongs to a bird tribe noted for eccentricities, especially about domestic matters—the cuckoo. The European branch is conspicuous for shirking the care of nest and nestlings, and imposing the work on its neighbors. Our own species content themselves with a poor apology for a nest, and often shows a queer jumble of eggs and young of several ages together. The bird referred to, the ani, found sometimes in our Southern States, seems to have solved the problem which presents itself to the cuckoo family, namely, how to reconcile the habit of depositing eggs at long intervals with the comfortable rearing of the young. The ani has overcome the difficulty in an original way, and set us an example in co-operation. When nesting time arrives, several of these birds combine and make a nest of large size, in which the whole party deposit their eggs and take turns in the labors of sitting and bringing the young to years—or weeks of discretion. The eggs are carefully placed in layers with leaves between, so that they shall not injure each other. If missionaries could be sent from this model community to teach their European relatives this solution of cuckoo troubles, it would be most welcome to the host of small birds who are forced to incubate and rear cuckoo youngsters.

A vagary in the manner of nest building is shown by one of the grouse, a family which also exhibits originality and peculiarity in several ways. This is the Canada grouse, or spruce partridge found in the northern parts of the United States. When moved to nest making, the bird scratches a cup-shaped place in the ground and lays three or four eggs. This is only to begin, for her "set" varies from ten to fifteen. Then every time she deposits another buff spotted sphere she picks up straws, grass, leaves or whatever she finds handy, and tosses them over her back towards the nest as she goes away. By the time her set is complete she has accumulated a quantity of this litter around her nest, evidently with the intention of providing occupation for the tedious hours of incubation. Then as she sits in the nest she reaches out, gathers in the stuff and arranges

it around her at her leisure. When the set is completed and ready to serve its use as a nursery, it is very deep and nicely constructed of grass and leaves.

Not only have many of our little neighbors individuality about nest building, but some of them have decided notions about color. A canary belonging to a family in New England greatly disliked black, and showed his feeling on every occasion. When a black cock employed he was so distressed and unhappy the family felt obliged—in pity—to replace with a white one. A tame robin had such aversion to all bright colors, except eye yellow, which he so much admired that he would "alight in perfect rapture" (as his mistress says on the hand of a person knitting yarn) on wool.

A certain parrot, on the contrary so loved yellow that he would scold and refuse to approach his mistress when she wore it. A yellow ribbon or anything of that color would drive him almost frantic. When a mass of ends of worsted were given him, he held them over carefully, picked out all the red ones and put them in a pile by themselves, showing that he had his likes as well as dislikes. The common ruby throated humming bird shows great fondness for bright red. I have seen one almost alight on a lady's red waist, and hover some minutes before a red painted piazza seat, passing back and forth before it, almost touching, and seeming to leave it.

The opossum has the credit of the trick of feigning death when captured, but several birds are equally clever at it. Among these are one or two grouse, or partridges, the humming bird and other small birds, some of whom even go through the process of going for breath and apparently dying. In the cases this is probably actual paralysis, but in others it is a sort of fainting, but in general it appears to be true "shamming."

Besides feigning to be dead "with intent to deceive," many birds pretend to be hurt to draw the enemy away from the nest or young. Perhaps the drollest is by another of the grotesque grouse family. The Canadian red grouse says Bendire, throws herself on her breast and kicks herself along with her feet, aided by her spread wings, adding to the comical effect by squealing at the top of her voice. She goes just fast enough to prevent her pursuer getting his hand on her, while the young, whom she is trying to protect by these manoeuvres, drop where they are, and remain perfectly motionless.

One of the most remarkable and least understood powers of a bird is that of sinking its body in water till only the beak is above the surface, and remaining in that position without motion. This faculty is possessed by several ducks and geese, and is exceedingly useful to birds pursued as game, often preserving their lives.

Nothing is more certain than that the wing of a bird is to fly with, but it is not confined to that use. It is capable of varied expression. Some birds have a curious custom of lifting the wings, which evidently means something more than we are yet able to interpret. Sparrows, on alighting, often lift one or two wings high above the back before they settle. The mocking bird has a very significant wing

ing both wings when advancing to the click of a beetle. I have sometimes thought it ought to be for instant flight if the quarry depicted alarming propensities; it has been tested that it is to startle and "flush the e."

In one case a redwing blackbird plainly tried to express a great deal when he came near me as he could get, lifted one wing held it quivering while he fixed his eyes, and delivered a long harangue, evidently relieved complaint. (Being about to leave I had carried him to a strange house in vered cage.)

new habits and ways are constantly coming light to upset all our time-worn theories and facts. It has been discovered that robins social clubs, and that some birds drink water; that crows eat more cutworms than shrikes more beetles than birds; nestlings have to be educated, and ground s have light breasts for concealment; that feathered "lords of creation" assume the care of the young, and others never their offspring till they graduate from nursery; that some fathers will eat their babies and others will die for theirs; and, next of all, that it is possible to change without moult.

It is thus seen that we have by no means wasted the interest of bird study. Every day is called upon to modify previous opinions, if the army of observers continues to increase, as it has been doing of late, it will not lag before our ornithologies will have to be rewritten. Then it is to be hoped we shall know something of the lives of our most interesting fellow creatures and be able to appreciate that

"Earth were not half so bright or fair
Without these ministrals of the air."
—Olive Thorne Miller, in *Public Ledger*.

HN BUNYAN.—Bunyan was the opposite mystic. His common sense in advice is ordinarily closely packed and hard, and his acute observation of the ways of humankind in practical life. He wrote once a story of one Badman, which is probably a contemporary life than the adventures of Jonathan Wild in the next century. It did not weaken his eye-sight over books, sharpened it on men and women. All his tales abound with anecdotes and incidents which he had evidently seen in the towns or by the roadside, and with phrases proverbial sayings close to the soil. Not least agreeable of the signs of this realistic sight for the bare fact in sense are those descriptions of the country of birds and flowers and fields, and the simple fullness of them to the country-born boy, who strews his pages from cover to cover. When he came to write his great book, he did in a perfectly natural way, and without thought, the reality of a journey on earth that of the search for heaven. The success with which, in a literary work, truth is clothed with fancy, is a measure of genius. It is perhaps more striking in this case because the work is an allegory, which is usually so fully pale a kind of composition. The characters and action of the "Pilgrim's Progress" on the contrary, are a transcript of so vivid that it cannot wear out. It is

not more realistic, however, than other portions of Bunyan's voluminous writings, in which one may get an idea, in English provincial character, of high historical value and human interest.

Bunyan's memory is singularly agreeable. Personally, he was free from defects of assumption, dogmatism and spiritual pride which entered largely into the religious character of this epoch, and his sensitive conscience seems to have kept him humble after he had won a name. The two great elements of his work—the homely quality and the Christian quality—were deep-seated in his nature and give him a charm. In an age of sectaries he was not a narrow bigot, and did not stickle for meaningless things; and in a time of political strife growing out of religious differences, and though himself a sufferer by twelve years' imprisonment in early manhood, he did not confuse heaven with any fantastic monarchy or commonwealth of Christ in London, nor show any rancor or revengeful spirit as a subject. It is worth remembering that from our Puritanism, which is regarded as a narrow creed and life, came the only book since the reformation which has been acceptable to the whole of Christendom, and is still regarded as the substantial truth of the Christian life in all the churches that preach it under any degree of orthodoxy. The life of the man who can evolve such a story must have been very simply typical of the Christian itself.—*The Evening Post*.

A Short Account of William Leddra, who Suffered Martyrdom the 14th of First Month, 1660-1.

William Leddra, an inhabitant of the Island of Barbadoes, being convinced of the principles of Truth as held by the religious Society of Friends and believing himself divinely called to travel in New England, came to Newbury, in the year 1658, where he was taken up, and with his companion, William Brend, carried to Salem, in Massachusetts. The magistrates of this place asked them if they were Quakers, and being told they were so called in scorn, they charged them with denying that Christ who died at Jerusalem, and also the Holy Scriptures. These false accusations they boldly contradicted, declaring they owned no other Lord Jesus Christ but He who suffered at Jerusalem, and that they owned the Holy Scriptures. They were, however sent to the House of Correction, and at length removed to Boston and again imprisoned, with orders that they should work. Unwilling thus to recognize the power of their persecutors, they were kept five days without food and then whipped with a three-corded lash. After the infliction of this unmerited punishment, William Leddra was banished from Boston on pain of death; but believing it his duty to return thither, he was apprehended and thrust into an open jail, where he was kept during an extremely cold winter, chained to a log of wood. Here his hardships and sufferings were so great, that it seemed as if his persecutors designed to destroy him; but he was supported through them all, and on the 9th of First Month, 1660-1, was brought before the Court of Assistants with his chain and log at his feet. On being told that he had incurred the death

penalty, he meekly asked what evil he had done? Being answered that he owned the Quakers who had been hung, and refused to put off his hat in court and said "thee" and "thou," he replied, "Then you put me to death for speaking English and for not putting off my clothes." Finding that his persecutors were resolved, if possible, to shed his blood, he appealed to the laws of England for his trial, saying that if found guilty by those laws he refused not to die. But the court overruled his appeal, and endeavored to persuade him to renounce his religion and embrace that established by law. But he felt conscientiously bound to testify against a religion which would countenance men in cruelly persecuting men and putting persons to death, because they dare not embrace it; and looking upon those who were thus seeking his life, he boldly exclaimed, "What! join with such murderers as you are." Then let every man that meets me say "Lo this is the man that hath forsaken the God of his salvation." Sentence of death was passed upon him and the 14th of the same month fixed for his execution. On the morning when this servant of the Lord Jesus sealed his testimony with his blood, the Governor came to the prison with a military guard; William's irons were knocked off, and taking a solemn leave of his fellow prisoners, he cheerfully went forth to meet death. The guard surrounded him in order to prevent any of his friends from speaking to him; and when they reached the appointed place he took an affectionate leave of his friend Edward Wharton, saying "All that will be Christ's disciples must take up his cross." Then taking his stand where the guard directed him, he addressed the people thus: "For bearing my testimony to the Lord against the deceivers and deceived am I brought here to suffer." When the executioner was putting the halter about his neck, he calmly said, "I commend my righteous cause unto thee, O God," and as he was turned off, he cried out, "Lord Jesus receive my spirit." Thus did this innocent martyr lay down his life cheerfully, and patiently suffered for the name and testimony of his Lord and Saviour. The frame of his mind, at this solemn period was such as became a true Christian.

Copied 13th of Sixth Month, 1902, at Woodland, N. C.

As an Indian Saw It.

Chief Pokagon, of the Pottawottomies, a full-blooded Indian, who died last year, wrote a book called the "Queen of the Woods," apparently a sketch of his own life. The following passage from it is of real interest, enhanced by the circumstances of the writer:

A few years since as I passed through the peach belt of southwestern Michigan, I noticed in many of the peach orchards along my route men were at work digging up the trees, root and branch, and burning them. I also observed that many of the trees were loaded with ripe fruit of red and crimson intermixed, tempting to behold, which was also burned with them. I made careful inquiry for the cause of such wanton destruction, and was told the trees were diseased with a contagion known as the "yellows," and that the charming ripe fruit I had seen was premature and diseased, and that it was known among fruit growers

as "mock peaches," and further, that the State of Michigan had decreed that all such diseased trees must be destroyed; and if the orchard owners neglected to do so, the State of Michigan would destroy them at the owners' expense, and subject them to the payment of a fine of \$100 in each case, and imprisonment if not paid. To-day I passed over the same route again; and where eight years ago the land was cursed with dying trees and mock peaches, I beheld spread out before me in every direction, beautiful orchards loaded with rich, ripe fruit, red-cheeked and in the bloom of health, which, in contrast with the dark, green foliage of the trees, presented a living picture which excited my heart to cry out, "Behold Eden's garden of the nineteenth century." Men, women and children with jest and jeer, with laugh and merry song on every hand, were picking and packing the fruit while others with teams were hauling it away, some to the railroad and some to the lake for shipment, while the employed and the employer were happy alike, and rejoiced together.

Now let Pokagon ask in all candor, What brought about this mighty change from adversity to prosperity, from death to life? But one answer can be given: "The State of Michigan did it." With a single blow of her right arm she crushed the widespread contagion, and yet there are many who still dare say unblushingly, in both public and private life, in the face of such convincing facts and thousands of like cases, "that no law can be enforced to prohibit the sale and manufacture of intoxicating drinks."

My native brains are indeed puzzled to understand how it is that the incoming white race by their intelligence and skill have invented instruments whereby they can measure the heavens above and declare of what substance the stars are composed; who have provided means whereby they can travel at ease in palaces, sweeping above rivers and through mountains, outstripping in their course the flight of birds in their migration; who have provided means whereby they can enjoy parlor life while crossing oceans in the teeth of the wildest storms; who have perfected inventions whereby they can rise above the eagle in his flight, or descend into the depths of the sea, where fish can scarcely swim; whose subtle brains have devised means whereby they can talk as though face to face around the globe; whose ingenuity can successfully bottle up speech whereby generations yet unborn may listen to the voices of their forefathers; from whose brains emanated that marvelous invention by means of which a button pressed by the fingers of a child causes mountains to be rent asunder and torn down, or the granite bottom of the sea uplifted and broken in pieces. All these wonderful achievements the white men have accomplished, and yet they dare have the effrontery to declare to all the world by words and deeds, regardless of their marvelous works almost Divine, that they are not able to provide means whereby they can destroy that great devil-fish which their own hands have fashioned and launched upon the sea of human life, whose tentacles reach out to do their wicked work alike into wigwams and palaces, into schools and colleges, into halls of legislation and courts of law, and all unsought, crushes in its coils the heart of the young bride, the wife, the

mother and the little child. Now if it be true the dominant race lack the power to bind down and destroy that monstrosity born of their own race, then it must also be true that the moral science of good government, for the best good of all the people, has not kept pace with their remarkable discoveries and improvements. At this very time some of the best brains of our country are laboring night and day to provide instruments whereby the seed of disease, or any foreign substance, may be seen in the human body to aid surgery in relieving the afflicted.

The people are wildly clapping their hands over it, and shouting loud acclaim; and yet these benevolent men of giant research and their votaries, as well as many of our political and moral scientists, cannot or will not see in broad daylight the curse of the glass between the lips of our boys and young men who are rushing down the toboggan slide of shame into the broad gateway of physical ruin and moral death.

It is well for the agriculturist to study chemistry, so that he may understand the property of the soil and prepare it for the golden grain. But he who would so prepare his land and plant it with the best of seed and then allow the grass and the noxious weeds to choke out the young and tender plants, would be considered foolish with all his wisdom. Our country is one vast field for our cultivation; science, with a lavish hand has given us ample means to dress and take care of it, and yet, to the shame of this nation, cigarette weeds, whiskey weeds and all manner of vicious weeds are running over it, demoralizing alike the young men and the little boys. Fathers and mothers, Pokagon asks you in the name of the sons of the forest; he asks you in the name of the Great Spirit of his fathers and yours; in the name of humanity and Christianity, and by all that is sacred and dear to mankind, is it not your duty to destroy these deadly weeds root and branch? Ancient and modern history written and traditional, both declare most emphatically that in order to attain to the most perfect type of civilization for the best good of all, the people must be equally developed, morally, mentally and physically. And yet it must appear to every candid-thinking man, as he beholds intemperance sweeping our land like a prairie on fire, scorching all that is fair and lovely, that the lack of moral education to map out proper legislation is the most lamentable defect of the present age.—*Boston Transcript.*

How he Conquered the Plumber.

In one of the suburbs of New York there lived, not long ago, a plumber, who, as a workman enjoyed the respect of his community. No one could solder a leaky pipe better or at less expense; but although his heart was kindly his tongue was sharp. Oaths had lost their significance to him—he used so many. As for his faith he had none. He believed neither in God nor man. For years he had not been seen to enter a church building except to repair the furnace or the gas-pipes.

There had recently moved into this same suburb a young doctor. He had two small children, just at the age to be "troublesome comforts," never still and never ceasing to want time and attention. While struggling

to establish a practice the doctor took in several house patients, with their attendant need to help out his income. These, with his calls and outside professional work, were steadily drain upon his sympathy and patience.

During a cold winter the water-pipes burst in the doctor's house, and the plumber was called. This troublesome and expensive accident seemed almost the climax of ill fortune and weighed heavily upon the family. Pairs proved to be complicated and near a week was consumed in finishing them.

The plumber, wise in the ways of household and sardonic in his knowledge of the failings of people—failings that are often not apparent to the outer world, although freely and constantly betrayed in the seclusion of home—entered upon his work with his accustomed dexterity and rudeness. It was thus that he met a new doctor for the first time.

Gentle in manner and speech, of unflinching temper—soothing and yet cheerful—the physician refused to become exasperated under these trying conditions. He met the plumber with a smile that gave no hint of his inward trouble, or of the emptiness of his purse. Where in another home anger, harsh words and reproaches might have been stimulated by a confused state of things, here through the example of the master of the house, peace seemed to have come to stay. The doctor never argued for it. He lived it, and it lived in him.

As the days went on, the plumber found his heart an unfamiliar feeling toward the members of this strange household. His gentle language and bearing were a surprise even to himself.

When with uncomfortable anticipations, the doctor asked for his bill, the plumber said: "I ain't got a bill against you, doctor. I enjoyed this job, and I don't want to be paid for it."

"Why, what do you mean?" gasped the doctor.

The mechanic was silent for a few seconds. "Well," he said slowly, "I've been in almost every house around here, and I know them all. And yours is the first place I've been in where everybody seems to live as if they believed in the Bible and the ministers keep saying, 'ain't going to be a worse man for this job.' If you're sensitive about the bill, you can take it out when my children have the measles. I've seen folks enough that try to get the better of their plumbers, but you've got the best of me."

And so he had. The better nature of a rough and godless man had been awakened a won by a Christian gentleman.—*Youth's Companion.*

Am I Educated?

A well-known college professor, lecturing lately before a college society, told the members that there were five principal evidences of education. The man or woman presented these five evidences could be fairly called educated, whether by a college training or without any. The first evidence of education, he went on to say, was "correctness and precision in the use of the mother tongue;" the second, "refined and gentle manners, which are the expression of fixed habits of thought and action;" the third "the power and habit of

on," the fourth, "the power of growth;" the fifth, "efficiency, or the power to do." The professor dwelt upon each of these evils in turn, and ended by saying, very truly without these characteristics, knowledge never become power, and that in their session lies the secret of "gaining an education, no matter how that education is gained. This is the sincere opinion of a learned and not collegian. How many of us, according to his measure are educated persons? The question "Am I educated?" when asked in the light of these five characteristic evidences, to be answered "Yes," by the young man whose class, nor by the young woman whose class lack gentleness and grace, nor by the scholar who bolts his lessons, but never says them over, nor by the graduate who grows beyond his diploma, nor by the intelligent, though cultured person who takes no part in the work of the world. Education is good English—do we do any good, growing—do we meet? good, hard—do we ever do any good, steady—do we keep it up? good work—do we accomplish any? Books are necessary for an education, but books alone cannot give the best part of it. No diploma confers on us. We can begin and finish it without entering a college. We can and must do for ourselves indeed, if we would have all. But it is safe to say that, when we have gained, no stranger can meet us, untrained beside us, without recognizing us as educated, and well educated, men. "Am I educated?" Let each ask himself the question; and, if any one of the points has been neglected—well, there is time yet before the present to make an improvement branch out of it at once, and enroll as a special student. —Forward.

From the "HERALD OF TRUTH."

From a Mennonite in West Siberia. While the tide of emigration in North America flows from the East toward the West, in Russia it flows in the opposite direction, from west to east. In the civilizing influences of Western Europe, the Mennonites came from the Western frontier of Russia into Southern Russia. The tide of emigration among the Mennonites is still moving eastward. As the tide in the South advanced in price and conditions became too crowded, they turned their eyes to the fertile and cheap lands lying to the east, resulting in settlements in Samar, Turkmenia and Ufim. Here also the land advanced so rapidly in price that as a natural result some of the brethren began to look beyond the Ural Mountains to the vast Siberian prairie, and in the spring of 1898 a small company was formed to look for suitable land in Siberia. They were successful inasmuch as they found a tract not far from Omsk, the capital of the Akmolinsk District, which they bought for low price. In the spring of 1900 this tract was settled. As it proved too small to accommodate all, another tract was purchased at Tokuschi, which is three hundred and fifty miles from Tscheljabinsk, the point from which the Siberian railway begins. Although there is a vast amount of unoccu-

pied land in Siberia, there is comparatively a small amount to be bought, as it is either government land or belongs to the Cossacks, or is the property of army officers. Land belonging to the government or the Cossacks, is not for sale, and much of that belonging to the officers is held by such vague tenure that it is hard to obtain a legal title. The most advantageous way is to rent land, as rent is very cheap, varying of course according to the distance from the railway or market, the state of cultivation, improvements and the amount of timber allowed for use.

The country from Tscheljabinsk to Omsk, five hundred miles in length, is level, in some places undulating but in other places almost too level for drainage. There is only one mountain, at the River Ischim, near the city of Petropawlowsk (pronounce the "w" in Russian names like the English "v"). Although Siberia contains some very large rivers, like the Obi, Yenesei and Lena, the western part is lacking in streams. According to the map there are only three rivers between Tscheljabinsk and Omsk, viz: the Tobol, Ischim, and the Irtysh; hence one sees no small streams here as in the Ufa government, where they are so abundant. As an offset to this, Western Siberia has lakes, not all of which are sweet water. Of vast benefit here are the forests of birch and poplar. In winter they afford effective protection against the snowstorms and provide excellent fuel. With a good supply of birch "juggles" one can easily endure a Siberian winter. The winter is very severe, but we have found that we can get along.

The temperature sometimes falls very low, —we had as low as forty-eight degrees below zero; it lasted but a short time. But we also had a number of fine days and the thermometer rose to the freezing point. It is well that during such cold weather there is usually no wind. We have plenty of snow and storm but the storm is not so continuous as we used to have it in the South.

West Siberia is but thinly settled. The native Kergiz, a branch of the Mongolo-Tartar family, are engaged in pastoral pursuits in summer, living in tents in true nomadic style. The Cossacks hold much of the land. They engage in agriculture but in a very primitive way. Many of the settlers from European Russia who are poor and are supported by the government, also engage in farming, but not in the way we are used to it in the South. The land is fertile and yields good crops of wheat, barley, oats, flax, etc. Dairying forms the chief occupation of many land-owners and tenants. In many places this industry is conducted on a large scale. Owing to the cheapness of the land and the excellent pasturage found on the steppes the industry has been greatly developed, and butter has become one of the chief articles in the export trade of West Siberia.

It is to be expected that Siberia will be greatly developed, especially now that the railway has been built, and because the land is capable of producing enormous crops. The further eastward movement of the Mennonites is only a question of time. It is possible that in another decade they will have reached the Pacific Ocean and will send greetings across the water to their brethren in California (by wireless telegraphy, of course). God commanded

man to subdue the earth and we see that our people, in Russia as well as America, are doing their share in this matter.

J. D. ENNS.

Station Tokuschi, West Siberia.

Items Concerning the Society.

An edition of Isaac Sharpless's book entitled "A Quaker Experiment in Government," is now ready in one volume at \$1.50, published by Ferris & Leach, 29 N. Seventh Street, Philadelphia, who say of it:

"It is long since a book on Quaker history has been issued which has even approached the popularity of this work. It has gone through three editions in as many years, and has received the weighty commendation of the learned and critical as well as the appreciation of the reading public. Extended by an addition of a later volume to include the Revolutionary period, it became a complete History of Quaker Government in Pennsylvania."

The same publishers announce a revised and greatly enlarged edition of "The Early Settlers of Nantucket," compiled by Lydia S. Hinckman; profusely illustrated. Price \$5.00.

An English clergyman lately declared in his pulpit that "For their numbers the Quakers had influenced both this country and the United States more than any other body of Christians, simply because they laid such stress on character."

Notes From Others.

"Time was," says the *London Chronicle*, "when men wore their hats in church, and Pepsys evidently considered it an unnecessary piece of ostentatiousness to insist on the bare head in church. In his diary for November 17, 1661, he has the entry: 'To church and heard a simple fellow upon the praise of church music, and exclaiming against men's wearing their hats on in church.' On September 28 following, he went to the French church at the Savoy, where 'the minister do preach with his hat off, I suppose in further conformity with our church.' Probably it was about this date that the custom of removing hats in the church began."

"No card, no work," is becoming a labor cry in many parts. Rapidly are the coils tightening that will soon make it hard and still more hard for the man who remains out of the labor unions to secure work. In this stress we remember a time prophesied about in Revelation xiii: 16, 17, "And he causeth all, both small and great, rich and poor, free and bond, to receive a mark in their right hand, and in their foreheads: and that no man might buy or sell, save he that had the mark, or the name of the beast, or the number of his name." —*Soul Winner*.

A. Ellen Woody writes of having started a library in Madruga, Cuba, and the zest with which some of her neighbors come in and read. A five dollar purchase of books has proved of substantial usefulness, and she would appeal for further accessions. Her life from day to day in efforts to instruct and uplift the people would be much relieved by the donation of a sewing machine, costing in Havana about \$25. It is of interest to add in her own words:

"The 20th (of Fifth Month), was a great day in Havana and in the towns, and many flocked to them. When the American flag was lowered and the Cuban went up, instead of shouts of applause, silence reigned throughout the great throng, and there was scarcely a dry eye among those who witnessed the scene. The Cubans seem to be filled with kindly feelings and seem happy and hopeful."

BAD PARENTAGE FOR OATHS.—"Let your munition be Yea, yea; nay, nay; for whatever is more, cometh of evil (Matt. vi: 37). The first recorded appeal to God was made in the support of the lie by which he tempted Eve."—*Ev. Tract Society's Paragraph*.

NE in the station of minister, who was so far from the condition of a minister as to ask, "what did thee think of my sermon?" He received the reply, "I could follow thee a part he way, but when thou put thy hand into pocket and began to help thyself, thy words ceased, and thy ministry ceased."

Truth Biding its Time.

With the development of the fulness of the age we believe there is a great work yet to be done for the Society of Friends or for the fundamental principles of its profession, to occupy. Well grounded in the faith once delivered to the saints and among them to our Friends, the Quaker disciple standing in this rock of revelation can view calmly and without dismay from his position the surging of modern waves and the tumult of the people. He is pitiful, indeed, to see the rushing to and fro of high "thinkers," who have lost or fear morning, for a place to stand on; the tempest with which floating straws are tossed as flung upon the sea of popular unrest. Doctor Lo-here or Mother Lo-there; the blemish with which those who have thought have had in the letter of the Scriptures eternal life, forget to come to Christ the Word that they may have life; the parting with the past if this would grasp a new sunrise, and not seeing what point of the horizon to rush

towards to meet it; the jumping at work as if this were the new gospel; the development of the resources of nature as if this might be a handling of the power of an endless life. The popery of wealth by its monopoly; the upheaval of once firm churches that now feel they are rocking; the desertion of conventional Christianity for parts unknown, without knowing the true; the preaching from the top of pulpits against their very foundations,—these are but parts of the wreckage that is in the surrounding swirl, and we know not whether they are the fore-drift of a general break-up to come.

But we fear not for the up-building Word; "which liveth and abideth forever." Of that which has been built upon the sand the ruin may be great; but the Rock remains, and men may be great by the upheaval of all else be learning confidence in nothing else to build upon, or cling to. The true Friend knows the difference between the Scriptures and the Word, and so "the Lord hath need of him;" he knows the difference between news telling and power, and that the Gospel is the power unto salvation; he knows the difference between the Holy Spirit granted, and taken for granted, and so the Lord of coming times needs the possessor by obedient experience, rather than by assumption; "behold he desireth truth in the inward parts, and in the hidden part" to make his work-men know wisdom. He wants a ministering people who know his kingdom as not in word but in power; He wants followers that are sheep knowing his direct voice, speaking to their conditions and the signs of the times. He wants the service of possessors of his imparted grace rather than professors of the imputed. He wants a proof to the world of his reality, in a man whose dedicated being speaks, "For me to live is Christ."

But we cannot sketch the inexhaustibility of the possibilities of the attitude towards Truth in which the sons of our morning were placed, and for which the sons of the coming mid-day need to be preparing. While the modern cloud is rolling by we may with composure for the triumph of Truth "stand still and see the salvation of the Lord;" but this waiting does not mean excuse from standing on the alert, having our lamps trimmed and our lights burning and our loins girded, for the fresh work and service of the Truth, when the call shall come "Go ye out to meet Him."

Daniel Defoe's Letter to William Penn.

The following interesting communication has been received from the Librarian of the Society of Friends' London:—

Sixth Month 23rd, 1902.

To the Editor of THE FRIEND, Philadelphia:

Noticing an account of Daniel Defoe in THE FRIEND of Fifth Month 3rd, I thought that possibly thou might incline to publish enclosed letter from Defoe to William Penn, unless it has lately appeared anywhere. It is from a copy bought the other day with other copies of letters to W. P. Perhaps some Friend would edit it. Referring to the article in THE FRIEND can it be right to state that Defoe and the Wesleys were school-fellows? The dates, if I have them correctly, hardly seem to square with this assertion: Defoe, 1660?—1731, John Wesley 1703—1791, C. Wesley 1707—1788.

I am thine Sincerely,

NORMAN PENNY.

[By, school-fellows" the writer referred to may have intended to convey the meaning of fellow-alumni,—those once children of the same school though not at the same period. For Defoe's five years at Newington Green Academy (1675—80) ended twenty-three years before John Wesley was born. The year of Wesley's birth, 1703, was the year of Defoe's punishment in the pillory "for being misunderstood," as he declared, on account of his pamphlet, "The Shortest Way with the Dissenters." And it is under the apprehension of such impending punishment that this letter to William Penn appears to have been written. What William Penn's service to Defoe had been, we leave to be determined by some Friend who may "edit the letter."

Having said this much it might be somewhat unkind not to indicate what the offense of Defoe in his pamphlet was. Himself a dissenter, or non-conformist with the Church of England, he had no sympathy with those dissenters who for the sake of obtaining or retaining government offices would be "occasional conformists," that is occasionally acknowledge the established Church by partaking of its sacraments, and then return to the attendance of their own meetings for worship "conventicles." Defoe joined in the support of a proposed Act of Parliament which should clear out of office these half-conformists and half-dissenters. "If the Politic Dissenter or the State Dissenter can attend the established worship without offending his conscience he has no cause to be a Dissenter." Such was Defoe's contention, a kindness to the dissenters to clear their membership of the half-consistent, a kindness to the state by clearing it of the half-hypocrites. But the dissenters resented his attitude bitterly. Then suddenly his ironical pamphlet appeared, "The Shortest Way with Dissenters,"

intended as a "banter upon the High-flying Tory Churchmen," and was relished much by these while they thought it was serious, and it frightened the Dissenters too much to let them appreciate its humor. The High Church party winced under so bold an exposure of their own spirit, and the Tory ministry felt bound to bring the author to trial for seditious libel. The substance of his pamphlet which created such a sensation, may be found in these (mock) words: "If one severe law were made, and punctually executed, that whoever was found at a conventicle should be banished the nation, and the preacher be hanged, we should soon see an end of the tale—they would all come to church, and one age would make us all one age." "This was the mock churchman's shortest way for the suppression of dissent," says a biographer, William Minto, by whose aid this explanation is gathered. The book was ordered to be burned by the common hangman. The author was sentenced "to pay a fine of two hundred marks, stand three times in the pillory, be imprisoned during the Queen's pleasure, and find sureties for his good behavior for seven years."—Ed.]

From Daniel De Foe to William Penn, Esq.

July 12th, 1703.

Tho' a Long Appology Suites Neither yo' Own Temper, nor my Condition, yet I Can't Not but Let you Kno' wth all the Thankfulness I Am Capable The Sense I have of your Extraordinary Kindness—Concerning yo' Self For me So Much a Stranger to you. Nor Can I doubt whether To One who Appears So much my Friend as to attempt being my Saviour From This Distress, I should Scruple to use the utmost Freedom with Relation to yo' Present Case.

S' The Proposall you are pleas'd to hint By yo' Son from My L^d Nottingham of Discovering Paytees is y^e same which his Lordship has often Put upon me before.

S' In some Letters w^h I have Sent his Lordship I have answer'd him with y^e same Assurance I did to yo' Privy Council. Viz^t That in y^e Manner which they Proposed it I really had No plan to Discover: That if my Life were Concern'd in it I would Not Save it at y^e Price of Impaching Innocent Men, No More would I Accuse my F^riends for y^e Freedom of Private Conversation.

It has been my Character S' among those who Kno' me, That I Scorn to Lye and by God's Grace I'll preserve it while I live, I Take ye Freedom to give you the Trouble of repeating it, Only to affirm to you with y^e More Confidence y^e Protestation I make. I Solemnly Affirm that Other than what Passes in Conversation, and p^rhaps There is ill blood among people of my Opinion More than Enough, but other Than that I have no Accomplishes. No Sett of Men (as my Lord Call'd Them) with whom I used to Concert Matters, of this Nature, To whom I us'd to show, or Receiv hints from that in Ord^r to These Matters, and Therefore to Put it upon Condition of Such a Nature is to Offer me Nothing Atall.

But S' My Case is this, I came in upon y^e Honour of y^e Government, being Under Baile that (at least Some of them) Consented to Let me go away and prest me to it. I agreed to give the Court No Trouble but to

plead guilty to y^e Indictment, Even to all y^e Adverbs, the Seditiously's, The Maliciously's, and a Long Rapsody of the Lawyers et Cetera; and all this upon promises of being us'd Tenderly and Treated like a Gentleman:—and with Submission to yo' Judgement, I Think that ye honour of the Govern^t is Concern'd in it, and No Man will Venture to Tho' himself upon their Mercy again, if I am made the Example of their Tenderness in This Manner I am like a Prisoner of War yielding upon Discretion and afterwards Cut in Peices in Cold blood wth Tho' they may Indeed do by Law yet No Man will Trust Them after it.

As to y^e Church of England as I Never Meant to Insinuate That y^e of England as a Church did Design So to Treat y^e Dissenters, So Tis plain There are Members of or Rather in y^e Church who have Declar'd their Resolution to do it if it was in Their Power and as these are y^e Men I Aim'd at So I am Ready To do y^e Church of England any justice by Vindicating her in y^e Same Publick Manner They Suppose her affronted I mean in Print. This is what I Tho't Fitt to give you y^e Trouble of, For which I ask yo' Pardon, and Entreat y^e Continuance of those Kind offices you have So Generously undertaken for

An Unknown Captive,

Yo' Distress'd Serv^t,

DANIEL DE FOE,

July 12.

To WILLIAM PENN, Esq.,

Humbly Pres'd.

From a copy in the possession of The Society of Friends, Devonshire House, London E. C.

HE COULD SEE THE POINT.—Horsemen take great pride in being able to see all the good points in a horse; but one man found a good point in a horse which his driver had never noticed before.

Dr. Plummer was once riding on the box of a stage-coach along-side of the driver, who was a Jehu in his line of no common order. He was profuse in his praise of his team, and especially of one of the horses, interlarding his praises with oaths.

"You have omitted one good point," said Dr. Plummer with a twinkle in his eye. "What is that, sir?" said the driver. "What is that?" I have studied that horse over and over, and I did not think there was anything about him I did not know. What is it you have discovered?" "Well, sir," said the doctor, "It is this: We have ridden so many miles, and up to this point I have not heard a profane word out of his head." The driver looked at the doctor in surprise, and there was that same demure look, with a twinkle in his eye. "Thank you, sir," said the driver, "thank you. You have made a good point, and I think I will try to go as long without swearing as my horses will."—*The Common People.*

In a most true sense the saints shall judge the world. What makes a man a saint is what saves him from being a sinner. And what saves him from being a sinner is that central moral act of the Cross which is the final moral standard of the world. There is no earthly power that has the right to judge the real christianity in a man or rule his conscience. "He that is spiritual judgeth all things."—*D. Forsyth.*

Library of Star Photographs.

It was at the Astronomical Observatory at Harvard in 1850 that the first photograph of a star was ever made. It was taken on an old-fashioned daguerreotype plate, by George Bond, later the second director of the Observatory, but at that time an assistant to his father the Director, Professor William Cranch Bond. After years of further experimenting in 1857 the younger Bond succeeded in obtaining photographs on wet plates and he published three articles on the subject of celestial photography, which not only were the first important contribution to the bibliography of the subject, but may still be received as an authoritative statement of the general principles governing such work to-day.

Celestial photography is now a practical part of astronomy in nearly every important observatory in the world; but, in view of its beginnings, it is appropriate not only that it is still one of the important branches of the work at Cambridge, but that Cambridge is the center of the art in much the same remarkable degree as forty and fifty years ago. Both at Cambridge and at the Harvard Southern station in Arequipa, Peru, the work has been diligently and systematically prosecuted over a term of years, that more than one hundred and fifteen thousand plates, ranging in size from four by five to twenty by twenty-four inches have been accumulated, with several thousand more in course of shipment or waiting examination and classification.

The collection of photographic negatives now stored in Cambridge forms, indeed, what may be termed for purposes of illustration, the most valuable and unique astronomical library in the world in which each plate or definite series of plates takes the place of a book or a series of volumes—a library moreover, which contains such records as no human ingenuity could ever replace if destroyed. Each plate is a "document" on the portion of the sky which it covers, and contains information which exists nowhere else. The value of the collection is widely recognized, and the data which it furnishes are called for by astronomers in all parts of the world. The Observatory staff, for example, is at the present moment engaged in "checking"—as the work may be called—discoveries that have been made at the Cape of Good Hope, in England, and Germany.

The parallel between this great collection of plates and a library of books is very striking. For one thing, the entire collections are arranged, so far as the present endowment permits, according to modern library methods: regards catalogues, cards, cross reference, methods of consultation, and general adaptability to consultation. It forms a complete history of the entire stellar universe for the last twelve years. To illustrate its importance and its magnitude it may be pointed out that if all the photographic plates at all the other observatories in the world were brought together in one building they would supply but a small portion of the material stored here.

One of the most striking illustrations of the value of the Harvard negatives is shown in the case of the tiny planet Eros. Eros was first discovered until 1898. S. C. Chandler of Cambridge, one of the best-known non-professional astronomers in this country, working in co-

mation with the Harvard observatory, made laborious computation of its path in 1893, very near the earth. This approach occurs every thirty-seven years, the last one being in 1893,—not 1898. It will not approach so near again until 1930. A valuable opportunity to observe our nearest neighbor of the solar system had thus apparently been lost, but by reference to the Henry Draper memorial photographs taken at Cambridge and Arequipa—as a large portion of the general collection is called in recognition of the work done by the eminent New York astronomer—Eros was found upon twenty plates. Five giving charts of position, and five representing arc spectra, between Tenth Month, 1893, and Fifth Month, 1894, and upon six of the plates taken in 1896—so that its position and path during the entire time that it was nearest the earth could be accurately determined. Thus, what might have been a lost opportunity, had not been for the systematic work of the observatory, was utilized for the advancement of astronomical science.

Just how important this special information is from the astronomical point of view may be better realized when it is explained that calculations based upon these determinations of the path of Eros will probably give a better knowledge of the distance of the sun from the earth than was obtainable from the last transit of Venus, in whose observation all the principal countries of the world took part, the United States Government, alone, spending over a million dollars. Not a single photograph of Eros, it so happened, was found in the collections of any other observatory.

In 1899 there was another impressive illustration of the value of these photographs, which, it is to be remembered, are taken night after night as a matter of comprehensive routine, quite independently of those taken with special regard to any special object or phenomenon. On Fifth Month 20th, 1898, Ceraski, the astronomical observatory in Moscow, discovered a variable star of the Algol type—where a dark star too faint to be discerned by even the most powerful telescope, periodically shuts off the light of a bright companion by intervening between it and the earth. For nearly a year observations were continued at Moscow and only one other eclipse is noted. Yet within a week after Sixth Month 1st, 1899, when the announcement of a discovery of the star was received in Cambridge, there were found in the Draper collection two hundred photographs of the region in which the star appeared, taken between 1890 and 1899, and showing it in a state of eclipse twenty different nights. From these it was possible to work out its period with a calculated uncertainty of only about one second—the eclipses predicted from the calculations afterwards recurring with the regularity of clockwork. The most striking feature in this case was that at Moscow, where they knew the position of the star, and were watching for it, only the two observations at minimum noted above were secured in a year's time. The so-called "American idea," of which we have lately heard so much in industry and finance, may be taken, perhaps, as characteristic of the Harvard Observatory. No steel or great bank is run on a more systematic business-like plan than the permanent sta-

tions at Cambridge and Arequipa, and the temporary stations which are from time to time established, for special purposes, in various parts of the globe. Night after night telescopic cameras south and north of the equator are automatically making records of the sky, the entire heavens from pole to pole being covered several times a month, and certain more interesting portions of the sky still more frequently. These plates may have no special significance for the moment, but no one can tell when the astronomer may wish to apply to them for verification of a discovery or for working out a special problem; and with each year, naturally, the value of the record grows.

All plates used, whether at Cambridge, at Arequipa, or at such temporary stations as the one recently closed in Jamaica, are developed in the place taken, where a note of the time of the observation, the instrument with which each was made, and the point in the heavens at which the instrument was pointed, is also recorded. All plates are then brought back to the photographic department in Cambridge. Here they are verified by being placed over a celestial chart, in order to locate exactly the centre of every plate, and are then classified in five divisions, according to excellence, by W. P. Fleming, the curator of the collection, who has had charge of the photographs for the past fifteen years. The examination which she makes is mainly for new stars and for variables, after which the plates are filed away in the stack, with suitable references and cross-references in the card-catalogue to facilitate future consultation.

All plates, numbering, as has been noted over one hundred and fifteen thousand, and increasing at the rate of several thousand a year, are at present stored in a three-story brick building of "mill construction," the simplicity of which may be gathered from the fact that it cost only fifteen thousand dollars. The building is now almost wholly inadequate, and, owing to the constant increase of the collections which it contains, the conditions are bound to become worse and worse. One of the immediate wants of the Harvard Observatory, therefore, is for a better and more fire-proof building to protect and store for all time this great collection, the destruction of which might perhaps be regretted by astronomers as deeply as the destruction of the Alexandrian library has been regretted by the world at large. The use of the present building could be continued without loss for the Observatory's valuable collection of books, possibly the best astronomical library in the country and one of the best in the world, now shelved in a number of different rooms. A simple building, plain and without ornamental architecture, Professor Pickering has estimated could be erected for fifty thousand dollars, for which there is an excellent site on the present Observatory grounds. An additional fifty thousand dollars would far more than double the usefulness of the photographic library by providing an additional corps of assistants to look up the past history of new stars as announced and other objects of interest. Indeed, the possibility of work on present accumulations is in itself enormous. Even if the sky were to be overcast both at Cambridge and Arequipa every night for the next ten years there is more than work enough on hand to keep the entire staff

of both stations busy for the whole decade. And the suggestion of what a thorough examination of the plates now on hand might reveal in new knowledge of the heavens, perhaps new laws of stellar growth, is something that the astronomer—or for that matter any lover of science—can hardly contemplate without a deep feeling of disappointment that no one has yet come forward to supply the necessary equipment and endowment.

FOR "THE FRIEND."

A Baptist Minister's Experience.

A Baptist minister of Boston, narrating certain experiences which he deemed to have been crises in his life, tells how, when he was pastor of a village church not far from Chapel Hill, the seat of the University of North Carolina, he preached a series of sermons with the view of reaching the hundreds of young men who were students there. He found, however, much to his mortification, that the desired end was so far from being attained, that many who came were either indifferent to the message or received it mockingly. Walking through the campus and being recognized, he would hear the voice of a mimic reproducing the tones of his sermon or prayer. And so, he says, there came "a horrible feeling of failure," accompanied by a sense of weakness and unworthiness, and prostration of body and soul before God. Most of the time was given to reading the Bible, to prayer and meditation, the occasion of failure being thereby mercifully uncovered. That same evening, in going to the meeting, no formal sermon was prepared, but a result very different from what had preceded, followed. The other meetings immediately succeeding were felt to be seasons of favor, many of the students being reached, among them the present governor of North Carolina. The narrator says upon this time of trial and sifting:

"As I look back upon this experience, it seems clear that the secret of it all was that I was led by the Holy Spirit to turn from dependence on myself to simple faith in God the Holy Spirit. I had been expecting that preaching would interest and save the young men. I wrote into my sermons history, poetry, philosophy, Scripture—everything that I thought might impress their conscience, reason or imagination. It was a transition from influence to power. I had been up to that time striving to influence the young men by argument and appeal. When I began to trust in God, the influence was not dispensed with, but God worked through it in a way worthy of Himself."

J. W. L.

The first thousand million minutes since the birth of Christ elapsed sometime in last Fourth Month, according to announcements from three separate French authorities distinguished in astronomy. The "Bureau of Longitudes," in correction of the differing dates of the other two, places the date at Fourth Month 28th, forty minutes past ten o'clock, a. m.

PROFESSOR W. J. MCCREE, of the Government Geological Survey, declares the Great Salt Lake may disappear entirely in the near future because contributing streams are being used for irrigating the lands around the lake.

FOR "THE FRIEND."

Reminiscences.

(Continued from page 406.)

A quiet dignity of manner which always distinguishes those who live in and walk in the Truth, was conspicuous in the life and walk of Abigail Hutchinson.

The following memoranda, made by a Friend who knew her well, related to a period in her life when she was about ninety-one years of age.

"Second Month 10th, 1889. Near the close of our meeting on First-day morning, Abigail Hutchinson appeared in supplication for which service she seemed hardly to have the physical strength, as her voice rather failed her and she had to be helped off her knees to her feet.

"Eighth Month 3rd, 1889. At our Quarterly Meeting of Ministers and Elders our dear Friend A. H.'s strength gave out and she fainted. She did not fall, being supported by women Friends who laid her down on the bench, putting a cushion under her head. Consciousness returned, but she lay quietly there, a Friend sitting in a chair by her side and some others rendering assistance. She seemed better pretty soon, and the business of the meeting went on.

"Eighth Month 25th 1889. Abigail Hutchinson was out at meeting this morning engaged in supplication. She seems very feeble but lively in spirit.

"First Month 31st, 1890. Visited A. H., who seems weak, but improving. She told me of some expressions of her mother not long before she died. She seemed to have rallied from a sinking spell and said, 'Very sweet—very sweet is the view that I have had. The gates were open and I thought myself almost through; but I must return to earth.'

"Sixth Month 4th, 1890. Our dear friend A. H. is now evidently passing through the valley of the shadow of death; but as I sat in her house the language went through me; 'This day thou shalt be with me in Paradise,' which I received as an assurance that she would be accepted."

"Sixth Month 16th. Abigail Hutchinson breathed her last about five o'clock in the morning."

"Sixth Month 18th. The funeral of our dear friend, Abigail Hutchinson, took place from the Orange Street Meeting House, assembling at three o'clock. There was quite a fair representation of Friends present, also quite a number not members of our Society." A solemnity spread over the company under which a number of testimonies were borne to the power of Divine grace as manifested in the life and religious exercises of our deceased friend. "Rebecca K. Masters engaged in prayer."

A memorial of her was issued by Philadelphia Yearly Meeting, which says, "In many of her religious engagements she was strengthened by the sympathy of her beloved sister Elizabeth Hutchinson, a valuable elder in the Truth, who possessed the ornament of a meek and quiet spirit, and with whom she lived in much unity until the death of her sister. On the seventh of Eighth Month, 1882, her beloved brother Thomas, highly esteemed for his humble and exemplary life, was removed by death. This bereavement was deeply felt by her, but she was enabled to write on the 28th of the month: as I lay on my bed a few mornings ago,

dwelling on my strippedness and loneliness, the language came before me, 'Put on strength in the name of the Lord, finish thy work and there will be a mansion prepared for thee.' About three months before her close she wrote to a friend: 'I feel, through the mercy of my Holy Redeemer, all has been forgiven and blotted out, and the cheering hope, when the Lord is pleased to say it is enough, of being united with our loved ones.'

Her health had been feeble for many years, yet she was not entirely prevented from attending our religious meetings until about six months before her death. In this period of seclusion, she wrote: 'I have had some comfortable quiet meetings in my chamber, the dear Master has been very near, praises to his name!' Thus supported by a sense from time to time, of the Divine presence, she peacefully drew near to the close of her life, which took place on the sixteenth of the Sixth Mo., 1890, in the ninety-third year of her age.

Lights and Shadows of Colportage.

The following letter from William Liphardt, who is engaged as a colporteur of the American Tract Society, and whose field of labor is principally among the foreign-born population found in Kansas, shows both the bright and the dark sides of colportage work. He writes:—"Dear Brethren: In summing up the work of the year there is much to encourage and a few causes for regret. My field is prosperous, financially. Unusually heavy crops of wheat and other small grain were harvested and command good prices, the corn crop alone being almost a failure owing to the severe drought of last summer.

"Here in a settlement of Russo-German Mennonites, expatriated from their Russian homes because their religious views were for peace and against conscription as soldiers, I look at what God has wrought. Thousands of poor people driven from their homes and forced to sell what little they possessed at a forced sale, settled in what was then considered almost a rainless desert, and in the name of the Almighty God began life in a new country. After a score of years we find them with full granaries, cattle and other stock covering the land, school-houses and churches and every mark of plenty and peace. With four-fold blessings has the Lord recognized their faithfulness to the Prince of Peace and poured out on them his gracious mercies. It would seem as if material as well as spiritual blessings are given to those who trust in God. 'The Wilderness and the solitary place shall be glad for them, and the desert shall rejoice and blossom like the rose,' is surely fulfilled in our day in these immigrants, fleeing from persecution for Christ's sake.

"My reception as the representative of the American Tract Society was most cordial. The German periodicals of the Society were to be found in many of their homes and prepared a way for my coming and a gracious reception by all. A donation for the distribution of the German periodicals among the poor and especially to immigrants, was handed to me by a patriarch of the settlement, who remembered the kindness shown to him at Castle Garden by a colporteur of the Tract Society who gave him as a welcome to the gate of the New World beautiful tracts and papers. Further, a local

church there has sent to the Society's treasury a donation to help on union missionary colportage, in response to my presentation of the great need for enlargement.

"This settlement is one of the bright phases of my life, and the atmosphere and spirit the commend practical Christianity, for no leprosy suits or paupers exist among them. They settle their differences by the arbitration of the brethren, and provide amply for any poor or sick persons of their vicinity.

"The dark side of the picture in contrast with the above is seen in many localities where no religious bond binds the residents. There are a great many such places, and not so far from this happy valley I have described—*American Messenger.*

FOR "THE FRIEND."

Joseph Milthorp.

Joseph Milthorp, a member of Pontefract Monthly Meeting in Yorkshire, was educated in the principles of the Church of England. But as he advanced towards man's estate, because of a thoughtful disposition, and unsatisfied with the principles of his education, he, after various researches among the different modes of profession, joined himself to the Roman church, and for divers years constantly attended their worship, and strictly observed their ceremonial institutions, for some time firmly believing Christ Jesus to be the author thereof. At times he was led to believe there was a subduing of the passions and a renovation of heart, which the truly righteous experienced, and also a fruition of inward peace, which they at times possessed; to all which found himself, in great measure a stranger. This caused him many times secretly to mourn and pour forth earnest prayers to the Father of mercies, that he might become a partaker of the same happy experience.

While he was thus exercised it came into his mind to go to a meeting of the people called Quakers, for an account of which take his own words, in a letter, viz:

"I sat at ease a long time, yet earnestly desired that if the Lord had any particular regard to that people, or approved of their manner of worship, he would make me sensible of it. Being thus set and grown weary of silent waiting, Divine power seized upon my body, soul and spirit, which caused me to break out into abundance of tears, and my body greatly to tremble. Then said I, O Lord, why am I thus? To which inward cry I said, something which till then I knew not, though I had often felt a measure of the same power, though never to that degree, answered, 'If thou didst but love the Lord thy God with all thy heart, mind and soul that love would be so prevalent over thee, that it would teach thee what to do, and what to eschew.' O the surprising sense I then found myself in! How was my heart filled with love, peace and joy unspeakable and full of glory! Soon after, an honest Friend stood up in tears and much trembling, and said, 'It is an excellent thing if we can say (as truth Jesus Christ lives in us.) These words reached my state; I then bowed in my mind, adoring the Divine power that then influenced me, and said, 'Dear Lord, if thou art He at I have long sought and mourned for, tell me, O Thou that hast ravished my heart; wilt thou should do to be saved, or to continue in my

er?" Upon which the humble Jesus, the true bridegroom of my soul, affectionately replied, "I require no rite or ceremonial worship of thee, but that thou give up thy heart. There I would reign, it is there I would be, and there I would be worshipped in spirit truth."

It was sometime before he could get from under the prejudices he had in favor of the man church, but continued to frequent both mass house and Friends' meetings, until after a further visitation by instrumental music he was effectually reached, became a able and useful member, exemplary in conduct, careful to have the discipline maintained, and at times was concerned in a short sermon, which was very acceptable. He a peaceable neighbor, and being of extensive knowledge, was capable of advising in many cases, which he was always ready to do, constraining that the living Divine principle alone embraced, led him to the exercise of every Christian virtue.

For divers years before his death he was at times sorely afflicted with disease, the acute of which he bore with exemplary patience. His last illness was short, and apparently attended with no symptoms of death till near the end of his departure; and though he was suddenly called, yet not unprepared, for being dead a little before his death how he was, he expressed himself thus: "I am pretty easy, though not without some bodily pain, yet in comfort helps greatly;" and added, "I weary, weary of this world, if it would see Providence to take me to Himself, O acceptable it would be!"

He departed this life the third of the Seventh mo, 1766; aged about fifty years.

FOR "THE FRIEND."

Remarks on Carnal Ordinances.

Jamestown, R. I., Seventh Month 3rd, 1902.

Dear Editor:—"I hope the time may come when Friends will so far recognize the right individual conscience in the matter of baptism and the Supper, that they will not remember those who feel it required of them to observe these obviously scriptural requirements."

My observation is that where ever this liberty has been acceded to, the identity of the Society as a protesting body against officialism, soon follows. Whether we look at individuals from George Keith to the present, or meetings where the work of disintegration has been most conspicuous, results are the same.

I am not now considering the grounds for such so called ordinances: I would only ask, is it reasonable that such of our members as themselves constrained to practice them should expect to be retained in membership. I do not marvel at the wish—we have known members so constituted that they precluded the principles of Friends except in the name of them—I only marvel at their understanding, when I see them so well intentioned; but, good people sometimes mistake broadness for righteousness.

Some years ago a large house was built in a town by a congregation made up of the selected of different denominations—their meeting over the front door was, "In essentials

unity, in non-essentials liberty."—They employed a cultured man for pastor who discussed ethical subjects ably—they soon discovered a disagreement among themselves as to what was essential and what was non-essential.—Baptism, in substance and in form, was a prolific subject;—the Supper, was it a priestly function or not? Was "the second coming" a scripture doctrine? Moral questions came in for a large share of attention—prohibition, theatricals, etc. "The Union Church," for such was its name, made history fast for three years—the lights all went out, and the building passed into other hands.

Undoubtedly where true Bible unity prevails (unity of the Spirit) the fruits of the Spirit will be found in active operation—charity, long-suffering, kindness, gentleness, patience—a waiting attitude towards the weak and the untutored. But if, as William Penn says, "the judgment of the body is superior to that of the individual"—the relative position of the two regarding fundamentals becomes apparent. If "the good that has been in necessary to the good that is to be," can Friends in their Society capacity be silent? Can they be neutral when it is proposed to honey-comb the Society with a sacramental system?—At the beginning it looks to be very little.—Where would be the stopping place? Dr. Pusey seemed to embrace, not everything, but nearly everything that Rome decreed.

In allusion to the passing away of the old and bringing in of the new dispensation, a recent writer thus expresses himself—"The apostles were not appointed to pull down one ritual system and set up another. They began at the beginning. Under the Divine impulse of the Pentecostal endowment, their first enterprise was, not to overthrow Judaism, but to preach Christ. 'That was not first which is spiritual; but that which is natural; and afterward, that which is spiritual.'—In the natural sphere, last year's withered leaves sometimes adhere to the stem on which they had their birth; as if kindly lingering, to welcome their successors, and to afford shelter and defence to the tender buds, until the rigor of the new life, 'in the fulness of time' and at the right time, quietly displaces them."

Plants as Time-Pieces.

Each flower, bird and insect has its appointed time in the shifting panorama of beauty and music that stretches through the year. They perform their parts as regularly as actors in a play, all keep well their places, and appear only when the piece expects them. This accuracy extends even in days and hours. The naturalist Thoreau said that if he were placed in the fields after a sleep of unknown length, he could tell the exact day of the year by the flowers around him. Other close observers of nature have claimed the same. Before mechanical clocks were common, it was an ordinary habit to read the time of day in the flowers.

Every blossom has its precise hour for unfolding its petals and for shutting them. Although the light and temperature affect these movements, there is always a strong effort made by the plant to keep its allotted time. Day flowers imprisoned in darkness still follow their usual out-door habits. Most flowers open at sunrise and close at sunset, but there is no

hour of the twenty-four when some blossoms do not awaken, and there is none when some do not begin to sleep. This motion is generally gradual, but morning flowers open rapidly, and afternoon flowers close very rapidly.

The daisy, or "day's-eye," spreads its lids to the earliest rays of the sun, usually, about five o'clock, and goes to bed just before sunset. The morning glory does all its blooming between six and nine o'clock in the morning, and never opens a second time; the life of each flower being limited to a single morning. Dandelions awake between six and seven o'clock and are put to sleep sometime before evening when the heat is excessive. The yellow goat's-beard, so common in the meadows, ends its day at noon, and is therefore familiarly called "go-to-bed-at-noon." The pink little pimpernel blossom is known as "the shepherd's clock," from its custom of closing exactly at two in the afternoon.

The old-fashioned "four-o'clock" either was falsely named or has lost its reckoning as it does not appear until about six o'clock. Of all the plants which fold together their flowers and hang their heads at sundown for the night's rest, perhaps the most noticeable are the asters, which invariably hide their faces at six o'clock. Many leaves do the same. The clover trefoils and the wood sorrel (oxalis) close between six and seven p. m., and stretch out from six to seven a. m. This action is very marked in all pod-bearing plants, as the acacia and locust, and especially the sensitive plant, which all double up, or rather double down with the closing day. In a country walk toward sunset you may see the drooping leaves and blossoms nodding one after another in slumber, setting a fine example of early dreams.

Heliotropes, sunflowers, marigolds, and all compound and yellow flowers, turn toward the sun throughout the whole day, following his course so as to face the east in the morning, south at noon, and west in the evening. The direction in which they point therefore shows the time.

Many kinds of plants bloom only at night, and toll the hours of darkness with their silent bells of beauty, ringing perfume instead of sound during their period. Often their fragrance is extraordinary, as if to offset the disadvantage which their color suffers at night. The evening primrose does not show its loveliness until about seven p. m. The night-blooming catchfly modestly nestles out of sight on the ground through the day, but at seven o'clock, as if at the touching of a fairy, the little blossoms sparkle thickly among the grass. The night-blooming cereus begins to open at seven o'clock, and is locked fast again at two a. m.

The great water-lily *Victoria Regia* is nocturnal, like some other water-lilies. Linnaeus, the father of modern botany, constructed a flower clock which would tell the hours.

Is it possible that all this time-keeping, involving a knowledge of astronomy, the times and motions of celestial bodies, the progress of the seasons, the times of sowing, planting, growing, blooming and ripening, are the result of blind chance, or unreasoning "Law," or simple unintelligent force? Who can believe it? Only the fool, who hath said in his heart there is no God.

Science and Industry.

FEAR causes more disease than do microbes, more deaths than famine, more failures than panics; it costs more than war, is always a failure, and is never necessary. Fear weakens the heart's action, induces congestion, invites indigestion, produces poison through decomposing foods, and is thus the mother of auto-poisoning, which either directly causes or greatly aids in the production of quite ninety per cent. of all our diseases.—G. F. Meacham, *M. D. in Health.*

THE CUBANS.—The population of Cuba is about a million and a quarter, of which a little over thirty per cent. is negro; the males are ten per cent. in excess of the females, and this difference is greater in the white than in the black race, while, for general purposes of enumeration, the people are divided into blacks and whites, there are really four classes—the whites, the colored, the blacks and the Chinese. The whites include the Spaniards, Cubans and foreigners, and among these are a considerable number of Canary Islanders, who are farm laborers. The Cubans have large families of children, of which the women are proud. The children develop young, are very bright, have strong memories, and become, under good training, very intelligent. The people are easily educated and many of their prominent men have been taught in Europe and in the United States. Under such influences they have turned to Cuba, and those who remain there are among the best inhabitants of the island, polite, hospitable, intelligent and kind, with refined tastes, affection and patriotism which Spanish tyranny has been unable to quench. They have had no experience in Government, and are said to lack the firmness which is necessary to make it a success. This, however, is an untried experiment, and may prove more successful than has been feared.—*Correspondence of the New York Observer.*

THE PINEAPPLE AS A DIGESTIVE AID—The partaking of a slice of pineapple after a meal is quite in accordance with physiological indications, since, though it may not be generally known, fresh pineapple juice, contains a remarkably active digestive principle similar to pepsin. This principle has been termed "bromelin," and so powerful is its action upon proteids that it will digest as much as one thousand times its weight within a few hours. Its digestive activity varies in accordance with the kind of proteid to which it is subjected. Fibrin disappears entirely after a time. With the coagulated albumen of eggs the digestive process is slow, while with the albumen of meat its action seems first to produce a pulpy gelatinous mass, which, however, completely dissolves after a short time. When a slice of fresh pineapple is placed upon a raw beefsteak, the surface of the steak becomes gradually gelatinous, owing to the digestive action of the enzyme of the juice. Of course, it is well known that digestive agents exist also in other fruits, but when it is considered that an average sized pineapple will yield nearly two pints of juice, it will be seen that the digestive action of the whole fruit must be enormous. The activity of this peculiar digestive agent is destroyed in the cooked pineapple, but unless

the pineapple is preserved by heat there is no reason why the tinned fruit should not retain the digestive power. The active digestive principle may be obtained from the juice by dissolving a large quantity of common salt in it when a precipitate is obtained possessing the remarkable digestive powers just described. Unlike pepsin, the digestive principle of the pineapple will operate in an acid, neutral or even alkaline medium, according to the kind of proteid to which it is presented. It may, therefore, be assumed that the pineapple enzyme would not only aid the work of digestion in the stomach, but would continue that action in the intestinal tract. Pineapple, it may be added, contains much indigestible matter of the nature of woody fibre, but it is quite possible that the decidedly digestive properties of the juice compensate for this fact.—*London Lancet.*

A MARVEL OF IRRIGATION.—Thirty-five years ago the Salt River Valley, into which we had driven, was all a parched desert, uninhabited save by a few lean Indians and two or three hardy traders, whom the sand and cactus crowded down close to the water of the river. It was a thousand miles from the nearest railroad—an unknown, desolate, forbidding land, a part of the Great American Desert, which travelers said would never support human life. To-day the Salt River Valley contains a population of over twenty-five thousand. It has three cities, one, Phoenix, the capital of Arizona, having electric lights, an electric car line, good hotels, churches and other buildings, residences surrounded by trees, lawns and a wilderness of flowers. More than one hundred and twenty-five thousand acres of land round about are laid out in farms, highly cultivated, with orchards of oranges, almonds, olives and figs, and grain and hayfields. Thousands of cattle feed in the rich meadows, and there are bees, chickens, ducks and ostriches unnumbered. Richer soil than this once desert valley does not exist anywhere in the world except in other once desert valleys. Here one may behold the startling spectacle of orange groves in bearing worth one thousand dollars an acre on one side of a fence, and bare cactus desert on the other, both having the same soil, the same opportunities, but only one having water. Here, when a man builds his fence of cottonwood posts, such is the soil and such the water that the posts take root and grow into trees, so that the wire of many old fences is seen running through the centre of large trees. Here a farmer rarely needs to use fertilizer, for the river comes in bearing rich silt, and spreads it over his fields; and he may sometimes cut two or three or more crops a year from his alfalfa fields, and then pasture them during the winter—winter which is in reality a continual spring.—*The Century.*

WANTED, A SCIENTIST.—Under this caption *Zion's Herald* asks: Will some professor, who has given teetotalism scientific study, tell us what fearful evils would ensue if the upper half of society should practice abstinence for the next fifty years, and all pull together to get the under half of society on its feet? Why refuse to enter the lists for humanity?

A Home Wedding.
